Business India

The country's biggest and most ambitious retailing project in recent times, a 1,50,000 sq.ft. shopping mall called Crossroads, is getting ready to open soon in south Mumbai. It represents the first significant greenfield venture of takeover tycoon Ajay Piramal and his Rs 1,800-crore(CH) Piramal Enterprises and marks the group's entry into the retail business. The retailing boom is attracting a host of entrepreneurs but being an evolving business, making definitive projections on returns is difficult. There can be no doubt though that the Ajay Piramal group has the staying power for this long-term game.

Over the years, Piramal has demonstrated an uncanny ability to spot the emerging opportunity and seize it. Most notably, his timely diversification from the family's traditional business of textiles into pharmaceuticals through a string of takeovers. In addition, he forged strategic alliances and joint ventures. These were with international majors like Boots Healthcare International plc, Allergan Inc, and homegrown outfits like Charak Pharma and the Sarabhai group.

Certainly, Piramal has been making several right moves. Yet, he has been rather less successful in reinventing Morarjee Mills whose fortunes have declined steadily in the last three years. Of course, compared to the rest of the industry, it is better off but that is not saying much. Weighed down by the burden of history — it is one of the country's oldest mills and was the fourth company to be listed on the Bombay Stock Exchange — Morarjee is now moving up the value chain into premium, niche fabrics. But its long-term prospects are an open question. Yet there are many who believe that textiles is a business in which India has significant comparative advantages. Textiles, they emphasise, can be a sunrise industry in India.

Furthermore, the sheen on Piramal's pharmaceutical business is somewhat fading. Analysts see the lack of innovation and its still nascent research base as serious drawbacks. They also carp about the multiple collaborations and question the group's ability to sustain them in the future. Consequently, Nicholas Piramal's showing on the stockmarket is nowhere close to the rocketing price/earnings multiples of high-flying drug majors like Ranbaxy or Dr Reddy's.

In his transition from millman to medicine man and now to mallman, Piramal has carefully cultivated his image. Pitching himself as a takeover specialist with a successful track record in diversification has paid off. Folks in the private equity business are enamoured of his group. Indian financial institutions are tripping over themselves to deal with him. And Piramal is reaping the benefits of astute positioning.

The enthusiasm of FIs over Piramal is symbolic of the prevailing reality in Indian industry: large capital pursues only the same, few entrepreneurs. There is no paucity of entrepreneurship in this country, only the ability to spot it and then give it the right kind of backing. Unfortunately, financial institutions are playing it safe and not cultivating new entrepreneurs. If they did, there would be many more Ajay Piramals.

Building brands

West Bengal's hosiery market may have lost its lead, but a handful of companies are doing brisk business

• Flights from fancy

The Ruias successfully launched the 'Essar' brand in the stock and consumer markets in the early 1990s. They attracted investors but cashed their goodwill for their long-term ventures in oil and telecommunications. All they created were castles in the air. Now all their investors are trying to get out.

AKHILESH KUMAR SAH
Faizabad

• Your cover story (26 July) refers to the Reliance Group in a couple of places, implying parallels between Reliance and the Essar GRoup. In one instance, it explicitly says that Reliance went through similar rough seas in the 1980s.

We find this comparison unfair and unjustified. The Reliance group has an unblemished record for meeting all its obligations throughout its history, and has never ever defaulted.

Being a victim of political attack is completely different from being in the centre of financial problems or default, and from that perspective the said reference to the Reliance group is not fair.

YOGESH J DESAI
President - Corporate Development
Reliance Industries Ltd
Mumbai

• Your cover story on the Essar Group came as a breath of fresh air after the media song and dance on the FRN default. It vividly and forcefully brings out the fact that the Essar refinery project that has been hampered by the delay in financial succour and the apathy shown by the FIs towards a project that is more than half complete. I get the impression that the FIs have an indirect role in cost overruns. I wonder how many infrastructure projects in the country have suffered from a lack of institutional understanding of long-gestation and high-cost projects.

S THYAGARAJAN
Udumalpet (Tamil Nadu)

• Allow the PSUs to market

Your article (Special Report, 26 July) mapping the apprehensions of the oil sector about the open market mechanism makes interesting reading. The growing stature of IOC has made the other oil companies feel threatened and HPCL seems to be leading a pack to form a formidable force to counter IOC.

Another apprehension is the possibility of being swamped by international oil giants once complete decontrol is brought about. This is unlikely to happen. The oil companies in the country have over the years built enormous infrastructure, which is difficult to replicate.

The refining companies have long aspired to enter the marketing arena. The government has allowed private sector refineries with minimum investment of Rs2,000 crore to enter marketing and hence there is no justification in keeping the PSU refiners out.

S. RAGHAVAN
Chennai

• Watchdog

Your story on the Hamco scam (Focus, 26 July) was interesting. Business magazines hardly report financial scams these days, although numerous scams regularly take place. Reports like yours exemplify the media's role as a watchdog.

G RAVISHANKAR
Mumbai

• Where's our self-identity?

Nothing could be more apt than Brij Khandaria's column (28 June). True, India has throughout bet on losing horses and has in turn become an international diplomatic pariah. But while we need not have become toadies like Pakistan or some other countries, hanging onto the tail-coats of superior powers, we could at least have adopted a semblance of self-identity as France occasionally does, despite on the whole toeing the line of the Western bloc. We neither have the gumption of China nor its political system to withstand isolation.

Just one instance of our disastrous foreign policy has been our all-out support for Palestine and the PLO, which meant a mindless animosity towards Israel. Ask any Indian visitor to the Gulf and he will testify that those people who hurt and humiliate us most are the Palestinians. They neither feel any kinship towards us nor do they show any trace of friendship or gratitude. And they insult Indians at the slightest opportunity, giving a cue to the other Arabs who would otherwise would not bother.

Such instances are far too many. India is anathema to Bangladeshis, where over 6,000 soldiers laid down their lives to liberate them. None of our neighbours, Saarc or anyone else, has any respect for us and cannot be counted as friends. It was the US that had to help us, albeit for reasons of its own, most notably Osama bin Laden.

Our foreign policy has to be stripped of frills. If it suits us now to befriend the West and Japan, so be it. If we make a show of conviction and stand by the poor, they will be the first to ditch us with no thanks for the help received. Our largesse towards Bangladesh and Nepal should be based on these bitter facts.

HEMA I ANAYA

Hullo, Hullo?

The Department of Telecommunications needs to understand the reason for its existence

What a precious thing a telephone is in India. For those who have one. Others couldn't care less. Others, in this case, is nearly 98 per cent of India, except in one or two cities like Delhi and Mumbai, where the figure drops to about 80 per cent. Given a putative household population of about 4, the access-to-telephone figure rises to 8 for the country, and 80 for the superurbs. In other countries, notably the United States, the 'have-nots' cannot be measured in terms of households, only individuals. There are more telephones than people in the country, because many people have more than one phone, while only a very few don't have one at all.

In India, if one visits a friend and must make a phone call, it is considered extremely impolite not to ask prior permission. If the call is a trunk call within or outside the country, of course one must also insist on paying, because the amount will almost certainly not be a minor expense. In the same situation abroad, in some countries the local call is free, so that isn't an issue, but even domestic trunk calls are (relative to income) so cheap that your host will probably raise an eyebrow at the thought of your offering to pay. Why has our country lost out in this area?

When we gained Independence, we lacked almost every kind of infrastructural element, and there were strong indications that the fledgling private sector would not be able to access enough money to build it up. The industrial policy was designed to reserve certain sectors (including telecommunications) for public funding, while affording protection to the others, where the private sector could run free without fear of cheaper imports.

Unfortunately, one (possibly unintended) side-effect of this policy was that investment in infrastructure became a state subject, while profits generated by operating services on the same infrastructure were transferred to the general revenue account. The department responsible for telecommunications goes, begging bowl in hand, for money each year to put down new phone lines, while at the end of the year, any money it makes from phone services is turned over to the government, to spend no doubt on alleviating poverty. Or the salaries of public servants. Whatever.

The bleak telecommunications scenario was sought to be improved when the private sector entered the picture, since it would presumably be free to spend on infrastructure according to prudent economic norms, or plain old business sense. However, since the new investment plan was shaped in large part by the same people whose fiat was sought to be diluted, it is little surprise that the new players ended up bidding highly unfeasible amounts in terms of licence fees. The unseemly mess we have had the dubious pleasure of witnessing in the courts and the front pages of newspapers, over the past year, is the direct result of this short-sighted policy.

For the right or wrong reasons, the source of most of this mischief has been the Department of Telecommunications. Telecommunications experts from abroad have repeatedly attempted to get the point across to our little masters that their job is to help people communicate, not ration out phones as though they were going out of fashion. This has not succeeded. A recent headline has a department spokesman bemoaning the fact that projected revenues will be Rs2,000 crore short of projections made for the year. The fact that this is entirely due to the court-ordered removal of billing anomalies that have plagued consumers for decades is conveniently side-stepped. More to the point, the fact that telecom revenues are derived from a shockingly small section of the country's people, is ignored entirely.

When the telecom ministry spokesperson addresses the public in this one-sided fashion, is any consideration given to the fact that the entire telecom paradigm is about to undergo a cataclysmic inversion? The emergence of digital communications is nigh, and in the early part of the next decade, normal telecommunication will be digital from end to end. This automatically means that there will be no distinction between a call made next door and one to the ends of the world. Therefore, there will be no justification for tariff differentials on such calls.

Is this something out of science fiction? Unfortunately for Luddites in the ministry or its departments, no. Already by the end of this year, the interconnect backbone in the United States will be totally digital, and digital lines will soon percolate to consumers as the primary option. What price billing squabbles then? •

Let the champagne flow

The growth in the economy, this time around, is for real based as it is on sound fundamentals

National economies have a funny way of changing track and surprising the most learned pundits. Who would have thought that the Indian economy would prove its resilience to political fluxes and bash on towards a growth path? Well the latest data show precisely that; several indicators show an uptrend in performance especially in the industrial sector. For example, the fact that consumer durables were doing well was well known as were the hi-tech sector. But surprisingly, industrial intermediates too have done well though capital goods seem to be still struggling to find their feet.

On the ground the news gets better; commodity prices are rising around the world and steel producers in this country with sufficient capacity and quality have been muscling in rather successfully. Of late the prices of hot rolled coils have firmed up and major steel producers have been able to realise higher prices. The happy result is that Indian producers may soon be able to reduce their domestic inventory of around two million tonnes.

Consider the state of the economy yet another way. Dun and Bradstreet have released what they term 'Business Optimism Index' for the third quarter of 1999. Calculated on the basis of a random sample from the firm's commercial credit information file for the country, the BOI measures the pulse of the business community by basing their indices on various indicators of performance like net sales, net profit, selling prices, new orders, inventories and changes in number of employees. In almost all the indicators the BOI registers a more positive tone than the BOI for the first quarter of the year though in almost all of them the indices are less favourable than they were for the second quarter. The authors however note that "in the final analysis it must be stated that the economic recovery that seemed visible in Q2 1999 survey was no mirage".

The idea that the real economy is going through some kind of recovery cannot but be heartening for another reason. Often in the recent past, for instance in the third quarter of last fiscal, spurts of activity in the stockmarkets and the consequent rise in the Sensex have not been accompanied by, or emerged as a result of, growth in the real economy. Speculation and institutional trading have been the cause and in recent times the growth in IT stocks. This time around the two sectors, the equity market and the productive economy, seem to be moving in the same direction.

Of particular interest in the recent spurts in the capital markets is the emergence of mid-cap stocks. It is one thing and perhaps the expected thing for a rally to be based on the performance of pivotals; the rise in the sensex that took place in the last year was predicated on the 'A' group shares. But this time the growth seems to have been centred around the 'B' group shares; after a gap of four years stocks in the 'B1' and 'B2' groups have outnumbered pivotals in climbing new peaks. Nothing shows up this broadbasing more than the S&P CNX 500 comprising 79 industries covering mid- and small-cap stocks which have outperformed the Sensex by almost a third. As a matter of fact a number of scrips that were fairly inactive or traded in low volumes of 100-500 shares found themselves being traded in thousands if not lakhs.

The story of the broadbasing does not end there. Whereas earlier, the rally had been fired by the IT stocks this time around other "brick and mortar" type industries too seem to have been fuelled by rises in cement, auto-ancillary, metals and finance. Brokers feel that a part of the reason for the feel good factor is the fact that the sun is shining on the economy. The significance of this correlation between the two sectors, the capital market and the productive economy, lies in the fact that it has occurred after a gap of nearly five years. It was during the 1993-94 period that the last simultaneous movement of the two sectors took place as a result of the first phase of reforms. Since then the capital market seems to have dipped into a slumber while the economy lost all its sense of moorings.

Politics of course has a way of queering the pitch as has been the case so often in the recent past when a fall of government sent the economy reeling into uncertainty. But this time elections that are round the corner should end the uncertainty as a government is installed at the end of the process. At this point of time all one can hope for is a government that capitalises on the current wave of good luck. ◆

SC rights a wrong

The apex court's reservations on admission to the super speciality level are heartening

While "protective discrimination" for the overall societal good has been the notional objective behind reservations for the disadvantaged scheduled caste (SC), scheduled tribe (ST) and other backward class (OBCs) categories, it has over the years become grossly abused and misused in the hands of self-serving politicians. The entire process has become a charade, with states outdoing one another in the reservation race in an effort to buttress their votebanks. Not only has such action led to reverse discrimination, it has actually perpetuated the scourge of backwardness by compromising liberally on the educational and work standards. Compromising on proficiency and ability more often than not compromises on accountability as well.

The runaway reservation had earlier compelled the intervention of the Supreme Court which imposed an overall ceiling of 50 per cent on these quotas and prescribed periodical reviews of the designated beneficiaries to skim off what it termed were the 'creamy layer'.

On 11 August, the constitution bench of the apex court in the *Post-Graduate Medical Entrance Examination (PGMEE) — Reserved Categories — lower minimum qualifying marks case* ruled that any special provisions like reservation for admission at the super speciality level were 'contrary to national interest'. It stipulated merit as the sole criterion for selection, contending that admissions to the highest available medical and engineering courses, where even the facilities for training are limited, must be granted only on the basis of competitive merit. The five-judge bench, presided over by Chief Justice Adarsh Sein Anand, also struck down as unconstitutional the Uttar Pradesh Post-Graduate Medical Education (Reservation for SC, ST and OBC) Act 1997 which fixed 20 per cent as minimum qualifying marks for reserved category candidates. It treated similarly the Madhya Pradesh government order of June 1997 that fixed 20, 15 and 40 per cent as the minimum qualifying marks for SC, ST and OBC respectively.

This ruling of the highest court, which was disposing of consolidated review and writ petitions, and appeals from various aggrieved candidates, will most likely lead to similar prayers as regards other streams of education as well as employment. There will always be divergence in perception on the validity or otherwise of such reservations. But the Supreme Court's own previous judgment favouring caste-based reservations in government jobs had dispassionately recognised the legitimacy of such 'positive discrimination' in a caste-ridden society like ours. At the same time, the conflagration that erupted during V.P. Singh's prime ministership against the Mandal provisions that he sought to implement underscored the resentment that had been brewing amongst those who felt they were being discriminated against.

Rather than contradicting its own previous verdict, the Supreme Court has sought to reaffirm the fact that while enabling the weaker sections to compete equitably with others in education and employment was a Constitutional obligation, the 'wider interests of society' could not be ignored. In other words, it is clear that reservations should not descend to the level of misplaced justice and if they did, corrective action should be forthcoming. The bench, in its judgment which will have prospective application, asked the Medical Council of India to go into the question of lower minimum qualifying marks for reserved categories at the PGMEE as such measures impinged upon the standards of medical education. It declared that there cannot be a wide disparity between the minimum qualifying marks for the reserved category and for the general category candidates at that level, maintaining that the percentage of 20 for the reserved category and 45 for the general was not permissible under Article 15(4) of the Constitution.

It is argued that affirmative reservations have proved their viability in Tamil Nadu for instance where they have largely bridged the gap between the general and reserved categories of students. But it needs to be assessed whether such bridging the gap has raised the overall standards or induced a decline. It is to be hoped that with election fever in the air and all political dispensations intent on scoring marks over their opponents, the politicians of the day do not exploit the apex court verdict to their advantage. •

Leo up for sale

BlowPlast, part of the Rs800-crore DCP Enterprises, is looking for a buyer for Leo Toys. The management has decided internally that since Leo (set up in 1980) has not made any profits over the years, BlowPlast shall opt out of toys completely. A valuation is still to be done, but Leo is sitting on a mountain of moulds which should fetch a handsome price. Chairman Dilip Piramal reckons that in the foreseeable future labour intensive businesses in the land will undergo a paradigm shift as the labour laws will lead to uneconomical production. Moreover, China, Hong Kong and Taiwan are increasingly becoming the cheapest producers of toys in the world. Leo, which entered into a 60:40 JV with Mattel of US in 1986, has already sold its stake to the latter. Mattel, in fact, is operating on its own now in the Indian market which essentially means marketing their own products. Earlier the marketing was done by BlowPlast. Piramal now wants to concentrate on the luggage market, hence the decision to opt out of the Leo brand. Takers anyone?

Ne(s)t eggs

McKinsey partner Neeraj Bhargava and principal Sandeep Singhal have resigned and teamed up with Mumbai-based investment banker Rajesh Jog, promoter of Gateway Capital, to launch India's first Internet-centric incubator fund, Acquavit. Unlike other incubators promoted by Intel, Microsoft and Computer Associates, this one has no strings attached in the form of particular technologies. Acquavit will assist first-time India-US entrepreneurs to begin Internet-oriented ventures, providing both management support and funding. This month has seen a flurry of angel and venture capital funds get under way with operations in India, including Infinity and Chrysalis, both being heavily technology-centred. Comparative old-timer Draper International from Silicon Valley has reportedly closed its books, amid rumours of disagreements about its operations. Kanwal Rekhi, well-known Silicon Valley venture capitalist closely associated with The Indus Entrepreneurs (TIE), which brings together some of the Valley's most famous Asians to help new entrepreneurs, flew into India to launch TIE's first Indian chapter, which will be launched this month in Bangalore, reportedly with Infosys' Nanadan Nilekani as president.

Santoor rejig

Wipro is relaunching Santoor soap and talc in mid-September. Apparently Santoor is doing very well in

Santoor will witness a complete makeover

Andhra Pradesh, Kerala, Karnataka, Maharashtra and the northern belt of Punjab, Delhi and Haryana. Both soap and talc will be coming with a complete makeover – new packaging, fragrance and shape. And of course a spanking new ad campaign – on TV, press and outdoor – being designed by FCB-Ulka is ready on the drawing board. Close to Rs80 lakh has been earmarked for just September by Wipro. Coming up next is the phase two of Wipro's multi-crore corporate campaign as Azim Premji, India's richest man according to *Forbes* magazine, pumps up the volume.

End game for TV software houses?

Is UTV headed the Plus Channel way? Though UTV's television software division continues to do well, the Vijaya TV, Singapore and Malayasian ventures appear to be having a debilitating effect on the group. Profit centre heads too are walking out as the pressure gets intense. The capital intensive Vijaya TV venture appears to be bleeding, more so in a cluttered southern boob tube marketplace. Meanwhile, fellow traveller Plus Channel continues to head southwards with no rolling plan in sight and practically all divisions barring TV software having been shut down. In Plus' case, with the promoters having backed out, it is a veritable firefight on a daily basis. Unilazer chairman Ronnie Screwvala has, however, managed some breathing space with an $6 million animation co-production contract with 20th Century Fox.

Green signal for Redington

Redington, India's second largest computer hardware distributor, and one of the successful Indian ventures of the Singapore-based Chanrai group, may finally be changing hands. The Chanrais, who are non-resident Indians, having built up the hardware distribution business from scratch may well be interested in cashing out. Earlier, they had been talking to CHS Electronics, but those discussions have fallen through. Now, US-based Ingram Micro, ranked the world's largest in the computer distribution business, who is also eager to make an entry into India, may be a prime candidate to take over Redington.

Ingram had recently acquired Electronic Resources, better known as ER, a Singapore-based computer distribution giant. The deal with Redington, it is learnt, has reportedly been done with ER India Limited, a company which ER had earlier formed by buying equity in another local firm, Spectra. ERIL is soon to be rechristened Ingram Micro India. A near 75 per cent annual growth in the computer distribution business in India makes the country attractive for any leading international player. With a turnover estimated at Rs600 crore, what makes Chennai-based Redington a plum takeover target is its number two position after Godrej Pacific. •

Faces Behind The IKON

IKON Behind The Faces

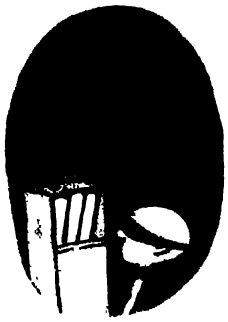
Monopoly virus... Day trading... TV for kids... Losing hair

Bill Gates may have decided to donate his huge fortune to charity, but those who have been gunning for him are not about to give him any respite. Coming on e-mail soon is the Monopoly virus. Along the lines

of the Melissa virus, which created such havoc, Monopoly is in the form of an e-mail message entitled 'Bill Gates joke'. The programme, written in Microsoft Virtual Basic, causes a dialogue box to pop up which displays a picture of Gates superimposed on a monopoly board along with the message: "Bill Gates is guilty on monopoly. Here is the proof:-)". The virus also sends itself to all e-mail addresses in the victim's address-book in Outlook Express and collects data on country, Website, password etc. While this can be very damaging, most observers believe that Monopoly is still a zoo virus. In other words, it has not yet been discovered in the wild. But e-mail users would be well advised to give Bill Gates' jokes a miss for some time.

While on the subject of Bill Gates, here are two offerings from MSNBC (the Microsoft Internet channel):



• Rene Joly, 34, filed a lawsuit in Toronto against several drugstore chains and the Canadian defence minister, charging that they conspired to kill him by poisons in his prescriptions and a military microchip in his brain. He told reporters: "Genetically speaking, I'm a Martian, yes," having been cloned from material recovered from NASA missions. The college-educated Joly apparently impressed some reporters with his eloquence and calm demeanor, but one defence lawyer said merely that Joly "has watched too many episodes of *The X Files*."

• A *Jerusalem Post* reporter interviewed an extraterrestrial by telephone through the services of Adrian Dvir, an engineer who develops computers for the Israeli military. The alien, 'Fenix', said he was 200 years old and was calling from near Uranus, via electronics that translated his speech into Hebrew. Dvir was chosen for contact because he had enrolled in psychic-training courses that were being monitored by Fenix's Kliendcontlar race. Fenix called Dvir (from a number blocked by Caller ID) and spoke for 85 minutes, answering the reporter's questions as relayed by Dvir.

Sure makes one wonder if all the out-of-the-world (in more senses than one) sites about Bill Gates have something to them after all.

With a day trader in Atlanta killing 12 people and himself after suffering massive losses, US regulators are wondering whether they should put curbs on the practice. Unlike most stockmarket investors, day traders hold shares for minutes or hours instead of years. The result: they can wipe themselves out equally fast too. According to a survey by the North American Securities Administrators Association (Nasaa), an organisation of state regulators, more than 70 per cent of the day traders studied at one firm had lost money, for the most part, all they had invested. By a curious coincidence, considering that the survey took place before the mayhem, the firm was the All-Tech Investment Group, one of the places that the Atlanta day trader had chalked up his huge losses. The Nasaa survey points out that many day traders are encouraged to go over the top because of the loans that the firms that facilitate such day trading extend to them. It concludes that commissions are so high that it is a mug's game trying to make money through day trading. But, in the US, a mug is born every minute anyway.

The BBC, amongst other producers of kids programmes, is under fire from the American Academy of Paediatrics. According to the academy, producers have been deliberately targeting very young kids and this can prove extremely damaging to their development.

After a two-year study, the academy has issued viewing guidelines in the journal *Pediatrics*. For starters, it says that kids below the age of two should have no exposure to TV at all. "Research on early brain development shows that babies and toddlers have a critical need for direct interactions with parents and other significant care givers for healthy brain growth and the development of appropriate social, emotional and cognitive skills," the academy says. It is better for children to dig in the dirt than watch TV. For older kids, TV should be strictly rationed. According to the survey, overexposure tends to make kids fat, disoriented and prone to think of violence as the best means of settling disputes.

Are HSBC bankers a harried lot? Are they balding too soon? Not necessarily. But nestling in the latest issue of *Select*, the group's personal finance magazine in Asia, among plugs for upmarket properties and country club memberships, is an ad from Svenson, "the world's leading hair experts for over 40 years". Svenson has flagged off a better hair growth campaign through electronic analysis. Says the ad: "During the Hair Rescue campaign, special consultants at Svenson International will take a few hairs from the balding or thinning areas of your scalp and send them to be professionally analysed at advanced laboratories in London. You will find out exactly the cause of your hair loss and what action must be taken to

correct it." The analysis is being offered free of charge and there is a 15 per cent discount on the course.

Bank sources say that the ad is just one of those things and none of them are losing any sleep (or hair) over HSBC's performance. There is a sobering thought, however: *Select* is not targeted at the bankers but at their customers.•

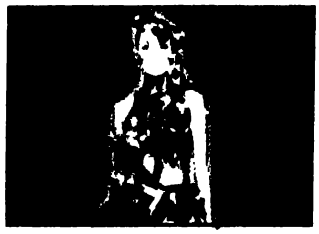
Gujarat Ambuja

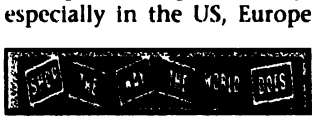


One of the most recent companies and perhaps among the first three cement majors to go on the Web is Gujarat Ambuja with **www.gujaratambuja.com**. The opening screen offers an explanation for the company's motto 'I Can': "Give a man orders and he'll do any task reasonably well. But let him set his own targets, give him freedom and authority, and his task becomes a personal mission: I CAN." The site carries information on the company's financials for the

last five years, information on installed capacity at plants in Punjab, Gujarat, Madhya Pradesh, and Himachal Pradesh, its efforts towards the protection of the environment, and a host of awards – including the National Quality Award, the National Award for Pollution Control, and the *Economic Times*–Harvard Business School Association Award for corporate excellence – that it has won. An interesting feature of the site is the section on *vaastu shastra*. A good corporate effort!

Virtual model

As far as looks and beauty are concerned, Indian women have been in the news for the last couple of years. Remember Sushmita Sen and Aishwarya Rai, who were successfully crowned Miss Universe and Miss World? It was only a



matter of time that the cyberworld was also to be captured by a Indian beauty. It all began when Anagha, a Bangalore-based girl with a degree in Economics from St Stephen's College, New Delhi, launched her portfolio on the Web at **www.anagha.com** with the help of her Australian husband David, who is a photographer. The site was reportedly designed to handle one million hits a month. Today it boasts a hit rate of one million a day. So much so that, last month, *USA Today* picked it as its Site Of The Month. Anagha has already landed herself a contract with a New York-based Metropolitan ad agency and help calls from aspirant models all over the world who would like to be part of her Website. Check it out for yourself.

Shopping online

While business-to-business e-commerce is making rapid strides in cyberspace, the business-to-consumer module is also picking up gradually, especially in the US, Europe

www.online-shoppe.com

and Japan. According to one estimate, a full third of all e-commerce transactions today are business-to-consumer. No wonder we already have an Indian site **www.online-shoppe.com** being termed by the promoters as India's "first full-fledged business-to-commerce, e-commerce-enabled shopping arcade on the Net". Some of the wares featured on the site include paintings, clothes, chocolates, Titan watches, Armani perfumes, jewellery, Reebok and Woodland shoes, squash racquets from Head, and toys. Online buyers can make payments by Indian and international MasterCard and Visa Cards, or even by cheque or demand draft. The site offers free shipping and handling and gift vouchers.

It is sure to attract interest once more brands and goods are added to its range. Worth a visit.

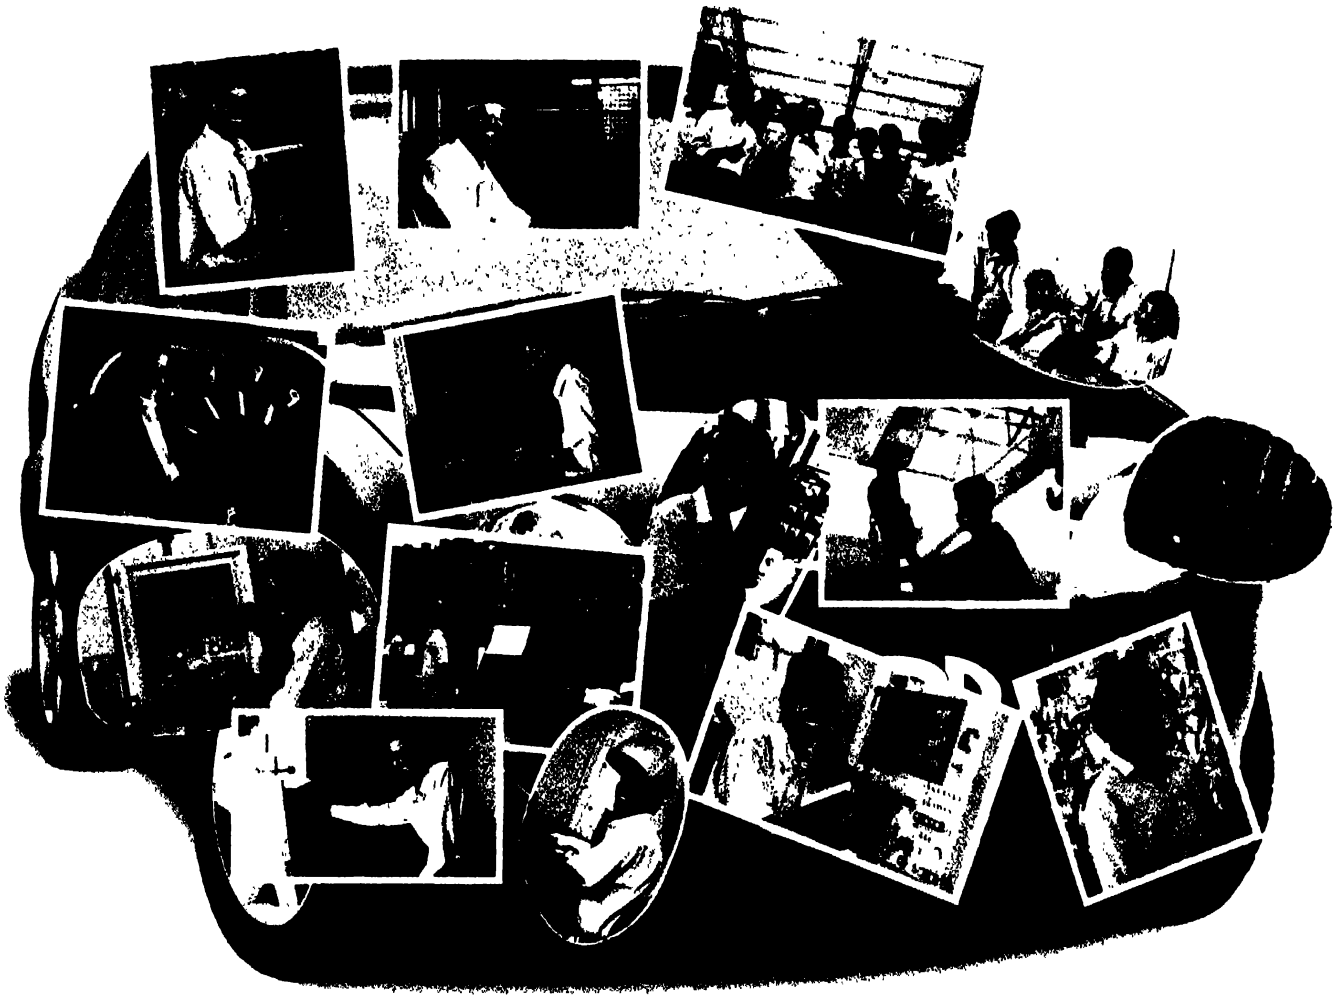
Feed the hungry

Did you know that 24,000 people die every day from hunger or hunger-related

causes, or that three-fourths of the deaths are children under the age of five? Or that the majority of hunger deaths are caused by chronic malnutrition in families that simply cannot get enough to eat? Do you want to do something for this gross human tragedy? **www.thehungersite.com** provides you the opportunity to satisfy your charity instincts. It allows visitors to donate a day's meal for the hungry by clicking on the "Donate Free Food" button. Interestingly, the user doesn't have to pay for the donation; its absolutely free, with no strings attached. The site has a pool of sponsors who take up the charge. The donated food is then distributed through the United Nations World Food Program, the world's largest food aid organisation with projects in 80 countries. An interesting concept as more and more cyberdonors start visiting the site.

WebWatch

Net begins to diversify



On the Internet, the golden rule is 'Big is Better'. The top 40 Internet companies were valued at some $300 billion at the beginning of July 1999 with the top three – AOL, Yahoo!, and AtHome – accounting for more than half of that. Reason: with their enticing portals, these companies were attracting a large chunk of online traffic. Not any more. A growing number of cyber analysts predict that a trend towards greater fragmentation of the Web audience is clearly emerging with the fastest growth to be found in sites that offer specific services or target particular demographic and interest groups. Does this mean that big portals will ultimately lose the fight against specialist Websites? Only time will tell.

Net trading

Internet-based stock trading is the in thing in the US and Europe — and it may be reaching Indian shores sooner than expected. According to a news report, the Stock Holding Corporation of India, recently, successfully tested an electronic kiosk which can be accessed by using a smart card reader allowing a user to buy and sell shares sitting at home. The stockmarket player will have to open a cash account with a bank which has an understanding with SHCIL and also a depository account with the corporation.

More of Zee

The Zee TV supremo Subhash Chandra, as we all know, prefers anonymity. At a function held recently to flag off the first of Zee's regional channels, Chandra paid a fleeting visit disappointing many a scribe. Leave he did in a hurry but not before making a customary speech on his plans to get a pie of the regional channel marketshare. "Since we operate from here (Maharashtra), it was but natural that we launch a 24-hour Marathi channel which would cover news and events as well as entertainment programmes," he says.

In the coming months, Chandra expects to launch the Bengali, Punjabi, Malayalam and Telegu channels, not necessarily in that order. "There is scope for a complete bouquet of channels," he says, without ruling out the possibility that these would be pay channels. "The option is we could work out a package of channels (to make them paid ones)," says he. Going by the popularity of his channels both in India and overseas, he will surely succeed in making the cable operators toe his line.

The Zee counter has already caught the fancy of stockmarket operators and investors. From Rs500-odd that the scrip was quoting barely nine months ago, it is now ruling at Rs2,500 and several marketmen are of the view that there is ample room for appreciation in stock value. A substantial part of the earnings multiple (73 times) is because the bourses have begun giving greater weightage to brand values. The Zee brand, company officials say, is worth at least $2 billion.

PALASHRANJAN BHAUMICK

Chandra is wooing Maharashtrians

Our Cover feature of the issue dated 7 September 1998, had stated that Zee Telefilms would add several more channels. For starters, it has flagged off its regional channels quest with Zee Marathi

Rolta on a roll

Rolta India's latest move should provide a big boost to its image. RIL has entered into a strategic tie-up with the $1 billion Parametric Technology Corporation (PTC). The overseas company is a leader in CAD/CAM/CAE supply of software tools used in designing, manufacturing components and body styling. Known as the Pro/Engineer family of software tools, these are used by the automotive, heavy engineering, aerospace and consumer electronics segments of industry.

In India, according to company officials, four of the six two-wheeler manufacturers use these software tools to automate and reduce costs as well as improve quality and productivity. "The partnership would enable our customers to maximise their returns on investments. Our infrastructure and understanding of the mechanical design automation market will open up new channels and markets for Parametric's products," says K.K. Singh, chairman and managing director of Rolta India.

For PTC, the tie-up provides a foothold in India. PTC already has a research facility at Pune and has donated software worth Rs11 crore to the Indian Institute of Technology in Delhi, Chennai, Kharagpur and Guwahati. Says Chris Reisig, senior vice-president of the Asia Pacific region: "India is the key focus market for us in the south Pacific rim. Going forward, our direct presence coupled with complementary efforts, resources and infrastructure of Rolta, would enable many more organisations to experience the benefits of deploying world class product development solutions from us that provide them with a sustainable competitive advantage."

According to Singh, revenues from sale of such software tools could tot up to Rs60 crore annually. He says that the CAD/CAM/CAE software is no longer a requirement of only large organisations, but a part of the fundamental IT infrastructure of any organisation. Rolta is said to be a leading CAD/CAM/GIS solutions provider and a fairly large software exporter. For the six months to June 1999, the company recorded a turnover of Rs82.14 crore and netted a profit of Rs29.21 crore. The annualised earning works out to Rs10.6. The market price discounts the earnings less than 15 times.

• ROY PINTO

ROLTA

We had, in our 10 August 1998, issue, reported that RIL had become a total solutions provider. Its tie-up with PTC is one more feather in its cap

Way to go

We had, in our issue of 28 June 1999, reported that container handling at the Jawaharlal Nehru Port Trust in Nhava Sheva, Maharashtra, had witnessed significant improvement. But recent global figures reveal that the port still lags far behind the biggies, and indeed is only a step ahead of its ancient neighbour, the Bombay Port Trust

JNPT is a lot better than it used to be, but it has a long way to go before reaching the ranks of the biggest and best. The good news is that it has done well in terms of container and vessel turnaround, but on the distaff side, this has not yet translated into a serious shift in international traffic to the port, which is just outside Mumbai.

In a July ranking of the global top 100 container ports, the industry journal *Cargo Systems* reports that Nhava Sheva (JNPT), with 504,149 TEU (equivalent 20-foot container units) had reached the 73rd position for the year 1998, one ahead of its nearest physical neighbour, Mumbai (BPT), which clocked a few less, 503,310. A major difference between these ports is that JNPT recorded 19.1 per cent over its previous year's total, while BPT did 16.3 per cent less. According to information gathered by the magazine, BPT will show even less movement this year, only 480,000 TEU. JNPT has apparently not given them a target for its operations.

Overall, container handling has grown 8.3 per cent, to over 153 million TEUs. No other Indian port figures in the 100 rankers, but in the region (aside from Singapore), we have Dubai and Colombo in the first 25 (11 and 23, to be precise). Another four lead India, Bangkok (39), Jeddah (47), Khorfakkan (60) and Penang (72).

Apparently, JNPT has succeeded in cannibalising container movement largely from BPT,

PALASH

There is considerable scope for improvement at JNPT

and if the difference (nearly 100,000 TEUs) is deducted from JNPT's figures, the net growth for JNPT too will turn negative, down 4 per cent to just 406,169 TEUs. Clearly, the port will have to work harder now to market its services internationally, having made significant progress in ironing out its differences with labour and gaining the trust of its operational partners, cargo owners and their handling agents. JNPT may have to work harder with the press too, since this magazine, at least, has been declared *persona non grata* by its public relations division, for having dared to publish the news of its upturn without taking prior permission.

• VIKRAM CRISHNA

Going global

We had reported that Kopran Ltd had restructured its penicillin business by hiving it off into a new company (Business India, *25 January 1999*). *Now the Bombay High Court approval for the tie-up has finally come through*

With the industry shaping up to tackle the post-patent scenario, there has been a flurry of activity with pharmaceutical companies rushing to tie-up with suitable foreign partners. One such was Kopran Ltd, which restructured its money-spinner penicillin business by hiving it off to a new company, Kopran Drugs Ltd, under a strategic alliance with the UK-based Synpac Pharmaceuticals. With the Bombay High Court's approval finally coming through, Synpac will now be a joint venture partner in Kopran Drugs. The 50:50 JV will be between Synpac and Parijat Enterprises, the holding company of Kopran. Under the scheme of things, existing shareholders of Kopran will get one share of Kopran Drugs free for every two shares held. The new company will have an equity of Rs7.5 crore and is yet to be listed on the stock exchange. It is proposed to issue an additional equity equivalent to $1 million (or Rs4.3 crore) to Synpac.

The JV will benefit both parties. Synpac manufactures more than 4,000 MMU of penicillin and has recently started manufacturing 6-APA through a new technology, thereby reducing the cost of semi-synthetic penicillins. Kopran Drugs will provide the enzyme for this new plant. Synpac's contribution will also extend to marketing penicillin-based bulk drugs in the Far East and North American markets. Synpac's international set-up includes its associates Synpac Kingdom Pharmaceuticals, Taiwan, which manufactures finished dosage forms and a subsidiary in Carolina, US, which undertakes R&D in biotechnology. "This JV will create a synergy and provide Kopran Drugs with a continuous supply of penicillin/6-APA at competitive prices and thus have a major global presence," says Surendra Somani, managing director.

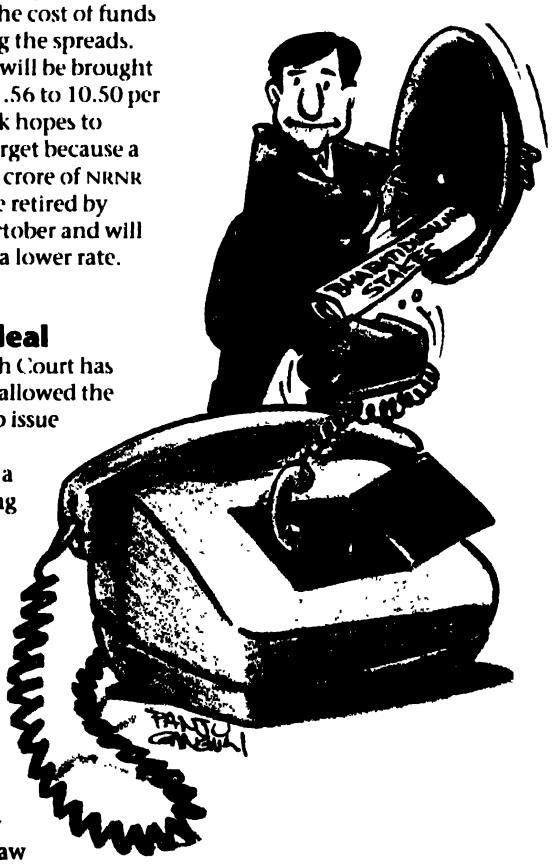
Federal Bank plans AMC



Federal Bank is toying with the idea of launching an asset management company, recognising the potential of portfolio management services and mutual funds. According to sources, since the existing subsidiary of the bank called Fedbank Financial Services could not enter the mutual fund industry, a separate company would have to be floated for the purpose. The source added that the bank had to fine tune the proposal before presenting it to the Board for its approval. The company plans to offer portfolio management services to the ordinary investor. The bank had made a net profit of Rs4.18 crore in the first quarter of the current year, down from Rs21.71 crore during the same period of the previous year. However, the bank is poised for growth, the setback in profit notwithstanding. The bank's strategy would lay emphasis on reducing the cost of funds and increasing the spreads. Cost of funds will be brought down from 11.56 to 10.50 per cent. The bank hopes to achieve the target because a total of Rs700 crore of NRNR deposit will be retired by September-October and will be repriced at a lower rate.

HC okays telecom deal

The Delhi High Court has conditionally allowed the government to issue new telecom licenses under a revenue sharing arrangement to the existing operators. At the same time the Court made it clear that the Election Commission could pass any orders that it saw fit. The Court was hearing a public interest litigation filed by the Delhi Science Forum, challenging the government's decision to allow existing operators to migrate to revenue sharing. In its interim order, the court said that the new licenses would be issued only to those basic and cellular operators who agree to give an undertaking that the migration from fixed licence payments to revenue sharing would be subject to approval by the next council of ministers and new Parliament.

Bharti Telecom to hive off phone making unit

Bharti Telecom is planning to spin off its telephone manufacturing business into a new company, Bharti Teletech, floated recently. Bharti Telecom has two factories manufacturing phones located at Ludhiana and Gurgaon. Phonemaker Goa Telecom, a wholly-owned subsidiary of Bharti Telecom, will also be merged into Bharti Teletech. The decision to hive off its phone-making business is part of a restructuring process started last year to separate its services and manufacturing activities. According to sources, the stakes Bharti Telecom holds in Bharti Duraline, which makes cable ducts, and Siemens Telecom, a joint venture with Siemens India, will be transferred to Bharti Teletech as a part of the process. The Bharti group controls two mobile phone networks in Delhi and Himachal Pradesh and a fixed-line phone licence in Madhya Pradesh. The group's investments in these networks are routed through Bharti Telecom.

Sierra Atlantic to up stake in Optima

US-based Sierra Atlantic Inc is hiking its stake in Hyderabad-based Sierra Optima to 25 per cent from current 4.50 per cent. It is learnt that the stake is being hiked through an internal exchange of holdings between the Indian and foreign promoters. The Indian promoters are transferring around 20 per cent holdings in the company at a price of Rs377 per share compared with the current market price of Rs371 on the Bombay Stock Exchange. With the transfer of holdings, the Indian promoters' stake would come down to 7-8 per cent. Subsequent to transfer, the promoters' holdings in the company would remain unchanged at around 40 per cent while 60 per cent would be held by the public. Sierra Optima has received approvals from the FIPB, Sebi and the RBI. According to officials, the move is exempted from Sebi's takeover code as it is an internal adjustment and would not lead to any increase in equity capital. The stake is being hiked taking into account long-term relationships with the foreign collaborators who currently hold low stake in the company, but contribute a good amount of business, officials added.

Smart banking

Most people agree that plastic is a more sensible way to handle money, in the form of credit and debit cards. Of course, those that don't, like the Maharashtra government, think that cards are a means to extract more money from the people in the form of double taxation on sales. Be that as it may, the world is heading towards a smarter variation on the original plastic, namely, the smart card, which incorporates a microprocessor chip embedded in the plastic. Information can be stored on the chip in a much more secure and reliable fashion than on the magnetic strip implanted on an ordinary card. This enables users to use the cards as a much closer and more acceptable approximation of the traditional and familiar paper and metal cash form that money usually has taken. Of course, this calls for some fairly significant change in the way that regulatory and executive organisations, such as those belonging to the banking system, handle their affairs. Precisely how that will be done has now been formulated in India following a study conducted in the Indian Institute of Technology, Bombay (sorry, Maharashtra government, it hasn't yet changed its name in English, and it was always Mumbai in Hindi). On 20 August, 1999, the newly formulated standards for the use of smart cards in India were formally handed over to the Reserve Bank of India at a small and sober ceremony in IIT Bombay.

In this case the current subscription term will not be extended by two issues nor will they receive the free gift.
5. All other terms and conditions as those which apply for new subscribers will apply to existing subscribers who participate in this offer.

HURRY! OFFER FOR A LIMITED PERIOD ONLY

GIC to provide health insurance

The Union government granted an in-principle clearance for the setting up of a new GIC subsidiary which will manage specialised healthcare insurance business in the country. The official stamp of approval will be received once the new government is formed at the Centre and the Parliament is installed. GIC is also setting up another subsidiary for corp insurance, which is currently managed by the state government. GIC has corp cells in each of its subsidiaries to administer the scheme. The plan now is to spin this business off into a new company with independent functions. This would be the first time health insurance is being managed by a separate outfit. According to sources, gradually all the health insurance schemes would come under the purview of this subsidiary. However, though the new company will manage the business, the entire marketing will be undertaken through GIC's four existing subsidiaries.

Index rejig may hit India

Morgan Stanley Capital International Inc said it was increasing weightage for Taiwan and reincluding Malaysia in the MSCI Emerging Market Free, a move which could impact foreign portfolio investment into Indian markets. The change could affect the decisions of the fund managers who based their India investment on the MSCI-EMF, analysts say. According to them, it was difficult to assess whether and how India would be affected. MSCI has not put out a revised index as yet. India's weightage in MSCI-EMF was 8.5 per cent as on 30 July 1999. Korea was the highest with 15.8 per cent followed by Taiwan 11.1 per cent, South Africa and Mexico at 11 per cent each. The MSCI-EMF comprised of 25 emerging countries. With the reinclusion of Malyasia, the list would go up to 26 countries. It is safe to assume that India would lose its standing, as would many other countries in the region, opined one fund manager.

Nippon all charged up

The Chennai-based Nippon Industries Ltd, a leading manufacturer of electronic ignition systems, is bullish on the demand for the product in the current year, following the 10-12 per cent growth predicted for two-wheelers. The company plans to invest Rs4 crore this year to manufacture the new range of CDI and regulator/rectifier with surface-mounted devices as well as introduce the new digital technology-based ignition system. The company hopes to increase its market share from 32 per cent in 1998-99 to 35 per cent due to the addition of new customers like LML and introduction of products for new applications for existing customers.

BSE adds 12 more infotech stocks

In a reshuffle that will see 26 scrips replaced, the Bombay Stock Exchange announced that it is bringing 12 more infotech stocks into its carry forward list – the A group. The decision to revamp the A group was taken by the Index Committee of the exchange at a meeting held recently. The committee reviews the list every quarter. The size of the A group will not change and remain at 150 scrips. The reshuffle will add Rs41,000 crore or 13 per cent to the current market capitalisation of the group as per BSE estimates. The change in composition will take place with effect from Settlement No 26, beginning 14 September 1999. According to a BSE official, scrips for replacement have been selected on the basis of parameters which hinge on market capitalisation, liquidity, shareholding and management. The 26-scrip list includes 12 IT scrips while the rest are related to healthcare, oil and gas, media and the housing industry.

Voltas sets up territorial organisation

Through resources generated from the chemical plant and white goods undertakings, apart from the sale of investments in Merind Ltd, Voltas Ltd has significantly brought down its borrowings. The company's 1998-99 annual report shows that despite setting aside these sums, there was an extraordinary income of Rs26 crore. Voltas's debt:equity ratio has thus improved from 2.26:1 in March 1998 to 1.23:1 in 1999. The company has put a new territorial organisation in place which, while empowering sales, will ensure more efficient use of cash and strict commercial discipline. The company is also making efforts to bring all its offices to one location to reduce costs and improve operating efficiencies. Voltas, however, clearly stated that the extraordinary income will not be available in a substantial measure during the current financial year. The airconditioning business will also have to contend with low margins in spite of higher volumes, especially in 'unitary' products, Voltas said. The company's engineering projects and projects division was affected by recession in its user industries, automobile and automobile ancillary segments.

Pfizer rebrands Becosules

Pfizer Ltd is going in for a brand extension of its most significant product, the vitamin formulation Becosules. The new product will be free from price control and eventually replace Becosules, the price of which was slashed recently. According to sources in the company, Pfizer is coming out with Becosules Plus, which will be in the market soon. The new product contains the coenzyme vitamin H, also known as Biotin. The new product will be priced just above Rs11 for a strip of ten, marginally below the price of Becosules when it was brought under price control and suffered a onsequent price cut to Rs7.90. Becosules, at one time the largest pharma brand in the country with sales of Rs70 crore, was brought under price control earlier this year. The clamping of control was a major blow to the company, which issued what amounted to profit warnings at its AGM recently. The old Becosules is likely to go off chemists' shelves as soon as Pfizer stops producing it on the grounds that the price allowed by the government is too low.

Indian steel cos upstage competition in Europe

Taking advantage of the sharp upturn in international prices of hot rolled coils, Indian steel producers have begun pushing exports in a big way. The move can considerably reduce the two million tonne surplus in the domestic market. The Indian makers command prices higher than those of their West European counterparts, at $260 per tonne FOB. Ispat Industries managed to receive $270 a tonne on FOB for its September shipments within a year of commencing production while Essar Steel has contracted $305 a tonne on C&F basis to the United States. The current upswing in HRC's export price will help new mills to meet some of their commitments to the Export Promotion Capital Goods Scheme. Currently, the average export price of HRC is $260 a tonne. It was $203 in January 1999.

SBI plans IT network

The State Bank of India is planning to network all its 2,500 computerised branches, all its ATMs and make a foray into Internet banking by March 2000. SBI has invited presentations from 10-12 international and domestic consultants to advise it on an information technology blueprint to lead it into the new millennium. The mandate for the consultants will include suggesting technological improvements to be made to the existing system and the new technologies to be adopted to equip the bank to compete in the new millennium. The bank, which has world's largest branch network, feels technology will be the biggest challenge in the new millennium, with technical progress determining which banks will lead in the future. The bank is also planning to broadbase its shareholding in its major subsidiaries starting with SBI Capital Markets. On the issue of SBI Home Finance, SBI would try its 'level best' to see what can be done. The options being considered include recapitalisation, takeover of assets and liabilities and winding up the company or taking over its assets and liabilities and buying out the remaining shareholders.

Hewitt plans thrust

Noble & Hewitt and Hewitt Associates, a human resources firm and a global management consulting firm respectively, said that they would further integrate by creating a wholly-owned Hewitt operation in India. The integration process of both companies will become effective after obtaining necessary approvals from the government, according to a release issued by the company. Noble & Hewitt joined forces four years ago. As the business needs of clients in India and around the world grow, we believe it is important to further invest in and further build up on our services, technology and global network capabilities, said a Hewitt Associate executive.

CESC wants more loan

The RPG-managed power utility, CESC Ltd, will make fresh borrowings to cover the additional cost for its 500 MW Budge Budge venture. The venture's project cost is currently under dispute. The company has obtained term loan sanctions of over Rs200 crore from FIs with ICICI and IIC I sanctioning Rs120 crore and Rs40 crore respectively. Besides, the former has sanctioned a Rs45 crore loan for routine capital expenditure requirements. The company is planning to take shareholders' approval for hypothecation of properties at its annual general meeting in September. The West Bengal government has imposed a Rs1,853 crore cost cap on the project, which is around Rs400 crore less than the cost figure arrived by CESC. The dispute was referred by the company to the Central Electricity Authority for arbitration and the proceedings are on.

SMILE. YOU'RE ON THE PHONE.

Digital maps

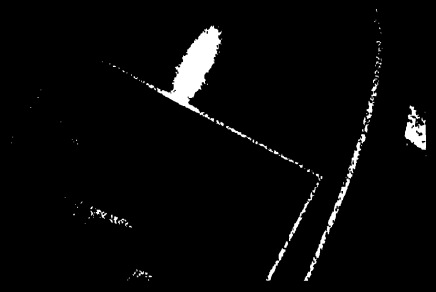
If the people at Nokia have their way, you'll never miss out the latest news stories because you weren't near the TV or a newspaper. Neither will you have to suffer the frustration of getting lost in a big city. Simply because, in the not too distant future, you'll be able to download any and every bit of accessible information into a Nokia mobile phone. Including the daily on-line newspaper, digital road maps and city information guides.

It all has to do with a new and innovative telecommunication technology that's set to sweep the world and change the way you use your mobile phone.

Called 3rd Generation technology, it means that in future, Nokia mobile handsets will be using transmission speeds hundreds of times faster than today's mobile networks.

So not only will mobile phones be able to transmit voices, they'll be able to transmit images of the people you're talking to and access literally anything you want off the Internet.

Personalised news & video calls



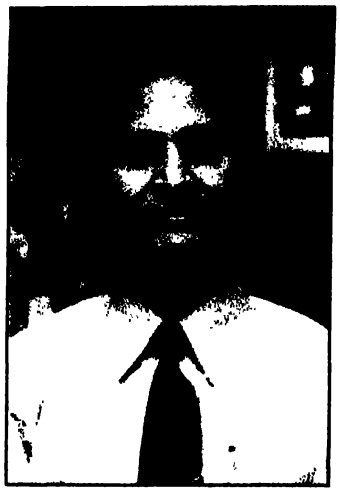
NOKIA

Connecting People

Already Nokia has created the world's first integrated communication device (the Nokia 9000) and its successor (the Nokia 9110), the world's first cellular data card and the world's first software based data solution for GSM phones called the Nokia Data Suite.

Train schedules

Mobile multimedia



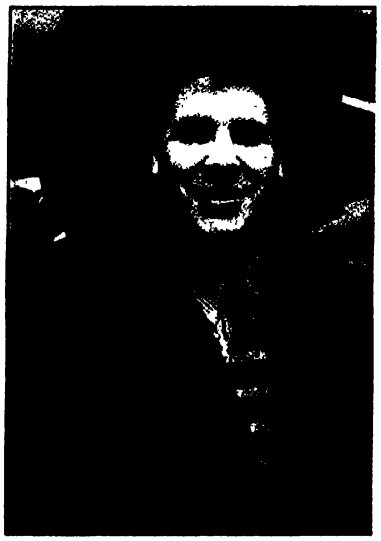
For example, not only will the mobile phone of tomorrow be able to instantly retrieve information like flight schedules, download e-mails, video clips and daily newspapers, you'll also be able to do it wherever and whenever you want.

It's all part of a new world where Nokia is the leader. A world where wires and phone lines no longer determine where people work or spend their leisure time. A new realm of truly personalised communications and mobile multimedia services.

It's all just a sneak preview of a future that Nokia is bringing into reality. You might call it amazing. At Nokia we call it human technology.

NOKIA

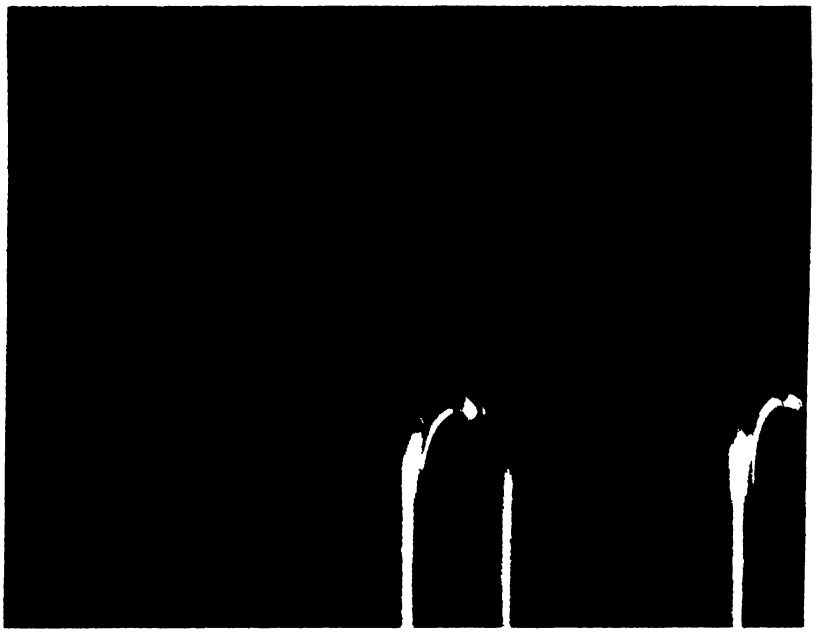
Connecting People



The vice-chancellor of the Indira Gandhi National Open University (Ignou) announced its entry into an alliance with KarRox Technologies Ltd, a Mumbai-based IT training organisation, for dissemination of its three-year bachelor's degree programme in information technology. "The course includes online certification at KarRox's centre," professor Abdul Waheed Khan clarified, "so that students will get the benefit of distance learning for the full duration of the course." Students in Maharashtra will also be able to complete Ignou's BCA and MCA programmes at KarRox with the inception of this alliance. Ignou is also actively working towards augmenting its other distance learning programmes to take advantage of the rigorous environment that the online methodology promises. Khan has had considerable experience in distance learning in other countries, including Bangladesh and Nepal. He initiated All India Radio's 'Farm School on the Air' programme in 1975. This is his second stint at Ignou, having spent six years from 1986 as director, communications. ♦

Brintons Ltd, UK, is a £112-million (Rs700 crore) global major in machine-woven carpets. Over the last 14 months it has been busy setting up its first manufacturing base in Asia, which is an EOU, near Pune in India. John Pilling, group manufacturing director, flew down to Pune to see the progress of the work at the company's 25-acre production site located at Pirangut, on the outskirts of Pune. "The Brintons Group worldwide has been growing at the rate of 5-7 per cent, despite the fact that the market for its products is static for the last couple of years, especially in Europe and US," reveals Pilling. "Last year we acquired an American carpet manufacturing company and this year we have set up operations in India, which at full production capacity should add Rs80 crore (£12 million) to the group turnover," he adds. Pilling is excited about the Indian market too, where Brintons Ltd has already been selling carpets to the Taj, Oberoi and Leela Group of Hotels, even before setting up their manufacturing plant in Pune. "We now hope to expand our customer base in India and become market leaders, besides exporting from here to countries like China, Australia, UK and US," sums up Pilling. ♦

The US-based Megasoft Consultants Inc has launched its India operations recently in Chennai. "The India facility will be both an R&D centre and an offshore development centre," says Ravi Reddy, president and CEO of Megasoft. "This centre will be involved in cutting-edge technologies such as Internet-based applications, e-solutions and wireless messaging systems." Another reason for setting up India operations was to provide opportunities for Megasoft employees who want to return to India. Reddy, who had set up Megasoft in 1994, feels that this was the right time for India operations. "If I had come to India earlier, I would have been lured into picking up talent in mainframe technology and legacy systems, which were a rage at that time. I would have been stuck up with that baggage. Now I have the advantage of hiring top-notch professionals with skills in frontier technologies to work for us," says Reddy, who hails from Nellore in Andhra Pradesh and has graduated from REC Trichy. Reddy did his masters from John Hopkins University. Regarding the company's future plans, Reddy says, "We have all along been strong in client-server technologies. Now, we are going in a big way into Internet-related technologies. Soon, there will be a shift in our revenue source." ♦



Two Irish companies are tying up for parallel development centres in Pune. Padhg Crowley, the Dublin-based operations director of Pace Software, was in Pune last fortnight to lay the ground for his company's long-term strategic relationships with Iona Technologies plc, the first Irish company to achieve a billion-dollar valuation on Nasdaq, and e-commerce specialist Trintech, with 1988 sales of about $20 million. "Our target is the mid-size European software companies with high growth paths but resource constraints," Crowley explains. Pace offers access to critical resources, a reduction in product development cycle time and, consequently, sustainable cost savings to such companies in the fields of e-commerce, communications and systems software. ♦

Intelligoods

The launch of this collaborative consultancy will boost a critical input of an organisation's distribution systems

PALASHRANJAN BHAUMICK

Guzder, Ashish Basu (IQI), and R.S. Pawar (NIIT) come together

Three very different companies have just announced their decision to work together in order to give commercial organisations the best of breed information and implementation of logistics solutions. AFL Ltd, IQI Ltd, and NIIT will pool their talent to create uniquely complete solutions for commercial organisations. Logistics, a fairly new business, grew from the discovery by the Toyota Motor Co in Japan that significant cost-cutting can be achieved by simply reducing the quantum of goods locked into the total distribution system. Initially implemented as just-in-time (JIT) deliveries by vendors to manufacturers, the activity has been enhanced considerably in many industries to include complete outsourcing of distribution and tracking (often over the Web).

Most people will be very familiar with UPS and Federal Express, which deliver small packages around the world. Actually, these companies are equally comfortable with a related activity for commercial organisations, managing the flow of goods in process as well as before and after manufacturing, in fact, the entire supply chain. AFL, which has a long-standing relationship in India with DHL, a major global player, has spotted a rich opportunity to assist companies to build complete solutions. IQI, promoted by NIIT to implement quality in goods and processes for client organisations, has built a strong reputation for its ability to analyse distribution processes (among others) and identify ways and means of continuously improving them. NIIT is one of India's largest software companies, and has optimised its software development process with internally developed tools. Put together, the three hope to be able to afford customers a very intimate approach to their problems.

According to figures on the rural market gathered by managing director Cyrus Guzder of AFL, India is exhibiting active consumer behaviour in very non-traditional regions, and these in fact represent the strongest growth opportunities for FMCG (fast-moving consumer goods) and consumer durable vendors. These are the previously considered rural areas, beyond the metros and mini-metros, which are today filling up with new consuming classes who are exposed to the range of goods and services enjoyed by residents of the cities by the rapid spread of television and cable channels.

Satellite towns of industrial clusters and the *mandi*s, together with other towns of over 100,000 people account for as much as 75 per cent of the Indian market. This fact, taken together with the statistic that the supply chain represents over 80 per cent of the cost structure in a typical manufacturing organisation (spread between purchases — 50–55 per cent; manufacturing — 15–20 per cent; physical distribution — 10 per cent; and sales — 5 per cent), means there's a lot of scope for Indian companies to use advanced cost-reduction exercises in their approach to this rapidly expanding and valuable market.

"The global standard for supply chain costs is under 1 per cent of GDP, but in India this figure is far higher," asserts Guzder. He bemoans the fact that 14 per cent of manufactured goods and 30 per cent of farm produce is lost in the chain, not just a social disaster but a real economic problem for a country like ours. Previous cases of supply chain management solutions include a cycle time reduction for Hewlett-Packard computers and peripherals (between the US and the Indian customer) from 37 to just 10 days, temperature-controlled transport solutions for McDonald's, and order-to-delivery cycle reduction from three weeks to three days for the Godrej (Godrej & Boyce Mfg Co Ltd) lock division.

With this background, Supply Chain Consultancy Services, the branded collaborative effort between AFL, NIIT, and IQI, will bring together competencies in the management of physical distribution (AFL), information technology (NIIT), and process improvement and integration (IQI) to assist Indian companies transform the supply chain into a value chain.

TELESHOPPING

Beyond TV

Teleshopping was a unique product when it started in March 1995. The two players who entered the market around that time, Tele Shopping Network (TSN), a part of the Unilazer group, and Asian Sky Shop, a part of the Essel group, had a difficult task on hand — to influence decision-making and build a market without allowing customers to touch and feel the products they were buying. But the efforts of both have borne fruit. In the last four years both companies have been able to make a dent in this market. According to Gita Jaisinghani, manager (marketing services), Asian Sky Shop, her company has successfully marketed over 250 products and established a customer base of over half a million people. Their range includes home appliances, fitness equipment, toys and games, healthcare equipment, *et al.* TSN is close behind with a customer base of 300,000. There are other factors also that indicate teleshopping is a success has been able to influence decisions. "That we have succeeded in influencing decision-making is shown by the fact that the maximum retail price (MRP) of goods sold on the show are in the range of Rs1,200–1,400. This is equivalent to the American standard of $29.99 on teleshopping shows," says Rajan Kaicker, managing director of TSN.

The primary medium of communication for teleshopping is the television. TSN is aired for approximately five hours daily over 12 channels, terrestrial, cable, and satellite. Asian Sky Shop airs its infomercials on Zee TV throughout the day. Now to build up the credibility of what you see on television, both players are refocusing their business. A customer can now order a product either by phone, mail order, or off the Internet. Both companies have also expanded into retail outlets "so we can optimise the brand equity we have built for our products over a period of time", says Jaisinghani. So now some of the bestsellers of teleshopping, such as the *roti* kings and snackmakers, will also be available at the retail outlets and on the Internet.

Distribution is an important ingredient for success. TSN has already established a varied distribution system in Delhi and seven other cities in Tamil Nadu, Andhra Pradesh, Karnataka, Maharashtra, and Gujarat. It has 94 franchisees and sub-franchisees. "We are the first people to provide a range of products that are heterogeneous, with a heterogeneous distribution system," says TSN's Kaicker. Further, Tele Shopping Network is changing its name to Total Shopping Network. The retail business, started in January this year, has already set the tills ringing. Until July the new retail business accounted for 20 per cent of TSN's sales (Rs30 crore for this year). The TSN supermarket shop-in-shop is a replica of the TSN supermarket on the show. The company has already established 18 outlets in Mumbai in places like Foodlands, Akbarally's, and Apna Bazaar, to mention a few. Kaicker wants 26 outlets in Mumbai by the end of the year, after which the concept will be taken to Bangalore, Chennai, and Delhi. His overall target is 300 outlets nationwide by the year-end. According to Kaicker, "The investment is not in terms of bricks and mortar as the shops are already there; it is in very small terms just to establish our presence in the store."

E-commerce is definitely identified as a high-growth business. TSN has already soft launched itself on the Internet at www.tsnshop.com, a site positioned as a shopping portal. The advantage these companies have *vis-à-vis* other companies entering the e-commerce business is a head start in terms of product range and distribution set-up. Both Asian Sky Shop and TSN are tapping the global market. TSN has already established a presence in South Asia with direct response TV in Sri Lanka, to be followed by Nepal and Bangladesh. By September this year the company hopes to have a presence in Dubai as well. The first Asian Sky Shop outlet in Bangladesh is slated to open 'soon'. Outlets in Nepal and Bangladesh are to follow.

UMESH GOSWAMI

Teleshopping provides a heterogeneous range of products, says Kaicker

Further, to position itself as the first integrated, marketing network, TSN is also taking up the marketing of branded goods such as Anchor sewing kits, Kotak Mahindra deposit schemes, gypsum boards from Gypsum India, Eureka Forbes' vacuum cleaners, and Cox & Kings' tours, to mention a few. "Over a period of time as the teleshopping channels and their products gain credibility in the customer's minds, the market looks poised for a quantum jump in growth," says Asian Sky Shop's Jaisinghani.

– BHAKTI CHUGANI

DATA WAREHOUSING

The new Big Thing

Indian industry is going through an IT revolution. As more and more business processes get computerised, a huge volume of data is generated. This raw data on its own is of little use. This is where data warehousing comes in. Put simply, a data warehouse is nothing but a repository of processed data collected or captured from disparate sources in an enterprise.

To give an example, data relating to sales is generated at several places in an organisation — often in far-flung, departmentally isolated systems of an enterprise. The concept of sales itself would mean different things to different people. For example, the product manager's idea of sales would be different from that of the finance manager.

The raw data is captured, cleansed, and stored in a data warehouse so that it can meet the decision-makers needs. The data warehouse, which is insulated from the transactional or operational data of an organisation, is designed specifically for the use of decision-makers. Once the data is stored in a warehouse, decision support system (DSS) tools are used for querying and reporting, analysis and interpretation, and mining.

Software giant TCS is already a major player in this new field. Two new players, Chennai-based Open Business Solutions India (P) Ltd and Hyderabad-based Daphne, have launched indigenously developed DSS products. TCS, on the other hand, is not into product development. "We have been concentrating on consultancy. We have a fairly large, experienced team working on setting up data warehouses. The success of a DSS depends on the design of the data warehouse and not on the tools that are available in the market. Therefore, our focus has been on designing and setting up data warehouses," says TCS vice-president K. Padmanabhan.

OBSI recently released IntelliMine Version 3.0, a decision support tool for data warehousing. "This tool offers a wide range of features which are tailor-made for the Indian market, particularly for FMCG, retail, automotive, and banks and FIs," says Sridhar Ramaswamy, director (India operations) of Systech Solutions Inc, of which OBSI is a subsidiary. Daphne offers the Daphne Datamart Suit, which it says is an integrated set of tools that "automates the process of designing, populating, and managing datamarts". It has another product called the Daphne ROLAP suite, which is a set of tools for reporting, analysis, and metric computation.

T S RAMESH

A good DSS could make a big difference in the competitive services sector, says Ramaswamy

Software companies are confident that Indian companies, which are learning to survive and grow in the new liberalised and highly competitive environment, will soon realise the importance of data warehousing and DSS. "DSS has become critical for all businesses to stay competitive," says S. Raghavan of the department of computer science, IIT Chennai. "A data warehouse empowers decision-makers with business information on their desktop, resulting in faster, better decision-making and a more flexible and responsive organisation," according to a Daphne white paper on data warehousing.

A data warehouse can be can be used for several purposes, depending on the nature of the business and its objectives. "At a macro level it can used for understanding business trends and identifying core competencies; at a micro level for making decisions about product mix, analysing profitability, estimating operational efficiencies, etc," says Padmanabhan.

Data warehousing is more relevant for companies that have to know the mind of the consumer. "The DSS can be effectively used by companies that are in the highly-competitive services sector, where an insight into the consumer's mind alone can give a competitive edge. A good DSS would help determine individual consumer preferences, forecasting consumer behaviour and, through slice-and-dice analysis, uncovering hidden trends and new business opportunities," says Ramaswamy.

For a manufacturing organisation, a data warehouse would help rationalise inventory and supply, weed out poorly performing products, and manage all segments of the supply chain, including procurement, manufacturing, distribution, and logistics.

Data warehousing is a pretty expensive proposition. It can cost anywhere from Rs10 lakh for a SME to over a crore rupees for a large corporate, depending on the volume and complexity of data. Put to proper use, a company can get back its investment in a short time. The quantifiable returns would be in the areas of cost-cutting and enhanced productivity.

CRICKET TELECAST RIGHTS

Zero sum game

The Board of Control for Cricket in India is sitting on a honeypot. And a lot of bees are swarming around to grab the five-year international cricket telecast rights on offer. In 1994, when BCCI broke the Doordarshan stranglehold on cricket telecasting in India with current ICC supremo Jagmohan Dalmiya at the vanguard, Trans World International and Communication Service International were bidding for the right to represent the board as a distributor. Carping critics reckon that TWI's bid was accepted because of its frontman Mark Mascarenhas's alleged proximity to Dalmiya.

Raj Singh Dungarpur, president of BCCI (his three-year term expires next month and he will be replaced by Tamil Nadu Cricket Association president A.C. Muthiah, vice-chairman of the Spic group), says: "The TWI bid was for $2.7 million per year for five years (i.e. $13.5 million all told at $100,000 per day for the 27 televised international playing days in a domestic season). Of this, a 30 per cent commission went to TWI. This arrangement lapsed on 30 June 1999, and the board is keen on exploring fresh bids for the coming five years. The new bid will be considerably higher than last time." Incidentally, this $13.5 million less 30 per cent went a long way towards rehabilitating the financially debilitated cricket board those days. It is expected that Rs300 crore will definitely be the cut-off point.

While the media continue to speculate on the bids, Dungarpur is categoric: "We will have to evaluate the veracity of each bid in great detail. My contention is that channels should bid, as we are not very keen on middlemen or agents. But that does not mean we have frozen all options in this regard. Doordarshan is a very important player which cannot be ignored, for it has the largest viewership on offer."

Business India has ascertained that, with BCCI asking for a broadcast window offering a minimum 15 million households, alliances and alignments may be just what the doctor ordered. Insiders at Sony, one of the bidders (Rs160–225 crore) claim that they will pull out at the last minute. Others feel that Sony Entertainment Television, which was initially bidding to secure the rights on its own, may be looking at a strategic alliance with rivals Zee Television. Zee TV's individual bid may be Rs250 crore and this will help it kickstart its new sports channel. If at all a joint bid guaranteeing viewership in excess of 15 million comes through, it will not be less than Rs350 crore. ESPN–Star Sports (current bid Rs150–260 crore), beneficiaries last time round, are reckoned to be out of the loop this time.

SET executive president Rajesh Pant claims, "The time has come to turn cricket into the *numero uno* home entertainment segment, just as football arouses passion in Europe and South America. While we are making a

Dungarpur says the winning bid this time will be considerably higher than the last

favourable bid for the rights, we are weighing and measuring our options almost daily. We are respectful of the state broadcaster Doordarshan and we don't want to get into a firefight with anybody. After considerable thought we clinched the Sri Lankan and Singapore tourneys. But our strategy for these two tournaments is very clear — we are looking at it as a market penetration device. Remember, we don't have much of a presence down south, so this will enable southern households to tune into Sony and, hopefully, get hooked onto our programmes. The India matches in the World Cup had TRPs ranging between 17 and 22, and this proves the magical quality of the sport." While Pant's action plan doesn't reveal the alliance with Zee, there is another more potent alignment possible.

Prasar Bharati Corporation chief executive Rajeev Ratna Shah is considered by many as the floater in the pack for he is very keen to sew up the deal. Raj Singh's comments to *Business India* also revealed that DD might be the favoured party. Nimbus Communication Ltd, which according to many has made the single largest composite bid of Rs500 crore for the multimedia rights incorporating television (satellite and terrestrial), radio, Internet, and merchandising, appears on paper to be the leader at this stage. But CEO Harish Thawani says that trends over the last fortnight don't exactly inspire confidence. "BCCI is a house divided on this subject. I don't think the august body is either transparent or progressive. I've already confirmed to it in writing that Nimbus has a JV with one of the world's best sports production houses. Moreover, I can state that I have a 54 per cent stake in a broadcaster. Logically my bid cannot be struck down, but then who knows?"

Thawani is reported to have met R.R. Shah and the two could have come to an agreement whereby Nimbus is expected to pull out in favour of the Prasar Bharati bid, which will then be underwritten by Nimbus and Nimbus Creative Corporation will take up the marketing and production (including filming) aspects for Prasar Bharati. Essentially the same role Nimbus played during the recent World Cup, where it covered all the components barring the filming *per se*.

Nimbus's bid of Rs500 crore is in place and if BCCI accepts it, the structure will be as follows:

- Rs25 crore will have to be paid as the signing amount;
- Rs50 crore before the start of each international season as bank guarantee; and
- another Rs25 crore before the culmination of each playing season.

This effectively means that almost Rs100 crore will have to be paid every year to BCCI. Against this BCCI will

Presenting 100 exciting reasons to go for superior quality

EPSON
THE POWER TO CREATE

EPSON 'Rewards for Quality' CONTEST

15th July '99 to 10th Sept. '99

A brand new Santro is just one of them.

Buy the world's best personal inkjet printer, the EPSON STYLUS COLOR 440 and the many advantages of EPSON's superior technology are yours:

- ❒ MicroPiezo Technology for photoquality printing
- ❒ 720 X 720 dpi resolution ❒ QuickDry inks for smudge free printing
- ❒ Low cartridge prices at Rs.620* for black and Rs.980* for colour
- ❒ Upto 3300# pages on a single black cartridge.

Now, with the Epson 'Rewards for Quality' Contest, you could win a brand new Santro or other fabulous prizes! Any way you look at it, you stand to win with Epson.

100 Fabulous Prizes to be won!

- **1st Prize 1 No - Santro Car**
- **2nd Prize 2 Nos - Family Holiday Package for 4 (Kathmandu or Goa)**
- **3rd Prize 3 Nos - IFB Microwave or Personal Photocopier**
- **4th Prize 4 Nos - Philips VCD Player or Modi Xerox Fax Machine**
- **5th Prize 10 Nos - Sony Walkman or Panasonic Cordless Phone**
- **6th Prize 15 Nos - Ray Ban Sunglasses or Sharp Digital Diary**
- **7th Prize 25 Nos - Parker Pens**
- **8th Prize 40 Nos - Music CDs**

Free extra black cartridge* worth Rs.620* with every purchase
*Inside the Printer Carton For a limited period only

Cut here

Entry Form

Name :.....
Designation :.....
Company Name :.....
Address :.....
.....
.....
City:.....
Pin :.....
Phone :.....E-mail .....

To enter the Epson 'Rewards for Quality' Contest, read the terms and conditions carefully and fill in the blanks in the following sentences:

1. The Epson Stylus Color inkjet printers can print upto . . dpi
2. It prints upto . . .... pages on a single black cartridge
3. Epson Stylus Color.. .. . . . is the world's best personal inkjet printer
4. The Epson Stylus Color 440 costs only Rs. . .. .
5. Black and Colour cartridges for this printer costs only Rs and Rs ... . respectively.

Note: Fill in the blanks with the serial No. of the correct answer from the set of answers given below:

1. 3300# 2. Rs.620/-* & Rs.980/-* 3. Rs.7495/-* 4. 1440 dpi 5. 440

Complete the entry form and send it to. Epson 'Rewards for Quality' Contest, P.O.Box 5415, GPO, Bangalore 560 001.

*Local taxes and levies extra **Please allow 5 weeks for delivery of CDs # In black text economy mode

TERMS AND CONDITIONS : The last date for receiving the entry form is 17-9-'99. Entry forms received thereafter will not be entertained **A copy of the invoice with the Printer Serial No. should accompany the entry form as proof of purchase of EPSON STYLUS COLOR 440 Printer made during the contest period.** Only entry forms which are complete in every respect will be considered valid. Only one entry form per person acceptable Contest is not open to employees and family members of EPSON Singapore Pte. Ltd. (India Office), its advertising agencies and channel partners Selection of entries will be on the basis of their answers and draw of lots. Only entries with all correct answers will be considered for the Draw to Prizes. The decision of the panel of judges selected by EPSON Singapore Pte. Ltd. (India office) will be final and binding The results of the contest will be declared at the head office of EPSON Singapore Pte. Ltd (India office), Bangalore on 17-10-'99 The winners will be informed by post None of the prizes are encashable or transferable. All disputes to be settled within the jurisdiction of Bangalore

For enquiries or a free booklet on inkjet printing, write to us at P.O Box 5483, GPO, Bangalore-560 001 or E-mail to: sheetal@epsonindia.com

PERCEPT CHUO SENKO/EP/1399

guarantee 140 playing days over the next five years. This season, for instance, New Zealand and South Africa will be visiting India, playing three Tests and five one-day internationals each, i.e. 40 international playing days. In turn, 70 per cent of the money coming from the bid accrues to the 15 international staging associations, 10 per cent to the seven associations that don't hold international matches, and 20 per cent directly to BCCI. Dungarpur claims, "The board president, five vice-presidents, two honorary secretaries, the honorary treasurer, chairman of the marketing committee, and Jagmohan Dalmiya as a special invitee will be overseeing the awarding of the bid." But Thawani adds that BCCI has split vertically on this issue and while the 11-member committee might be overseeing the bid, the 21-member working committee will have to ratify it. Thawani is spoiling for a fight because he reckons the odour of fish market bargaining pervades the board.

He says, "Rs100 crore on a rotational basis is no big deal in this day and age of structured finance. The money can be raised very quickly if we show the projected cash flow streams. After all, we did do the 1999 cricket World Cup at very short notice and successfully at that." While that may be true, it is increasingly obvious that televised cricket is turning into a zero sum game. Take the case of the cricket World Cup telecast which, after Hitchcockian suspense and protracted litigation, was awarded to Nimbus 48 hours before the event went onstream.

The volume of advertising was phenomenal — 1,180 minutes carried during the matches and 236 minutes before and after, resulting in gross billings of Rs71.16 crore. On ESPN–Star it is believed that total sales (on both channels) was in the region of Rs45 crore. More importantly, DD's average audience size per match was 30.07 million given that DD1 has a reach of 60 million homes and each home has an average of 5.6 viewers, while ESPN–Star, with 20 million homes, delivered an average audience size per match of 12.14 million. What is pertinent here is that DD only telecast the India matches, the semifinals, and the final, while ESPN–Star brought viewers every single ball.

Doesn't that tell us something!

• SANDEEP BAMZAI

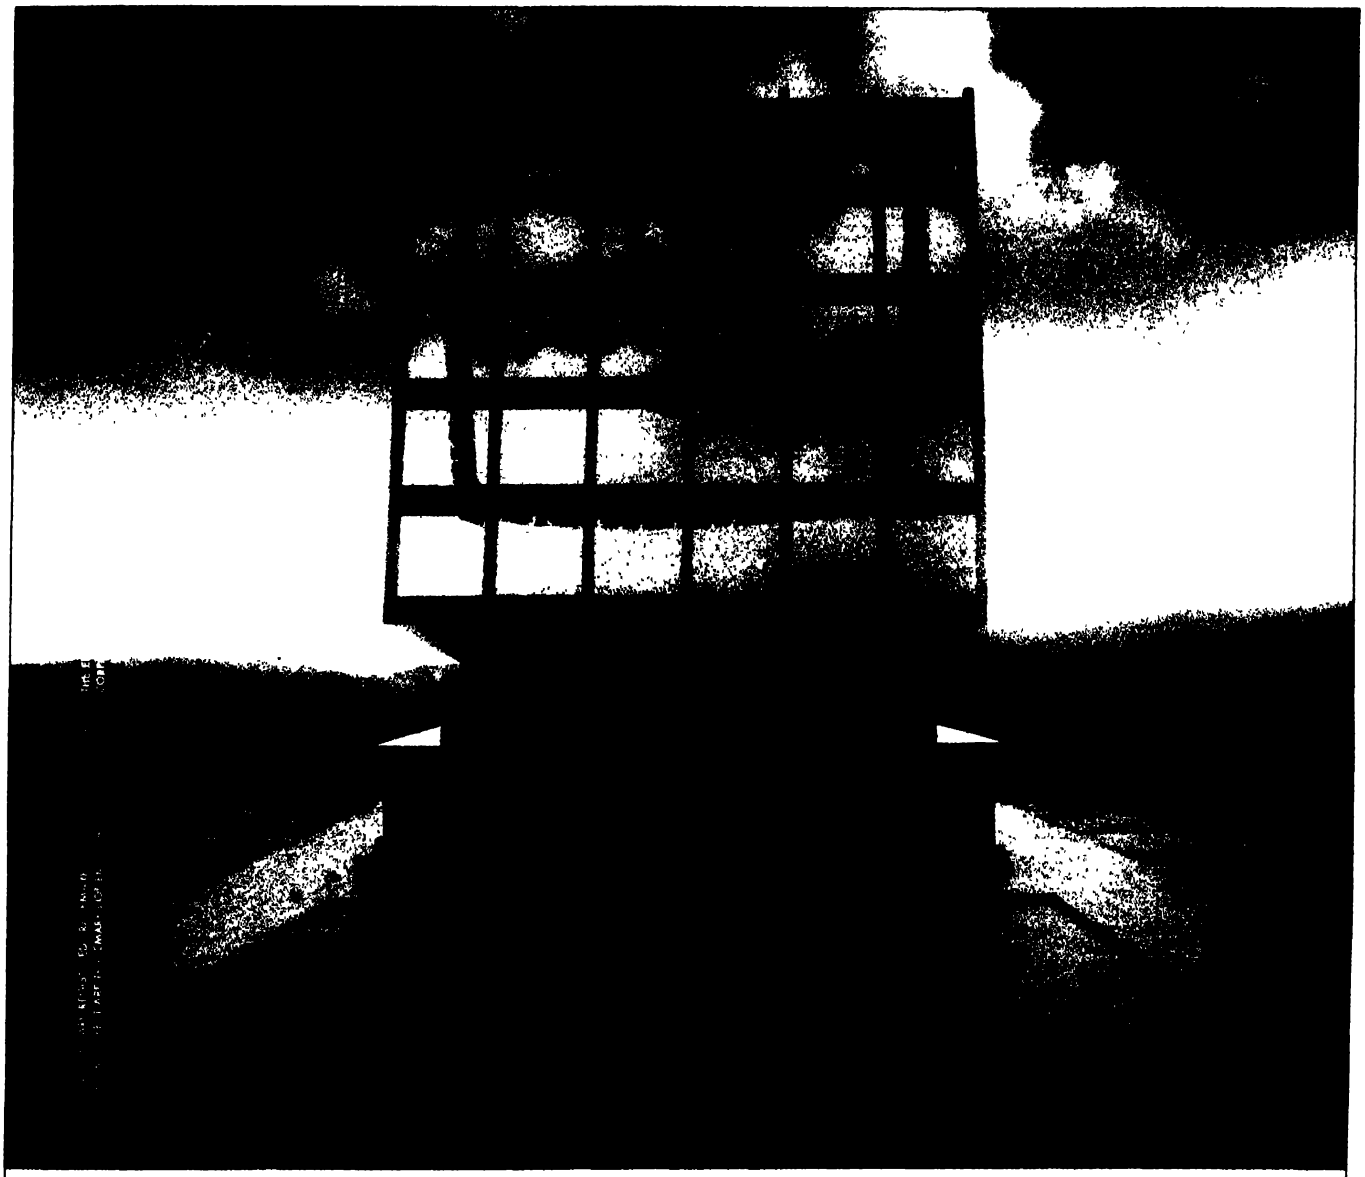
ONLINE EDUCATION

Learn to earn

When The Quantum Institute opened its doors – well, screens might be more appropriate a term – two years back, academicians feared that the move towards online education would result in a lowering of standards, real and perceived. Fears of the latter happening can now be laid at rest, with the first round of campus placements over. The institute offers the master's degree program from the Urbana-Champaign campus of the University of Illinois (UIUC), USA, which is regarded among the best among such courses in the world.

Of the seven graduating students from India, two have been snapped up by Big Five consulting firm KPMG for their global operations, with a starting salary of $65,000, equivalent to about Rs28 lakh per annum at the current exchange rate. Two more have been placed with a Goldman-Sachs-promoted Silicon Valley Internet start-up at the same salary level. This is said to be appreciably higher than what MCS degree holders from the IITs are getting, mainly because the course content is much closer to the leading-edge technologies of today.

For students at the Delhi campus of UIUC, the net cost of study is much lower than actually going to the US, since living costs are lower (the tuition fees are the same). With placement directly in international jobs at starting salaries at the same level as people educated in the US, this cost is more easily recovered.



VIVAN

Dang says the advantage of the UIUC syllabus is its focus on self-learning

Unlike other Internet-downloadable university courses beginning to flood the Web, Quantum provides the equivalent of an actual extension campus, not a repackage of a standard course. It worked closely with UIUC to reformat some details of the course so that both sets of students (in India and in the US) would be treated on par. Examinations were held at precisely the same time, although lectures were streamed at more convenient hours of the day. Students in India have access to the same learning materials. However Anil K. Dang, who is chiefly responsible for setting up the institute and hopes to replicate the example in at least eight more locations in India within the next couple of years, says: "The chief difference between UIUC and Indian institutes is the focus on self-learning and initiative that the US system engenders." This helps students adjust to handling responsibilities once they are thrown into their work environment.

Nuclear games

Extending the dangerous episode of nuclear blasts a bit further for petty electoral gains may cost India dearly

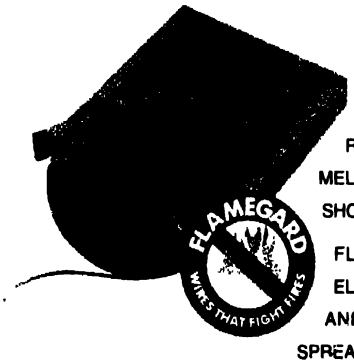
With no provocation whatsoever and no perceived threat grave enough to justify this urgent need of the government to come out with this nuclear doctrine, it seems that the decision has been influenced by the greed to harvest the spill over effect of patriotism in the coming elections. Especially so, when the caretaker government is not supposed to come out with any major policy statement under the model code of conduct set by election commission, its release by a body with no statutory powers raises serious doubts.

The National Security Advisory Board (NSAB), a 27-member body has suddenly unveiled a draft paper on India's Nuclear Doctrine (IND). Released on 17 August by the National Security Adviser, Brijesh Mishra and head of NSAB, defence analyst K. Subrahmanyam, this document will acquire policy status subject to pending discussion and approval of the National Security Council (NSC) and a council of the cabinet ministers. As Mishra puts it, this was being made public in favour of greater transparency in decision making but when asked why the document does not elaborate the specific steps undertaken, he says it is for reasons of security.

A step necessitated by the security environment, the doctrine is not country specific. Aimed at achieving an element of strategic autonomy, Mishra explains the concept of an effective credible minimum deterrence by stressing on the policy of 'no first use' and the 'cardinal principle of civilian control' in the use of nuclear weapons. Subrahmanyam says that it is a consensus document despite individual members of the NSAB having different views on certain elements. NSAB not being a statutory body, the next government will perhaps reconstitute or may be even do away with the advisory body. Moreover, the document does not specify the time frame for installing the nuclear arsenal structures.

Nuclear powers require a nuclear doctrine

Outlining the broad principles for the development, deployment and employment of nuclear devices, the policy strategy is supposed to flow from this framework that would be prepared separately with regular reviews. This indicates that a separate body will look into the issues identified by this doctrine and given the vague presentation that does not even talk about threat perceptions, the implementation part becomes arbitrary. Underlining the so-called nuclear button, the control of nuclear weapons will reside with the prime minister or the designated successor not identified by the document. 'Effective credible minimum nuclear deterrence', not supported by crucial quantitative parameters such as an assessment of the threat perceptions and adequate retaliatory capacity bears no operational significance.



No doubt, nuclear powers require a nuclear doctrine and a nuclear strategy that talks about the threat perceptions. It is supposed to address questions like whether our nuclear adversaries are regional or global, when and where are the nuclear weapons to be deployed. But for the NSAB, it seems that these issues carry no meaning in formulating a nuclear doctrine. Says Dr G. Balachandran, an independent analyst: " effective deterrence capability in the Indian context points out to the fact that the existing capabilities in the nuclear field will not suffice to build such a nuclear deterrent capacity". Also, the draft does not refer to the estimated costs of the programme. It only goes on to say that 'nuclear forces will be effective, enduring, diverse, flexible and responsive based on a triad of aircraft, mobile land-based missiles and sea-based assets' without classifying whether sea-based assets would include nuclear capable submarines. Subrahmanyam says that the language of the doctrine allows it.

Not only does the doctrine refer to enhancing the survivability of the forces with a combination of multiple redundant systems, mobility, dispersion and deception, a survivable nuclear force itself has been defined as one that will be designed and deployed to ensure survival against first strike and to endure repetitive attrition attempts with adequate retaliatory capabilities for a punishing strike which would be unacceptable to the aggressor. Survivability, according to them, is a dynamic concept related to strategic environment, technological imperatives and the needs of national security and that the actual size, components, deployment and employment of nuclear forces will be decided in the light of these factors. It further states that any threat of use of nuclear weapons against India shall invoke measures (not specified) to counter the threat. Also that India will not resort to the use or threat of use of nuclear weapons against States which do not possess nuclear weapons is a

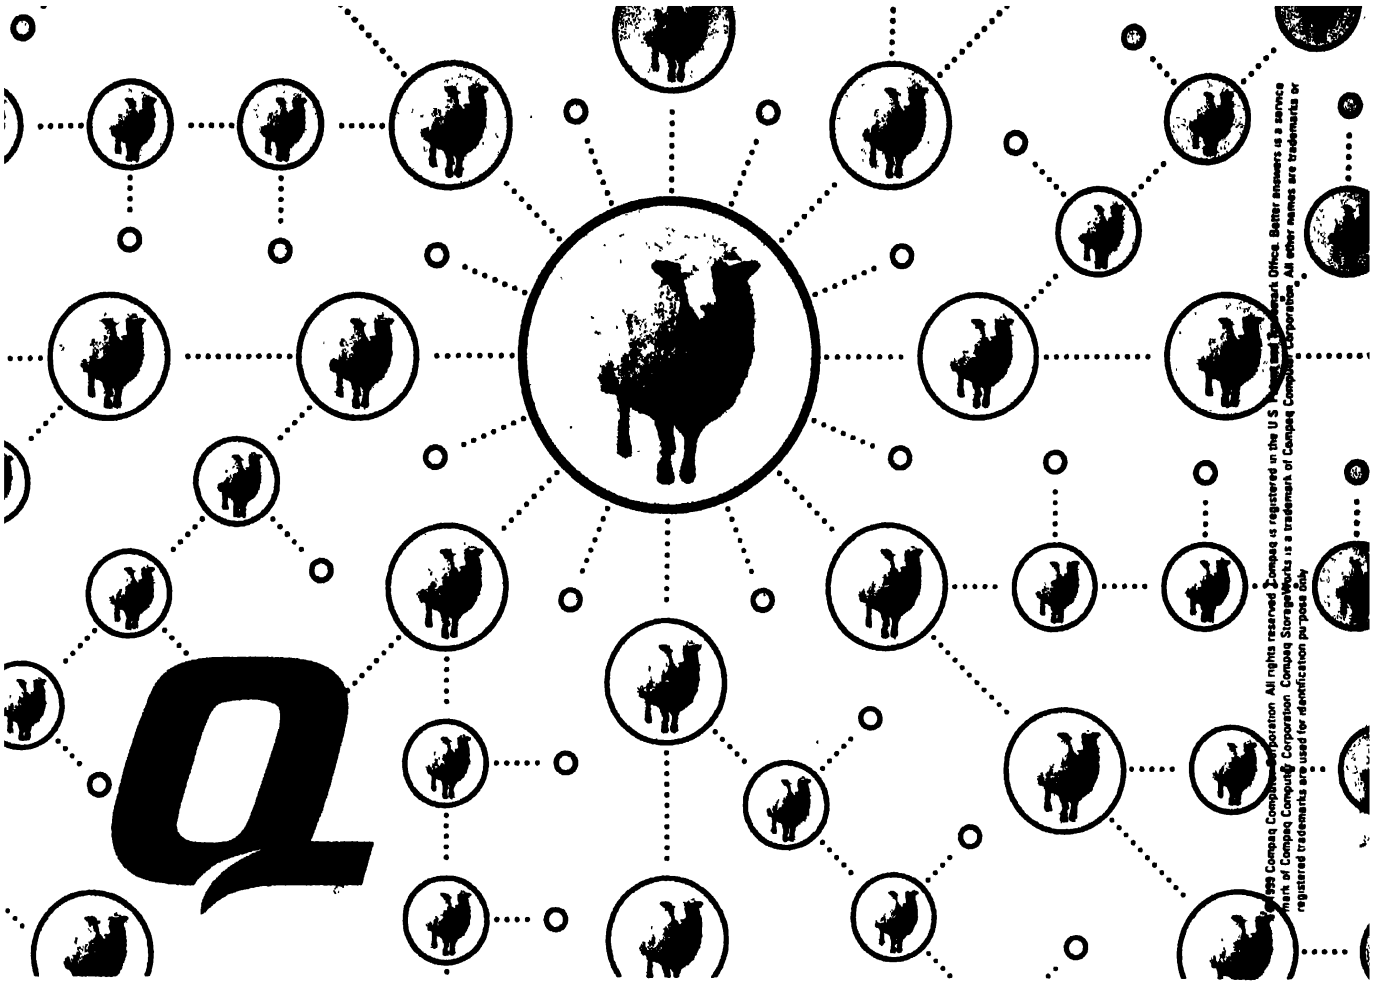
redundant statement given the "no first use" and "retaliation only" policy already adopted by India.

One of most unacceptable statement made by Mishra, while releasing the document, is that the Kargil conflict and its resolution had vindicated India's nuclear deterrence policy. On the contrary, experts feel that after having achieved nuclear parity with India to a certain extent, an irresponsible country like Pakistan could venture into a conflict with India and India's superior conventional force was not any more sufficient to deter Pakistan from military adventurism. In this context the document says: "highly effective conventional military capabilities shall be maintained to raise the threshold of outbreak both of conventional military conflict as well as that of threat or use of nuclear weapons." Subrahmanyam agrees that it implies far more expenditure on conventional forces than the estimates released in certain quarters. Only about a year back, cut-down in the conventional military expenditure was justified on pretext of going nuclear. Strangely, the doctrine upholds a greater investment in conventional force structures to raise the threshold of conflict in complete *volte-face*.

RAMESH PATHANIA

Mishra stresses on the policy of 'no first use'



The document ignores the fact that security and safety for nuclear materials and nuclear weapons, during their manufacture, transportation and storage, have to be orders of magnitude more stringent than what is maintained for conventional forces. Even an agency like the Department of Atomic Energy (DAE), with years of experience with nuclear materials, does not have a grand track record for safety even in civilian nuclear installations. As Dr A. Gopalakrishnan, the former chairman of the Atomic Energy Regulatory Board (AERB), commenting on safety issues points out that in countries such as the US, a defence nuclear facilities board exists for independent external overseeing of all nuclear weapon activities from the viewpoint of safety. "During my tenure" Gopalakrishnan highlights "the fact that even the R&D programme of the nuclear submarine or the Advanced Technology Vehicle (ATV) project, had been kept outside the purview of the AERB".

As a matter of fact, the AERB has no independent authority to regulate civilian nuclear activities. As such, the Indian defence establishment or the DRDO are not experienced enough to handle nuclear activities. Experts feel that with no agency for defence nuclear activities under the ministry of defence, regulatory aspects of a nuclear weaponisation programme needs to be addressed first before building up an arsenal. It is pertinent to know that in India nuclear training is imparted only within the DAE system. And therefore, even for defence requirements, the personnel have to be pulled out from the DAE or a new defence nuclear establishment that would require an instituted recruitment and training programme on a long-term basis.

The document talks of disaster control and says 'India shall develop an appropriate disaster control system capable of handling the unique requirements of potential incidents involving nuclear weapons and materials'. It fails to point out that safety means prevention of inadvertent use and risks of accident therefrom or even accidental nuclear material dispersion from failed missile launches. One of the criteria of safety against accidental detonation used in the US is one point safety criterion. US conducted a series of hydro-tests of yields commensurate with such one-point detonation accidents to ensure safety. India having declared moratorium on further tests needs to explain how these tests would be undertaken.

It seems that political compulsions have forced the government to make the document public now, even though it had been submitted by the NSAB nearly a month ago. Government sources have been propelling the idea that with the articulation of a doctrine the world would be forced to recognise as a nuclear weapons state. Or may be the government feels that controversy arising out of the discussion of the doctrine by world nations would trigger serious thought provoking sessions in order to let India be recognised as a nuclear state. However, the timing of its release when the BJP led coalition is riding a Kargil euphoria cleverly crafted as an aspect of patriotism that can garner votes for them in the coming general elections raises a few questions about the credibility of IND. With Pokhran episode fading away, this may yet be another effort by the government to create a certain atmosphere that suits their political interests but whether NSAB should become a party to it is what needs to be probed. Especially so when the reaction of US and other Western countries point towards another round of sanctions that our ailing economy can ill afford.

When my data multiplies like crazy, will I be able to handle it?

The data in your enterprise is being cloned more rapidly than sheep are, these days. And the growth of the Internet is taxing your storage system even more. That's why you need a storage system that grows right along with it. Compaq Storage Works™. Designed with the open, standards-based Enterprise Network Storage Architecture, it gives you a modular storage solution that expands with your enterprise. And this architecture virtualizes storage — working across multiple platforms while being centrally managed from one location. So information can be shared by anyone anywhere in your enterprise. For answers to all your questions about multiplying data, write to Owais.Khan@compaq.com or visit us at www.compaq.com.sg/storageworks/.

Proaction for peace

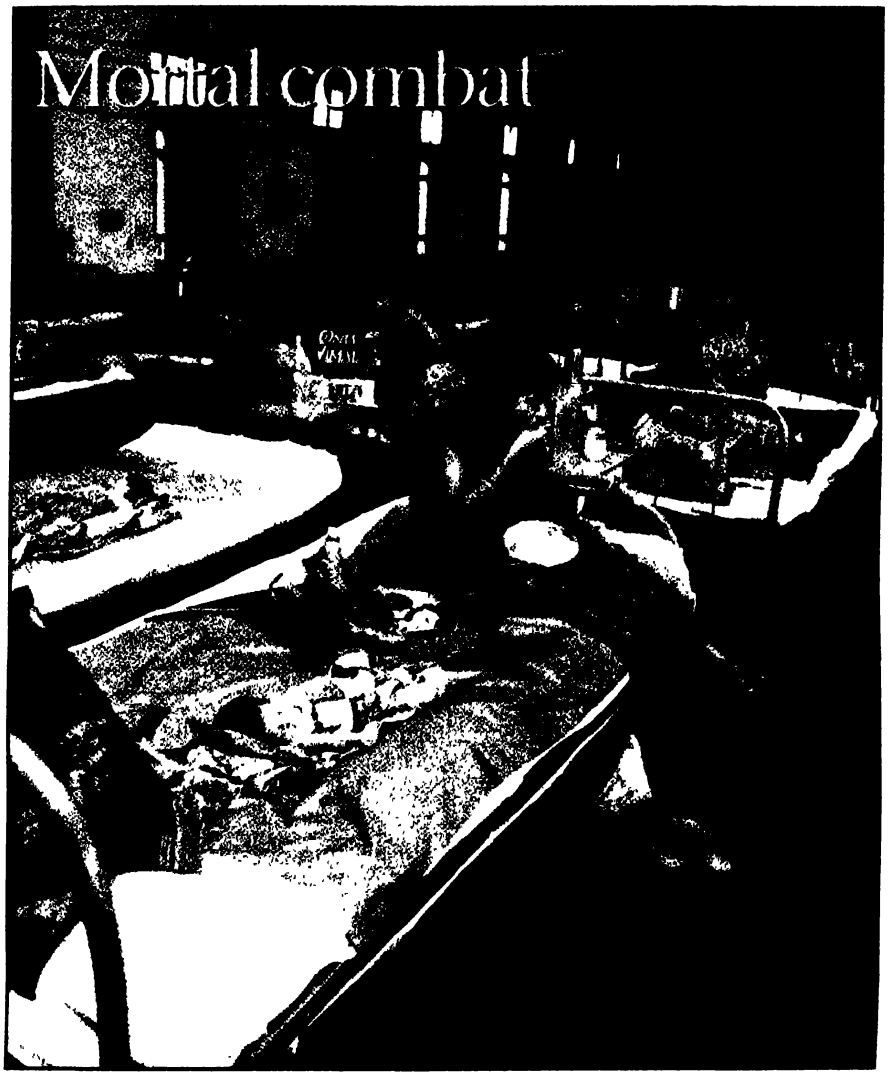
Peace has come to be conceived of as something beyond just a state of no war. India must wage peace to defeat Pakistan's designs diplomatically

A new and golden opportunity, not seen for 50 years, has opened up for India in its relations with the US and Europe. In spite of their fears about Indian jingoism, leaders in G-7 capitals are looking upon India with new interest and respect because the Kargil conflict gave them undeniable proof of India's democracy and secularity as opposed to Pakistan's theocratic militarism.

This is a welcome change and an opportunity because the US and Europe have long seen India as a somewhat flaky weakling trying to steal into the backyard of the world's big boys by doing things they do not like. Those include acquiring nuclear weapons and opposing many aspects of world trade and financial liberalisation. The question now is whether India's policymakers will show flexibility in jettisoning some of their 40-year-old prejudices about the West and find new ways to build that respect into a platform from which to play a more fruitful role in regional and global diplomacy.

However unpalatable it may seem in Delhi, Kashmir ceased to be a bilateral issue after the fall of the Berlin Wall in 1989. Till that time global security was based on a balance of terror. Since the Gulf War of 1991, it has been based on a new and more universal conception of peace as being something that goes beyond just a state of no war. This new and positive peace is still being defined through trial and error, but the Cold War era of proxy wars is over. In this electronic age of integration of world markets, any war anywhere destabilises global prosperity. What matters more than weapons are economic and technological power. The utter necessity of renouncing war is not idealism but a recent discovery of international conflict resolution. The discovery is that, unlike in earlier wars, even such overwhelming victories as those achieved by US-led coalitions over Iraq and in Kosovo do not bring peace.

Renunciation of war as a path to peace does not mean that a country should allow itself to become a military weakling. Credible military deterrence is an essential ingredient of peacemaking because it persuades the enemy to come to the negotiating table. However, solutions involving the threat of war in the last resort are counterproductive. In the coming century there will be only two possible approaches to achieving peace — accumulating economic power and sitting around a negotiating table.



There are two broad paths we can take. The first is to co-operate more willingly with the US and Europe in their global security and economic concerns. Without that we cannot acquire the technology and money needed to modernise our defences and build up the necessary economic power. The second is to put much more emphasis on the soft components of national power in our relationships with Pakistan, Saudi Arabia, and the Islamic world.

The way the West won

The West defeated the Soviet Union by turning its people against communism through the simple expedient of bombarding them with information about life and values in the US and Europe. It also bankrupted the Soviet Union by forcing it to spend too much on defence. After just one decade of this treatment, people overcame their fears and poured out onto the streets to depose governments famed for their pitiless police, domestic spies, gulags, and insane asylums.

We have both these means at our disposal. We have never used them because of our obsession with deterrence and preventing interference by the UN or the US. It is time now to become proactive. Pakistan's people have lived under near totalitarian regimes for 50 years and have very limited access to information about India's secularity and democratic and economic vitality. They are oppressed by a theocratic state ideology that is obliged to keep them poor and ignorant to maintain its own hold on power. They cannot imagine what life in a secular state might mean for a Muslim.

If Pakistanis knew how ruthlessly their demagogic leaders have cheated them, they may refuse to commit national suicide in a war for a territory whose annexation will ruin Pakistan financially. That might lead to the emergence of a new government amenable to sincere peace negotiations. If other Islamic and Arab countries, especially Saudi Arabia, had a clearer picture of India they might discourage Pakistan from further adventures. We have a golden opportunity to use such proactive strategies because the world has now largely accepted the line of control as the border between India and Pakistan, allowing us to move forward to a new phase of peace-building. ♦

A new scepticism about the validity of Kerala's infant mortality rate may well be a storm in a teacup

For development economists and demographers, the south Indian state of Kerala offers a riddle which keeps them happily – and sometimes infuriatingly – engaged, much like schoolchildren handed a jigsaw puzzle by their distraught teacher to keep them out of harm's way. The only problem is that often some naughty child hides a piece or two. And that leaves the rest of the earnest gang groping in the dark.

This seems to be now happening with one of the most brandished indicators of Kerala's supposedly high level of social and human development amidst a paltry per capita income – the low infant mortality rate (IMR, defined as the number of infant deaths in a year divided by live births during the year multiplied by 1000; *see Table 1*).

No less a master than Nobel laureate economist Amartya Sen has lauded how Kerala's IMR fares better than China's: 17 and 16 per thousand live births respectively for boys and girls in 1991, compared with China's 28 and 33 respectively. "The average levels of literacy, life expectancy, infant mortality, etc, in India," notes Sen, "are enormously adverse compared with China, and yet in all these respects Kerala does significantly better than China."

More recently, another group of researchers led by demographer Anthony R. Measham and supported by the Royal Norwegian Ministry of Foreign Affairs, analysed data for the period 1975 to 1990 to assess how changes in income and other temporal factors determine the IMR and the total fertility rate (TFR). They concluded: "Kerala's success in having the lowest IMR and TFR in the country, levels comparable to some developed countries, is probably due largely to its universally literate population, better status of women, and more equitable distribution of health services – all of which have been due more to strong commitments to investments in the social sectors than to economic growth. This commitment has allowed Kerala's population to benefit from the rapid change globally in the means for improving health."

And the results gleam. Consider the recent indices published in the Population Foundation of India's *State of India's Population* – the human development index (HDI), the gender-related health index (GHI) and the reproductive health index (RHI). On all scores, Kerala comes out right at the top of the list of Indian states. In fact, latest official estimates place Kerala's IMR at 12.

In calculating these indices, social scientists accord weightage to the IMR, as well as related parameters like life expectancy, total fertility rate, teenage pregnancies and contraceptive protection rate. Most estimates of Kerala's IMR are based on data generated by the Sample Registration System (SRS) provided by the Registrar General of India, Ministry of Home Affairs. The SRS supplies annual statistical series on indicators of mortality and fertility. It is these numbers that social scientists have crunched to arrive at their deductions about Kerala's health status and the physical quality of life of its citizens.

But the estimates for IMR could actually be off the mark, claim demographers S. Irudaya Rajan, Associate Fellow at the Centre for Development Studies (CDS), Thiruvananthapuram and P. Mohanachandran of the Department of Demography, University of Kerala. In a recently published paper, they point to "a number of fluctuations and inconsistencies in the IMR estimates throughout the last 25 years".

Rajan says that in May 1998, Nibhon Debavalya, director, population division of the UN's ESCAP

How they die

Source: S Irudaya Rajan and P Mohanachandran, March 1999

(Economic and Social Commission for Asia and the Pacific) asked him: "Is the IMR really as low as 16? The decline in mortality between the period 1981-91 and 1991-96 seems unrealistic."

By subdividing the one-month IMR data into two components, viz, figures for 0-7 days mortality and 7-28 days mortality, Rajan and Mohanachandran discovered that out of every 14 children who died in Kerala within a year of birth, 10 died in the first week itself. "Thus," they conclude, "the infant mortality in Kerala is basically a one-week mortality, not a one-year mortality." They also note the inexplicably higher levels of the stillbirth rate, one-week mortality rate and perinatal mortality rate (number of stillbirths and deaths of infants under a week old during one year divided by the number of live births and stillbirths during the year multiplied by 1000).

"We have questioned the SRS-IMR estimate of 14 and in our opinion, the SRS underestimates the IMR," say Rajan and Mohanachandran. "Our estimates place the IMR for Kerala at 37." They also assert that different sources have different estimates of Kerala's IMR (*see Table 2*).

Who's correct?

Various estimates of Kerala's IMR

Source	Reference period	IMR
Registrar General of India	1981 Census	55
Registrar General of India	1991 Census	42
Irudaya Rajan & Mohanachandran	1991 Census	37
World Bank Fertility Survey (1980)	1970-75	59
	1975-80	46
Kerala Fertility Survey (1991)	1980-85	44
	1985-90	26
National Family Health Survey	1990-93	24
	1985-90	38

Source: S. Irudaya Rajan and P. Mohanachandran, March 1999

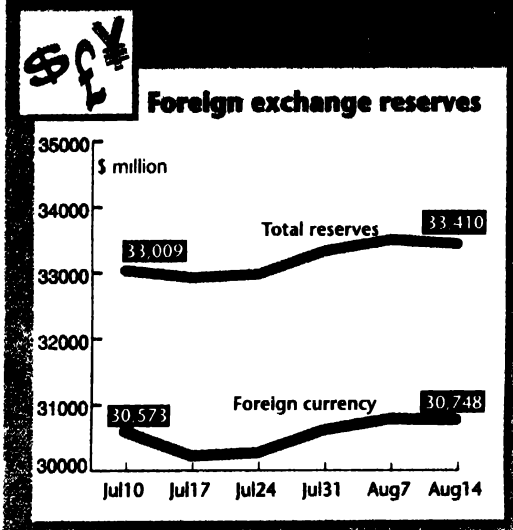
However, these conclusions have been seriously challenged by demographers and economists who took part in a seminar where Rajan and Mohanachandran presented their findings. According to demographer K. Navaneethan, also an associate fellow at CDS: "There is no scientific or analytical rigour in the paper to establish that SRS underestimates the IMR in Kerala. What are the limitations or drawbacks in the SRS sample design including sample size, data collection and methods? What is the sensitivity of the sample design or sample size on the IMR estimates?"

Navaneethan questions the basic methodology used by Rajan and Mohanachandran. There are two ways of estimating IMR, as he explains, the direct method and the indirect method. The Fertility Surveys and the SRS use the direct method. In both the 1981 and 1991 censuses questions were asked about the number of children ever born and the number of children surviving to all the ever married women. Using coefficients developed for this purpose, explains Navaneethan, it is possible to deduce the probability of children dying at different ages. The MORTPAK computer software developed by the UN uses these techniques to estimate infant and child mortality.

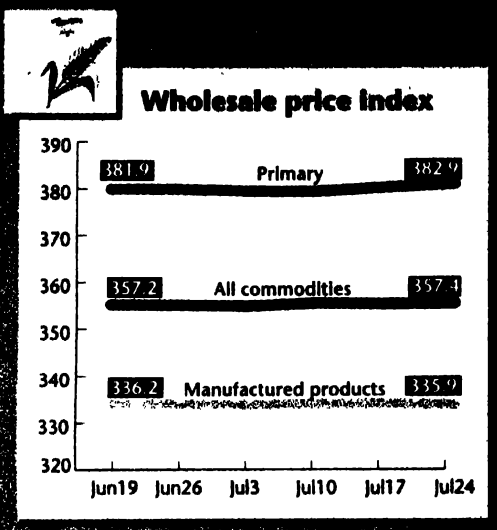
On the other hand, notes Navaneethan, the indirect method used by Rajan and Mohanachandran overestimates the true level of IMR due to the inherent assumptions in the method.

Rajan's contention of a paradox in Kerala's low IMR being combined with a high stillbirth rate and one-week mortality has also attracted vehement refutation. Navaneethan quotes similar differences for other countries like Thailand, Puerto Rico, Greece and Belarus.

But Rajan is still convinced that his "hunch", as he calls it, is right. "My hunch is also that in many of Kerala's hospitals, children who die within hours or even a day of birth are often misclassified as stillbirth," he continues, "because no hospital or doctor would want to lose the reputation of being a baby-friendly hospital."



Rajan feels that one way out of the statistical jungle is to strengthen the civil registration system in Kerala. He points out that 95 per cent of births in Kerala occur in medical institutions and are thus automatically registered in the civil registers. Relying on these figures would bypass any sampling lacunae in the SRS. The flip side of the story, as his critics point out, is that not all deaths, particularly infant deaths, are registered in Kerala.



As these squabbles over Kerala's IMR continue, the paradox of India's "model" state lingers. Growth vs equity, redistribution vs accumulation, social progress vs industrial growth – which way to go? Perhaps the true worth of the Kerala Model is the employment opportunities it generates for several social scientists – and the odd journalist.

RIDING HIGH

Piramal Enterprises chief Ajay Piramal is taking his group into the greenfield area of shopping malls. His existing businesses, meanwhile, are a mixed bag

Last month, Ajay Piramal added children's appetiser brand Mom, I'm Hungree to his stable. It's obviously given him a good appetite. Since then, he has taken over four brands from US pharma major Eli Lilly, flown down to Sri Lanka to finally seal the deal for the purchase of a glass manufacturer, and struck up a strategic alliance with Swiss multinational Siegfried Pharma for export to European markets. More such deals are in the pipeline. "I'm hungry," says Piramal. "I'm always hungry. There is so much more to do."

Not that there has been any dearth of activity. Over the past few years, Piramal has launched on a spree of strategic alliances and takeovers — of both companies and brands. Today, his alliances and joint ventures are with illustrious international majors such as Boots Healthcare International plc, Allergan Inc and Stryker Corp not to speak of homegrown outfits like Charak Pharma, the Sarabhai group and Shree Dhootapapeswar, a 125-year-old *ayurvedic* company. His major corporate scalps are Roche Products, Boehringer-Mannheim and Sumitra Pharma. And his brand buyouts include Lactocalamine and Burnol. "Taking over companies is Piramal's core competency," says an observer. An apt comment on a group that began life with the takeover of Morarjee Mills 64 years ago.

But, despite all the action, takeovers are probably the last thing on Piramal's mind right now. In a few days, he will be flagging off Crossroads, billed as India's first international class shopping mall, and the group's maiden greenfield venture of any significance. Some 500 people are working around the clock to get the show going by D-day. "Our obsession is to complete the project on time," says Jaydev Mody, who heads Piramal Holding Ltd (PHL), the company that is setting up Crossroads.

At a time when retailing is the flavour of the month and everybody and his uncle is rushing into the business, Crossroads stands out because of the sheer magnitude of the project. Spread out over 1,50,000 sq ft in the heart of South Mumbai at Haji Ali, it will, says Piramal, be "more than just shopping; it will be a destination landmark for Mumbai".

Crossroads will boast the largest McDonald's outlet in Mumbai. Its Food Court will offer six kinds of cuisine — from standard south Indian fare to exotic Lebanese dishes. There will be a separate Italian restaurant styled Biscotti and a sports café called Café Ole. Says Mody: "This is the only place in the city where you can order a *masala dosa* and Chinese food and sit side-by-side and eat."

Food is really the aperitif. There's a recreation arcade spread over 20,000 sq ft. Called Jammin', it is, says Mody, designed for "kids of all ages" though he really expects the appeal to be in the 7-21 age group. Priced at Rs20-60 per go, the menu includes bumper cars, bowling, and simulation and virtual reality games.

The heart of Crossroads is, of course, the shopping. The Piramals have their own show called Piramyd, spread over various floors, to offer clothing, garments, toys, home furnishings, jewellery, cosmetics and what have you. Apart from this, there will be a large number of other outlets set up by leading names such as Pantaloon, BPL, Shyam Ahuja, Lacoste, Hallmark, L'Oreal, Planet Kids, Adidas, Reebok.... The list goes on. "There will be more than 200 brands available here," says Mody. "Fabulous," says business historian Gita Piramal, who along with her husband Dipil split from the Ajay branch of the family a few years ago.

There are other aspects of Crossroads that Mody takes great pride in: a unique rooftop parking lot, Asia's largest retractable roof (outside Japan), a video wall... "We have the best," says he. "The roof is from Australia, the car lifts are from Japan, the lighting design is from Sweden." Even the chef at Biscotti is from Italy.

The Y2K target

Group Turnover	(Rs crore)
Nicholas & pharma subsidiaries	800
Other subsidiaries	400
Textiles	450
Engineering	100
Others	50
Total group turnover	**1,800**

The figures are internal projections

Gupta sees value in brands

Setting records

All these superlatives read like a sumo wrestler's wardrobe: everything is biggest, largest, best. Given the nascent state of the organised sector retail industry in India, that may well be true at the moment. But it brings attendant problems.

For starters, it is difficult to get a fix on the prospects of the business and the return on investment. Understandably, both Piramal and Mody are wary about talking numbers. On investment in the project, for instance. Piramal says it is difficult to give exact figures as the land came courtesy the takeover of Roche (PHL is actually the shell left after Roche's pharma business was spun off to Nicholas Piramal India Ltd). Besides, the individual retailers who have set up shop are also spending big bucks on their own outlets. The only estimate available is that it would today take Rs300 crore plus to set up a similar establishment

at a similar site from scratch.

Mody is a little more forthcoming when it comes to traffic estimates. He is looking at 13,000-15,000 visitors on weekdays with the figure going up to 25,000-28,000 on weekends and holidays. McDonald's alone is expected to cater to 6,000-7,000 people daily. "It is difficult to make estimates based on the experience of other countries," he says. "Singapore has 70-80 such malls. We can't extrapolate from their figures."

Visitors, however, do not automatically translate into business. Crossroads is certain to attract rubbernecks from suburbia. But will their oohs and aahs when they see the frills and features convert to ouch when faced with the price tags? Will Marathe from Matunga and Sandra from Bandra splurge with the same abandon as the richie-rich matron from midtown Mumbai?

Research conducted by an international agency for another retail aspirant indicates that any buying decision at a mall of this sort will be coloured by the impression that prices have been significantly marked up to pay for the ambience. It doesn't help too that most of the items are big ticket ones for their category anyway. But Mody is clear about his target: "We are aiming at a south Mumbai audience." And he thinks the numbers add up.

So what are the takings going to be like? Here again, the proof of the pudding will have to be left to the eating. But total sales of Rs1 crore a day seems a minimum figure. This is not what NHL will be earning. It gets a fee from the retail outlets (in some cases there is a percentage of turnover too). Its other income is from parking fees, promotions and launches, and signages. Jammin', Piramyd and Biscotti are independent Piramal group owned companies that PHL treats like any other user.

There is a reason for this structure. PHL is basically in the mall management business. The three other companies have more specific functions and could well lend their expertise to projects independently. Jammin', for instance, is already involved in another entertainment centre which has nothing to do with the Piramals or Crossroads. PHL itself now has insignificant public holding with the Piramals having bought up most of the equity through a public offer and delisted the company.

Expansion plans

Even before the first mall is off the starter's block, Crossroads is thinking expansion. Mody explains that some land across the road from the current Crossroads site has already been acquired to build an annexe. More sites in Mumbai are being identified ("It could be Bandra, it could be Lokhandwala; the three most important things in the mall business are location, location and location"). And it will be then on to the other metros. "We intend to repeat the Crossroads format in other places," says Mody. "We have the expertise now."

There have been questions about this expertise, however. The Piramals have experience in textiles, pharmaceuticals and glass. Observers have looked askance at this apparently totally-unrelated diversification into

Mody is serving an extensive fare

mall management. "That's what people said when we went into pharma," counters Piramal.

But the mall management business is claimed to be not as unrelated as it seems on the surface. The Piramals have been in property development and management for several years now. Among projects handled are a residential building in Juhu and a hospital project in Lower Parel, both suburbs of Mumbai. These were in-house projects and the core team for Crossroads was drawn from this expertise.

"Of course, the format has changed," says Mody. But, he adds, over the three-four years they have been on the job, PHL has got it all taped. He says that he will answer the sceptics who talk about his own and the Piramal group's inexperience through performance. On their side they have the backing of foreign consultants and the training of several staff members have gone through abroad. "Everyone wants to talk about retail, everyone wants to talk about malls, but it is not an easy thing to do. Ours will be a difficult act to follow."

It will be a difficult act to evaluate too, particularly in the short term. As mentioned earlier, crowds don't necessarily mean revenues and PHL and the other companies involved don't have to publish their results for public scrutiny. Mahesh Gupta, chief financial officer (CFO) of Piramal Enterprises Ltd, the umbrella company for the Ajay Piramal group, admits that retail won't add significantly to group turnover for some time. He projects the total group turnover for 1999-2000 at Rs1,800 crore, with pharma hogging the lion's share.

Pharma has been hogging the limelight too. Scarcely a month goes by without a new joint venture or strategic alliance being announced. "This is a plan we had charted out shortly after taking over Nicholas in 1988," says C.M. Hattangdi, who was inducted from a multinational drug major to head Nicholas after the takeover and continues to be on the board of the company today.

"We didn't have basic research," says CFO Gupta, who has been with the organisation for nearly two decades now. "So we had to take a different route." Hattangdi explains that the first thing they did was to set up world-class manufacturing facilities. The second was to set up an extensive field force and distribution system. After that, it was just a matter of waiting for the suitors to come a-wooing.

Pinto is looking at exports

Stream of JVs

"Companies like Roche came to us on their own," says Nicholas Piramal India Ltd (NPIL) CEO Francis J. Pinto. "We didn't have to go to them." (Roche, it must be remembered however, was desperate for an exit option and was approaching everybody remotely interested in taking over the company.) Since then, there has been a steady stream. Today, there are OTC products distribution JVs such as Reckitt Piramal (hawking brands like Dettol, Saridon, Burnol, Lactocalamine) and Boots Piramal (Strepsils, Sweetex, Icy). There are ayurvedic JVs — Solumiks Piramal (with Shree Dhootapapeswar) and Charak Piramal (which will hawk *gulkand, chyawanprash*, honey and, of course, Mom, I'm Hungree). There are the niche JVs — Allergan India (eyecare) and Scholl Piramal (footcare). And there are more; when you start talking about the strategic alliances too, even company officials find it difficult to give a comprehensive list.

Pinto explains that such takeovers, alliances and joint ventures gave NPIL access to technology and products to keep it going until it could build up its own research base. "That was Nicholas' role in the first decade," explains he.

It was a role very different from

high-flying pharma majors like Ranbaxy, and the stockmarkets have not been particularly enthused. Though NPIL (Sales Rs441.78 crore; PAT Rs45.34 crore) has been a little more active over the past couple of weeks, it is still quoting at a price/earnings of 16 against 50 for Ranbaxy and 45 for Dr Reddy's. "Tie-ups everywhere, multiple collaborations. There has been no innovation. The company has just been playing it safe," says Raamdeo Agrawal of Motilal Oswal Securities Ltd.

Others are prone to be even more critical. "You can't get into bed with just about everybody at the same time," says a pharma sector analyst. "Have you ever heard of a harmonious harem?" According to him, the two risk factors are, first, that the joint venture partners will walk out when they reach a critical mass and, second, conflicts will arise when two JVs have similar products and plans.

Urvi Piramal says restrictions are crippling Morarjee

The history of JVs in India with foreign partners has not been particularly happy. The Tatas, traditional husbands of convenience, have seen several allies (Pepsi, IBM, Mercedes, Timex...) suing for divorce once they have established themselves in the country. What's protecting the Piramals from a similar fate?

Pinto provides one answer. "What kind of after-care programme did the Tatas have?" he asks. "We have an algorithm for successful strategic alliances." Piramal elaborates that, the group's "after-care" apart, there are certain basic features of the Indian drug industry that make such divorces unlikely. Drugs in India are one-tenth or even one-twentieth their international prices and the situation is unlikely to change soon. Under the circumstances, it makes no sense for a multinational to devote resources to building up a manufacturing base and a distribution network. The stockmarkets, adds Pinto, have not really understood NPIL's strategy.

That strategy, however, may be changing. While the focus on partnerships will continue, research and foreign markets have also been added to the agenda. "We are now talking about an international thrust fuelled by research," says Pinto. But that's easier said than done.

A small beginning has been made in exports. Global Bulk Drugs (a NPIL subsidiary made up largely of the erstwhile Sumitra Pharma) is tying up with a US partner to tap the export market in speciality chemicals. Laporte Piramal is setting up a 100 per cent export oriented unit in Hyderabad. The worldwide marketing will be handled by a JV with Cultor of the US. These two projects should contribute Rs100 crore annually in exports. The strategic alliance with Swiss multinational Siegfried Pharma is designed to leverage the latter's skills in the European markets though this will take some time to hit the big league.

Research thrust

But the cutting edge in exports will come only when the research underpinnings are in place. And a good beginning has been made with the acquisition of the basic research unit of Hoechst Marion Roussel, which has since been renamed as the Quest Institute of Life Sciences. "The centre has 148 international patents to its credit," says chief medical officer Dr Swati Piramal.

She says that the focus is now on business-driven R&D, which means not just patented knowledge but getting a commercial product to the market. "Our platform is natural products (read *ayurveda*)," she explains. "This could either mean developing a new molecule or using, say, a herb as it is."

Swati Piramal thinks there is a great future in ayurveda. "Auryveda companies have never grown because there was no emphasis on quality. We are going to add science to ayurveda." There's competition there; companies like Dabur are doing it too.

Swati Piramal's other initiative is to set up a countrywide chain of pathology labs. Being in charge of the group's IT thrust, she's been responsible for wiring up the various offices. With an intranet and VSAT links in place, this can be leveraged for the lab network. Here too the JV bug has struck: a 50:50 venture has been set up with Calcutta-based pathology lab Dr Tribedi & Roy. "I have a dream that there will be 100 pathologists across the country working together," says Swati Piramal. "One day, my dream will come true."

While Swati Piramal is having a dream, it's probably been more of a nightmare for Pramod K. Gothi. The

Swati Piramal is developing "natural" products

executive director and CEO of Morarjee Mills has seen the company go through a couple of torrid years, perhaps one of the toughest periods in its 128-year-old history. Income from operations in the year ended 30 June 1998 (the latest audited figures available) has declined to Rs334.6 crore from Rs347.9 crore the previous year. Losses have grown from Rs2.09 crore to Rs5.88 crore. (In 1996, the company had made a profit of Rs9.78 crore.) For the nine-month period ended 31 March 1999, income is marginally down while the losses have mounted to Rs8.91 crore (Rs6.40 crore). Morarjee is clearly more a millstone than mill.

"If you want an honest answer about our prospects, I'd say it's bad," admits Gothi. "But if you look at the industry scenario, we are much better off than competition."

The textile industry has been living a threadbare existence ever since the Datta Samant inspired strike of the 1980s (which, technically, still continues). But Morarjee was one of the few mills which managed to keep its head above the waters. It's not about to go under, but it's surely getting a severe lucking.

Gothi lists the various problems facing the industry. Mumbai mills, he says, have to contend with ever-increasing costs, while they cannot raise prices. "This is an industry with low entry barriers," says he. "The unorganised sector does not pay for power, water or octroi. It has much lower labour costs. And the buyer of the eventual product is not discerning as regards quality."

Litany of woes

Recent times have compounded woes. The government has added restrictions on development of mill land — a goldmine for the beleaguered companies. This has crippled modernisation plans. And the Southeast Asian crisis, resulting in a sharp drop in international prices, has reduced most Indian mills to basket cases. "It's been a very difficult time," says Morarjee vice-chairperson Urvi Piramal.

Ajay Piramal says an exit from Morarjee is not an option. There is the burden of history, of course; Morarjee is the fourth company to be listed on the Bombay Stock Exchange and the oldest one still in existence. Besides, quips Piramal, who's going to buy it.

Jokes apart, he still sees a future in textiles, though the strategy has to be different. Explains Gothi: "We have to get into products where the entry barriers are high." A start has been made through the now familiar Piramal route — JVs. A 50:50 venture has been started with Manifattura di Valle Brembana of Italy to make high-quality shirting fabrics at a new unit in Nagpur. "Shirts branded Morarjee Brembana are doing very well in markets such as Japan," says Urvi Piramal.

Gothi feels that moving up the value chain will give Morarjee the necessary edge. But industry veterans are quite clear that even this will not help Mumbai mills too much. If a product is moving in the market, what's to stop a rival from setting up similar facilities outside Mumbai where the input costs (particularly wages) are not as high? Most millowners today are hanging on in the hope of cashing in on their real estate holdings. Companies like Morarjee will not close shop, but the reading is that they will have an increasingly limited presence in the city. Understandably, JVs like Morarjee Brembana are located elsewhere.

That's not true of another 50:50 JV with Castiglioni of Italy which is modernising the Mumbai mill to make a range of home furnishings. The Casabella range — which has roped in leading Indian fashion designers — will be making a splash at Crossroads.

A third JV with Legler Industria Tessile, again of Italy, was set up in Nagpur to go into denim, after Mckinsey recommendations that this was the big market of the future. Sanity and market sense prevailed after civil work had commenced and the denim project was abandoned. Given the dire straits that denim major Arvind Mills is in today, Morarjee Legler was lucky to avoid becoming a basket case. Today, it is looking at other casual wear options.

How does Gothi rate this experience with Mckinsey. "I have several friends there," he counters diplomatically. Urvi Piramal says that the Mckinsey stamp helped when negotiating with potential foreign partners. "Mckinsey opens doors," she says. The doorman *avatar* may not sit well with

Gothi is moving into top-of-the-line products

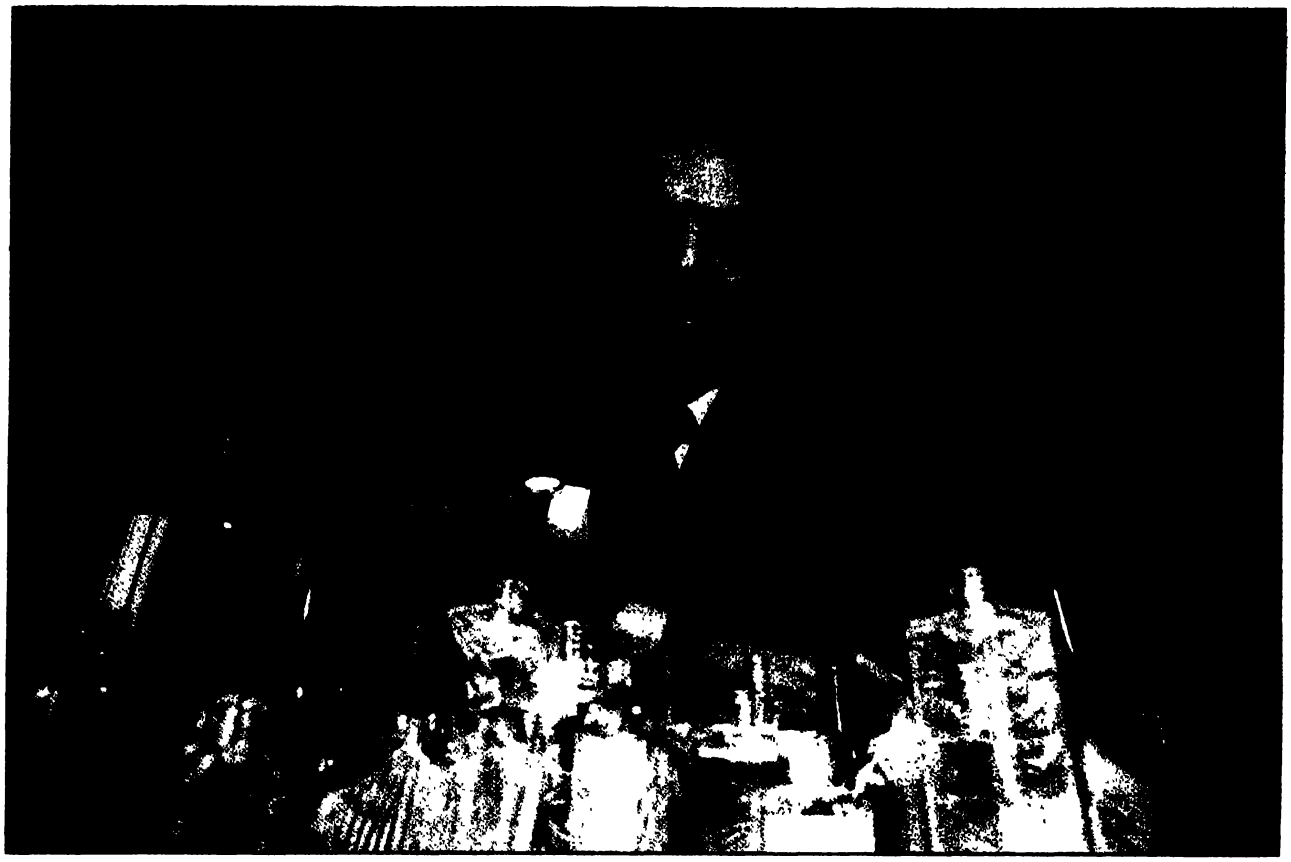
the Mckinsey brass, but it should be some consolation that when Crossroads was being set up the consultants were roped in again. With even the chef imported from Italy, more doors needed opening.

Mckinsey notwithstanding, Gothi says he now has his act in place. Operations at Morarjee are being downsized and the stress is on quality, not quantity. "We were cooking a different dish earlier," he says. "Now I am making a *biryani*." Adds he, proudly: "I have now finished cooking my *biryani*."

Cooking our goose not *biryani*, would be the stockmarket reaction. "Morarjee is a wealth destroyer," says Agrawal of Motilal Oswal who has studied the subject extensively. The figures say it all. Morarjee, which had a high of Rs330 a few years back, made a right issue in September 1992 at a Rs125 premium and a public issue in December 1994 at a Rs250 premium. Today, the stock is quoting at a marginally above par Rs11. An investor in 1994 would have seen more than 95 per cent of his capital wiped out.

No fallout on NPIL

Marketmen say this has affected the NPIL scrip too. But Ajay Piramal counters that while this have may been true a couple of years ago it is not so now. "The market has realised that Morarjee is not a management failure," he says. Until the government gets its policies on mill land deployment in place, the horizon for Mumbai's textile companies will remain blurred. "Politics is going to kill the game," says Gothi. Adds Urvi Piramal, reflecting on the manifold restrictions: "We can't even set up a bathroom on the premises."



Bathrooms were a problem at another of the group's ventures too. But it allowed a much easier solution. Urvi Piramal reminisces that when Gujarat Glass was acquired in 1984, it really was a rustic place. Visitors from Mumbai had to use the conveniences at an Ankleshwar hotel before proceeding to the plant site. (For those interested, Crossroads is starting with 31 conveniences from Day One.)

Gujarat Glass has come a long way since then. "We are the fastest growing company in the group," says managing director Vijay Shah. For the period ended 31 March 1999, the company had a turnover of Rs185.67 crore. (Accounting comparisons with earlier periods are not possible as the flacconnage division of NPIL was transferred to Gujarat Glass with effect from 1 April 1998.) Shah says that there was a 65 per cent growth last year and he expects to maintain a compounded annual growth rate of 35 per cent. "It will be much more if takeovers are included," he says.

The takeover trail has already been hit. The first trophy is Ceylon Glass in Sri Lanka. Some 39 per cent has been acquired and an open offer has been made for the remaining shareholding. Depending on the response, the takeover could end up costing Rs45-50 crore.

Gujarat Glass is leading the way down a path the Piramals are sure to follow in some of their other areas of operation: Ceylon Glass is the first major takeover of a foreign company by the group. Shah is today eyeing a few more targets in the Southeast Asian region. His aim is to be the dominant player in the entire area (including Australia). "We are looking at a turnover of Rs500 crore in two-three years," he says. At that point of time, the company is likely to seek listing on the stock exchanges.

Takeovers at home are also a possibility. This is a fragmented industry with more than 14 players. "There will be only three left a few years down the line," predicts Shah. But the consolidation may be some way away. "Today

Shah is setting growth records

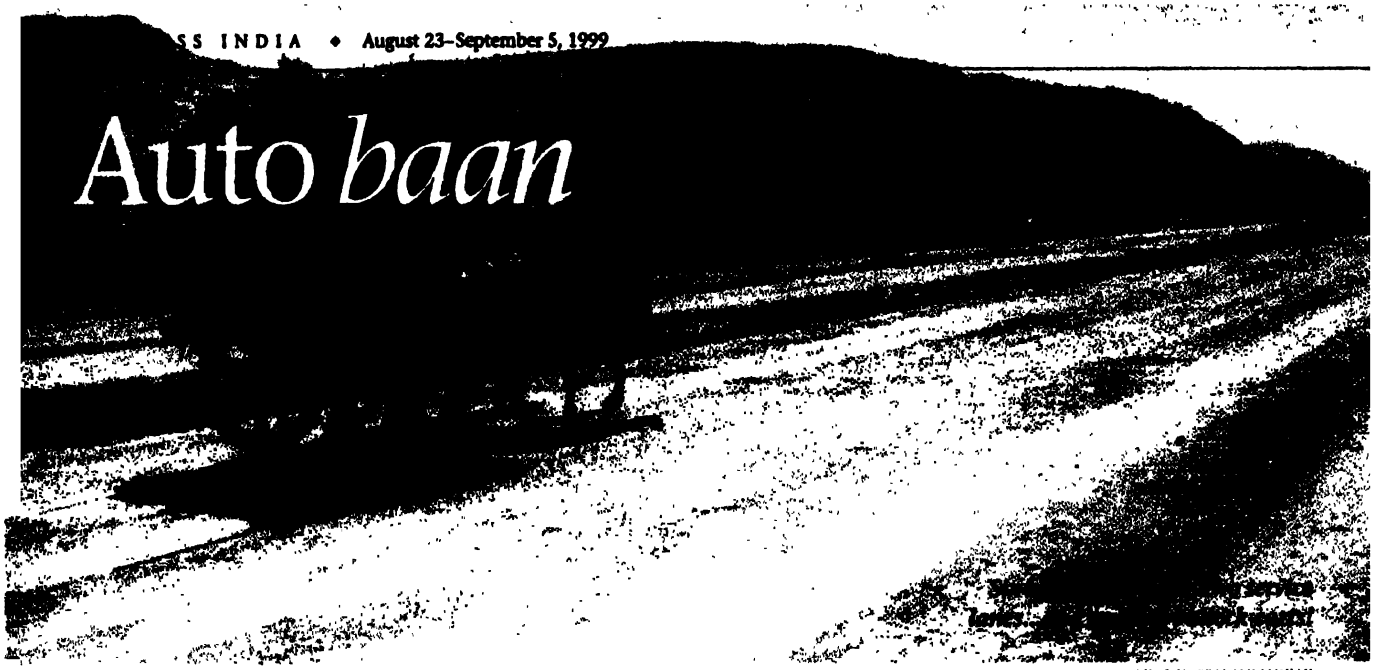
the valuations (of potential targets) don't look realistic," he adds.

"We have always believed that an acquisition is right only at the right price," says CFO Gupta, explaining the philosophy of the group as a whole. While he does not totally rule out acquisition of companies, the stress is more on brands. "Today, there is more value in brands," he says.

Seeking value outside is going hand-in-hand with creating a value system in Piramal Enterprises itself. "We have moved from a family-run company to a professionally-run business," says Ajay Piramal. "We have to now become world-class."

"The concept of the next millennium is the concept of world class," says group president (corporate development) Leonard D'Costa. He doesn't see a dichotomy in Piramal's statement of having moved away from being family run and the fact that there are so many family members still at the top (Mody of Crossroads also happens to be Urvi Piramal's brother). "What matters is that decisions are made from a professional system and there is no interference," he explains. And Urvi Piramal adds that she, for one, is no longer looking after day-to-day affairs.

"The two major areas that are going to keep us competitive are people and information technology," adds D'Costa. He is now trying to leverage these assets and build up knowledge management centres. An elaborate structure of knowledge committees and human resources forums is in place. The theoretical underpinnings already exist. "We have now to ensure that people walk the talk," adds D'Costa.



One doesn't know about the walking bit, but the talk has clearly become institutionalised. Urvi Piramal, who is focusing on training and development these days, talks about becoming the most admired group for its People, Products, Processes, Partnerships and Performance. At Crossroads, the chant is Change, Choice, Convenience, Competitive Costs and Customer Service.

Such alliterative *mantras* are necessary before their inherent message becomes internalised in the corporate culture. As Piramal Enterprises steps out into a new world, it is vital that it refurbishes this culture. It is also the opportunity for Ajay Piramal himself to change the perception in some quarters that he has just been lucky: Nicholas Aspro and Roche fell in his lap; the JVs are just unimaginatively applying the same formula; even the mall is because he didn't know what else to do with the Roche real estate. "Ajay Piramal has yet to show any strategic vision," says a critic.

In this sense, therefore, he is at the crossroads. At Crossroads — the brick and mortar one — there is no evidence of such doubts. Piramal has been clearly rejuvenated by the fresh challenge. You may not find him driving bumper cars at Jammin' too often. But, make no mistake, he's tried them out. You need to be young at heart to make the successful transition from millman to mallman.

Auto *baan*

PHOTOS: PRAKASH JADHAV

The country's first expressway shoots straight as a spear between Mumbai and Pune to halve the travelling time and create a series of other records, including being one of the few government infrastructure projects being completed before schedule and below budget

Ninety-four kilometres. Six lanes. Under one hour. Twenty-seven months from first tender notice to first drive-through. Cost: Rs1,600 crore, including escalation and interest. These are only a few of the figures involved in the construction of the first intercity expressway, a project on which ride the reputations of a do-or-die minister and a public sector corporation he set up.

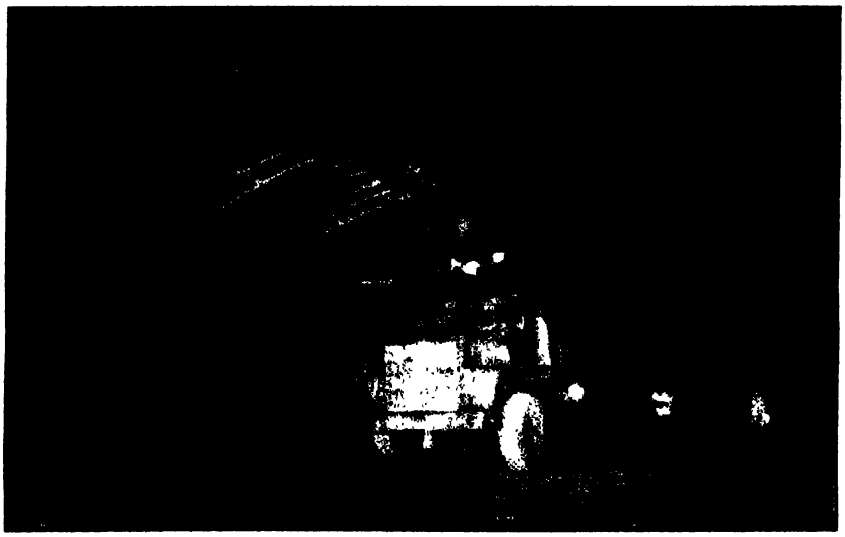
And this is only the beginning, says Nitin Gadkari, 42-year-old Bharatiya Janata Party minister for public works in Maharashtra's outgoing BJP–Shiv Sena government (*see box: We've passed the test*). If all goes well, he hopes not only that the expressway will be completed at a cost of Rs1,200 crore, but also that the Maharashtra State Road Development Corporation (MSRDC) will go on to build similar expressways linking the state capital to Nashik and on to Aurangabad and Nagpur, Sawantwadi on the way to Goa, and Talasari *en route* to Ahmedabad — all through private financing. Slated to come up within two years is a trans-creek freeway between Worli and Bandra on a cable-stayed, single-pillar bridge with a span of 250 metres on both sides — a world first of its type. The corporation, of which Gadkari is chairman, is already well on the way to completing most of the 50-odd flyovers to ease congestion within Mumbai. And, by March 2000, it hopes to have executed projects worth a staggering Rs25,000 crore.

The expressway story began in 1990, when the Maharashtra government asked Rail India Technical and Economic Services (RITES) and Scott Wilson Kirkpatrick of the UK to study the feasibility of a build-operate-transfer (BOT), toll-based system. After RITES submitted its report in 1994, the government invited private bids. The only tender was from the Reliance group, which came up with a forecast of Rs3,600 crore and five years. A shocked Gadkari promptly decided to set up a separate corporation, and entrust it with this and other road works in the state estimated to cost Rs25,000 crore at 1995 prices.

MSRDC, headed by former City and Industrial Development Corporation of Maharashtra (Cidco) managing director R.C. Sinha, was entrusted with the work. Sinha's special competence as a fundraiser was proved by the Rs1,200 crore he collected when MSRDC went to the market in January 1998 to raise just Rs500 crore. "Reliance had calculated interest at 20 per cent for five years; I borrowed the money at 13 per cent for two years," he explains. "The strength of the project gave the different bondholders the confidence that this would happen." Sinha does not agree that MSRDC's owes its very existence to the private-sector giant. "But our initial prosperity is definitely thanks to them," he admits.

But though MSRDC stepped in because the private sector was found wanting, it did not have the wherewithal to do everything itself. So it appointed technical consultants for reach of the four sections – 13.21 km from Kon to Chowk, 16.63 km to Adoshi, 23 km from Kusgaon to Ozarde, and 16.15 km to Dehu Road – as well as for two 'packages' each for the 9.75km Panvel bypass and the 15.41km ghat section excluding the tunnels.

Over the next year and a half till December 1998 it invited, received, and accepted tenders from contractors for the various sections. "The consultants carry out the surveys and provide the drawing to the contractors," explains B.R. Kulkarni, chief project manager of Sir Owen Williams Investment Ltd (SOWIL), consulting engineers for the Ozarde–Dehu Road section being executed by Jog Engineering Ltd. "We replace part of the responsibility of the clients – the government or MSRDC – by overseeing the contractor's work and reporting back regularly." MSRDC chief engineer S.S. Momin says, "They are our ears and eyes on the site." Pushp



Kumar, senior resident engineer for Intercontinental Consultants and Technocrats (ICT), which is overseeing the work of Hindustan Construction Co (HCC) on the Chowk–Adoshi section, says: "MSRDC's managing director, joint MD, and chief engineer monitor the work and hold monthly tripartite meetings."

Consultants and contractors alike are all praise for their client. "What does a contractor need?" asks M.A. Chitnis, chief resident engineer for Frischmann Prabhu, which is looking after the Larsen & Toubro (L&T) work on the Kusgaon–Ozarde section. "Quick decisions and cash flow. With MSRDC he has both." These depend on the system, and the person at the top – Gadkari, whose table sports a sign that reads 'I like people who can get the things done!' – has made all the difference, the contractors agree. Decisions are prompt. "We are looking at daily toll collection of at least Rs27 lakh," says Momin. "So if the engineer on site feels spending a couple of lakhs extra, say on shifting a pipeline will save us time, he can okay it." Payments are made every week at the latest. "Sometimes we get paid on the spot!" says M.M. Sawhney, vice-president of Jog Engineering.

With the environment ministry having refused permission to build a new road through the Bhor ghat, MSRDC has asked the Indo-Indonesian joint venture Leighton Shapoorji Pallonji & Co and L&T to widen the existing two-lane national highway, NH4. And Konkan Railway Corporation, with its experience in digging the longest tunnels for the Mumbai–Goa rail line, has the largest single contract — for five twin-tube tunnels, with a total length of 5.724 km.

The scale of work is massive. Nearly 1,100 hectares of land have been acquired for the roadwork, quarries, and dumping area; over 2 million cubic metres (Mm^3) of *murum*, 4 Mm^3 of rock, and 7.8 Mm^3 of earth have been excavated. Material requirements include 717,000 tonnes of cement, 25,000 tonnes of steel, and 2,400 tonnes of explosives for blasting — which one estimate equates to the power of 'one Pokhran'.

According to Col (retd) W. Kabir, project controller for HCC, his company has hired ICI as subcontractor, conducting 50–60 blasts in a couple of seconds with special explosives and conducting seismic tests to ensure that they stick within the set sound and vibration norms. "The three viaducts on this section are the most difficult part," says ICT's Pushp Kumar. "The longest is 250 metres in one direction and 280 metres in the other, brought down from the original 330 metres by realignment; and the highest of the 11 support structures is 40 metres tall." Each viaduct is in two separate sections with a gap of 6.6 metres corresponding to the median on the level road. This saves about 15 per cent in both cost and

Contractors on the project are seeing daylight at the end of the massive tunnels

"We have passed the test!"

Contractors, consultants, and officials alike agree that state public works minister Nitin Gadkari, 42, has lit a fire under them and transformed a moribund government department into a dynamic, result-oriented structure. Gadkari, a BJP veteran who is busy campaigning for the forthcoming legislative assembly elections in his home constituency Nagpur, spoke to *Business India* about his dream project

What drove you to get into such a massive project?

As a minister I wanted to do something for not only my city and region, but also for the country. When I took up the expressway project even my colleagues in the ministry were sceptical. We have passed the test! It has always been felt that the government should make policy, not do business. MSRDC pioneered the government's move into business, and it has clicked. This is our example for the nation — we can change the picture of the country in five years. I have also offered our prime minister that we will build roads worth Rs10,000 crore. We can raise this money. We can raise even three times that amount: anyone will invest in a viable project, and infrastructure is a goldmine.

Why did you have to set up a separate corporation when the engineers working in it are from the public works department?

If the PWD moves at 40 kph, MSRDC has a speed of 120 kph. The decision-making process in the government is complicated

PALASHRANJAN BHAUMICK

Gadkari is gung-ho

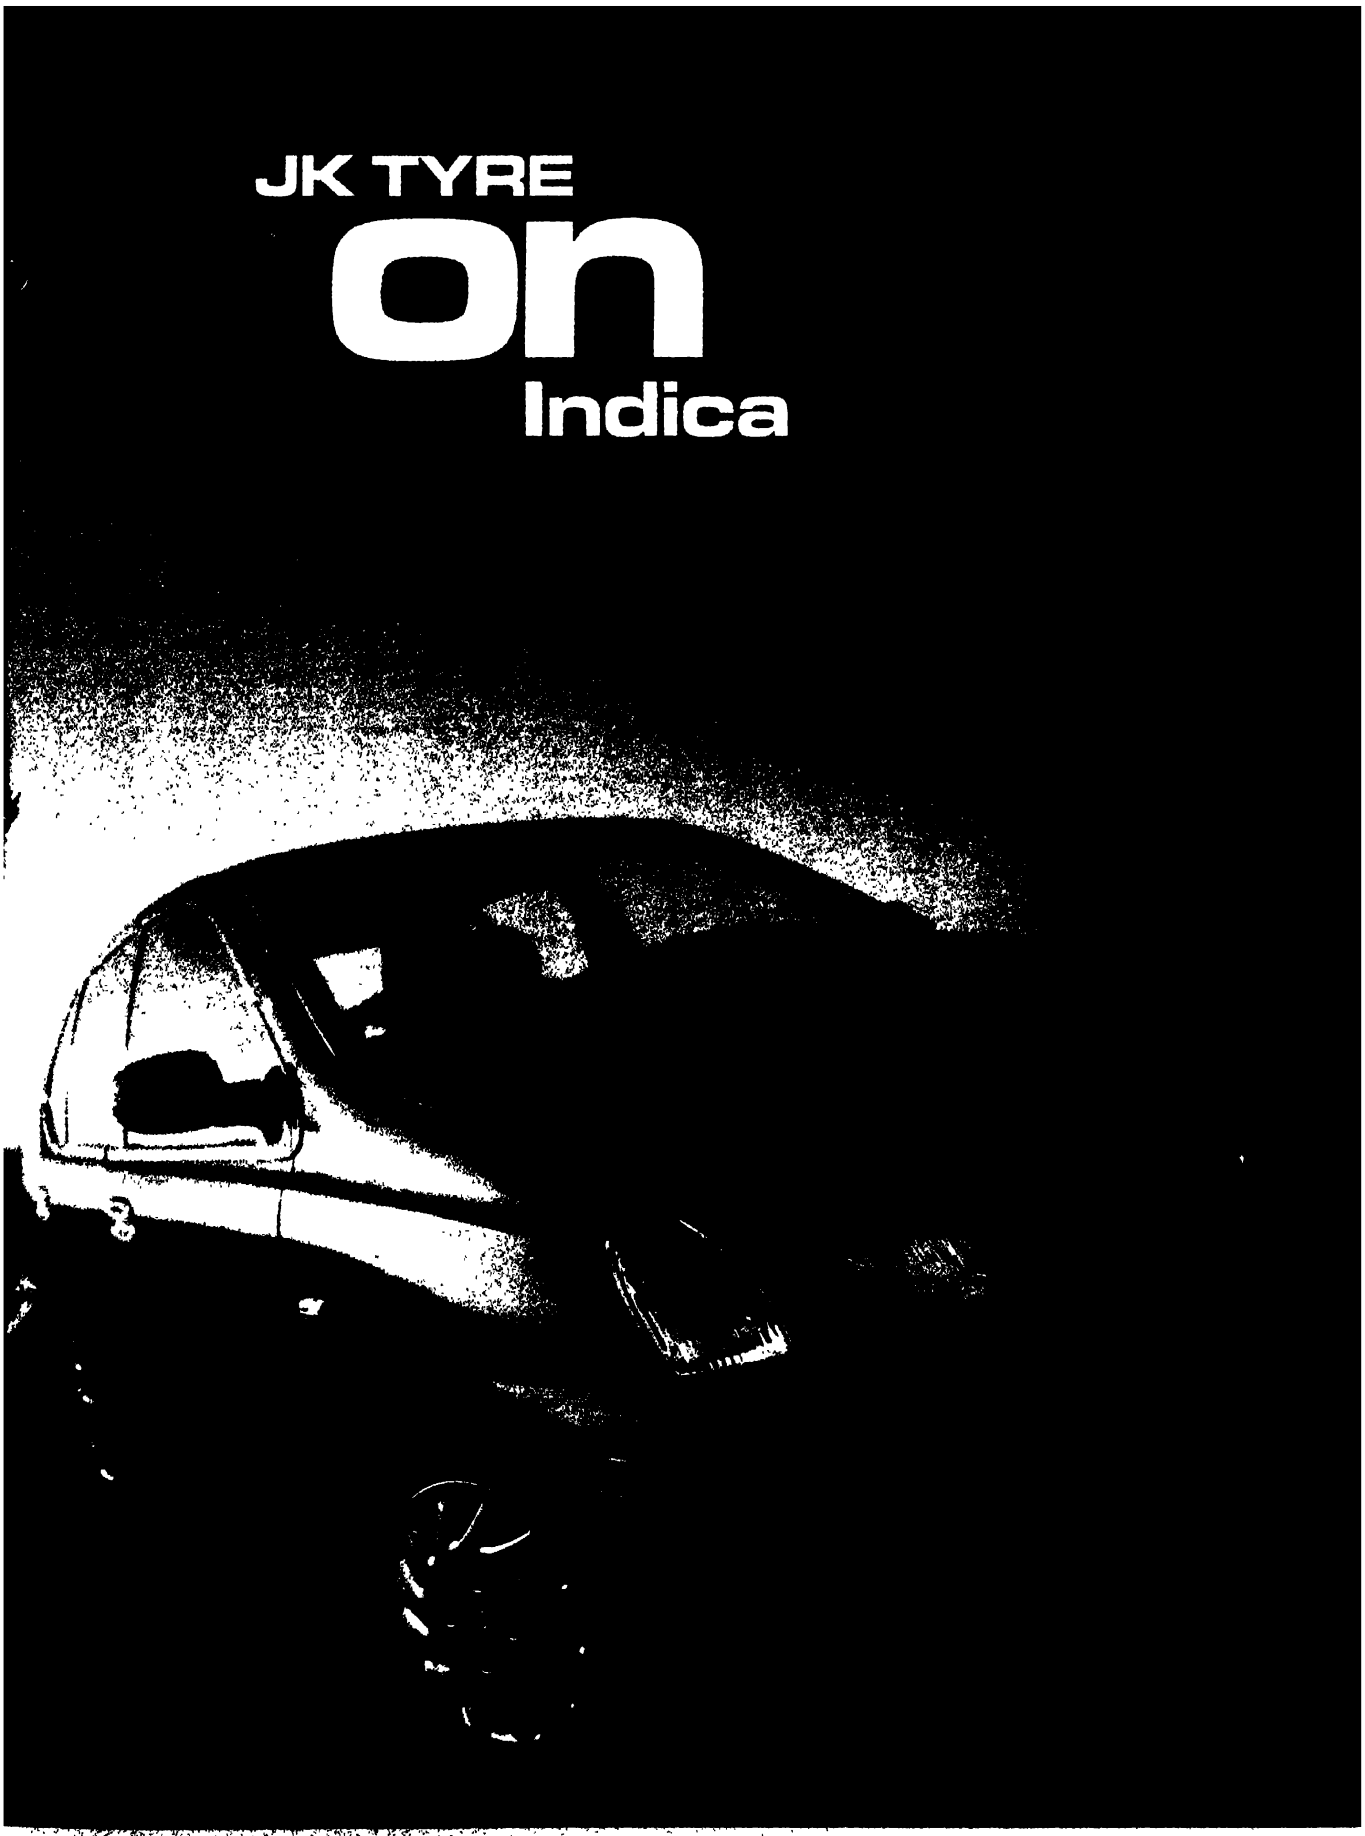
— there are different departments involved, and things can't move fast. At MSRDC we have professional management, full transparency, a time-bound and result-oriented approach. The principle of MSRDC is to go ahead and take a decision. Bona fide mistakes will be forgiven. This gives everyone a morale boost. On the other hand, I have also given everybody a 'do or die' ultimatum. Those who don't deliver won't survive. The work culture is important; if the political leadership has the will, we can do anything — the sky's the limit. MSRDC has changed the government's way of thinking, shown what can be done. I myself care for people like my family. I don't worry about protocol; I go to my secretary's chamber if I want to talk to him.

What about the opposition to the project from environmentalists and others? Will the work suffer if a different government comes in after the election?

I have planted 2.7 million trees. What do these environmentalists do? They only raise a hue and cry about some mouse deer being endangered! We need a development-oriented approach. My own philosophy is to work like you play one-day cricket: don't miss a single ball, so what if there is criticism that I use a cross-bat? I told the World Bank the same thing: if you want to finance our projects, say yes. If you don't, say no — don't keep us hanging for 13 years!

And no, the work will continue under whichever government comes, because the pace has been set. Of course, we hope to come back to power — so there's no question of priorities changing. •

time, he explains.

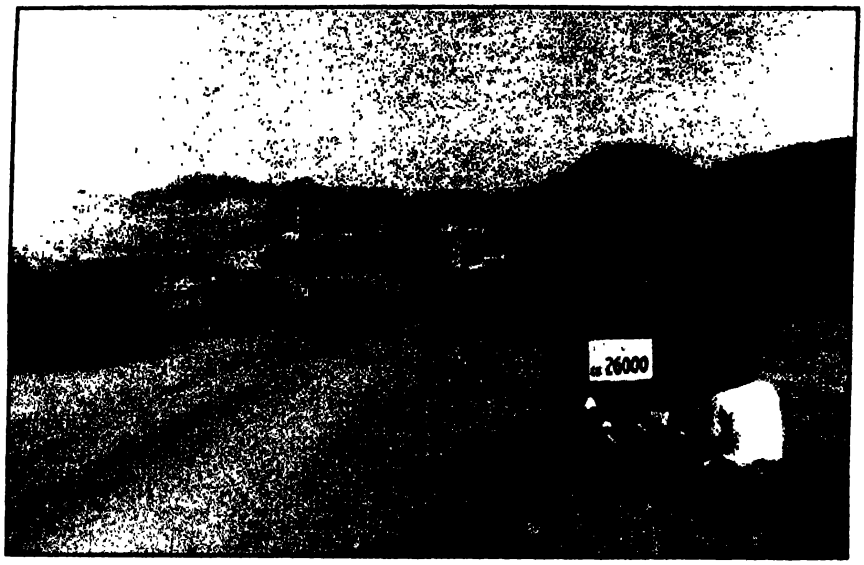


The expressway will also use up 70 million litres of diesel, 3 billion litres of water, and 5.3 million units of electricity. Over 17,000 skilled and unskilled labourers are toiling along the length, supervised by more than 1,000 technical personnel and 150 consultants' staff in 50 labour camps and 55 temporary offices. State-of-the-art machinery worth Rs326 crore – 400-tonnes-per-hour stonecrushers, batching plants to mix concrete automatically, and gigantic concrete-layers, which can do a metre a minute of both DLC (dry lean cement) and the final PQC (pavement quality cement) on the 11.5m carriageways on both sides of the median – have been brought in by the contractors.

"India has made a beginning in getting international standards," says Frischmann's Chitnis. "L&T has a Rs6.5-crore spreader-paver-texturiser, which is being seen for the first time in India." Water chilling plants have also been installed to cool the metal and enable midday concreting, combating the problem of not being able to lay cement at temperatures higher than 30°C. "Finishing by 26 January 2000 is not just optimism," explains Momin. "We are taking stock of the situation with each contractor every fortnight, and initiating corrective action." Even the onset of the monsoon, which he had earlier feared might affect the work, has caused no major slowing down, he claims.

In Sinha's office, a larger computer printout showing the number of days to go for D-Day occupies pride of place on the wall opposite his table. As *Business India* hits the stands, the figure is down to 156. But he is unfazed. "My level of satisfaction is almost 100 per cent," he says. "I am chasing everybody all the time — making my life, and their lives, miserable!"

The finished expressway will be lined with 70,000 trees and barbed-



JK TYRE
on
Indica

To harness the most powerful car in its class you're going to need the high-speed cornering capabilities and fail-safe braking of a JK Tyre. Built specifically for the Indica, its nylon capped steel belts keep you firmly on the road. A wider contact area means better grip. And structured transverse grooves ensure firm traction. For the most gripping ride.

Jog-ging along

It's ironic that the only section that might not be ready on schedule is the one being built by the man who mooted the idea of a Mumbai–Pune expressway 13 years ago. Madhav Jog, MD of Pune-based Jog Engineering Ltd, first presented a proposal for the project to Shiv Sena supremo Bal Thackeray in 1986, and to then prime minister Rajiv Gandhi in June 1987. "The travel time between Mumbai and Pune should not really exceed two hours, and this can be achieved by installing a six- (plus two pull-out) lane expressway to connect the two cities," Jog wrote in his covering letter. Carrying an estimated 30,000 vehicles a day, the expressway could save Rs299 crore annually in man-hours, fuel, tyres, accident reduction, and vehicle life, he said.

The M.V. Jog section is causing concern

Today MSRDC is faced with the possibility that the 16.15km section 'D' from Ozarde to Dehu Road – 27 km from Pune, where the expressway ends and returns to the existing NH4 – might not be ready by the telescoped target date of 26 January 2000. But everyone admits that it is not the contractor's fault; he had more than his fair share of problems. First, there was a five-week delay in issuing the work order — Jog got it on 7 February 1998, while the others had received theirs on 1 January.

Then it was discovered that a wrong stretch of 1.3 km had been acquired; this necessitated additional tapering of 500 metres at each end, for which the formal letter and drawings came only a year later, on 26 February 1999. "Even today, a 1.35km length is not in our possession!" says Jog. Only about 400 metres, demurs MSRDC chief engineer S.S. Momin. But, Jog points out, there is local opposition along 1.15 km which MSRDC has cleared, and consultant SOWIL's people got beaten up. "Law and order is not our job," he says. Another 200 metres is stuck in a court stay.

The section also has the largest number of substructures for canals and people to pass under the roadway, says M.M. Sawhney, Jog's vice-president on the site. "There are 85, some as close as 40 metres to each other; so we don't get the long haul our earthwork machinery needs," says Sawhney. To make matters worse, adds Jog, culvert designs were being changed as late as June-end, after excavation had been done according to the original plan.

Jog's troubles don't end there. The company had to excavate 2.5 million tonnes of rock, but this is not good enough to use for pavement concrete. "We had to bring in the *murum* from outside, for which we got the formal okay only in mid-April 1999," Jog says. "We finally got a quarry on 18 June and started laying concrete 10 days later."

Jog continues to lay concrete in the dry spells during the rains, targeting 2,000 cubic metres a day. "We are geared up for absolutely jet-set rocket take-off!" says Sawhney dramatically. He is confident that the company will finish its work as promised: "Our reputation concerns us," he adds. Jog himself is not so sanguine. "If anybody expects us to be magicians, sorry!" he says. "If we get the last piece of land peacefully by August end, we can still do it. Otherwise, I don't know." MSRDC is prepared. "We can use a slip road near Dehu Road to get back to NH4 if the section is not complete," Momin says. •

wire fences or walls along its entire length to deny access to unauthorised vehicles or people, and prevent encroachment. The road will be closed not only to bullock-carts and other slow-moving vehicles that plague drivers on the highways, but also scooters, motorcycles, and three-wheelers. Other vehicles using it will be charged a toll, ranging from Rs80 for a car to Rs270 for a bus and Rs670 for a trailer truck. Savings in man-hours, fuel, tyres, and vehicle life will far exceed these fees, even at the rates used by Madhav Jog, managing director of Jog Engineering Ltd, when he first presented his proposal for the project 13 years ago (*see box above*).

The toll, which MSRDC joint managing director P.L. Bongirwar says will be collected by an independent agency at four or five interchanges *en route*, will be in force for 30 years. Control rooms along the stretch will be connected to telephones at 1km intervals, and by wireless to ambulances and breakdown vans stationed at various points. There will also be sick bays, petrol pumps, and convenience stops, and a water system in the tunnels to fight any fires caused by accidents.

Also planned are two 'megacities' alongside the expressway, for which another 1,338 hectares have been acquired. Not all of those whose land has been taken are farmers — many have bought plots of 0.4 hectare or less to build homes. According to Jayant Sadavarte of the Plot Dharak Sanghatana, the government is giving such people alternative plots too. "But this is a concession, not a right — plotholders

Indica

The Indica is the only car in its class with independent rear suspension. Experience this new level of comfort with a JK Tyre. Built specifically for the Indica, its unique 6 rib pattern makes steering light and easy. Optimally placed tread elements give you a better ride. And the extra supple sidewalls cut out the imperfections of the road. For the smoothest ride.

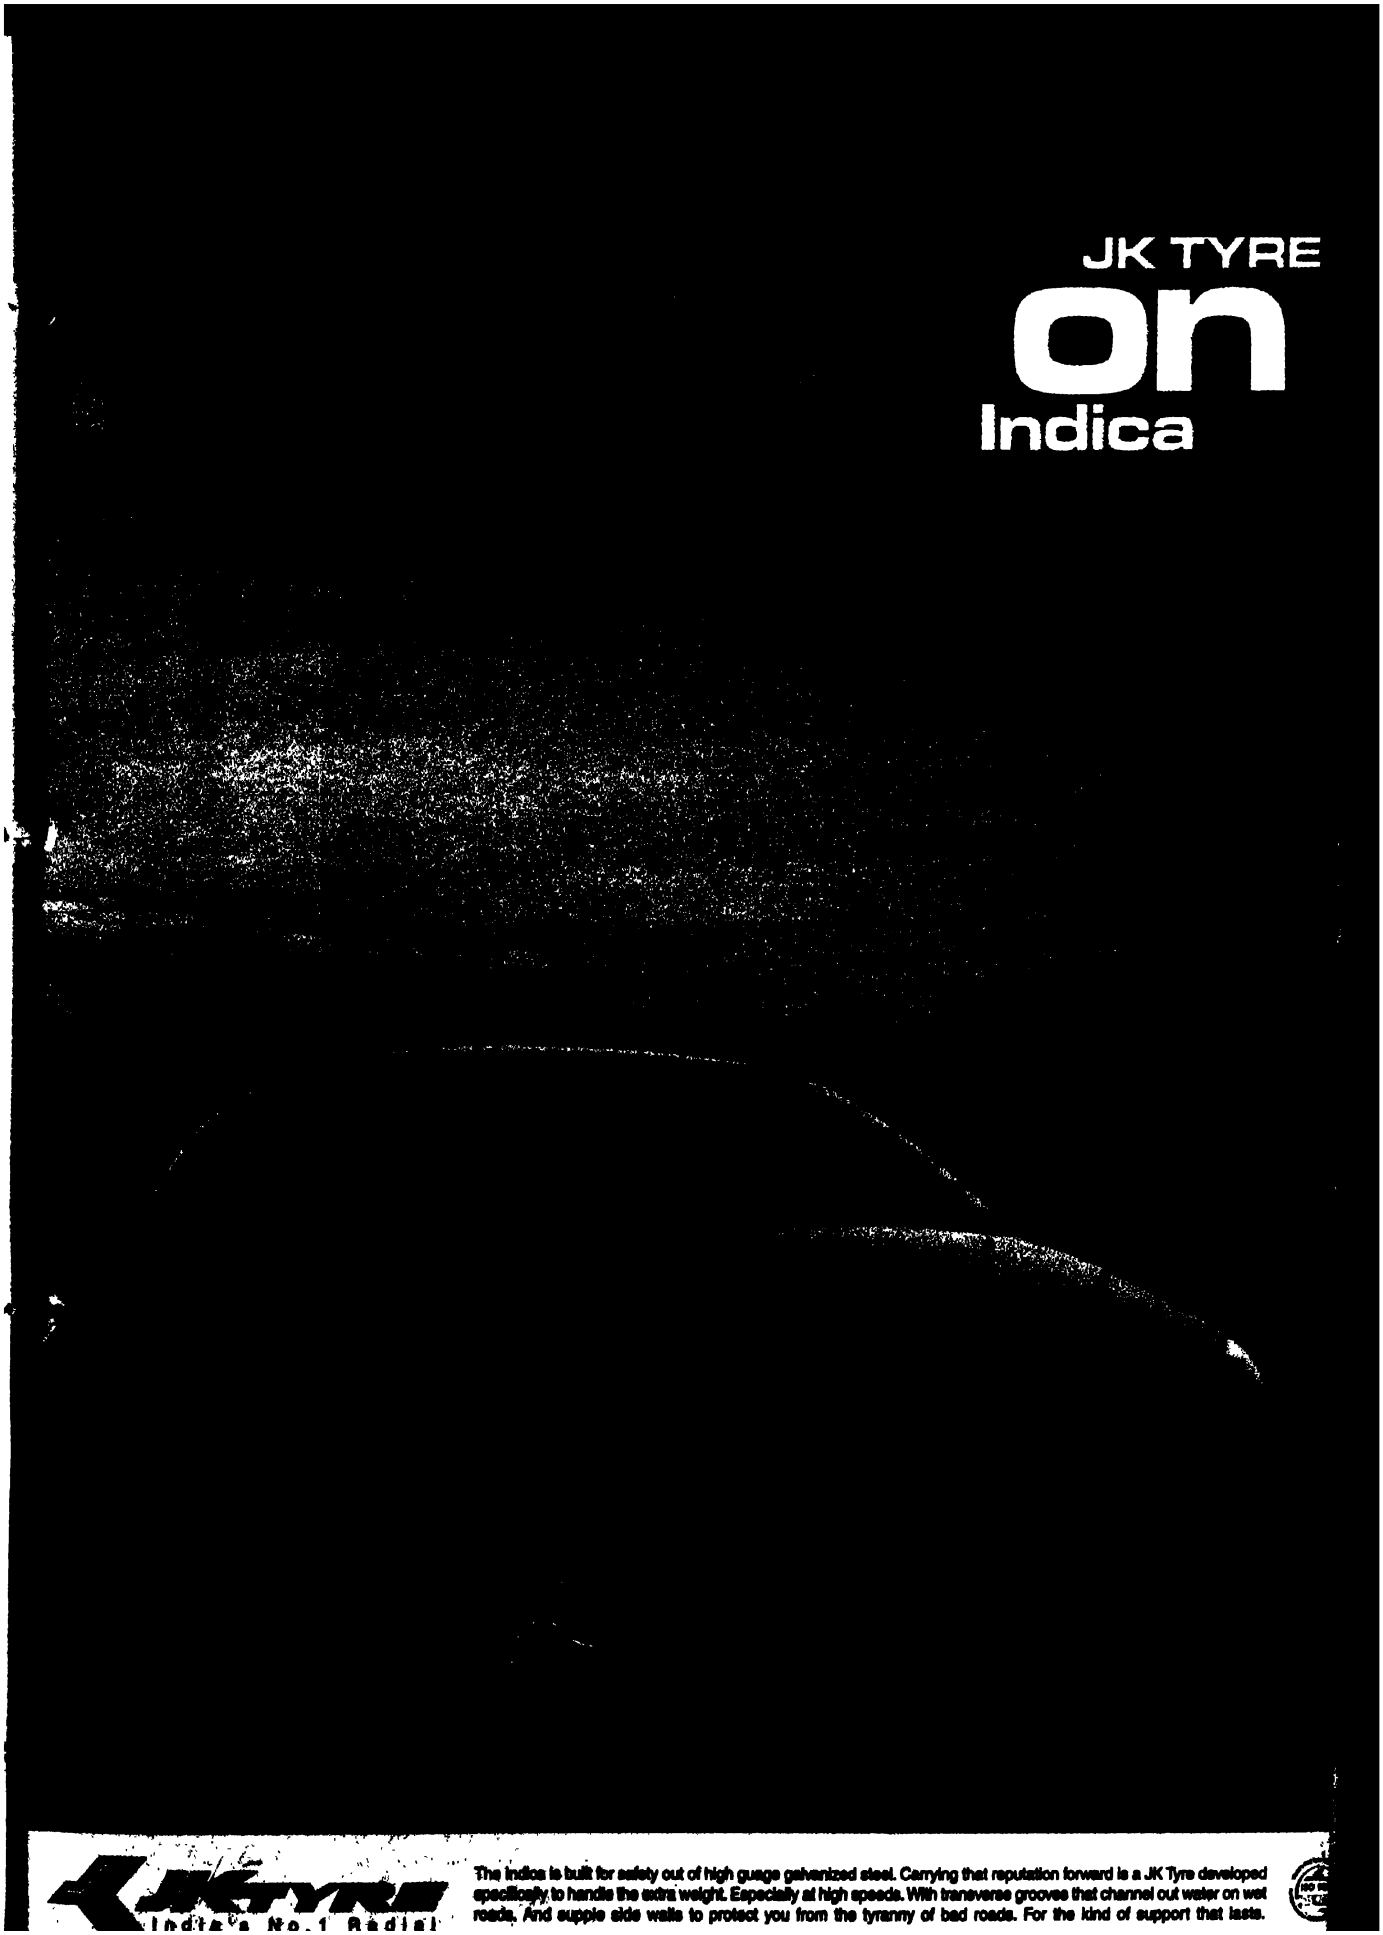
ARUN D KULKARNI

The road can match an airstrip not only in width, but also in strength

Huge investments have been made in concrete-laying and other hi-tech machinery

The three viaducts have support structures up to 40 metres tall

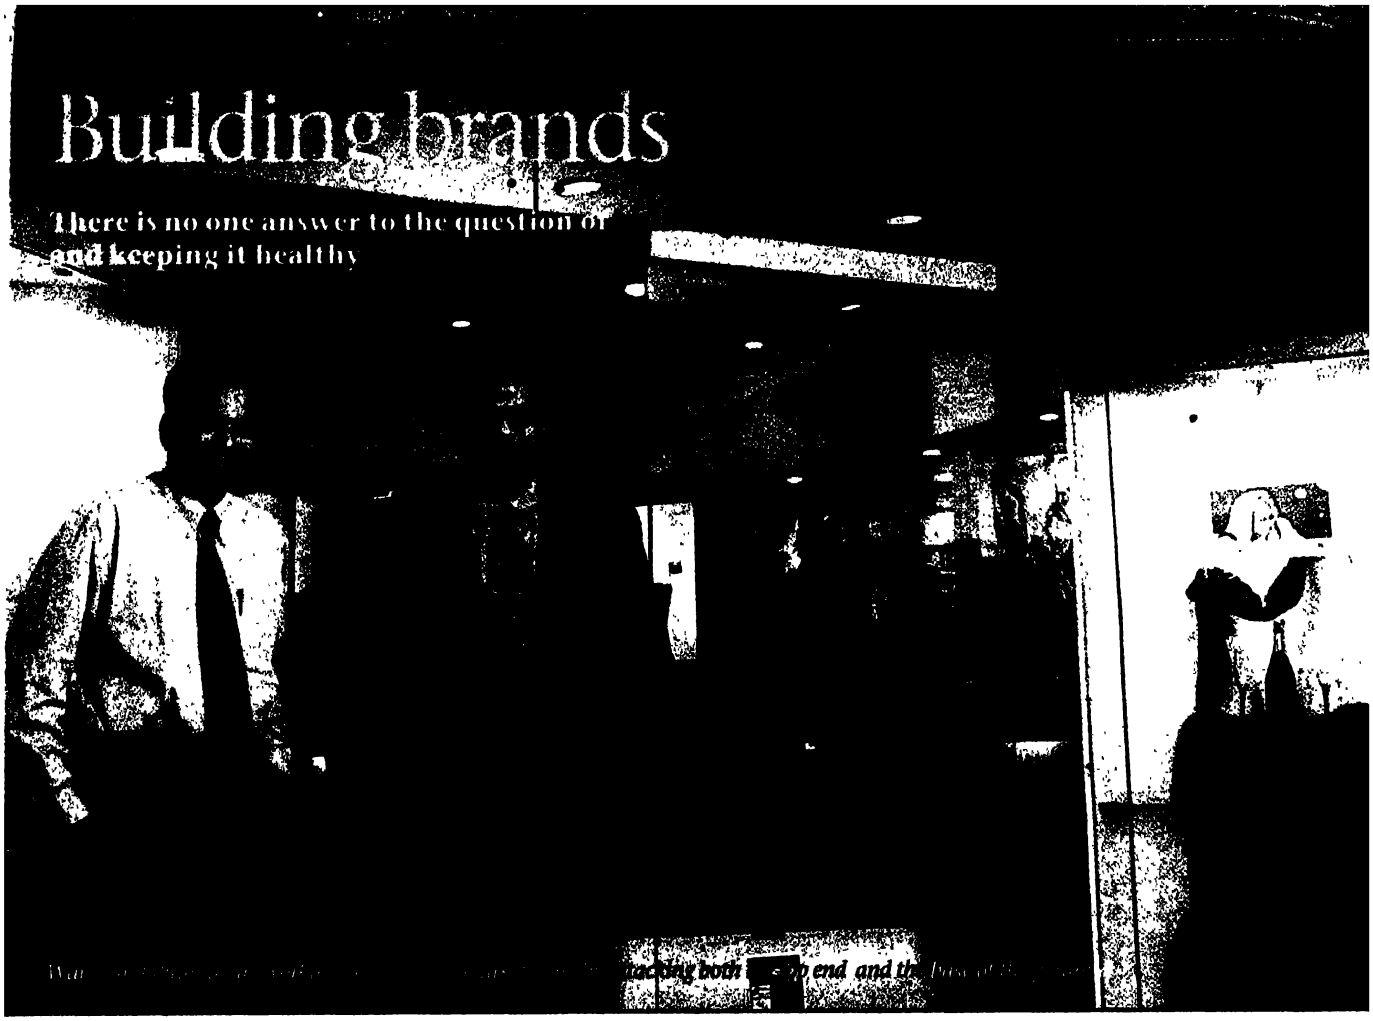
have to apply for it," Sadavarte adds.



But not everyone is happy. Ecologists have been up in arms against the degradation of the countryside and the threat to wildlife, especially in the ghat area. Sujit Patwardhan, environmental activist and founder of Pune-based Parisar, objects to the project on practical rather than 'green' grounds. "Gadkari's claim of being able to drive from Dadar to Alka Cinema in Pune is no less false than those of plantation companies promising astronomical returns to investors!" he fumes. Parisar and other organisations have been trying in vain for over a year to get the project report from the government and MSRDC. "Public money is being spent. Doesn't the public have a right to know whether it is necessary or not?" Patwardhan asks. The project, he claims, was cleared hastily on pressure from the state government at a time when environment minister Saifuddin Soz was not even in India.

"There has been no proper scrutiny," Patwardhan insists. "The wildlife society of Dehra Dun surveyed the ghat section and did not clear any blasting there — but MSRDC went ahead, and now there are landslides!" Momin, however, stresses that the landslides – which blocked traffic between Mumbai and Pune for a couple of days in August 1999 – were 'natural', caused by the heavy monsoon rains. "The railway tracks were also blocked. That couldn't be because of blasting on the road," he says. Patwardhan, however, has a point when he talks of the need to improve public transport so that fewer private vehicles are used. "We should reduce the traffic rather than build more roads, which will only attract more traffic," he adds. "Experience around the world has already shown this. Why are we going the same way?"

Gadkari has more justifications. "Every Rs1,000 crore of investment generates direct and indirect employment for 100,000 people," he says. And we are using steel and cement worth Rs2,000 crore this year alone, in a time of recession, when industries are on the verge of closure. Another 250 industries run with these two core industries, so count the benefits."



Adds the visionary and prime mover Jog himself: "The microeconomics is that the motorist saves fuel and time, which leads to the macro benefit of an enormous saving in foreign exchange outflows. Add a 25 per cent increase in tyre life, and the colossal cut in man hours spent with four passengers in each of 80,000 vehicles saving two hours — and you get a figure of Rs80 lakh a day. This will accrue to the national economy, not to MSRDC or the state government, he points out. Whether or not his company finishes its part of the project on time, there's no arguing with Jog's figures.

JK TYRE
India's No.1 Radial
The Indica is built for safety out of high guage galvanized steel. Carrying that reputation forward is a JK Tyre developed specifically to handle the extra weight. Especially at high speeds. With traneverse grooves that channel out water on wet roads. And supple side walls to protect you from the tyranny of bad roads. For the kind of support that lasts.

Building brands

There is no one answer to the question of and keeping it healthy

On the old Prabhadevi Road in central Mumbai, DGP Enterprises chairman Dilip Piramal is ensconced with his managing director A.G. Warey as they chalk out the strategic imperatives to take the VIP brand to a whole new audience. Students and young professionals are in the crosshairs as the concept of a hipper, trendier, and more zingy travel companion is being touted.

Meanwhile, Ahmedabad's Ashram Road has Nirma chairman Karsanbhai Patel in a huddle in his third floor chamber with his senior management team evaluating the success logged by Nima Rose soap, which was launched aggressively earlier this year. Nima Rose is being used as a flanking device by Nirma as it taps smaller regional markets and stops rivals in their tracks. In fact, the Nima brandname is now being used to sell detergent — cakes and powder — as well as soap. The creation of a parallel brandname, a first for Nirma after years of dominating the marketplace through umbrella branding, is already paying dividends.

In April 1998, Nirma turned the price-sensitive soap market on its head by launching Nirma Lime Fresh. In a month, 17 million cakes were sold and, as Karsanbhai himself says, "My strategy is very clear — I will not launch a product without test-marketing it. Further, I will not advertise till I launch the product. Remember that I am selling mass-based, competitively-priced products." A high-decibel advertisement featuring Ria Sen followed the Nirma Lime Fresh launch and the rest, as they say, is history.

Nirma, with a 38 per cent marketshare in detergents (cake and powder) decided to add value to its portfolio in 1992 by launching Nirma Beauty soap. Today it has an 18 per cent marketshare in the soap segment. Nima Rose is already a market leader just as Nirma Lime Fresh is. When Jai launched its lime variant, Nirma was quick to follow up its Nima Rose brand with a lime variant. Nirma is the perfect story of brand-building. Karsanbhai says, "In the early 1980s, when television began to make inroads into rural and urban India, Nirma would be one of the advertisers for the Sunday evening Hindi feature film. But the positioning of the TVC (TV commercial) was such that the majority of the populace thought the film was being sponsored by Nirma. This stood us in very good stead."

Similarly, overlooking the Arabian Sea in his Rang Sharda office in the western suburb of Bandra in Mumbai, Marico Industries managing director Harsh Mariwala is putting the tentpoles in place for his relaunch of Mediker, a brand acquired from Procter & Gamble for Rs10 crore. Companies armed with brands are resurgent on the stockmarkets. Marico, with Parachute and Saffola, is the perfect example. Marico has very smartly used the natural route to deliver promise. Mediker has been acquired as the group did not have a serious medicated brand in the problem-solution area in hair care. A need gap has thus been plugged.

Are brands enduring or

ephemeral? Do they become part of a habit? Jagdeep Kapoor, brand-builder and managing director of Samsika Marketing Consultants, reckons that serious brand-building as a concept has emerged lately in India. He says, "Earlier people would snigger at the thought of systemising the process (*see box*), but now that brand power has come through, good brand strategies will triumph in the marketplace."

It must be mentioned here that India is a large market which consumes a wide array of products. In fact, according to socioeconomic classification, there are 12 different segments. There has to be a passion to build a brand, for it is very much akin to nurturing a child or a plant, for that matter. A high level of involvement and marketing discipline is required to shore up a brand. What's important here is that marketing has different connotations for different organisations. Kapoor says, "It should be a culture within the organsation. I have created what is called the land and brand module. My contention being that, just as one invests in land, one invests in a brand. You have to have a long-term vision in brand-building that remains the edifice. For instance, brands like Navneet, that I thought had submerged, have been jumpstarted with the help of external inputs. Restructuring of the product portfolio and repositioning the brand has enabled it to grab marketshare and create a profile for itself."

Monginis, the franchise cake shops in Mumbai, have gone national very successfully using Kapoor as the whetstone. Over the last three and a half years Monginis has improved from 69 franchisees to 203 and the vision for 2002 is 1,000 shops.

Mariwala firmly claims that brand-building and survival in a free market depends not just on which category you are operating in, but the presence of global brands in it and, most importantly, the intensity of the battle. Take Coke and Pepsi, who with their deep pockets view markets very, very passionately. Soft drinks, toothpastes, or shampoos are arenas in which MNCs hold the cutting edge with a high decibel marketing. Mariwala says, "We aren't vulnerable to that extent. While we are fighting MNCs, these are very much *desi* MNCs operating from within. At the end of the day one has to be insightful to capture the consumer's interest and this should translate into brandworthiness."

Dilip Piramal reckons that the VIP brand was built on advertising, promotions, and a retailing thrust. "Yes, it was built from ground zero, but product quality has always been an engine. Today Sam-sonite's presence does not deter me, for I have managed to impact the top end of the market through better designing. In 1999-2000 VIP's adspend will be close to Rs20 crore."

Of oral care and opportunity

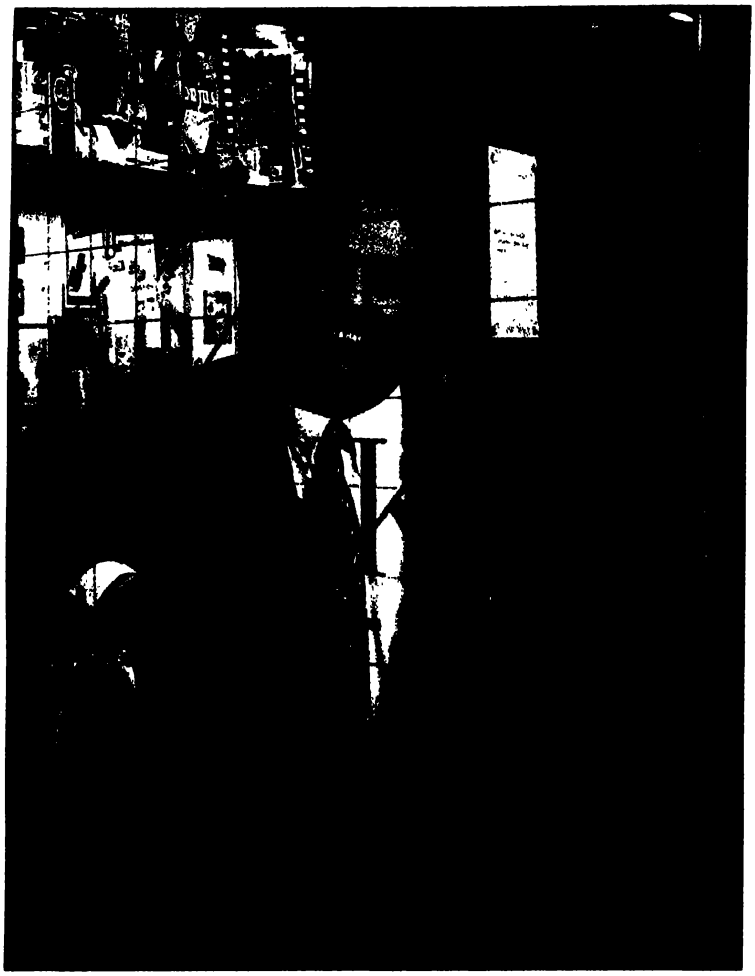
A classic case of brand-building in recent memory is Hindustan Lever's imperatives and intent in oral care, a market it has not only assiduously built over the last decade but also made deep incursions into rival territory grabbing a substantial marketshare. The toothpaste story begins in the late 1980s, when HLL had a marketshare of just 4-5 per cent through two brands — Signal and Close-Up. It was at this point that HLL realised that a huge need gap existed and the opportunity was staring it in the face. With oral care being designated as an integral part of personal care, HLL made its strategic foray. Concurrently, sweeping reforms were taking place and the third party manufacturing route was available. The action plan was clear — relaunch Close-Up, delist Signal, and concentrate on building one brand.

Differentiation is a critical area in the consumer's mind. So HLL decided to be distinct and attack with a genuine and unique selling proposition. Mukul Deoras, general marketing manager for toothpaste and toothbrushes, says: "Everything about the new Close-Up was different; it had functional attributes, brand benefits, and brand personality. When the world was full of white toothpastes, we offered the first gel, a spicy, clove-based toothpaste in a novel collapsible laminated tube with intrinsic characteristics offering youthfulness and vibrancy."

Those were the days when tooth decay was top of mind in the oral care category, but Close-Up's blueprint offering fresh breath and white teeth made a positive impact as it targeted a spanking new audience — the 15-35 age group. Deoras claims that, through its campaigns, HLL was now talking to the customer directly on a one to one basis. "When Close-Up was first launched it was seen as an elitist, urban, and westernised brand, but during its successful relaunch it evolved and expressed itself into a fresh breath-confidence booster mass-market brand."

This was the turning point as the brand property changed and a new segment was created. Pertinently, the toothpaste market today is valued at Rs1,780 crore. Colgate remains the market leader with 51.1 per cent, but HLL is closing up with a 37.03 marketshare. The evolution has been staggering — in 1990 HLL had a 10 per cent marketshare, which grew to 18 by 1995 and is currently pegged at 37 per cent.

Oral care valuation for 1999



Toothpaste	Rs1,780 crore
Tooth powder	Rs462 crore
Toothbrushes	Rs390 crore

Once Close-Up started climbing, HLL felt health remained an important benefit segment. It also felt that it had a large enough business to use as a springboard for the next step on the ladder. A relaunch of Signal was seen as a case of carrying the baggage of the past. Protection of the teeth thus became the focus area and 1993 saw Pepsodent being launched, and once again it bridged the need gap effectively. Today, of HLL's 37.03 per cent marketshare, Pepsodent-G, 2-in-1, and Advanced contribute 15.38 per cent.

The next level came when HLL decided to leverage toothpaste's brand equity in toothbrushes and in this too it made rapid headway. Today the toothbrush market is valued at Rs390 crore, of which HLL has a 25 per cent share. Interestingly enough, 20 per cent of the total oral care business is in toothbrushes and HLL is now operating across all the price segments.

The adspend in oral care is pegged at Rs160 crore and HLL alone forks out a third of that figure. The clinching fact, however, is that oral care is now contributing to the juggernaut's bottomline in a big way.

At Marico the view is that, as the environment is constantly changing, opportunities and competitive threats have to be absorbed. The challenge of change is what Mariwala is guarding against. Branded coconut oil is a Rs600-crore market, while the non-branded market is valued at more or less the same. Parachute and its extensions are the market leaders. Though there is competition from Shalimar in the east, Coco Care in the west, and HLL's Nihar, Marico has safeguarded its interests and share of the market by focusing on advertising, sales, and distribution. Marico's adspend is 7.2 per cent of its sales turnover (Rs551 crore in 1998-99). Nearly 50 per cent of Marico's sales come from Parachute and its extensions.

Kapoor reckons that brands live beyond human beings

Kapoor maintains that brand-building is based on honesty, distribution, segmentation, pricing strategy, perception management, and customer service management with advertising being a small component. "Brands live beyond human beings — they don't have just a personality, but longevity. Brand management is an integrated process. One cannot live on past glory. It is a consistent, persistent, and insistent exercise."

Which is an interesting thought, for if you look at Thums-Up, Kissan, or Captain Cook, they continue to do well despite having changed hands. But against that there are brands which simply begin to fade for lack of nurturing and embellishment. If they are not made contemporary and their perceived value is not cranked up and concurrently the consumer's expectation level goes up a notch, they begin to get inundated. They begin to drift, then languish. Examples that come to mind are Promise, Murphy, and Rasna.

Marketers will tell you that one needs to be proactive in brand-building. Let us take the case of Promise toothpaste, which in 1990 had a sizable 12 per cent marketshare, which was incidentally better than HLL's. But as HLL turned on the heat (*see box*), Promise lost focus. As the freshness market in toothpaste started growing with the advent of Close-Up, Balsara's Promise deviated from its given niche of being clove-dominated. It started targeting freshness, a folly in the ultimate analysis. Things went wrong when it was discovered that it was an undersupported category in terms of advertising and marketing expenditure. Further, Promise didn't have the ability to cross-subsidise in terms of surplus cash. Colgate too faltered, reacting too late, not changing its mix. Colgate Dental Cream was not bolstered at this vital juncture. A simple marketing tenet is that, when you are battling for marketshare, the core business has to be protected at all costs.

When HLL took on Nirma by launching Wheel, Rin and Surf were never neglected. On the contrary, they were beefed up. Rajesh Jejurikar, general manager at Marico, states that the core values of the brand have to be communicated efficiently at all times. That is one of the reasons why Marico is using Conquest, a consumer contact process, for constant brand feedback.

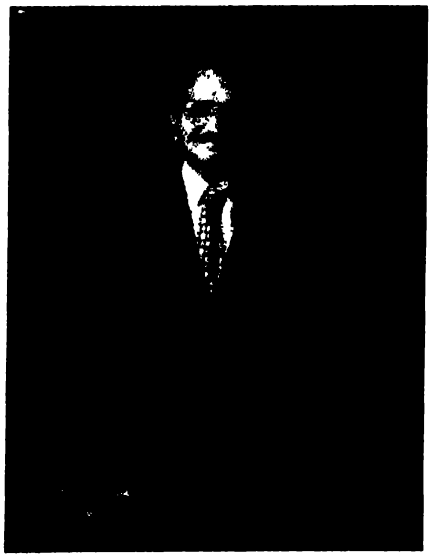
In toothpaste HLL was the aggressor and most proactive. Says general marketing manager Mukul Deoras, "We cannot afford to be the followers. Brands don't happen; they have to be clearly articulated with a relevant positioning strategy. Every single element of the brand's attributes and mix reinforces its position consistently." Propositions have to be created as price points for brands are less elastic to changes unlike commodities. Nirma is the finest example of price-sensitive products sweeping the opposition. But HLL too has brands like Sunlight and Dalda, which not only became irrelevant in their respective categories but couldn't transcend to the next level.

Against that you now notice that the commodity business is gradually turning into a branded commodity business with the MNC marketers moving up the value chain. Cases in point are HLL, Pillsbury, and International Best Foods, who are battling for the branded *aata* market. Niches are always easier to protect. The *ayurvedic* business, where MNCs cannot bring in global muscle and leverage, is one example. But here too, brand-building is a continuous process. Dabur and Himalayan Drug Company are relentless in this regard.

Homespun brand management

Marico Industries has institutionalised its brand management process. The manual for the brand management systemisation process, called MAVERIK, details how to manage the seven brands (Parachute, Saffola, Sweekar, Revive, Sil, Hair & Care, Mediker) and their extensions in the Marico portfolio. Managing director Harsh Mariwala maintains that branded businesses are Marico's core competency and the company is constantly building barriers to competitive threats.

MAVERIK has been broken down as Mentor-Analyst-Visionary-Entrepreneur-Resource Controller-Innovator-Koordinator. This dovetails into MAP (Marico Action Plan), launched in February 1995, which remains the group's guiding principle in building a "goodwill index". The bulwarks of this plan are brand empathy (bonding or endearment), brand saliency, and brand premium (ability to attract a price premium). Consumer perceptions are the benchmarks for a brand as a mapping is done to evaluate the emotional-versus-rational position.



Jejurikar maintains that Marico has used the natural route to deliver promise effectively

This translates into an annual strategy recommendation process using several tools like product packaging, distribution, customer relationship, public relations, advertising, sales promotion, and market research. The brand managers discuss these aspects threadbare to evolve the brand's thrust for the coming year. Over and above this, a monthly tracking programme which considers brand imagery, positioning, and disposition to trial is organised.

Marico general manager Rajesh Jejurikar, who has institutionalised the process, argues that all sorts of inputs are valuable. He says, "Consumer behavioural data is another important facet. Brand loyalty in our case is very high. In fact, for both our flagship brands – Saffola and Parachute – we are at the top end of the loyalty pyramid. And we have noticed very high retention scores for their extension products as well."

Dilip Piramal, who owns VIP luggage, one of the most durable brands in the Indian context, purchased it for Rs25 lakh in 1973. BlowPlast, which controlled VIP as a 100 per cent subsidiary, was a sick company known more for its PVC footwear and blow-moulded plastic containers rather than luggage. Piramal closed down footwear in 1976 and then began to work on the luggage products. "Till 1985 we were one of the largest advertisers, with print being used very effectively. We maintained a ratio of 5 per cent of sales as adspend and launched a welter of products — Travelite, Alpha, Classic, Skybags, Odyssey, and Elanza. Today brand sales including exports (Rs15 crore) are Rs315 crore. However, I must confess, our growth has got stymied with the mushrooming of the tax-evading unorganised sector. But we are tackling this at all levels."

BlowPlast managing director Arun Warey, who is leading VIP's retail response by setting up VIP Lounges across the country, says: "We already have 10 Lounges in place. The investment is to the tune of Rs6 crore, and we expect them to start giving us Rs50 lakh each annually in the immediate future. This is not just a marketing gimmick, but more of a brand- and customer-relationship-building venture. The response has been very encouraging and in the short term we will have six new Lounges in southern India. This year we should grow by 15 per cent in terms of sales with the economy segment (*mantra*) driving the growth taking on the unorganised sector." VIP is now seen as an A-to-Z luggage company with the mother brand spawning several sub-brands. Care is taken that the sub-brands like Travelite, Elanza, Odyssey, etc, don't diffuse the image of the mother brand.

Karsanbhai Patel is now using Nima as a flanking device

Brands are identifiable, valuable, and even synonymous with quality. Karsanbhai says, "Nirma is known for its quality. If the consumer is paying for my products, it is only because he values it." But the resources required to build brands are enormous. The entry point also matters. SmithKline Beecham Consumer Products recently launched Aquafresh toothpaste, despite the fact that a slugfest is on between two powerhouses. It is apparent that they have a strategy in place, which at this juncture is not visible.

What is pertinent is that good, sturdy Indian brands appear to be holding their own against the MNC onslaught. Reputation, quality, marketing savvy, usage, and a proactive approach remain the pivot around which the exercise of brand-building is based. The branded knights who going forward understand the consumer's psyche, adopting a single-minded professional marketing strategy that will dominate the chessboard and realise better prices.

SANDEEP HAMZAI

Changing colours

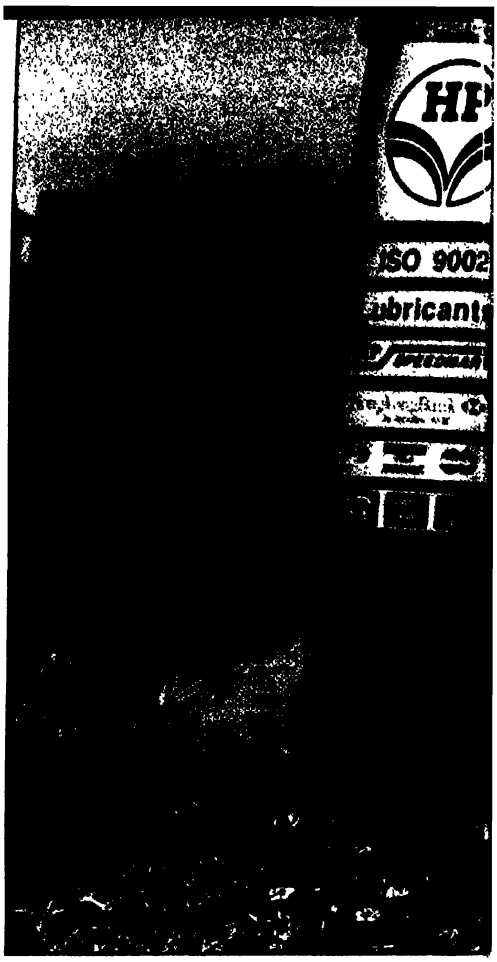
To thrive in the new free market, oil giant Hindustan Petroleum needs size, spirit and speed

Call it symbolic. Inside Petroleum House, the Mumbai-based headquarters of oil company Hindustan Petroleum, several walls are pulled down every day. On any working day, the sound of hammers beating ceaselessly is heard at different places in the seven-storey building. In the past two years, the offices for the top brass have already been made over. Now it is the turn of the middle managers to move into more contemporary work spaces

At Hindustan Bhavan, a 10-minute drive away and another company bastion, hundreds of computers lie junked on the staircase, waiting to be eased out as new generation, high-end machines replace them. The brand new work environs are just a face of the change sweeping through the Rs26,000-crore Hindustan Petroleum Corporation (HPCL).

From a completely government-owned oil refining company till four years ago, the Hindustan Petroleum stock is now actively traded (current price: Rs239) on the country's bourses as the government has sold 49 per cent of its shares, the largest divestment in oil yet.

From making and marketing refinery products like petrol, diesel, kerosene and cooking gas, HPCL now plans to produce crude oil and generate electricity. In its latest board meeting held late July, a new division for non-conventional, renewable energy sources like solar and wind power got approval.



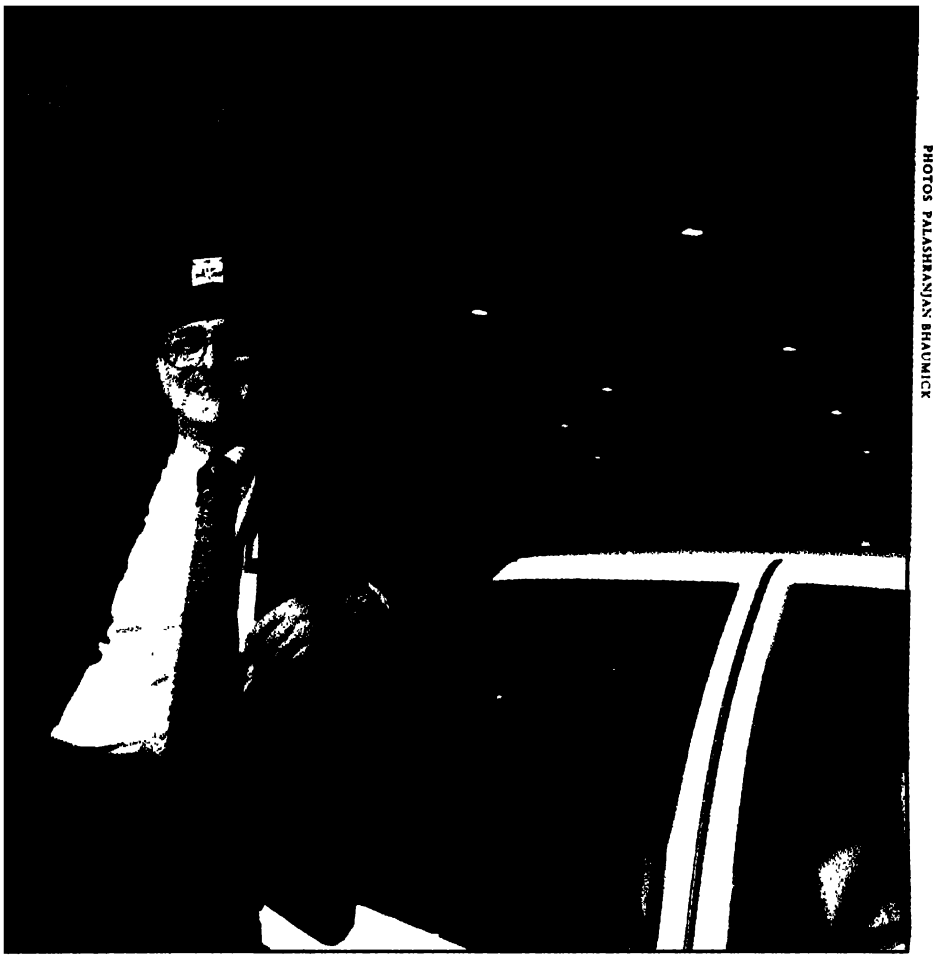
Further, its long-dragging project to set up a Rs10,000 crore, 9 million tonne refinery in Punjab as a joint venture may well come out in a new *avatar* soon, with the public sector oil firm opting to go it alone. Ever since joint venture partner Saudi Aramco ditched it in early 1998, citing unviability as its chief concern, the project has failed to attract a partner. Yet, rapid industrialisation in Punjab resulting in a growing demand for diesel has kept plans alive.

With fears of a surplus in Indian refining capacity by 2001, HPCL is now understood to be looking at Punjab primarily as a diesel-producing base and scaling down plans for other products at the moment. "The joint venture partner was required to raise the necessary financial resources. But if the cost of the refinery is brought down, then our own balance sheet can take it," informs Hiralal Zutshi, 57, chairman and managing director since 1995.

Organisational changes are churning too. Following recommendations from Andersen Consulting, a massive restructuring of the 12,000-strong company was kicked off two years ago. Four exclusive strategic business units (SBUs), currently under various stages of implementation, are to replace the practice of marketing the vast range of refinery products like petrol, cooking gas, lubricants and kerosene from under one umbrella. Upcountry offices will now have a matrix structure with employees reporting to respective business heads across the country. Delayering in its 3,000 officer ranks is ongoing. Bids for an enterprise resource planning (ERP) programme to integrate information technology are to be invited shortly.

But the most significant shift perhaps, is the one in heart. "We have been conservative. Where strategy goes, I believe it is a strength. But at the operating level, we need to delegate and become more responsive to the market. One may well argue that conservatism arises out of bureaucracy and we are trying to change that," admits Zutshi, who rose to the top post after a full three decades in the company.

The compulsion to change is a fallout of deregulation. Since the 1970s when the three foreign oil companies, Esso, Caltex and Shell, were asked to leave the country and their assets transferred to the two new



Chief Zutshi feels HPCL needs to shed some of

government-owned companies, HPCL and Bharat Petroleum (BPCL), the sector has been completely controlled. A standard pricing formula ensured a fixed 12 per cent post-tax return on net worth. Competition was further precluded with high entry barriers for imports and no permissions for direct investments by international oil majors.

Starting with lubricants in 1993, where both foreign and Indian players are now jostling for shelf space, the oil sector is in the midst of a phased liberalisation programme and is to be completely free in three years. Private companies like Reliance and Essar have already set up refineries and large foreign giants such as Shell, Exxon and Mobil eyeing the cake as well.

With its one-fifth share of the market, HPCL is second only to the Rs70,000-crore Indian Oil Corporation (IOC) which has half the market under its belt. HPCL's closest rival is clearly the Rs25,600-crore BPCL, which was formed from the erstwhile operations of Shell, just like HPCL came into being by putting together Esso and Caltex.

PHOTOS: PALASHRANJAN BHAUMICK

its conservatism

Barring petrol, diesel, kerosene, cooking gas and aviation fuel which make up about 70 per cent of volumes, refinery products like naphtha and furnace oil are already deregulated. With the exception of lubes where marketshare slid with increased competition, refining profitability in decontrolled products is understood to have improved with the transition from the cost-plus pricing mechanism to market-driven prices.

"The 12 per cent return was based on investments in assets. Today, both our refineries and dealers are old and hence their assets are depreciated. So, compared to a grassroots refinery our base is lower," explains Surinder Kapoor, 57, HPCL's director-marketing. Significantly, the marketing and distribution network which covers such critical aspects as companies choosing dealers will be controlled till 2002.

Adds Kapoor, "Post-deregulation I can see a scenario which will allow me to generate more out of marketing. For instance, transportation expenses are constantly going up, but our returns are fixed on historical costs. As a result, there are heavy under-recoveries." Agreeably, there exists potential for greater efficiency in a free market, but profit margins will also be under pressure due to increased competition, both from Indian and foreign companies. Further, the fluctuating prices of crude oil, nearly half of which is still imported, also impacts profitability.

According to a recent estimate by Birla Sun Life Securities, a Mumbai-based broking company, average profitability per barrel at HPCL has grown to $2.2 in 1999 as compared to $1.2 under the fixed price regime. Says Vidyadhar Ginde, analyst, "Basically the return was based on costs, which happen to be very low for the old PSUs." Thus HPCL is not unique in this respect and its competitors' operations have become more lucrative too.

In anticipation of the free market, HPCL drew a 25-year perspective plan in 1995, a 130-page "confidential" document, that is its Bible for the future. "We wanted a longer-term view of the emerging scenarios of the future and the opportunities. We assessed our strategies and decided to opt for joint ventures as our route to growth," says Zutshi, who consulted the Hyderabad-based Administrative Staff College of India (ASCI) to formulate the plan.

As with any long-term goal-setting exercise, the initial five years can be determined relatively easily, the next 10 are probable, while the last decade futuristic. Admits Zutshi, "The first five years up to 2002 are very crucial. During this period, competition is limited and steps have to be taken to develop systems, streamline procedures and create key assets."

Achieving size is the overriding concern. For some time now, HPCL has been representing to the government that it is the most suitable for taking over the Rs5,000-crore IBP, the standalone marketing company with a 7 per cent share. But BPCL appears to have pipped its larger rival in the race for IBP. With a total marketshare of 27 per cent, the BPCL-IBP combine will overtake HPCL's 20 per cent share in just one swoop.

Since the government-constituted Nitish Sengupta Committee first recommended the merger earlier this year, HPCL is understood to be repeatedly representing its case. It is pushing hard on two counts. One, it has more refining capacity than BPCL. Secondly, it hopes to cater to IBP's vast distribution network in the north with its new refinery coming up in Punjab. The final government decision is still awaited.

Also on Zutshi's agenda is an alliance with Bharat Petroleum. Till a few years ago, this would have been unthinkable. Though both companies are owned by the government and share infrastructure, their rivalry has intensified with deregulation.

But market dynamics are changing. Big brother Indian Oil is hardly napping. A few times the size of its smaller counterparts, it is not only adding more refining capacity, but also entering the high-risk, high-return crude exploration business in an alliance with the monopoly Oil and Natural Gas Corporation, another profitable state-owned venture.

Reliance Petroleum is another threat. Its 27 million tonne-refinery at

Long-term bargain

With information technology and pharmaceutical shares ruling the roast, India's oil giants are probably feeling left out. In the last two months, the three mega public sector companies, Indian Oil, Bharat Petroleum and Hindustan Petroleum have sought to lift shareholder spirits with magnanimous payouts and bonuses galore. While the dividends range from 110 per cent to 125 per cent, both IOC and HPCL have allotted one share free for every two shares held.

Says H.L. Zutshi, HPCL's chairman and managing director (CMD): "We have very hefty reserves (Rs4,812 crore in March 1999) and a small part of these (Rs112 crore) were capitalised towards bonus. Our minority shareholders were expecting a reward too." Currently, 51 per cent of the company's stock is held by the government and the balance by public. The bonus will take HPCL's equity from Rs226 crore to Rs338 crore. Post-tax profits were Rs900 crore during the year ended March 1999 and financial analysts expect these to cross Rs1,100 crore by March 2000.

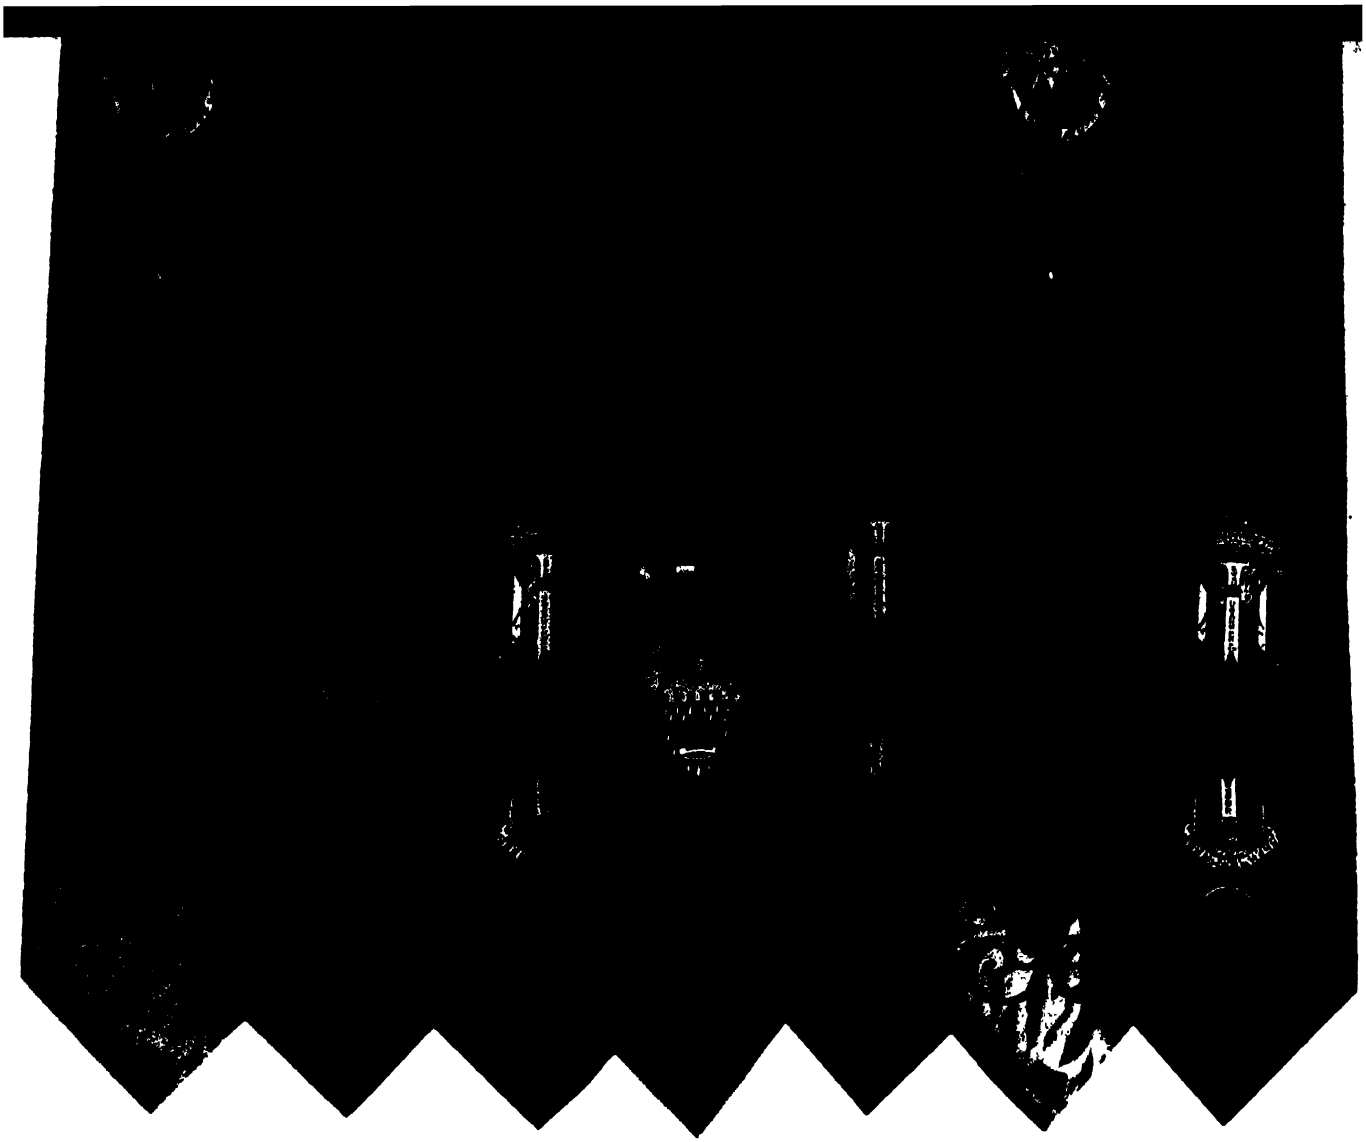
According to S.D. Gupta, HPCL's director-finance: "The stock makes a good buy as the government's stake is already down to 51 per cent. With several other public sector companies to be divested, HPCL is unlikely to have any further dilution. Further, its fundamentals are strong and it will gather strength as the economy picks up."

Rajesh B. Majumdar, petroleum industry analyst with broking firm BNP prime Peregrine, expects an upward movement in the stock from its current level of Rs240 (5.3 times the earnings per share) on the assumption that profit margins will improve in the third and fourth quarters of the current year. "We expect an improved product mix and the expansion in its Jamnagar refinery to increase HPCL's margin to $1.9 per barrel in 2000 from $1.8 in 1999 and then to $2 in 2001. A net profit growth of 20 per cent clearly makes it attractive," he says.

Further disinvestment in HPCL is unlikely, feels Gupta

A higher than projected 9 per cent growth in demand in the current year's first quarter has further bolstered BNP Prime's optimism. But not everyone is as bullish. Says Vidyadhar Ginde, sector analyst for Birla Sun Life Securities, who has a "longterm buy" recommendation on HPCL: "Basically I am underweight on the sector at the moment. With large refining capacity additions during 1999, a supply surplus is likely by 2001 and margins may come under pressure by this year-end."

For the long-term, however, he feels that oil company stocks like HPCL and BPCL with prices less than 6 times earnings are still valued "very cheap", compared to the average P/E for BSE sensex stocks at about 18. An alliance with a multinational can further boost oil industry stocks on account of the high valuations that foreign companies typically command. But with the government seeking to raise money in the near future through cross-holdings between different oil PSUs, the entry of a foreign partner, it is felt, is unlikely at this stage. •



Jamnagar in Gujarat is larger than the individual capacities owned by either HPCL or BPCL. Also, it is talking of teaming up with IOC. Reliance is currently the only fully integrated player with interests in upstream oil exploration and is a big consumer for refinery products for its mega petrochemical plants, which further feed its textile units. Competition from foreign companies is equally real. The strength of the three public sector oil companies lies in their tremendous marketing infrastructure.

The plan to forge a link between HPCL and BPCL had also been announced by the Sengupta Committee, which was constituted to look at the future options for the standalone refining companies and IBP. Notes Zutshi, "We must reach a critical mass. In the future, marketing facilities like retail outlets, pipelines, gas bottling plants will be crucial. Both HPCL and BPCL have a strong brand loyalty with customers and employees, so we may retain our respective individualities. A lot of ground would still need to be covered. We are looking at a holding company, which would help us reach economies of scale and facilitate infrastructure-sharing." Teams constituted with employees of both companies are already evaluating an alliance on different fronts. Just in case the partnership does not work out, Zutshi says HPCL will "have to consider a strategic alliance with a foreign player as huge investments would be necessary in the future, particularly in downstream activities like marketing."

Joint ventures are being firmed up by HPCL in other areas too. Prize Petroleum, a 50:50 partnership company with Indian financial institutions, has been formed for the crude oil exploration and production business. It has a wait-and-watch approach here and will first bid to only produce crude where it has already been discovered.

A 500 MW power plant in Andhra Pradesh, which will use residues from the company's Visakhapatnam refinery as fuel, is proposed as a tie-up with the AP State Electricity Board, wherein HPCL will have a 26 per stake. An entry into petrochemicals is envisaged for a later day. According to Zutshi, successful international companies like Shell and Exxon, have all been integrated instead of just a presence in oil refining. Closer home, IOC is also getting into businesses across the value chain.

HPCL is venturing into a range of downstream and upstream ventures to insulate itself from the ups and downs of refining. The 12 per cent promised return cushioned the companies from cyclical fluctuations of the business,

EXPORT-IMPORT BANK OF INDIA

EXIM BANK INTERNATIONAL TRADE RESEARCH AWARD 1999
In
International Trade and Related Financing.

THE AWARD

The objective is to promote research in International Trade and related financing by Indian nationals, at universities and academic institutions in India and abroad. The Award will consist of a sum of Indian Rupees One Hundred Thousand and a citation.

THE WINNERS

1989 : Dr. Nagesh Kumar - Thesis : Foreign Controlled Enterprises in Indian Industry.

1990 : Dr. Sebastian Morris - Thesis : Foreign Direct Investments from India : 1964-83.
Mr. Prabhirjit Sarkar - Thesis : The Post War Terms of Trade Controversy : A Re-Examination.

1991 : Dr. (Ms.) Neelam Singh -Thesis : Foreign Ownership, Size and Performance of a Firm : A Case Study of Indian Pharmaceutical Industry.

1992 : Dr. Subhayu Bandopadhyay - Thesis : Export Taxation in a Multicountry General Equilibrium Framework.

1993 : Dr. Mathew Joseph - Thesis : Exchange Rate Regimes of Less Developed Countries.
Dr. Tarun Kabiraj - Thesis : Some Aspects of Technology Transfer : Theory and Policy.

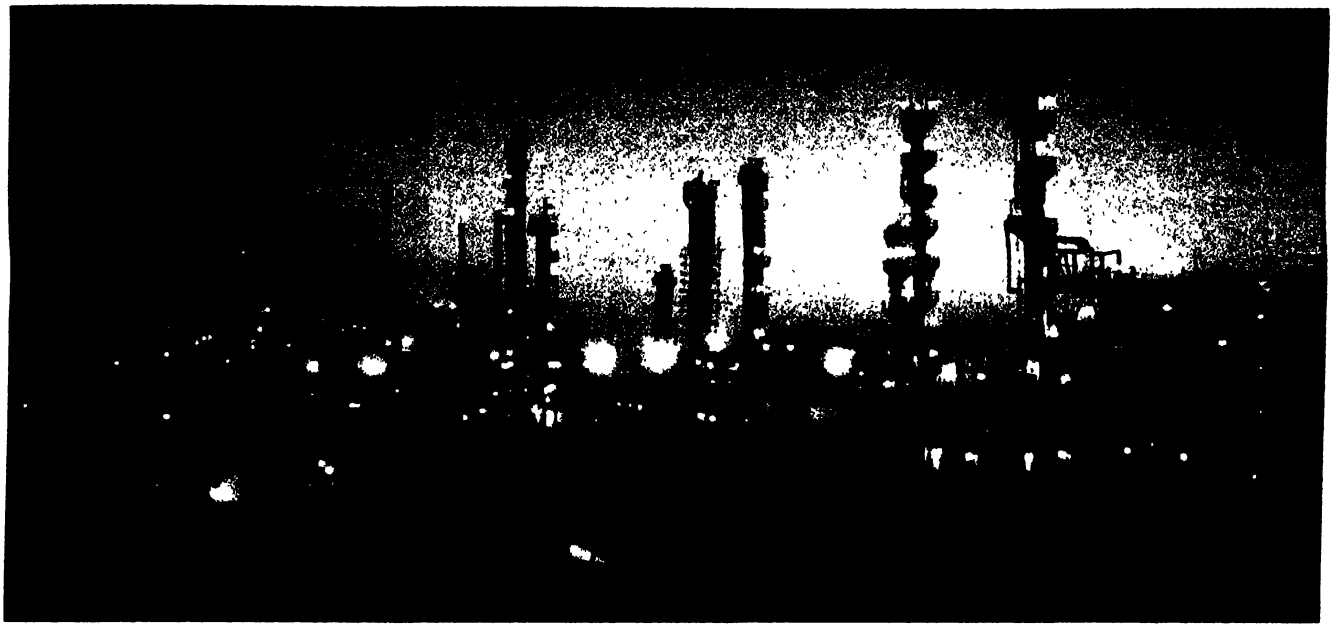
1994 : Dr. A. Prasad - Thesis : External Debt of Developing Countries: A case study of India.
Dr. (Mrs.) Ashwini Deshpande - Thesis : Some Aspects of International Debt of Developing Countries.

1995 : Dr. Aditya Bhattacharjea - Thesis : Essays in Industrial Organisation and Strategic Trade Policy for Developing Countries.

1996 : Dr. Avadhoot Nadkarni - Thesis : India's Exchange Rate under the Basket Arrangement : An Exposition and Evaluation.

Dr. Laveesh Bhandari - Thesis : International Technology Transfer : Contracts, Learning and Alliances.

1997 : Dr. Rajat Acharyya - Thesis : Theoretical Aspects of Liberal Trade Policies in Transitional Economies : Exchange Rate, Competition and Exports.



1998 : Dr. Avik Chakrabarti - Thesis : Foreign Direct Investment and Host County Interaction : A Strategic Approach.

Mr. Arijit Mukherjee - Thesis : International Joint Ventures and Technology Transfer in Developing Economies : Theoretical Analyses.

THE ENTRY

Research work in International Trade and Related Financing (either awarded a doctorate or submitted for a doctorate) from a university or an equivalent academic institution in India or abroad is a prerequisite for eligibility of the Annual Award. Where research work has been awarded a doctorate, EXIM Bank will accept as entries, theses by which doctorates have been obtained during January 1, 1995 to September 30, 1999. Last date for receiving entries is September 30, 1999.

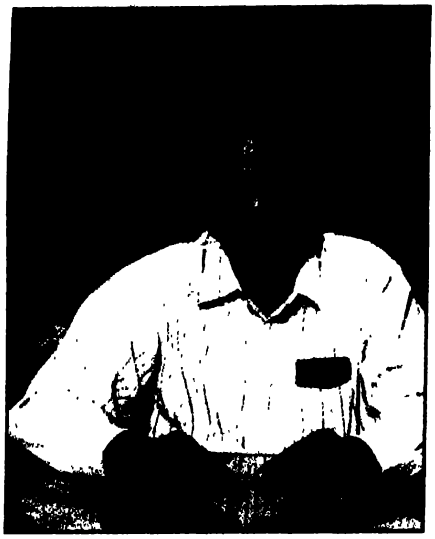
Entry forms available from :
Planning Group,
Export - Import Bank of India,
Post Bag 16100, Mumbai 400 005, India. Fax : 2180743
E-mail : eximind@vsnl.com • Internet : http://www.eximbankindia.com

Enhanced capacities are expected to go on stream this September

but market forces will now be at play. Admits Zutshi, "In the short term, that is in the next two to three years, we will have a surplus refinery capacity in the country."

Further, with the tightening of pollution prevention legislation, enormous amounts of investment will be necessary for making environment-friendly fuel. HPCL has already spent Rs1,500 crore to make cleaner diesel and this is only the beginning. "What needs to be decided upon is whether to make or buy, basically whether to add fresh capacity or invest in downstream projects like pipelines, storage and bottling facilities," questions Zutshi.

Notwithstanding the Punjab refinery project, HPCL's emphasis appears to be on infrastructure-building. The company, therefore does not feature in the government's latest consolidation plan for taking over the stand-alone refineries at Cochin, Chennai, Bongaigaon and Numaligarh. Its plate appears to be full with the 3 million tonne expansion in Visakhapatnam and 6 million tonnes at MRPL, its joint venture partner. Both the enhanced capacities are expected to go on stream this September. This would take production up from 8.7 million tonnes in 1999 to 12.7 million tonnes by the year ending March, 2000. According to R.K. Sukhdevsinhji, managing director of Essar Oil: "HPCL has a tremendous advantage in terms of refining capacity to match product requirements. It also has a favourable geographic spread of its capacity (Mumbai and Visakhapatnam)."



A massive Rs2,000-crore investment in marketing is envisaged over the next three years. This will be financed primarily from internal accruals and short-term loans. While the four SBUs are to exclusively focus on lubes, LPG, retail and industrial are under implementation, new business heads have also been appointed. With 34 years of experience beginning with the erstwhile Esso, Kapoor is at the helm of marketing. Late last year, Arun Balakrishnan, 49, also a career HPCL man, who was general manager-corporate planning till recently, was brought in to kickstart lubes. In April this year, Narotam Puri, 53, also an old Esso hand was appointed as chief general manager-retail.

As marketing infrastructure may well be the cutting edge for the three public sector oil companies, each is trying to strengthen its hold. Nowhere is this more visible than in retailing, where the three companies are constantly outpacing each other with international-style convenience stores called c-stores, service check-ups, outstation phone facilities and now even Internet kiosks. While BPCL was the first to turn market-savvy, HPCL reacted quickly. In fact, at Bandra in Mumbai where both companies have petrol outlets with attached c-stores, HPCL claims to have overtaken its rival site's shop with average daily sales of Rs80,000-100,000 from its own.

It is now considering the launch of a loyalty card which would entitle its customers of fuel to discounts in the "c-stores". Charge cards which can debit bank accounts with just a swipe are also being looked at. Over the next three years, Rs200 crore has also been earmarked for the 200 new outlets on highways called "jubilee stores", which would be built over 3-4 acres of space and offer a range of services. Another Rs200 crore will be spent on upgradation of existing outlets.

The emphasis is on improving profitability. While HPCL's network of 4,300 petrol stations and 1,500 kerosene dealers contributes 60 per cent to its turnover, its contribution to profits is less than a fifth. "In today's context of real estate prices, the returns to the dealers are not commensurate with the space they occupy. Retail-allied activities are one way of attracting customers and enhancing dealer loyalty," reasons Puri.

Not only are petrol and diesel prices controlled, but the government also selects the dealers and decides the basis for fee structures. With constant

Balakrishnan has to put lubes into high gear

government changes in recent years, the Dealer Selection Board has been frequently reconstituted, resulting in a minuscule 2.5 per cent growth in industry network whereas fuel demand has grown exponentially.

All this is set to change with deregulation in 2002. But that also throws up a new challenge as dealers will be free to switch companies. Not surprisingly, one of Puri's biggest goals is to increase the 45 per cent share of company-owned outlets against dealer-owned ones to 90 per cent in the next three years. Competitor BPCL already owns 50 per cent of its petrol pumps, but Indian Oil is more at the mercy of its dealers, who own as much as 90 per cent. Puri informs that new sites awarded to HPCL will either be company owned or leased. Alongside, it is trying to take existing dealer-owned properties on long lease with a few incentives. As the licence fee is controlled, benefits take the form of a facelift or add-ons like c-stores.

Surely, retail is the most visible aspect of marketing, but resources are also being employed in expanding other distribution infrastructure. The Vizag-Vijayawada pipeline is being extended to Hyderabad. An agreement has also been signed with the Gas Authority of India for moving cooking gas from Vizag to Mangalore.

In another alliance with Total of France, a Rs200-crore storage cavern for liquefied petroleum gas (LPG), better-known as cooking gas, will be set up in Visakhapatnam. From its existing import facility at Mangalore, HPCL already handles 40 per cent of the country's imports as it services the throughput of BPCL and IOC as well. Though HPCL's marketshare for cooking gas is currently a quarter, Kapoor is confident of strengthening it on account of its infrastructure. A memorandum of understanding has also been signed with Total for subsequently putting up a similar facility for LPG.

Strengthening marketing is equally necessary for the lucrative lubes business, which makes up a fifth of HPCL's Rs900 crore profit. Since it was deregulated six years ago more than a dozen players have entered the market. From a marketshare of 21 per cent, HPCL is now down to about 19 per cent. Particularly during 1999, HPCL has reported

Enhancing retail profitability is Puri's focus

a drop in lube volumes compared to the 3 per cent increase in the industry. Zutshi attributes the laggard behaviour to a routine maintenance shutdown at the lube base oil refinery at Mumbai for two months. However, he admits that HPCL has been "conservative in discounting to dealers".

Arun Balakrishnan, who took over this January as general manager-lubes, has a two-pronged strategy for his newly-created SBU. One, to expand distribution from the petrol pumps to the high volume *bazaar* trade which has been used by Castrol successfully. HPCL has appointed as many as 100 distributors. Secondly, it has activated research & development. In the next few weeks, it will launch a new engine oil for automobiles and two variants on engine coolants in quick succession. As many as 16 new products, including variants are being readied for launch.

Deregulation can improve profit margins, feels Kapoor

With competition, Balakrishnan expects a shakeout with at least a 5 per cent share necessary to survive. HPCL feels it is better poised as it has the country's largest lube oil refinery, where it uses 60 per cent for in-house consumption. With base oil prices recovering in the last 2-3 months, Balakrishnan is hopeful of enhancing performance this year.

Like in any diversified company operating in a free market, a focus on individual businesses, decentralisation and quick decision-making are necessary. For a Rs27,000-crore giant having thrived in a protected market, this means a complete shift in mindset. Accordingly, the key performance indicators for HPCL executives are also being reworked.

"We've got to get people to think differently. With any sort of change, there is bound to be pressure. I spend a lot of time communicating so that our people develop a proprietary interest in what is happening," says Zutshi. Sure. If HPCL is to hold its rung in a free market with competitors nudging each other, then managing change is a skill which both Zutshi and his team will need to master.

Shining through

Despite the Search Chem Industries albatross around its neck, United Phosphorus continues to power its way to the top of the agrochemical heap

PHOTOS: SANJAY BORADE

Jai & Vikram Shroff believe in being different

Jai Shroff has jetted in from London where he held a series of confabulations with Novartis who market their products in France. Meanwhile, younger brother Vikram Shroff has also returned to home base — Mumbai — after an inspection of the manufacturing facility at Vapi in Gujarat. Brothers Shroff, director and executive director respectively at the Rs763.8 crore (up 12 per cent from 1998, while the net too showed a 51 per cent ramp up to Rs46.6 crore) agrochemical major United Phosphorus are shaping the destiny of the company as it makes its hurried tryst with the millennium. This is a far cry from the situation 10 years ago when UPL posted a Rs72.2 lakh loss.The days of Greenpeace and MRTP investigations are behind them.

Assisting them in their task is management mentor V.K. Madhav Mohan. Change is the operative word on the third floor of Uniphos House in Mumbai as brainstorming sessions are smoothening the transitionary process under way. The agenda is clear-cut: the directors have to metamorphose into leaders with very clear role definitions. Madhav Mohan is inculcating a new ethos — bottom-up management, leaving the directors free to macro-manage, narrow-focusing on strategy rather than operations. Says Mohan: "This is a need-based phenomenon which will help the company achieve targets. The CMD, Rajju Shroff, and vice-chairman Sandra Shroff will now spend more time on external environment management. All the directors have very open mindsets and this is propelling them to innovate and I guess this is the biggest spin-off."

In fact, as part of this organisational transformation, new personnel have been inducted, so that directors pursuing their new role of systems orientation scrutinise the performance levels of the company across the board. Another case of the family delinking itself from hands on management. As such, over the past one month, a new head of sales (president), Gautam Nagvekar from Marico, CFO Vinayak Purohit also from Marico and Countrywide and president-manufacturing Krishna Srivastava from Goodlass Nerolac have been appointed to infuse new blood and new thinking into the company. The tenets of FMCG brand building are likely to be extensively used in the future. Says Jai Shroff: "We have grown very rapidly over the recent past. Our credo is that we must constantly be different to emerge winners, that has been our bulwark. And it will remain the driving force, hence the process of change."

The blueprint is ready. As Jai Shroff says, "Going forward, by March 2001, we should crack the Rs1,000-crore turnover barrier. Our strategies are in place, we have devised a model whereby 65 per cent of our total sales will come from international operations while 35 per cent comes from India (at present it is 60:40). The building blocks in synch with these imperatives are two-fold. We are looking at acquisitions and increased return on capital. Three regional directors for Asia-Pacific and Africa, Europe and north and South America as part of their business plan are scouting for small companies in Mexico, Philippines and Argentina in this regard."

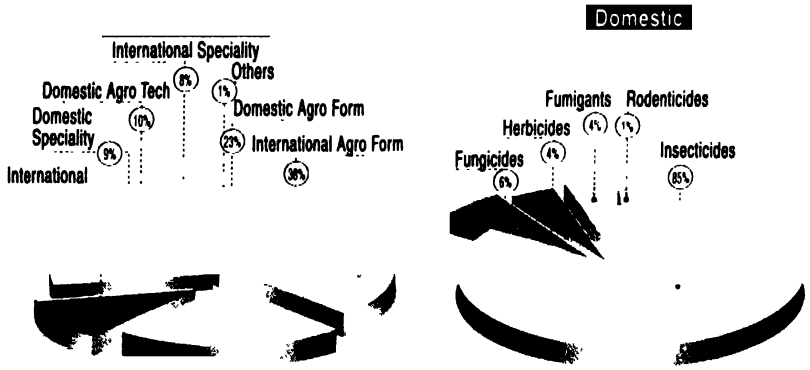
First quarter results are encouraging though domestic sales were down by 5 per cent year on year. This is primarily on account of the restructuring of product portfolio, focus on formulations rather than technicals and very vitally zeroing in on higher margin products. Net profits for the same period have shot up by 27 per cent to Rs5.87 crore. A staggering 44 per cent growth has been registered in formulations and branded products. International sales too have been done due to the reasons cited above. Jai Shroff is not unduly perturbed about the drop in the domestic or international sales, as he expects a surge in the half-yearly results, cannoning forward by 15 to 20 per cent in operating profit year on year. He says, "We are targeting a 25 per cent topline growth in international markets with 80 per cent of the business being generated by agrochemicals. India too should concurrently see a 20-25 per cent topline growth annually."

UPL is an Indian transnational that has expanded operations across the globe. Europe and the US alone contribute 70 per cent of the total international business. Jai Shroff reckons that the UPL board sensed an opportunity abroad and felt that to be truly competitive, it had to take the MNCs head on on their own turf. He says, "Ours is a specialised business, not a commodity chemicals business. In the 1980s, we discovered that doing business internationally was very profitable. Around this time, we were the leading manufacturer of aluminium phospide (for which subsequently, the company received a US product patent after a two year wait) and there was a huge demand for this product in the US market. It was selling for $7-8 per kg in India, while the price was $20 per kg in the US. This was a great leap forward for us and to tap the potential, we set up Inventa Corp in 1986 in the US."

Similarly, the Shroffs shrewdly preempted the formation of a common European Community market in 1994 by acquiring MTM Agrochemicals in the UK. As international operations manager Rajendra Darak says, "UPL Mauritius was established to manage the international ambitions of the company, it was created as an intermediary to acquire the UK facilities. The name of the game is to constantly re-engineer cost-effective ways of producing organic compounds to create patented formulations and own registrations. At the UK end, we have shut down our Warrington facility as part of our production has moved to India. The other part we have moved to Sandbach for higher operational efficiencies."

But it is not that the domestic market has been relegated to the background. Realising the Government of India's emphasis on agri-nomics, the Shroffs are now offering complete farm solutions as a nodal agency. Remember that the total arable land available in India is more than what China and other Southeast Asian nations have put together. Improving yields is the best way to enhance productivity and farm management technologies are part of UPL's strategic foray.

UPL has set up a chain of 5,000 dealers across the land and is now operating through them, instead of distributors, thereby lopping off a needless 5 to 10 per cent cost input. As Jai Shroff says, "We were in bulk chemicals for a long time, till we ventured into the formulations game in the mid-1980s. We have moved up the ladder to number three behind Rallis and Novartis now. Our goal is very clear, we have to be number one in formulations and we need to offer more to the farmer. And this can be achieved by offering more than just the product, by offering solutions to improve yields."



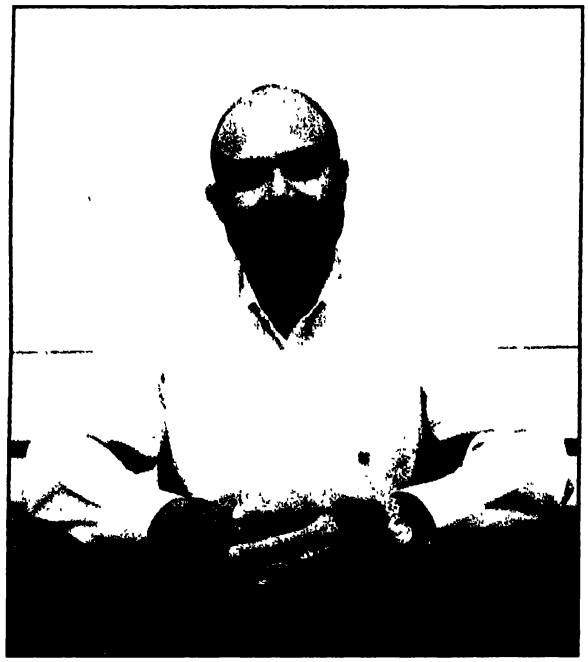
Tying up with the DG Hapase Foundation, UPL is doing pioneering work at its 65-acre Vikram farm in Vapi. Realising that sugarcane is the biggest user of pesticide in Brazil, UPL decided to seek the killer application to make the breakthrough in yield increase. The average yield is 30 tonnes per acre and through the complete solutions package (seed selection, single eye bud, wider spacing, soil treatment, water management, systematic usage of agrochemicals and plant nutrients and inter-cropping patterns which include short 60-day crops like garlic and onion) being offered by UPL, Shroff is guaranteeing a 50 per cent enhancement. And he claims the day is not far when they will be able to record 100 tonnes per acre under test conditions.

Seventeen sugar mills with trial plots accounting for 20,000 acres are replicating this model already in Gujarat and Maharashtra. Impressed by the success, there is now a possibility of the State Bank of India funding this project in other states.

Simultaneously, UPL is involved in enhancing paddy yields in the east-west Godavri region in tandem with the regional universities. A 33 per cent increase in rice production has been observed in this area.

Another key success logged is through the introduction of a sprout suppressant Oorja, a cold storage fumigant which is being widely used by both McDonald's (worldwide) and Pepsi Foods and Mother Dairy at home. Oorja increases the shelf life of potatoes in cold storage and is manufactured at UPL's UK plant. With the foodgrain output expected to touch 200 million tonnes this year, Oorja usage will be exemplified with the government now recommending creation of 20 lakh tonnes of additional storage capacity to prevent wastage of perishables.

GLOBAL AND DOMESTIC SALES COMPOSITION 1998-99



The Indian crop protection market is presently worth Rs3,000 crore, with insecticides contributing 75 per cent, followed by herbicides at 12 per cent and fungicides at 10 per cent. Against this, the global crop protection chemicals end user market value in 1997 was at an estimated $31 billion. Of this generic products alone account for $24 billion. The demand drivers for the crop protection market are the growing demand for food and the limitation of the land available for agriculture the world over. It is believed that even with the use of crop protection products, one third of the world food is lost annually to pests and diseases. Generic and branded products have gained tremendous acceptance as they address specific needs

adhering to stringent quality standards and providing significant revenue enhancement opportunities.

However, with the escalating cost of manufacturing and registrations, a global presence is vital. The US leads with a market consumption of 30 per cent for crop protection products, while western Europe with a 25 per cent marketshare follows. The pecking order next features the Far East with 23 per cent and Latin America with 12 per cent. The rest of the globe accounts for a meagre 10 per cent. To move up the value chain, UPL is constantly expanding its horizons. Insecticides are already contributing to 40 per cent of the international crop protection sales (herbicides contribute 50 per cent), while in India insecticides like Phoskill, Kinadon, Ustaad, Lancer and Viraat account for 75 per cent of domestic sales.

Applied R&D remains the gudgeon as UPL invests in innovative formulations as part of the enabling process to develop registrations and patents. Jai Shroff reveals, "We are spending $3-4 million per year on registrations alone." It remains a thrust area for UPL just as infotech is. Vikram Shroff has just installed a Rs75 lakh PAMA system from HCL Comnet which will enable him to video-conference with his manufacturing plants in Vapi, Ankleshwar, Halol and Jhagadia, cutting down costs substantially. They are also in the process of implementing MfgPro, a distribution software in all the depots. To tighten the belt in recessionary times, a little over a year ago Andersen Consulting with its best practices was roped in as a looking glass to see warts and everything. Shroff says, "We have already saved something like Rs15 crore by examining internal systems and processes, utilities, speed of maintenance at the plants, inventory management, credit control and most importantly by de-bottlenecking the plants."

However, even though the brush strokes on the canvas paint a pretty picture, there is one eyesore which refuses to go away. Jai Shroff calls Search Chem Industries "a millstone around the company's neck". Importance is being attached to UPL shareholder value where Shroff believes they are edging back(since 1 June, UPL has moved from 108.05 to Rs180 on the BSE), providing 18 per cent return presently on net worth, which is expected to be up to 35 per cent three years down the road.

Madhav Mohan's mission is to bring about change

The Search Chem Industries, a 53 per cent subsidiary of UPL story (acquired in FY1995), though of related diversification, is one of a sense of proportion going awry. An IPO at a premium of Rs35 per share (presently Rs13.95) aggregating Rs75 crore was floated in February 1996, Shroff explains, "There was pressure in the board to put up a caustic chlorine plant. Flush with GDR money ($55 million), it was further decided to set up a 50 MW captive power plant. But we didn't anticipate the shift in the view of the state government in the mid-1990s in Gujarat. We built an efficient plant with excess capacity; we still think we did all the right things for the right reasons, but with governments coming and going in Gujarat, there was nothing we could do in terms of policy decisions."

In 1998-99, Search Chem took a beating incurring losses to the tune of Rs74.65 crore, "accumulating a lot of headaches in the process". But Shroff maintains that the worst is behind them, for "the capacity utilisation of the power plant was running below 50 per cent PLF. Finally last August, it began wheeling power to UPL after being granted the necessary approvals by Gujarat Electricity Board. Now the issue is that we should be consuming 38 MW in-house by the middle of next year. Moreover, GEB has given us an undertaking that they will buy 15 MW which will take care of the surplus power generation. Last year also saw a breakdown of both the power plant and the caustic chlorine plant which resulted in a loss of production for over three months. Caustic chlorine prices were at their lowest in a decade, which didn't help matters. Prices have now started firming up to the extent of 15 per cent and we are adding some chlorine based products to our portfolio."

Shroff is clear in his mind about Search Chem breaking even this financial year; this remains the board's priority. To achieve the same expeditiously, financial restructuring of its capital liabilities for reducing its burden of interest/lease expenses has been undertaken. The repayment period of leases from the State Bank of India and the Bank of India has been provisionally extended from four years to nine years. Short term debt has been thus replaced by long term debt, something that most beleaguered companies are trying to do these days. The IDBI term loans have also been rescheduled upto the second half of financial year 2000-01.

The strategy is obvious, increased wheeling of power to group companies and concentration on specialty chemicals exports is expected to turn the albatross into a profitable subsidiary. It is said that adversity brings the best out of the Shroffs, and Search Chem's turnaround is *numero uno* item on the family's wish list presently.

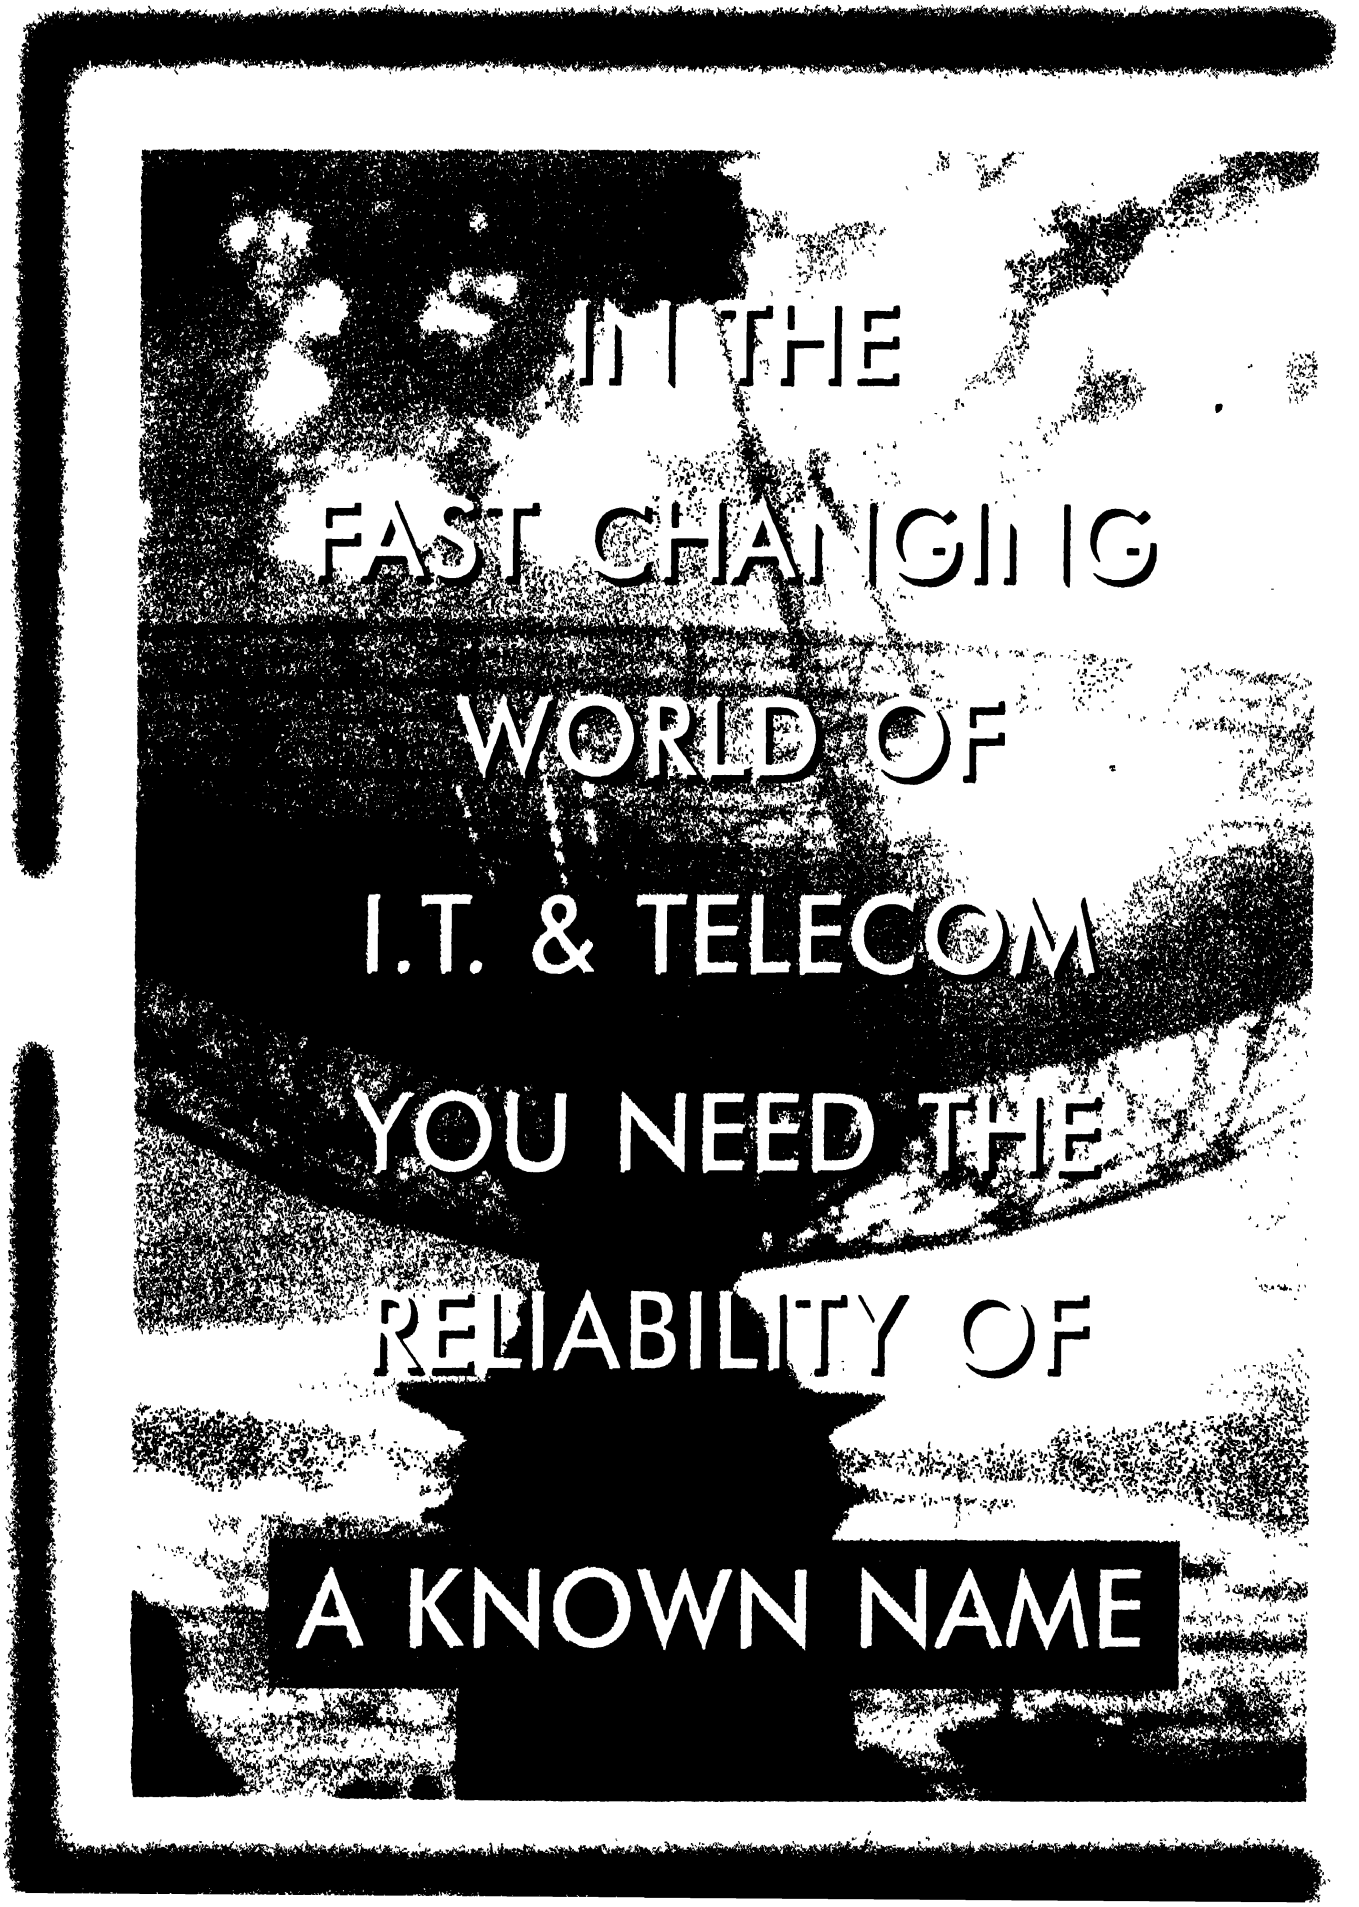
For the discerning dresser

Largely known as a middle-class brand, S. Kumars is moving into the premium category of textiles. But will it succeed?

Mumbai-based textile manufacturer S. Kumars Synfabs has been busy of late. The Rs387.5-crore flagship of the Rs700-crore S. Kumars group, has launched an advertising blitzkrieg aimed at sloughing off its polyester image. It wants to reach the top shelf of the textile industry in double-quick time and is spending heavily to reach its goal. "We want to become one of the largest textile players in India within the next five years, and a significant global player within the next decade," declares managing director Nitin Kasliwal. The Kasliwals have targeted a group turnover of Rs1,000 crore by 2001. This growth is going to come from the company's new thrust in the retail area and in the worsted fabrics business.

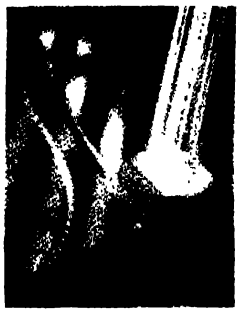
S. Kumars' focus is to become the clothier to the nation, and hence its objective is to cater for every need, every occasion, and every budget. It is the only textile company that operates in all categories – uniforms, workwear, poly-viscose fabrics, cotton, synthetics, dress materials, and home textiles – all, that is, except worsted fabrics. To give itself an expensive new cut, the company recently commissioned its state-of-the-art Rs240-crore Reid & Taylor worsted manufacturing plant at Thandya near Mysore. The move is aimed at making the company a big player at the top end of the market. "Now with Reid & Taylor, we are more or less on the threshold of becoming a clothier to the nation," says Kasliwal.



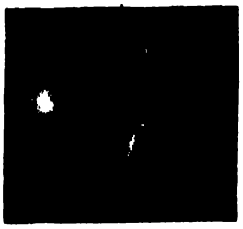
S. Kumars Synfabs has acquired a 20 per cent stake in Reid & Taylor Ltd of Scotland, giving it complete manufacturing control and the rights to the Reid & Taylor brand in India for perpetuity. At least 25 per cent of the worsted production is for the export market. While the Reid & Taylor brand was launched in the domestic market during the recent cricket World Cup, the product itself was launched in the last week of July at a retailers' conference hosted by the company at Mysore. Here Reid & Taylor launched its winter collection, comprising 300 designs.

S. Kumars moved into the premium segment of blended fabrics in 1994. To demonstrate its seriousness of purpose, the company launched a range of worsted fabrics imported from Reid & Taylor and cobranded S. Kumars with a view to making Reid & Taylor a national brand similar to S. Kumars. But what's important is that, as S. Kumars is largely a middle-class, the worsted range is being now launched under the Reid & Taylor brandname. Priced at Rs425–1,300 per metre, the Reid & Taylor product is targeted at a large spectrum of the domestic market. The Rs1,600-crore worsted market is dominated by Raymond, which has a 47 per cent share, and includes OCM, Digjam, and Vimal. "It will be difficult for Reid & Taylor to eat into Raymond's market-share," says Mehul Dedhia, analyst at Mumbai-based Networth Stock Broking Ltd. "More importantly, S. Kumars is trying to change its perception by its advertising strategy," he adds.

Within the textile industry, worsted (woollen) fabrics are like the icing on the cake. The worsted market is estimated to be worth around Rs2,000 crore, growing at a rate of 10–15 per cent per year. This growth is mainly because it is no longer a seasonal business and it is now possible to sell throughout the year. There's sound logic behind setting up the worsted plant in southern India — in spite of the weather, the region is one of the most consistent consumers of worsted fabrics in the country. Hence the maximum sales of all worsted mills are in the south, i.e. in Andhra Pradesh, Karnataka, and Tamil Nadu. Consumption in other cities is mainly wedding-related or climate-dependent.



S. Kumars is going all out to associate itself with the premium segment. Its adspend has been increased by 66 per cent to Rs20 crore. James Bond (the



IN THE
FAST CHANGING
WORLD OF
I.T. & TELECOM
YOU NEED THE
RELIABILITY OF
A KNOWN NAME

It's a now-this, now-that scenario in the I T. and Telecom world today With change being the only constant factor. In this scenario, there is one name that has the ability to race the tide, Crompton Greaves -- Digital One of the key Strategic Business Units of India's premier corporate enterprise, Crompton Greaves Ltd., the company is rapidly making its mark in the arena of Telecommunications and Information Technology. Setting new benchmarks, the company is driven by a visionary management, specialised workforce, strategic alliances with global leaders and a mission to live upto expectations and trust.

Customised, turnkey solutions through System Integration -- Adding value to the customer's business objectives as the benchmark, the Informatics Division offers cost -effective solutions through System Integration in the area of servers, information technology and software for leading computing and networking companies From ethernet, ATM technologies, Inter/ Intranet to LAN, WAN, etc this Division provides unique solutions to Corporates, Defence Services, Government & Private Telecos in strategic alliances with global leaders

TELECOM BUSINESS SOLUTIONS

The today and tomorrow of Business Communication -- Keeping in focus the need for voice, data and video communication solutions, this Division in collaboration with ECI Telecom Ltd , a *global name in telecommunications,* offers world-class Coral range of ISBX exchanges, with configuration flexibility of 4 ports to 6000 ports. So, whether its Corporates, ISPs, Defence Services, Government, Hospitals, Hotels, Banks, Educational Institutions, Manufacturing Plants, Public Utilities etc., these exchanges are ideally suited for ISDN, transparent networking, call centre applications etc.

TERMINALS

State-of-the-art office automation products- Committed to discerning global standards in quality and technology, the Terminals Division offers superb and exciting range of office automation products to streamline communication and increase productivity. Product range includes, basic and multi-functional telephones (for retail & institutional segments) at an affordable price, ultra modern Fax Machines with plain & thermal paper options and Desktop, PCMCIA & ISDN modems for speedy uninteruppted access

PUBLIC SWITCHING, TRANSMISSION & ACCESS PRODUCTS

Futuristic public switching, transmission and access systems -- Looking beyond the present, this Division in total conformance to international quality standards offers central office and rural electronic exchanges of capacities ranging from 128 ports to more than 40,000 ports The range of transmission systems includes Fibre Optics Transmission Systems (FOTS) of 90/120 channel capacity, Ultra High Frequency radio systems and optical based SDH systems Network based access product include WLL, HDSL, DLC etc
This division caters to the needs of the Government, Defence Services, Railways & Private Telecos

character and not Pierce Brosnan, the actor) is the brand ambassador for the Reid & Taylor campaign. What this means is that even if the next James Bond movie doesn't star Pierce Brosnan, Reid & Taylor still has a tie-up with James Bond. A marketing tie-up has been established with Paramount Pictures, whereby Reid & Taylor will endorse James Bond and vice versa. Further, Reid & Taylor will be able to use music, stills, clips, etc, from any James Bond movie in its advertisements. The tie-up has been initially confirmed for two years, after which it is renewable if both parties are happy with it. According to the company, the ad campaign has worked well, and there have been customers inquiring about the 'Bondwala' suiting.

SANJAY BORADE

Being a global player means much more than just exporting, says Nitin Kasliwal

The company is faring well financially. At Rs138.7 crore, its sales for first quarter 1999 were up 13 per cent from the previous quarter. Revenue increased by 43 per cent in 1998-99 to Rs387.52 crore, and net profits grew 60 per cent to Rs23.34 crore. Its operating profit margins have increased steadily over the last three years from 8.85 per cent in 1996 to 12.55 per cent in 1998.

Most of the company's growth has come from the zest of the second generation of Kasliwals. S. Kumars started as a textile trading house set up by Shambhukumar and Abhaykumar Kasliwal in 1948. The trading activity continued till 1966, when association with CAFI, a division of ICI, plunged them into branding. A similar arrangement with Madura Mills followed. Over these years, what the senior Kasliwals did was to establish a strong brandname. It was only in 1976 that the company ventured into manufacturing textiles.

An important year in its history was 1978, when the Kasliwals bought Shree Ram Mills, a sick mill in central Mumbai, and succeeded in turning it around. But this very mill suffered a setback because of the Datta Samant strike in 1981. It was only in the 1990s that the group diversified into power generation, real estate, and finance. But textiles has remained the core business. Today the company has manufacturing facilities at 22 locations in the country and a distribution set-up of 30,000 retail outlets nationwide.

Today, in a broad sense, S. Kumars stands for uniforms, workwear, international suiting blends, and, of course, Reid & Taylor. Workwear and uniforms contribute over 50 per cent to the company's turnover. But Nitin Kasliwal expects this equation to reverse in three years' time — although volumes will increase in the uniform and workwear business, the worsted and high-value cotton businesses will contribute more in value terms to the turnover. S. Kumars claims to be the leader in the school uniform segment with a 40 per cent share of the market. Other players include Mafatlal, Binny's, and Bombay Dyeing.

In the workwear segment, the plan is to introduce ready industrial apparel. The idea is to add value for its existing clientele for workwear fabrics — hospitals, airlines, hospitality services, etc. Plans are to create a separate division to manufacture and supply workwear to companies. Service centres to launder and press uniforms and overalls on a weekly or fortnightly basis are also on the agenda.

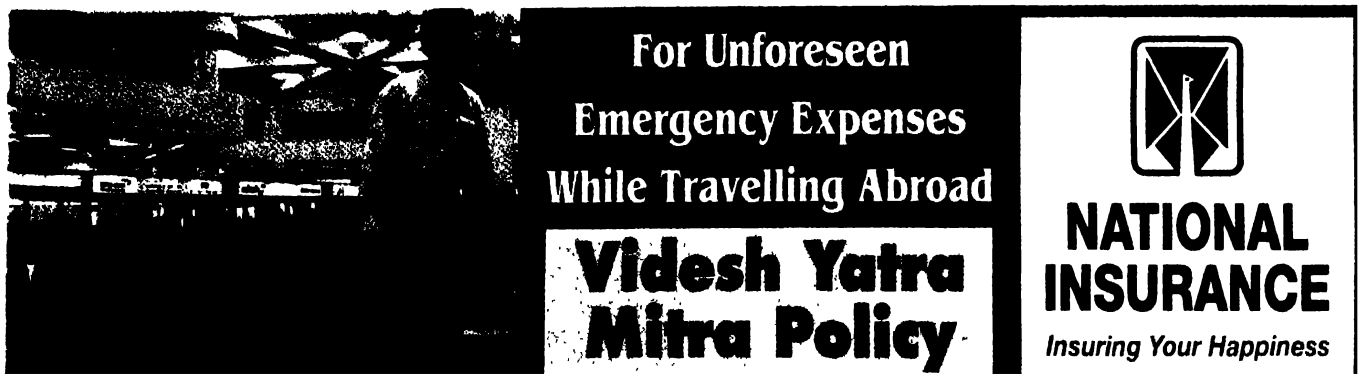
In the poly-viscose segment, the company has a presence in the lower end (Rs150-250 per metre). International Suiting Blends is basically the company's poly-viscose premium range. Priced (retail) at Rs150-270 a metre, this range is targeted at the middle income bracket. To further strengthen its presence and increase its marketshare in this segment, advertising is being beefed up. "In an era of brands, a well-branded product is in a stronger position in the marketplace than a lesser branded product," says Nitin. Accordingly, Kapil Dev has been introduced as brand ambassador to ensure that S. Kumars maintains its position. He will do much more than just advertise the company's products — he will also be involved in promotional interactions with the retail and wholesale trade.

In recent years there has been a substantial shift from getting fabrics tailored to ready-to-wear — almost 50 per cent in shirts. Since S. Kumars already is a popular household brand, the idea is to capitalise on its popularity by moving into readymades with three or four brands. Plans are initially to introduce a whole range of men's wear including shirts, trousers, jackets, formals, and casuals, followed later by women's and children wear. The company is preparing to ride piggyback on the retail boom in the country.

Its distribution network comprises more than 250 wholesalers and 30,000 retailers, of which 2,200 are authorised retailers nationwide. Plans for the next three years are 200 exclusive stores nationwide selling the whole range of textiles and readymades.

"Our mission and objective for the millennium is to be a leader in every category we operate in domestically and then globally," says Nitin. Towards this end the company is setting up a high-value cotton plant near Delhi with an installed capacity of 16 million metres annually. The Rs500-crore project will be implemented by 2001. The company has recruited Martin Hammerle, a technocrat from Austria, to head the project as CEO. The product range will include cotton knits, cotton trousers, etc. This unit is expected to add Rs350 crore to turnover. Almost 75 per cent of output is slated for exports. "There is a distinct shift from unbranded to branded. And our customers recall our brand," says Nitin. The high-value cotton shirting market is currently divided between players like Arvind Mills, Ashima Textiles, and Century Textiles.

Exports are a thrust area. For fiscal 1998–99 the company reported exports of Rs54 crore, and Kasliwal projects Rs100 crore for the following fiscal. Home linen (towels, sheeting, upholstery, etc) constitutes the bulk of the company's exports. With the addition of high-value cotton fabrics, Kasliwal projects an export turnover of Rs300 crore by 2002. But, Nitin adds, "being a global player doesn't mean only exporting from India. Our aim is to have a substantial presence in the overseas market as well." The ideal way to achieve this, according to him, is to have a marketing arm overseas and source products from cheaper manufacturing countries, such as India. Kasliwal's logic: "A European product commands a higher price than an identical non-European one. Hence, if you want to make money in Europe you can only do it at the upper end of the market; the lower-end is extremely competitive. But to be in the upper end you have to be a European company. By exporting you will be in the lower rung." For now, the overseas marketing network has been strengthened. An international trading company has been established in Mauritius.



Diversified business

The group also has a presence in power, tyres, and financial services. The 400MW Maheshwar hydel power project already under construction is expected to start generating power in 2001. An investment of Rs300 crore has already been made, and a firm escrow is in place. A total of Rs130 crore has already been allotted for resettlement programmes. The dam will submerge 22 villages, nine fully and 13 partially. Out of the 300 families that will be rehabilitated, 258 have already accepted plots in the New Jalud model village. However, the recent NBA rally has finally made an impact on the Maheshwar project, delaying it by six months. The cost implications are still being worked out. Further, Hermes, the German-government-backed insurance company which provides lenders a cover for political risk, has now become wary of providing support for the project's lenders. "The NBA is trying different tactics to scare away any development in the region," says group director Vikas Kasliwal. Maheshwar is one of the few private hydel power projects that managed to get financial assurance for about $270 million. HVB Bank of Germany was to be the prime overseas lenders to the project.

In tyres, the company mainly undertakes contract manufacturing of Black Cat scooter tyres for Apollo Tyres. This business contributes less the 1 per cent to turnover. However, according to Vikas, "There should be a reason to exit the business and it hasn't given us a reason to exit as yet." From a capacity of 700,000 tyres, the company is expanding capacity to 2 million tyres.

In the financial business, plans are to tap services that will fit in with the company's core competences, such as distribution. This business will initially cater for the company's own needs, but future plans include getting into life insurance. "We have a very strong brand and our image is that of a reliable and strong entity," says Vikas. To keep in synch with the 21st century, S. Kumars plans to provide venture capital for IT companies. As it doesn't have a presence in the IT industry, a separate entity has been set up. The idea is to approach the business from the e-commerce angle. "This is not going to be specific to the S. Kumars group. It will apply to anything that we can distribute," says Vikas. This move is related to the group's plans to enter retailing. A proposed foray into the entertainment business will not be under the S. Kumars brand name. According to Vikas, plans for the company's first entertainment and retailing complex should gel within the next 12 months.

• BHAKTI CHUGANEE

Does it have enough juice?

Enkay Texofood has finally got approval to restructure its business. In the process, its scrip is getting re-rated

Its core activity has made it sore but its other operations are beginning to soar. That in a nutshell is the story of Rs200-crore (in the seven months to March 1998) Enkay Texofood. The Mumbai-based company, which has been in the business of spinning yarn, was a consequence of a merger of Enkay Synthetics. By the end-1980s competition in textiles was at its fiercest and export-oriented units were booming. That was when the company identified agroprocessing as a thrust area. Since then ETL has comprised two division — textiles and food processing.

Though dyed yarn raked in higher turnover of Rs284 crore as on March 1999 (unaudited), processed foods totted up a revenue of Rs125 crore. The unaudited figures put the net loss for the year at around Rs12 crore, but the revenue breakdown shows that, while the textile division incurred a loss of Rs22 crore, the foods division made a Rs10-crore profit. So Tulsi Goyal, managing director of the company, had no option but to spin the lossmaking division off as a separate outfit.

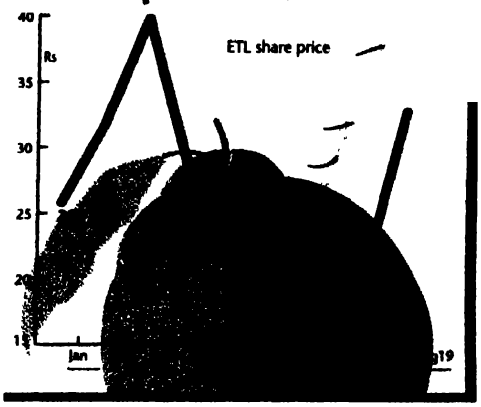
Tropicana is going to make the going extremely difficult for Goyal's juice business

According to Goyal, the plan is to demerge the textile division and then merge it into another group company Avon Synthetics, leaving ETL with just agroprocessing. The foods business comprises three segments — fruit pulp (largely exported to Europe and the Middle East, fetches about Rs50 crore annually), orange juice brand Onjus (a money-spinner, rakes in about Rs60 crore), and Life mango nectar (launched in September last, fetches about Rs15 crore). The two branded beverages are expected to account for Rs100 crore in turnover in the current year.

At the time this report was written the restructuring proposal was given the go-ahead by the inter-institutional committee comprising IDBI, IFCI, and ICICI. The financial institutions had earlier stalled the restructuring move because they apprehended that recovering term loans from the promoter would be difficult. ETL has debt amounting to Rs70-odd crore, more than half from its textile operations. "They (the FIs) wanted to make sure that their comfort levels were high before allowing the restructuring," says a corporate watcher.

According to Goyal, the restructuring process will take about two months. The plan is to allot each shareholder of ETL one free share in Avon Synthetics, an "inactive company", says Goyal, thus taking the latter's equity to about Rs15 crore. "Textiles is a commodity business which is passing through a bad phase. But the industry won't die and if we find a buyer we will even sell it off," he adds. The asset value of the textile division is said to be about Rs80 crore (though the unaudited figures for March 1999 are out, the balance sheet for the period is not yet finalised since the demerger would be deemed effective from April 1998, according to Goyal), but sources say he may not be able to realise even a fourth of the value considering the conditions prevailing in the textile industry.

Though Goyal would like to project a 'single focus' image, the reality, according to market sources, is that he wants ETL to be re-rated by investors on the bourses. There's no denying the fact that Onjus has clicked and part of its success has brushed off on Life, the mango drink. In barely one year the orange drink has become a Rs60-crore product. With brand-names attracting phenomenal values on the stock-market, the timing of the restructuring seems right. Besides, in order to get institutional players interested in the counter, what better way than to project ETL as a company driven by brands?



Having tasted success in foods, Goyal has been contemplating expanding capacities. For this he has been planning to place equity privately. However, it is believed that the acquirers, though upbeat at the prospects of the company's brands growing by leaps and bounds, were

not at all comfortable having the textile unit lugging along. Demerge and surge seemed to have been the refrain.

Once the restructuring is in place Goyal plans to raise about Rs43 crore. But he won't talk about the pricing. The proceeds of the placement will be utilised to add four more packing lines to its three existing at a cost of Rs25–30 crore. A couple of lines will be used to make branded sugarcane juice, which he says will hit the market by March 2000. Goyal believes there is a huge market for cane juice. "Several of us would like to have cane juice, which one sees being sold on pavements, but cannot do so because of the unhygienic conditions in which it is sold," he says.

Besides, part of the money raised will be utilised to expand the reach in terms of distribution channels. (The company caters to about 300 towns in India at present and Goyal plans to extend his reach to 600 towns). Retiring part of the debt, according to him, is also on the agenda. But to what extent does ETL's equity get expanded from the present Rs15-odd crore? Goyal reveals that there will be around Rs4 crore of additional capital. If the fresh equity is capped at the said level, Goyal is clearly looking at palming off a fresh offering at a premium of more than Rs75 per share.

Squeezed & eased

The stockmarket has begun revising its rating of ETL scrip. After stagnating at Rs20 for several months, the counter has begun its upward march and had last hit an upward circuit breaker at around Rs30. Marketmen have begun to look at the foods division's past year's performance when it managed to net Rs10 crore. On an equity base of around Rs15 crore, therefore, the earnings works out to Rs6.6. Being a brand company, they argue that the scrip certainly requires a higher discounting than the present five times.

Be that as it may, there's no doubt that, in the short term, ETL scrip is going to continue its upward march. Though Goyal may have a winner in Onjus, he himself does not enjoy a good reputation on the stockmarket, where he is viewed as a "pucca shrewd trader". With world-renowned Tropicana attacking his market, Goyal has a battle on his hands. Will he, as some corporate watchers believe he will, meekly surrender by hawking off his prized brand?

• ROY PINTO

IDBI

OFFERS INVITED FOR TAKEOVER / MERGER OF A SICK UNIT HAVING FACILITIES TO MANUFACTURE SPONGE IRON

Pursuant to BIFR directives, Industrial Development Bank of India as the Operating Agency (OA) of BIFR, invites offers for takeover/merger/amalgamation/leasing, etc. of a sick industrial company having coal based plant for manufacture of sponge iron. Brief particulars of the company as on December 31, 1998 are given below:

LOCATION	:	District Vizinagaram, Andhra Pradesh
PRODUCT & INSTALLED CAPACITY	:	Sponge Iron 2.2 lakh tpa (2 modules of 1.1 lakh tonnes)
SHARE CAPITAL & RESERVES	:	Rs. 10450 lakh
PRINCIPAL TERM LOAN	:	Rs. 7786 lakh
INTEREST THEREON	:	Rs. 16230 lakh
BANK BORROWING	:	Rs. 950 lakh
ACCUMULATED LOSSES	:	Rs. 15896 lakh

The OA will be guided, inter alia, by the following main considerations while examining the offers: (i) Proven financial, technical and managerial abilities (ii) Acceptability to financial institutions and banks (iii) Willingness and ability to bring maximum amount from its own sources (iv) Minimum possible reliefs / concessions from financial institutions, banks, Central/State Government, etc. (v) Experience in related industries.

The Offers will be evaluated by the OA in consultation with BIFR. The OA reserves the right to accept or reject any offer without assigning any reason therefor. **The proposal may be submitted latest by *September 15, 1999.***

For further details, interested parties may contact: **Shri Inderpal S. Kalra, Deputy General Manager, Rehabilitation Finance Department (RFD), IDBI, IDBI Tower, 7th Floor, WTC Complex, Cuffe Parade, Mumbai - 400 005, Tel.: (022) 2189111 Extn 4590. Fax: (022) 2182562. E-mail: inder.kalra@idbi.co.in.**

VENTURES

Teutonic titan

The world's biggest bank is revving up its Indian operations

PALASHRANJAN BHAUMICK

Downsizing? Rubbish, says Shirazi. Deutsche Bank is in fact expanding in India

In the global banking stakes Deutsche Bank AG (assets: $877 billion or euro 848 billion) stands tall. The German bank's acquisition of Bankers Trust in the US ($135 billion/euro 114 billion) last June for $10.1 billion immediately propelled it to an even stronger position. Even before it swallowed the American bank, it was the biggest bank in the world with assets of $740 billion (euro 627 billion). Of course, the impending merger of three large Japanese banks to create a $1.3-trillion entity would push it to number 2, but it will remain a force to reckon with.

It is ironic then that this banking behemoth should have such a low-key presence in India. Here it has none of the image of the aggressive, expansionist entity that it has internationally. Deutsche Bank is ranked 33rd among the top 100 banks operating in India (as per the *Business India*-Probity ranking done earlier this year on the basis of performance for 1997-98). In terms of assets its ranking is even lower — 41st. It doesn't even figure among the top five foreign banks.

Not surprisingly, in banking circles, Deutsche Bank has been traditionally regarded as a typically conservative German bank. That isn't necessarily a bad thing. As one foreign banker puts it, "Deutsche has always been respected as a player that will not forsake the rule book to cut a deal." Slow and steady rather than fast and loose — that has been the bank's hallmark.

Yet Deutsche Bank, like other foreign banks, seems to have slowed down even further in recent times. Decreasing growth in advances over the last three years and declining profitability - net profit plummeted to Rs49.5 crore from Rs117 crore a year back - have contributed to the impression that it is downsizing its operations in India.

Nothing could be further from the truth, exclaims Javad Shirazi, regional head (India, Pakistan, and Sri Lanka), astounded at the suggestion. On the contrary Shirazi, a career banker who was with the World Bank for 24 years before he joined Deutsche Bank last November, has the mandate to rev up the Indian operations. And he has every intention of doing so, he says. His goals: be the banker of choice to top-league companies in India. Propel the bank into the big league by leveraging Deutsche Bank's global strengths.

These are worthy ambitions to be sure, but one cannot ignore the fact that Shirazi has his work cut out. With the economy just about chugging again, banks are yet coping with the aftermath of the slowdown. Deutsche Bank is no different. The report card for the year 1998-99 isn't exactly rosy. The total income of the bank was virtually stagnant — Rs565 crore as against Rs563 crore a year back. Profitability is down and even fee income from non-fund-based activities like guarantees, LCs, and treasury-related products, the bank's core-competency area, has shrunk to Rs132 crore from Rs159 crore a year back.

Despite all its legendary precautions the bad loans in the bank's books have increased. Provisioning for bad loans more than doubled to Rs37.5 crore in 1998-99 from Rs14.1 crore a year back. The bank boasts a strong treasury operation. But curiously, in a falling interest rate scenario, the provision for depreciation on investments shot up by 60 per cent to Rs1.68 crore. Even public sector banks have fared better on this count, seeing an appreciation in their investments this year. At the same time the cost of deposits have shot up. Although deposits marginally increased to Rs2,128 crore from Rs2,024 crore a year ago, interest expended was higher at Rs213 crore compared to Rs185 crore in 1997-98.

Shirazi's defence is that these are blips; in essence the balance sheet remains strong. For one, reduced profits are because of increased provisioning for bad loans. He attributes this to the economic slowdown, not poor asset quality. Secondly, the bank has made investments in technology and, with this thrust, been recruiting specialists. This has contributed to a higher wage bill. "We are introducing new lines of business," he says. "The reduction in profits is because we are in a transition period. Costs are being incurred now, while the returns will accrue over a period of two-three years — there will be a time lag before the new areas start generating revenues."

When the Asian contagion came to the fore by mid-1997, Deutsche Bank quickly rejigged its strategy. It decided to reduce the number of clients in the Asian region, including in India, and also cut back on fund-based activity.

Nobody cares as much.

While the bank has consciously reduced its advances in India, it is in every other respect in expansion mode. "Our advances may not have grown, but our assets increased by over 36 per cent to Rs4,452 crore in 1998–99. It's just that the composition of growth has shifted from giving loans to investments," he argues. Investments have grown by over 60 per cent to Rs1,666 crore.

Under the new strategy it wants to provide the full range of financial services. It is positioning itself as a one-stop financial solutions provider — from treasury-related products like currency and interest rate swaps to custodial services encompassing securities lending, fund accounting, and administration to cash management services to private banking, infrastructure financing, *et al.*

As proof he points to the opening of the bank's sixth branch in Chennai in August. Deutsche Bank wants to target thriving companies in southern India in tea and coffee, the IT sector, plastics, textiles, and telecom. But this would be the last of the brick-and-mortar branches, at least for the moment. The reason: with branches in Mumbai, Bangalore, Calcutta, Chandigarh, and New Delhi and a total of 520 employees, the bank is geographically well spread. "We have the technology to cater for our focused clients across India from these centres," Shirazi explains.

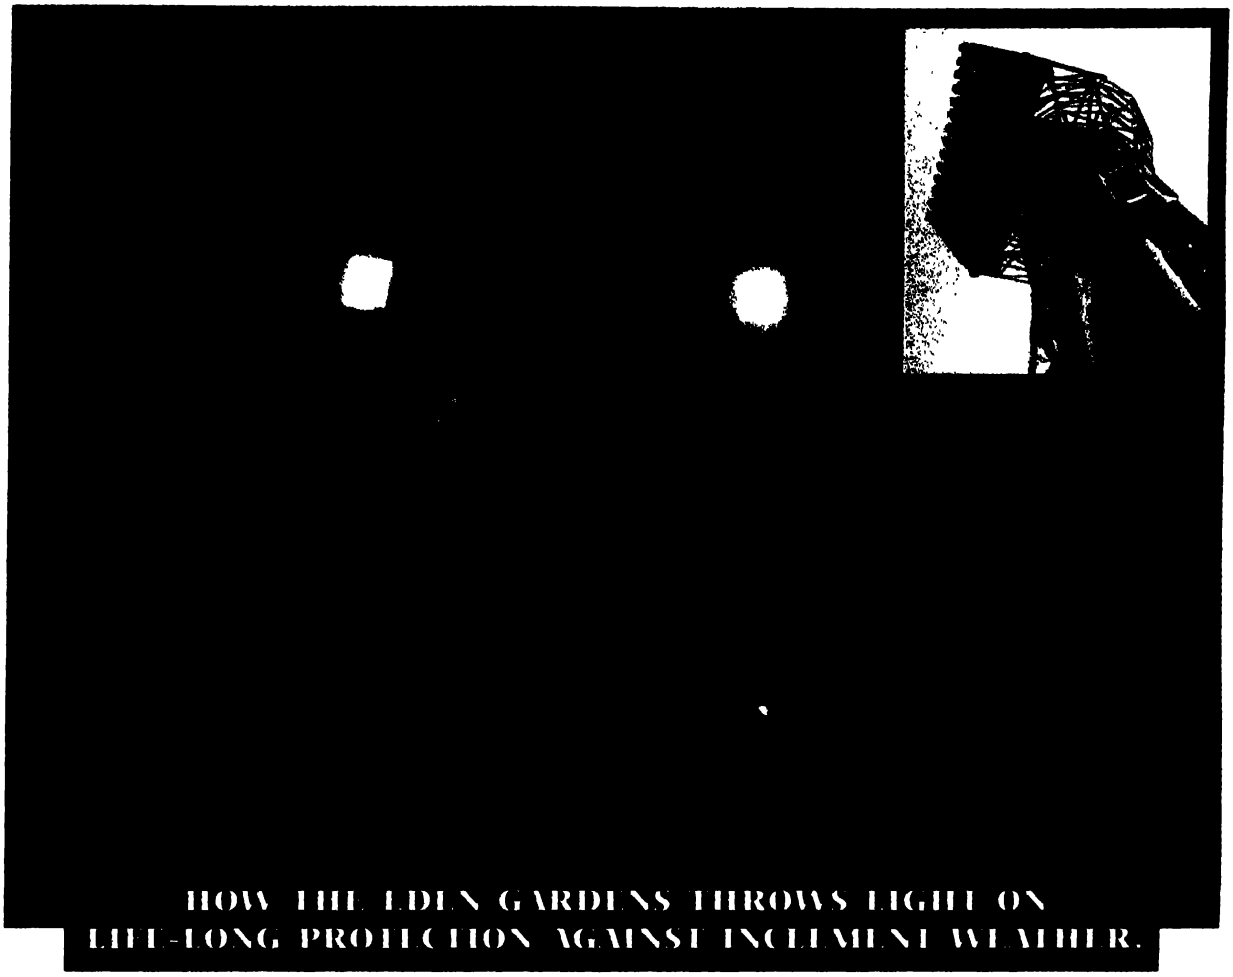
As part of its expansion plans in India, the bank set up a primary dealer subsidiary in June 1999. Deutsche Bank has a 75 per cent stake in the Rs60-crore capital of Deutsche Securities India Pvt. Ltd, with the balance held by Star Grain and Shipping Pvt Ltd. The bank also set up a 100-per-cent-owned software company – Deutsche Software India Ltd – in 1992 to develop banking software solutions for itself and other banks.

"We have moved from narrowly focused treasury operations, where we dealt only with buying and selling of foreign currency for corporates, to full-scale treasury services like currency and interest rate swaps, over-the-counter derivatives, and fixed income securities," says India co-head (global markets) Rajiv Baruah. The thrust on treasury operations can be seen from the fact that this division contributed Rs11 crore to the bank's earnings in 1993–94. This went up to Rs60 crore in 1998–99, when it began offering a plethora of treasury-related products, Baruah says. Deutsche Bank was among the first to strike interest rate swaps (IRSs) when the Reserve Bank of India permitted them two months ago. In a span of two months, Deutsche Bank IRS deals have crossed Rs500 crore, the highest by any bank in India, Baruah adds.

"In infrastructure financing we have a significant presence particularly in the area of telecom, where we have fund-based and non-fund-based exposure of over Rs1,000 crore and command a 25 per cent share amongst the foreign banks," adds Carl Saldanha, head of the global banking division (India). Deutsche is looking at a growth rate of 20–25 per cent in infrastructure financing, he says.

Although a late entrant (in 1994) into the custodial business, Deutsche has captured a significant marketshare, says regional business manager (Indian subcontinent and Indonesia) Venkatesh Roddam. To prove his point, Roddam says that, of the BSE market cap of $142 billion, the FIIs' share is $9.8 billion. Of this Deutsche Bank's share is $3 billion. Initially, the focus was on FII business, but now Deutsche is focusing on big Indian institutions and mutual funds. Consequently, it has introduced products like securities lending, fund accounting, and back-office administration for mutual funds.

What has it gained from the Bankers Trust (BT) acquisition in India? Apart from the custody operations, which have now gone to Deutsche Bank, BT had a nominal presence in India with one representative office and 22 people. Moreover, it did not have any loan book and its only activities were non-fund-based and dollar-clearing business in the US for Indian banks. Nor was the Indian venture active in mergers and acquisitions (M&A), a niche area for both Deutsche and Bankers Trust.



The purpose of the acquisition was to give Deutsche a solid American platform, particularly in the area of investment banking and M&A deals, Shirazi explains. The bank has got control of BT Alex Brown, an investment bank, which was one of the underwriters to Infosys Technologies' American depository receipts (ADR) issue earlier this year. Besides commencing M&A deals, the Indian operations will also look at business from companies planning to tap US markets. "This is the direction of global banking and India cannot be far behind the changing dynamics of banking," he adds.

The next millennium will see the decline of fund-based and brick-and-mortar banking, and Deutsche Bank AG is proceeding in the right direction. But it remains to be seen whether the Indian operations achieve the levels of growth it has done elsewhere.

HOW THE EDEN GARDENS THROWS LIGHT ON LIFE-LONG PROTECTION AGAINST INCLEMENT WEATHER.

PRESENTING MRF METALCOAT

The lighting tower at Eden Gardens is an awesome metal structure, built with a huge investment. Fortunately, providing it life-long protection from corrosive atmospheric salinity in a coastal town like Calcutta is a much simple affair. Thanks to* ***MRF Metalcoat.*** *A revolutionary finish that protects structurals from the elements and adds precious life to them.* Pioneered by MRF's Speciality Coatings Division, MRF Metalcoat is a **100% Polyurethane** finish. MRF Metalcoat protects metal surfaces against abrasion, corrosion, chemicals and even the ultra-violet radiation of sunlight – far more than any other system can ever hope to. Being a very versatile finish, it is suitable for any metal surface – chemical plants, machinery, scooters, bus bodies, grills and metal furniture, not to mention imposing super-structures like the one above. It is virtually free from maintenance and it lasts much longer than any conventional paint, thus saving on scaffolding and labour costs involved in frequent repainting. Needless to say, there's a wide range of colours to choose from. Choose MRF Metalcoat. And forget repainting your metal structures. For years on end.

Steady it grows

What began as a small co-op bank for the Parsi community is today a thriving cosmopolitan credit institution

Mumbai-headquartered Zoroastrian Co-operative Bank Ltd (ZCB) has attained phenomenal growth over the past six years, its deposits soaring tenfold from Rs10.76 crore to Rs101.20 crore and its advances over 25 times from Rs2.01 crore to Rs50.34 crore (*see chart*). The bank's share capital of a modest Rs20.16 lakh has been pumped up to Rs2.26 crore, its 8,087 shareholders gaining a 15 per cent dividend, the maximum permitted under the Maharashtra State Co-operative Societies Act, 1960.

The bank's venerable chairman Jehanbux J. Gandevia, born a year after ZCB was registered in 1927 as a co-operative "credit" bank, says the board of directors applied to the Reserve Bank of India for scheduled status once the co-operative bank's deposits crossed Rs100-crore in the last accounting year. Scheduled status will facilitate RBI licence for foreign exchange transactions, easier letters of credit, and multi-state branches, he explains. The bank has this year targeted advances of Rs65 crore and deposits of Rs130 crore. A qualified chartered accountant, Gandevia joined as director 22 years back and has now been chairman for the past eight years

As its name suggests, the Zoroastrian bank was founded as a communal bank, catering primarily for small depositors from the resident Parsi community. "About 12 years back, slackening business owing to scarce advances prompted the bank's conversion into a cosmopolitan one," he recalls. "If such a step had not been taken, the only option left would have been to merge with another co-operative bank."

ZCB, in fact, did not have a banking licence right until 1994, when RBI sanctioned it one to carry on banking business under Section 56 of the Banking Regulation Act, 1949. This is because ZCB had till then not fulfilled the criteria for such a licence as regards share capital, revenue, profitability, as also deposits, which were less than Rs10 crore. The increase in share capital and reserves now enable the bank to furnish advances of up to Rs2.25 crore in contrast to the Rs10 lakh or less it was till then allowed to.

SANJAY BORADE

Gandevia anticipates scheduled status

Managing director K.H. Taraporevalla traces ZCB's success to several measures adopted over the past six years such as inducting younger bankers with varied in-depth experience, computerising operations which streamlined all functioning, building strong bonds with clients through staff training and motivation, reorganising and revamping all branches, and enhancing payscales that won the union's unstinted cooperation.

Financial highlights

Comparative figures of six years

	31 March 1993	(Rs lakh) 31 March 1999
Share capital	20.16	225.62
Reserves	123.81	960.26
Deposits	1,075.67	10,120.1
Advances	201.00	5,034.36
Investments	40.07	1,967.74
Gross income	152.31	1,305.35
Net income	27.81	309.55

"It is teamwork and not any individual that has led to this success," interjects general manager Farokh Banatwalla. ZCB's inbuilt evaluatory system has reflected in its profitability, he notes. There were only seven employees at the bank's inception in downtown Mumbai's Horniman Circle business district. Today its six branches – five in Mumbai and one in Pune – have 97 employees, translating into total business of around Rs1.6 crore per employee. At the same time ZCB has among the banking industry's lowest non-performing assets, Rs77.87 lakh or a negligible 1.55 per cent of total advances, Rs50.34 crore on 31 March. "The bank is vigilant in recoveries of advances," he stresses.

According to Gandevia, while the bank is committed to the social concept of banking in the cooperative sector, it lists amongst its clientele such majors as Godrej, Steelage Industries, Charak Group, Dai-Ichi Karkaria, J.N. Marshal, Associated Breweries, and Josts Engineering.

ZCB now also has a modern central administrative office close to its main branch and has gained RBI approval for opening three new branches at Mahim, Lokhandwala Complex in Andheri, and Borivli (west). Gandevia mentions that RBI has also granted no-objection for further branches in Thane district and the municipal area of Navi Mumbai.

Senior manager Aspi Katgara observes that all the branches are fully computerised and both hardware and software Y2K-compliant. Computer networking is expected to be complete next year and the bank is installing an ATM facility at its Lokhandwala branch.

ZCB has since 1 September 1998 introduced nonresident external (NRE) and nonresident ordinary (NRO) accounts in rupee currency for NRIs at its Mumbai main, Dadar, and Bandra branches. "They can be opened in the form of savings, current, or term deposits for between 181 days and 60 months," says manager N.G. Paghdiwalla. "Forex transactions are routed through foreign banks and correspondents."

The art of distribution

In the future, the number of branches will no longer be a determinant of balance sheet growth for banks

One of the four important functions of a bank is efficient and economical distribution of its products and services. The others are risk management, fund management, and product development. The importance of the distribution function can best be understood from the fact that it accounts for more than half of the overall cost structure of a typical financial institution. Till recently the only distribution channel in India was brick and mortar branches. As a result of socialistic considerations in the past, the emphasis of banks, mainly owned by the government, was on geographic reach. However now, with conditions becoming more economically oriented, their managements are becoming more entrepreneurial in their approach. This, coupled with the increasing demands of customers who want more convenience and ease in transactions, has laid the foundation for more economical and efficient distribution channels in the financial sector.

In the future, profitability and the level of customer satisfaction will to a large extent depend on the distribution channels the banks adopt. This would be truer for those that have a retail focus, as success there is partly a matter of managing a wide variety of distribution channels. To retain a retail banking customer it is essential to provide him with anytime/anywhere banking and access to information at his convenience, not the bank's. It is therefore imperative for banking institutions in India to reexamine their existing channels and have a detailed distribution strategy for the future.

There has been a proliferation of distribution channels in the financial sector worldwide. The main ones are branches • agents • ATMs • telebanking • home banking • kiosks • Internet banking • sale at workplace • and supermarket banking.

The main drivers for multiplication of distribution channels are • increased customer sophistication • new technology • the inadequacy of traditional channels to service all customer segments • new entrants who are 'cherry-picking' profitable customer segments using cost-effective channels.

Channels must be chosen which both meet the customer requirements of convenience and ease and at the same time be economical. The only hurdle is that the low-cost channels also tend to be low on personal interaction.

The cost of distribution varies greatly across different channels. A study by a US bank found that while each customer walking into its branch cost the bank $3, a transaction done over the phone cost it $1, whereas an online transaction cost just 5¢. While the cost structure may differ from bank to bank and country to country, the fact remains that progressive migration from high- to low-cost channels benefits the bottomline. Migration, however, is a slow process, one that requires institutions to make a concerted effort to educate their customers through advertising campaigns, provide benefits to customers who migrate, etc.

The trend away from sole reliance on branches is now irreversible. More and more customers today are accessing remote channels to transact their financial affairs. Banks currently operating substantial branch networks need to restructure their distribution systems and approach to improve economics and the same time seize opportunities to serve an increasing proportion of customers without branches.

Branches will continue to remain an important channel; however, their number will shrink and, more importantly, their role will need to change, more towards business origination, selling complex financial products, and away from servicing. The branch system, which largely supports reactive marketing (order-taking), has to get proactive if it wants to survive in the future. Balance sheet growth will no longer be linked to the growth in the number of branches, like in the past, but depend to a large extent on the quality of services provided by the branches.

In India banks have very recently started looking at alternative channels, and are in a stage where they are thinking of expanding rather than rethinking their delivery strategies. The private sector banks are way ahead of their counterparts in the public sector in introducing/experimenting with new channels. In an era of extreme competitiveness, the only way to improve the bottomline may be through the middle line, i.e. the cost of doing business, and this is where the distribution channels will play a crucial role.

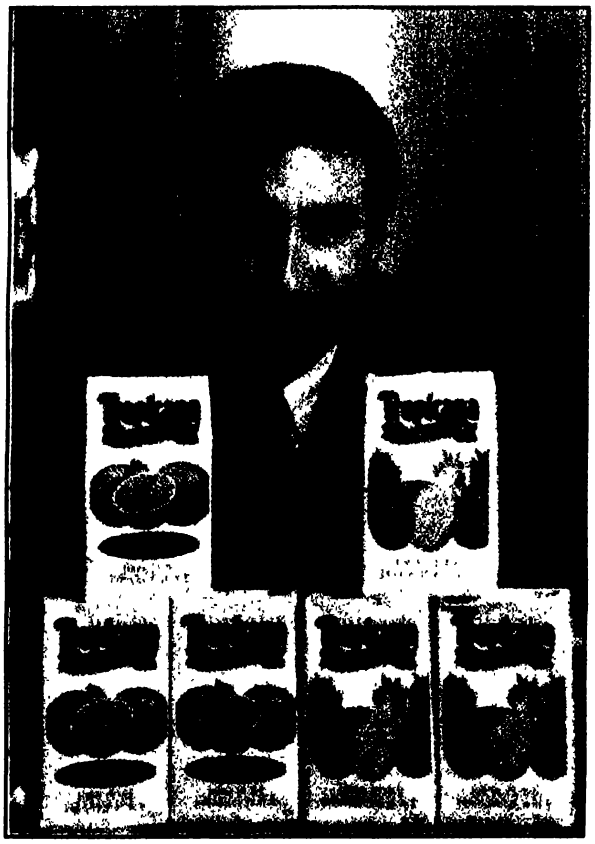
Fresh from Florida

The entry of a global giant promises to stir up India's nascent juice market



Indian taste buds have proved to be the nemesis of many a multinational that's taken upon itself the challenge of wooing them. Note how Kentucky Fried Chicken and Kelloggs cornflakes, staples in their home country, struggle gamely on here. Yet new, dewy-eyed hopefuls, ever so often, continue to arrive.

The most recent among these is the $2.3 billion orange juice giant Tropicana Products Inc, a division of PepsiCo Inc, which debuted last month in Delhi and Bangalore with two variants – its bestselling orange juice and pineapple juice. Headquartered in Bradenton, the heart of Florida's citrus belt, it is the global leader in fruit juices and thanks to the American juice-for-breakfast habit has a 41 per cent share of the $2.7 billion US chilled juice market.

Refreshingly, Tropicana's take on the Indian market is remarkably clear-eyed. "We're not for a moment assuming that having orange juice for breakfast is a worldwide habit," says Tropicana's president & CEO Gary Rodkin, who visited the Indian subsidiary for the first time last fortnight accompanied by Roger Knight, vice-president and managing director, Tropicana Asia Pacific. "Our positioning in the US is 'start your day with Tropicana' but India may have a completely different pitch. Basically, we'll fish where the fish are."

Presently, the category of branded juices is pretty small, somewhere between Rs80-100 crore, compared to the Rs3,500-crore soft drinks market. But Rodkin, drawing hope from the hundreds of fruit juice stalls that he saw on the streets of Delhi and Mumbai, is convinced that there's a latent thirst waiting to be quenched. He reckons that as disposable incomes rise, so too will the awareness of nutritious, 100 per cent pure juices, causing people to spurn the roadside stuff for hygienic Tropicana tetrapacks.

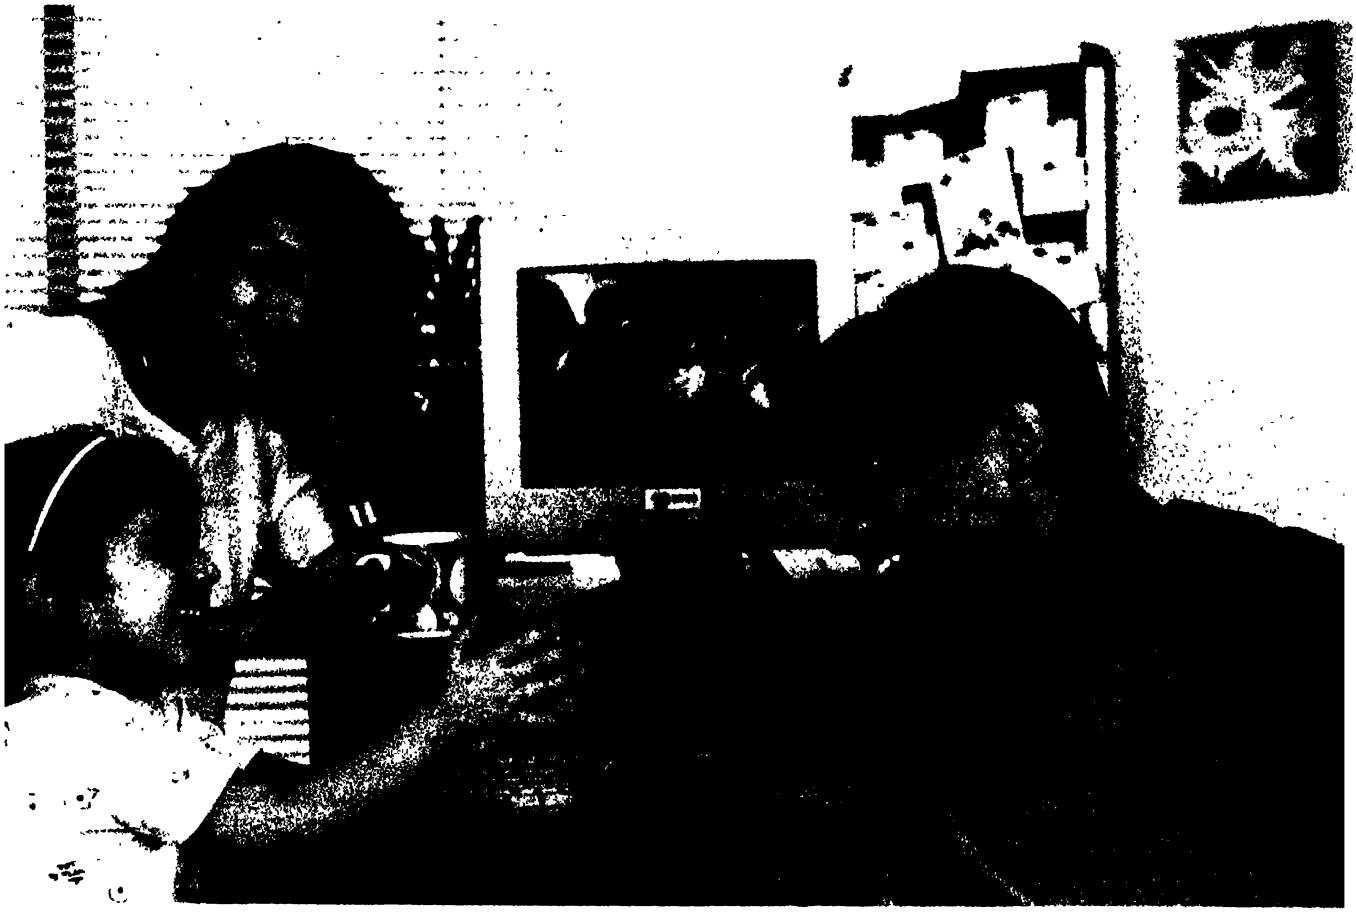
Orange juice purists had better be warned. Tropicana's bestselling Pure Premium, not-from-concentrate juice won't be sold here – it would cost a bomb to ship out and the absence of a distribution cold chain is another deterrent. The company is importing concentrate which is blended locally under its supervision at Dynamix Dairy Industries' plant in Baramati, Maharashtra. A test market exercise last November in Bangalore under the Dole brand (also owned by Tropicana) revealed that Indians would prefer a sweeter taste. As a concession to this preference, a special orange and white grape blend is being concocted at the research facility in Florida.

PHOTOS PALASHRANJAN BHAUMICK

Rodkin promises 100 per cent purity

Fortunately for Tropicana, Indian made-from-concentrate brands like Dabur's Real and Enkay Texofoods' Onjus have done the groundwork. Until their arrival a couple of years ago, the packaged juice market was stagnating at Rs25 crore. Brands like Noga, Kissan and Druk sold in cans and were not too widely distributed. Most significantly, they were nowhere close to authentic tasting. They sourced orange juice locally and loaded it with preservatives and sweeteners.

The new Indian brands have expanded the market considerably, says Jagdeep Kapoor, managing director of Samsika, the marketing consultancy that advised Enkay Texofoods. He estimates that it's growing at 40 per cent annually, driven by three key factors. People are gravitating towards 'natural' products and with the advent of companies like Kelloggs, the awareness of healthy breakfasts is gradually building up. "Then there's the growth of the white spirits market – vodka goes better with orange juice!" says Kapoor.



But the Tropicana men say that what's available locally is not quite the real thing. Tropicana juices contain no sugar, additives or any preservatives, so are 100 per cent pure. "The 100 per cent juice category doesn't exist in India. We're going to create it. Also the culture here is of wanting fresh food. We have to convince people that we're 100 per cent pure," says Roger Knight.

Enkay Texofoods' managing director, Tulsi Goyal, doesn't take too kindly to this allegation. He claims that Onjus, with sales of Rs66 crore, has a 79 per cent share of the juice market. Like Tropicana, it is also made from concentrate imported from Florida and Brazil. "The only difference is that we don't write '100 %' on our package. However, if it's juice it's got to be 100 per cent pure or else it would be nectar. They are just trying to cash in on their brand

Wipro Corporation. Market capitalisation over Rs. 16,000 crores, 9000 minds applying thought, day after day, to make a difference to your life.

image and if that is the case then I say that we're 101 per cent!"

Tropicana, which derives 80 per cent of its sales from the US, has a modest presence in Asia which accounts for 5 per cent of its business. But that is all set to increase, says Rodkin, and they've identified China, Japan and India as the big growth centres. The company's international drive accelerated in 1995 when it acquired the juice business of the Dole Food Company and also the global marketing rights for the Dole brand of fruit juices. Dole already had a business in China whereas Tropicana's presence was limited to a joint venture in Japan with Kirin.

The company first began fishing around in India in 1996 when it hired ex-Lakme executive Abhay Manglik as country manager and established a 51:49 joint venture with Calcutta-based Keventer Agro. An alumni of IIM, Banglore, Manglik says he was attracted to this assignment as it meant building something new. "Ours is a do-good, feel-good product. It's not a pure thirst quencher; what we're really selling is liquid food."

What we're really selling is liquid food, says Manglik

Problems with the joint venture slowed down the India plans. Then came a global change in the company's ownership in 1998, the fourth time in its 52-year history (*see box*). Tropicana, which was on the verge of an IPO, was sold by Seagram in July 1998 to PepsiCo for $3.3 billion following its acquisition of Polygram. For PepsiCo, juices is a good fit with its soft drinks and snacks business. (There's also the fact that Coca-Cola owns competing juice brand Minute Maid).

Being part of the PepsiCo family brought its own advantages. "Basically, we share the same customers, by which I mean the retail trade. That gives us tremendous leverage in the food service and grocery channel in the US. In India too, Pepsi can open doors for us," says Rodkin. Since Pepsi India Holdings already had FIPB approval for a juice business, it quickly set up a subsidiary, Tropicana Beverages Company which operates out of Pepsi's plush headquarters in Gurgaon, Delhi.

Tropicana has a global sourcing strategy for fruits. It buys apples from China, pineapples from Thailand and the Philippines, oranges from Brazil and Florida – the company picks up 30 per cent of Florida's annual crop. India could figure some day as a big-time supplier too. "We'd love to be able to find oranges here that have a high juice content. That would save us duty, freight and allow us to make some profits!" jokes Manglik. "Unfortunately, Indian oranges are a good table variety but aren't right for processing."

Rodkin wants to expand the range beyond citrus juices to other fruits like cranberry, apple, red grape. In the US, Tropicana has to contend with a host of flavour specialists like Motts apple juice and Oceanspray cranberry juice; but these don't exist in the virgin Indian market. Kapoor feels that might be over-ambitious. "This is an orange and mango market. Period." Rodkin doesn't underestimate the marketing challenge: "We don't expect to make money here and become a $1 billion business overnight. We're not playing a marketshare game but are focused on growing the category in multiples."

• NAAZNEEN KARMALI

Fruity foray

Coincidentally, in the same year that India achieved Independence, Italian immigrant Anthony Rossi began selling gift boxes of fresh fruit to department stores on the US east coast. Encouraged by the response, Rossi, a former restaurateur and tomato farmer, moved to Florida and started supplying fresh fruit slices, aseptically packed in glass jars to New York restaurants. From fruit salad to frozen concentrated fruit juice was the logical step forward for the astute Rossi who invested in an evaporator.

Tropicana

He branded the product Tropicana, a name he picked up from a Florida tourist resort and which he felt evoked 'a taste of the tropics'. Fruit Industries Inc, as the company was called then, was doing roaring business when Rossi came up with his next innovation: chilled, not-from-concentrate juice which was as grove-fresh as a shelf product could get. The company's name was changed to Tropicana Products Inc in 1957 to cash in on its popular brand name.

In 1969, the company had its IPO and was listed on the NYSE. By then it had already begun selling overseas, albeit in a modest way, to markets in Europe. By the 1970s, Rossi was being seriously wooed by companies like Kelloggs, PepsiCo and Philip Morris to sell out. Rossi, then 77, finally accepted the offer of Beatrice Foods in 1978. Eight years later, Tropicana was acquired by Kohlberg Kravis & Roberts which sold it to the Seagram Company two years later. •

How Sony got its groove

In just three years the music start-up has set several records

PHOTOS: PALASHRANJAN BHATTACHARJEE

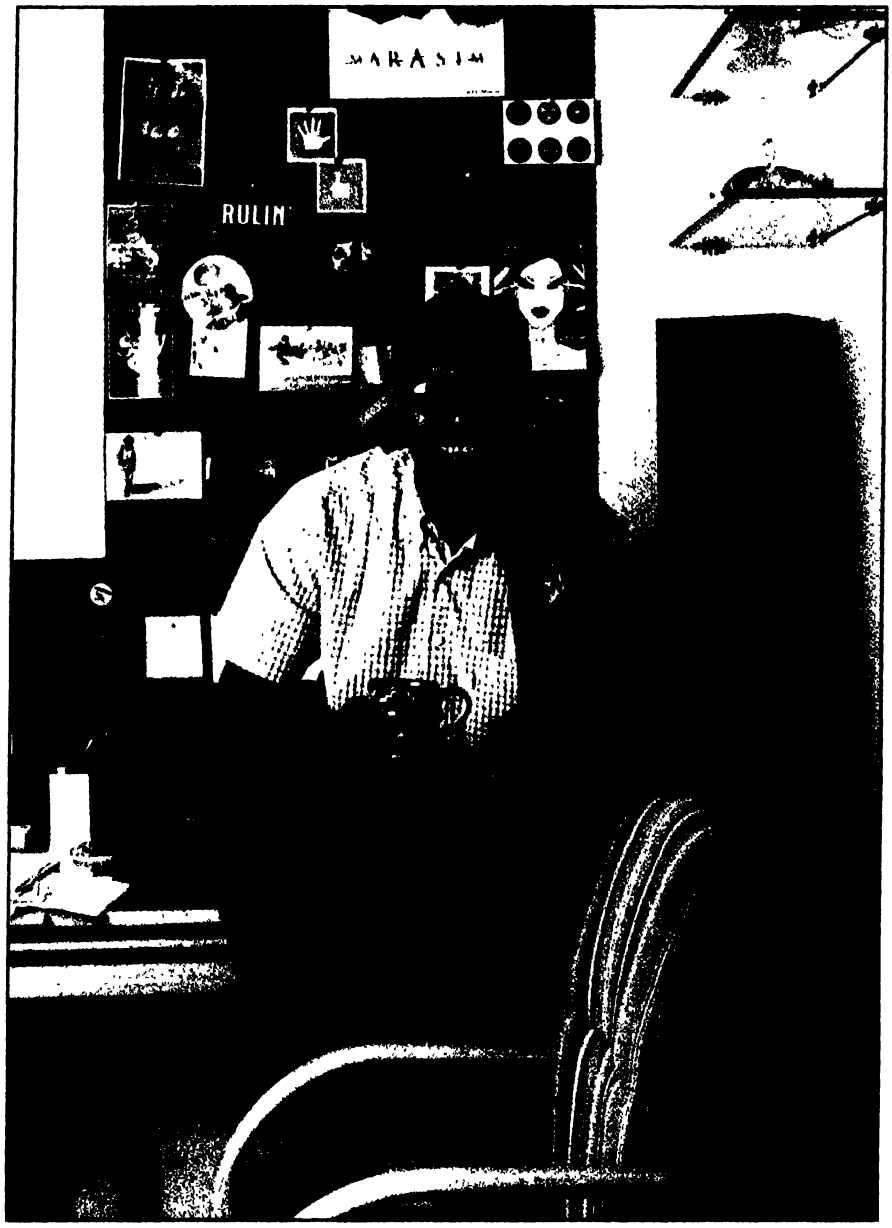
Singh : "We want to be the most desirable music company"

Stroking a well-cropped goatee and with a faraway look in his eyes, Vijay Singh, managing director, Sony Music Entertainment (India) is waxing nostalgic: "We had this ambitious wish-list. Sure we were naive but we had loads of enthusiasm." He sighs, pulling himself back to the present. Then glancing at the platinum trophies displayed in his cabin, he beams. "It's been an incredible ride. We've surpassed my wildest expectations," says Singh, his eyes now positively shining.

Allow him this moment of self-congratulation. For, in a record three years, Singh and his 'naive' team have put together what is arguably India's most successful music start-up. Having sold some 20 million cassettes to date and with a Rs60-crore turnover last year, the Indian subsidiary of the $6 billion Sony Music, has grown from rank newcomer to the fourth largest player in the Rs1,400-crore music industry. In international music, a segment that represents 6 per cent of the business in volumes, it is top-of-the-pops with a 40 per cent market-share.

The sound of Sony that emanates from every corner of its corporate headquarters in suburban Mumbai, now pervades some 5,500 stores countrywide. That sound includes not just hits from its well-stocked international catalogue — Ricky Martin, Celine Dion, Michael Jackson *et al* — but also what every record company here lusts after: chartbusting Hindi film songs. The Sony label was on the soundtrack of *Kuch Kuch Hota Hai*, Bollywood's biggest blockbuster in 1998. At last count, it had sold 6 million units plus nearly one million units overseas earning its producer Yash Johar an estimated Rs3 crore in royalties.

What's notable is that Sony's global competitors haven't quite hit the high note in India. EMI recently broke off with HMV, its long time partner and is setting up on its own as is Polygram. Virgin which set up last year is new to the game. Warner's contract with Music Today is up for renewal later this year and industry talk has it that it is looking for a joint venture partner. BMG has a joint venture going with Crescendo which is smaller than Sony Music and more low key.



No wonder Singh's boss, Hong Kong-based Richard Denekamp, president Sony Music (Asia) and a frequent visitor here, is over the moon. "India's been a success story for us. Our main objective was to be part of the local music scene and that's not easy to achieve," he says. Equal music for Singh's ears is what arch-rival Suresh Thomas, managing director, BMG-Crescendo has to say: "They've done a good job in getting their act together, particularly in distribution." Adds Shashi Gopal, chairman and managing director, Magnasound India: "Internationally, Sony Music has the reputation of thinking big and doing things with razzmatazz and they've been successful in creating that image here as well."

That's quite a leap from two years ago when industry veterans like Thomas were sceptical about how the young whippersnappers would fare. That was the time when Sony was on the verge of launching A.R. Rahman's *Vande Mataram*, its first locally developed Indian album (it eventually sold 800,000 units — *see table*). He had told *Business India* then: "Sony will learn the hard way, like the rest of us have." But the upstart was hell-bent on changing the rules of the game — how music was packaged, promoted and retailed.

Team effort

Even before Sony could sell a single cassette, it had to sell itself. "All I had was a letter authorising me to set up the company," recalls Singh, an ex-Titan executive whose last job was at Walt Disney. "I didn't have a clue what that would take so I dealt with the hurdles as they came." The first was putting a team in place. The industry had a cheesy image and was reeling under the shock of T-Series owner Gulshan Kumar's gangland killing. But the Sony name drew in people like Shridhar Subramaniam from Titan as marketing head and Rajat Kakar from Procter & Gamble to head sales.

As a conscious strategy, Singh decided to hire young and from outside the industry. The logic: they would bring fresh ideas and challenge the existing paradigms. "The average

Subramaniam says it's a marketing driven business.

age of people here is 26 which makes me at 44 the 'old guy'!" he laughs. With jeans and T-shirt as accepted attire, the culture is informal and exudes a youthful exuberance. TV sets and music systems strategically positioned everywhere give the office an atmosphere of a cool hangout — a perfect setting for out-of-the-box thinkers.

This year Singh & Co went looking for them at the management institutes. Their pitch? "Welcome to the world of sex, drugs and rock and roll!" That went down so well that, flooded with applications, the company recruited four MBAs instead of the two it had set out to hire. "Mind you, we pay fair but not max. The interest only proves that kids these days are exercising different career choices. Also, that our industry is acquiring legitimacy and respectability," explains Singh.

Who wants quality?

Positioning itself on the quality platform was another big gamble. Where subcontracting manufacture was the industry norm, Sony invested upfront — some $10 million — in its own cassette factory with a capacity of 12 million units a year. By next year, it will have a CD plant at the same site, representing a $3 million investment, manufacturing 2 million units annually. Currently, CDs are imported from Austria and Hong Kong and the raw tape comes from Sony Technologies, US. Imports are necessary since what's available locally doesn't make the Sony grade.

"Everyone told us don't make the mistake of investing in a factory — who wants quality? But we felt that creating good music, then having that on a shoddy tape made no sense," explains Singh. Sony upgraded the product inside the box and the box itself opting for transparent packaging rather than the opaque, plastic kind the market was flooded with. Small, user-friendly detailing like having a tear-tape on each cassette and CD and including the song lyrics contributed to an overall 'superior' look. Acknowledges, BMG-Crescendo's Thomas, "Their packaging has stood out."

If the look wasn't cheap, neither was the pricing. Back then Sony's premium

Indian billboard

	(Rs crore)
T-Series	200
HMV	110
Tips	70
Sony	60

Sony's hit parade

	Units sold (lakhs)
Kuch Kuch Hota Hai	70
Dil Kya Kare	10
Vande Mataram	8
Main Kabhi Kabhi	5
Boys	3.5
[illegible]	3

pricing strategy looked bold but iffy. The average Indian music cassette cost Rs25-35 and international cassettes retailed between Rs60 and Rs75. Sony's price: Rs55 for an Indian title and Rs100-125 for an international one. "In three years," says Subramaniam, "the quality-price equation has moved up in the category and I'd like to think that we had some role to play in it."

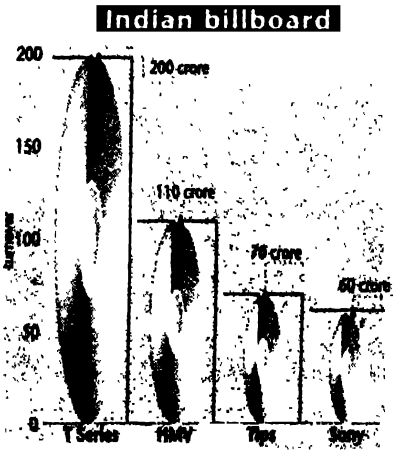
Curiously, where cassette prices have gone up as companies have rushed to upgrade quality, CD prices have come down. In a bid to push CD sales which account for a mere 2 per cent of the market — the US average is

85 per cent — Sony priced international CDs at Rs485, lower than the market average of Rs550-600. "The consumer perception is that CDs cost 10 times more than cassettes but in reality the multiple is only four times," explains Subramaniam.

Though that's still way above the international multiple of 1.5 times, he's hopeful that the growth in CDs will eventually happen. Prices have fallen and now are in the range of Rs360-485. Earlier, 5 per cent of international music was sold as CDs; that has increased to 11 per cent. Moreover, hardware sellers like Aiwa have begun bundling software (CDs, VCDs, cassettes) with their music systems.

Selling it like soap

It's obvious to even the casual observer, that music is more visible than ever before.



Proliferating music channels, billboards announcing the launch of new albums, rock shows by international pop stars *et al*. Now the emergence of speciality music stores like Planet M in Mumbai and Music World in Chennai makes music more accessible.

What's given Sony an edge in the marketplace is both availability and visibility derived from its extensive distribution network. "There was no infrastructure and the product was simply placed in the traditional wholesale channel," recalls sales director Kakar. "We decided to build our distribution from scratch and sell it like P&G sells soap."

Taking the Procter model, Kakar appointed redistribution stockists in towns with a population of 2,00,000 plus; add to this a network of 100 distributors and 13 warehouses countrywide. A field force of 40 people in four regional offices ensures that the Sony catalogue finds a place in 5,500 stores — the coverage is five times that of competitors. This helps in pushing volumes. For instance, on launch day of *Kuch Kuch Hota Hai*, one million units were released. "The system can absorb such quantities now," says Kakar proudly.

This, points out the head of a music company, has come at a price. Sony is reportedly stuck with unpaid bills from small dealers. "Big record companies don't deal with them as we derive 80 per cent of our sales from main wholesalers who carry the product all the way through." But Kakar says that reaching out to the large mass of retailers has reduced their dependence on the wholesale system — it accounts for only 40 per cent of sales down from 80 per cent earlier. According to Kakar, the numbers game is not going to stop and they will continue expanding retail reach.

Simultaneously, they've been working on persuading existing storeowners to upgrade their premises. One initiative that's been a runaway success was installing 'listening posts' at key stores, the cost of which is shared between Sony and the store. These are fitted with imported Nakamichi systems and headphones and cost Rs80,000 apiece. Kakar says that store promotions too have been at a higher

pitch — from signed posters by rock stars to ensuring that the facings of the cassettes are displayed rather than the spine. All this has added to greater visibility and improved 'airplay' at the store level.

The company has a business development manager whose role is to convince would-be entrepreneurs that music retailing with its 20 per cent margin and 21-day credit period is an attractive business. V.G. Jairam, head, operations and marketing of Groove, the South Mumbai music store that opened in June acknowledges that Sony has been very helpful. "Their sales team is here every day and that gives us a feeling that they're one of us. Sony's approach is very professional and they seem to be ahead of the game," says Jairam. The 6,500 sq ft store is doing roaring business, averaging sales in the region of Rs2.5 lakh daily.

Apart from the store 'push', Sony is laying out big bucks to create consumer pull. According to Shridhar, the annual marketing and adspend is Rs12 crore. "This is a very marketing driven business. The product development cycle is long but the life cycle is short, maybe three months. We're constantly building brands except our brands are human beings who can bite us back!" he jokes. The marketing department has four product management teams and two promotion teams whose job is to give Sony a heads-up in every media where music is exposed.

In international music, where they have a solid back catalogue, Sony has revved up the pace of releases. New albums are launched here in the same month if not the same week, as they are overseas. Subramaniam says that this segment is a no-brainer since all they have to do is roll out an album and cream the market. But in an effort to expand the market and get non-English speakers to buy English music, they've introduced an element of risk: identify acts outside Sony's catalogue that would go down well in India.

They've succeeded stupendously with Venga Boys licenced from Hong Kong-based Avex. This Europop group has turned out to be the season's hottest act. Notching up sales of 3,50,000 units so far, it seems on course to outsell BMG's Aqua, the biggest selling international album to date, claims Subramaniam. In addition to such mainstream pop, Sony has specialist titles under the Jazz and Blues label as well as titles licenced from Walt Disney Records.

Hello Bollywood

While all this has contributed to the gloss on Sony's image, it's the mainstream success of *Kuch Kuch Hota Hai* that's added substance to it. Not long ago, recalls Singh who also heads the artistes and repertoire function, Hindi filmwallahs wouldn't give them the time of the day and quoted absurd prices. Now they are regular visitors to Sony's offices but he's being choosy.

They lucked out with the first album but to continue the winning streak they will cherrypick. "We want to work with a few but the best," he says.

Releases this year include *Pyaar Mein Kabhi Kabhi*, a low-budget film distributed by sister company Columbia Tristar and actor Ajay Devgan's *Dil Kya Kare*. Up next is the soundtrack of Rockford, a film by NRI Nagesh Kukunoor and Bollywood star Shahrukh Khan's home production *Phir Bhi Dil Hai Hindustani*. In this risk-fraught category, Sony has rewritten the rules. Moving away from the industry norm of lumpsum upfront payments, they've cut advance-cum-royalty deals that, they assert, are totally transparent.

The royalty ranges from 3 to 8 per cent depending on how big-time the project is. Singh argues that this arrangement is more of a win-win. "Artistes demand upfront payments only because music companies don't report the right sales figures. With us, they can have no doubts about integrity. If it's a superhit, they make unbelievable amounts of money." But competitors allege that Sony has been outbidding everyone else offering high minimum guarantees. Reportedly, producer Yash Johar played hardball for *Kuch Kuch Hota Hai* and wrested a Rs2.5 crore minimum guarantee.

A category where Sony has made wrong calls and paid the price for it is Indipop or non-film, Hindi pop music. Other record companies too have burnt their fingers in this genre which has somehow not lived up to its early promise. "Indipop has been the industry's biggest lemon," admits Subramaniam. There have been hits like Daler Mehndi (by Magnasound), T-Series' Sonu Nigam and Sony's Lucky Ali, but in essence Indian consumers have been discriminating, turning away from pretty faces and big names if the music is mediocre.

"Our strong music culture has created rigid standards," analyses Singh. "People want someone with Lata Mangeshkar's voice and Madhuri Dixit's looks. Now where can you get that combination?" But it's a genre where record companies have the highest creative control, which is what makes it so alluring for them. In one interesting cross-selling experiment, Sony has placed a song from an album by newcomer KK on the Rockford soundtrack.

Meanwhile, albums like Colonial Cousins, on which Sony spent a packet developing and promoting bombed, knocking a hole in the bottomline. "They've racked up losses of Rs2.5 crore last year when with the *Kuch Kuch Hota Hai* success they should have made bumper profits," says one

Denekamp gives high marks to the Indian subsidiary

source. Singh asserts that they are committed to understanding this category and will keep plugging on, in the hope that it will be profitable in the future. They are aggressive about localising the repertoire and the approach is long term, he argues.

Industry experts feel that developing an Indian catalogue will take a long time and therefore acquisitions make strategic sense. Sony executives say that they are looking at this option. Meanwhile, they have signed a licensing deal with Navras Records, UK which has over 100 titles in live classical music performances. These are sold under the Sony Nad label ('nad' means musical note in Sanskrit) in India. "Classical music is a small but important category, which we have neither the time nor expertise to develop; hence the strategic alliance with Navras. Our long term goal here is to make classical music more relevant for the younger generation," explains Singh.

No doubt he has one eye also on selling such fare overseas where the Indian diaspora is a natural market. Both record companies and filmmakers have recently latched onto this in a big way and are seeing mega-bucks coming in. Sony tasted success with selling one million units of *Kuch Kuch Hota Hai* overseas and it now sees the larger opportunity there. The Sony machinery worldwide provides coverage in 27 countries in both mainstream and ethnic stores. "We get a lot of support," acknowledges Singh. "They realise the potential of the Indian repertoire."

Global record companies are scouting around for the next crossover sensation after the phenomenal rise of Ricky Martin. At the same time, they are grappling with the rapidly evolving external environment. One big change: music downloads on the Internet, record companies are belatedly trying to convert this threat into an opportunity. Sony has partnered with Microsoft for developing a secure digital music delivery system on the net. It's acquired CDNow, its first initiative on selling over the net.

Closer home, the government has announced 150 private FM channels and the retailing boom continues to gather pace. "We'll have to adapt ourselves to meet the challenge of this emerging environment, " says Subramaniam. Other opportunities: to leverage the obvious synergies between TV channel Sony Entertainment and film distributor Columbia TriStar which has FIPB approval to produce Bollywood movies.

Singh has redrafted his wishlist: "We're already a significant player. Now we want to be the most desirable company from the artistes' point of view. I'm convinced that the next Ricky Martin will come from India. After all, we have the music roots and culture," he says, that wistful look creeping back into his eyes.

The leopard skin chief

What to look for when choosing an ombudsman for your organisation

The role of an ombudsman is increasingly being appreciated in modern corporate offices. He is supposed to listen to complaints in the strictest of confidence, sift misunderstandings from serious misdemeanours, and seek solutions to grievances in a transparent, rule-abiding fashion.

It is for this reason that ombudsmen are so essential for the maintenance of high ethical standards within an organisation. By performing these tasks an ombudsman keeps communication channels open. This prevents pet peeves from growing into gigantic grouses, protects whistle-blowers, and consequently helps nip potential wrongdoing in the bud.

This is all very well, but who is to be the ombudsman? Many companies employ a person specifically for this purpose. Some others hire outside help. They come in at periodic intervals, do their job, clean up their desks, and leave. The best option however is when someone from within the company is given this responsibility.

The person chosen as ombudsman should have a sterling, almost charismatic, reputation within the organisation. The ombudsman's designation is much like a badge of honour. It is a recognition of the fact that the person chosen is widely acknowledged within the organisation for excellence in a mainstream specialisation of the company. In addition, such a person is also expected to possess valuable people-oriented skills.

The ombudsman too should treat his position as an elevation, even though it may not carry any financial remuneration. Neither should the ombudsman's job be a full-time one. A good ombudsman is rarely a full-time ombudsman. There could be times when he might have to spend longer hours, and there could also be occasions when such a demanding schedule is not required.

There are many similarities between the ombudsman of today and the traditional leopard skin chief among the Nuers of East Africa. The leopard skin chief was not a full-time job either. Ordinarily this person carried on with his life like any other Nuer. This largely meant tending cattle and occasional agriculture. But the leopard skin chief came into his own when there was a dispute and the parties wanted a quick and amicable resolution.

When the leopard skin chief was asked to intervene in such matters he would then don his leopard skin and become something like our modern ombudsman. The discussions would be held in his hut and the decision would be binding on both parties. Once the dispute was settled, the leopard skin chief sloughed off his loose tiger skin and become a Nuer cattle-raiser once again.

For the traditional leopard skin chief to accomplish his role successfully he must be widely accepted by his tribe. Neither force nor fear, but good, solid reputation built over years gave him the credibility for the job. Members of his tribe could relate to him and he to them. He belonged to the same company and in normal times he did what the ordinary Nuer was expected to do.

The Nuer people were somewhat unique in anthropological literature. They did not have any formal government or chieftainship. For this reason anthropologists call the Nuer society acephalous, or "headless". In spite of being without a king, chief, or president, Nuers were able to resolve conflicts amongst them with remarkable ease. The leopard skin chief, who acted as the chief negotiator in all major disputes, did not surround himself with the pomp of office, but functioned largely on trust and goodwill.

Against this background it is much clearer now why an ombudsman can be effective only when the person has an intrinsic legitimacy within the organisation. An ombudsman's office should not strike awe but respect and trust. To be able to freely air your suspicions, anxieties, and fears, and to expect to get some solace, comfort, and solution in return, your ombudsman must be someone you can look up to. You don't want a law-and-order martinet, or an outsider who lacks empathy.

This is what makes the ombudsman seem more akin to the leopard skin chief than to the big boys of HRD or the professional consultant. A successful ombudsman does not depend on traditional methods of coercion, nor on the stated hierarchy, or pecking order, to draw respect. As ethical behaviour functions best on mutual respect and transparency, today's ombudsmen would do well to learn from the ways of simple people in distant lands.

In the final analysis, the ombudsman is the best ombudsman who wears a leopard skin under his pinstripe suit. •

Banian *banias*

West Bengal's hosiery market may have lost its lead, but a handful of companies are doing brisk business

PHOTOS GOUTAM CHATTERJEE

P.R. and K.B. Agarwal are making better margins in knitwear

Credit VIP with bringing underwear out of the closet. A decade ago its controversial advertisements with their macho overtones forever changed the way low-value undergarments like vests and briefs were sold. Since then, ads have turned more in-your-face and retailers don't fight shy of prominently displaying this merchandise. With a national turnover of over Rs6,000 crore, of which branded products account for around Rs2,000 crore, the hosiery industry is on a roll. There are a few big names, but the industry is dominated by several hundred units vying for marketshare. Even top sellers like VIP, Rupa, and Lux find it difficult to wrench marketshare of more than 2–4 per cent.

Think of hosiery and Tirupur is the first place that comes to mind. But the original hosiery capital of India was in the east, way to the east, in West Bengal. While the state has lost its pre-eminent position, it is nonetheless home to a thriving industry that seems to have got a new lease of life with modern, outward-looking entrepreneurs taking charge. Meet the Todi brothers of Biswanath Hosiery Mills. Not such a well-known company, but its Lux brand of undergarments (no relation to the soap of the same name made by Hindustan Lever!) is a best-seller.

Pradip Todi, who runs the business along with brother Ashok, says: "It was the coming of television into every home that really sparked off the idea of advertising and opened up a big market for us. Earlier we had a limited approach to selling; today we are making a name for ourselves internationally." Like every other big player in the industry the Todis believe in the sanctity of quality, price, and above all, high-decibel advertising.

Rupa & Co, which built itself to a Rs103-crore turnover in its hosiery business when it took over an old unit – Binod Hosiery – around eight years back, firmly believes that quality and astute marketing were responsible for its growth. With its slogan *Yeh aaraam ki baat hai*, Rupa today has expanded beyond its bread-and-butter products into ladies' and children's wear. Its marketing gimmicks include offering prize draws for purchasers. Rupa's annual budget for advertising and promotional expenses is around Rs12 crore a year, money well spent considering "the need for survival in an intensely competitive industry", according to director K.B. Agarwal. Agarwal says the next few years should see a shakeout in the industry.

If underwear is going high-profile, part of the reason is because the profile of the industry has changed much since the 1970s. One of the oldest businesses around, most of the pioneering hosiery mills were set up in West Bengal as far back as the last century or the beginning of the present. Till the 1970s West Bengal retained much of

its pre-eminence in this sector, after which the industry's focus shifted to Tirupur, near Coimbatore in Tamil Nadu. Currently Tirupur produces more than 60 per cent of the country's hosiery goods, while West Bengal's share has come down to around 20 per cent; while Tirupur exports more than 50 per cent of its production, West Bengal's exports are just about 5 per cent.

The major reason why the industry has moved away from West Bengal despite its skilled workforce is poor productivity, a quarter of that of Tirupur, where the sweatshops run virtually day and night, in contrast to West Bengal units, where no worker will work more than eight hours a day. "Buyers wanting samples can get them within three days in Tirupur whereas here it takes 15," says Agarwal, who also has a unit in Tirupur. Nevertheless, he points out that Calcutta still represents a major market for hosiery products.

Although both Rupa and Lux look at north India as their main market, Calcutta is fast emerging as the biggest market for children's wear. "Calcutta has replaced Mumbai for knitted garments for children's wear or "baba suits" as they are popularly called, says prominent Calcutta agent Kantilal Sarayya, who estimates the size of the market at Rs50 crore annually, growing at least 20 per cent.

A major reason behind the growth in the fortunes of hosiery units is the changing product portfolio. "Earlier," says Agarwal, "knitwear meant undergarments. Today, T-shirts are replacing shirts in a big way and a lot of garments now use knitted fabrics." Rupa's ongoing modernisation and expansion have cost it around Rs25 crore till date and the company has plans to set up a Rs15-crore unit to develop products exclusively for women and children, including various kinds of outerwear.

"There's a growing market for knitted cotton fabrics," says Agarwal, who believes that only "timely investments in the latest, technology, product, and design can keep his company ahead of its competitors". Rupa has introduced a range in men's casual wear including Bumchums bermudas, trousers, and T-shirts. While basic undergarments don't offer much in the way of margins, shirts or dresses offer margins of up to 20 per cent, which with better cost control can go up further. Sales are further boosted by attractive packaging, which gives a new look to something as ordinary as a vest.

Rupa & Co spends Rs12 crore a year on advertising and promotions such as this one

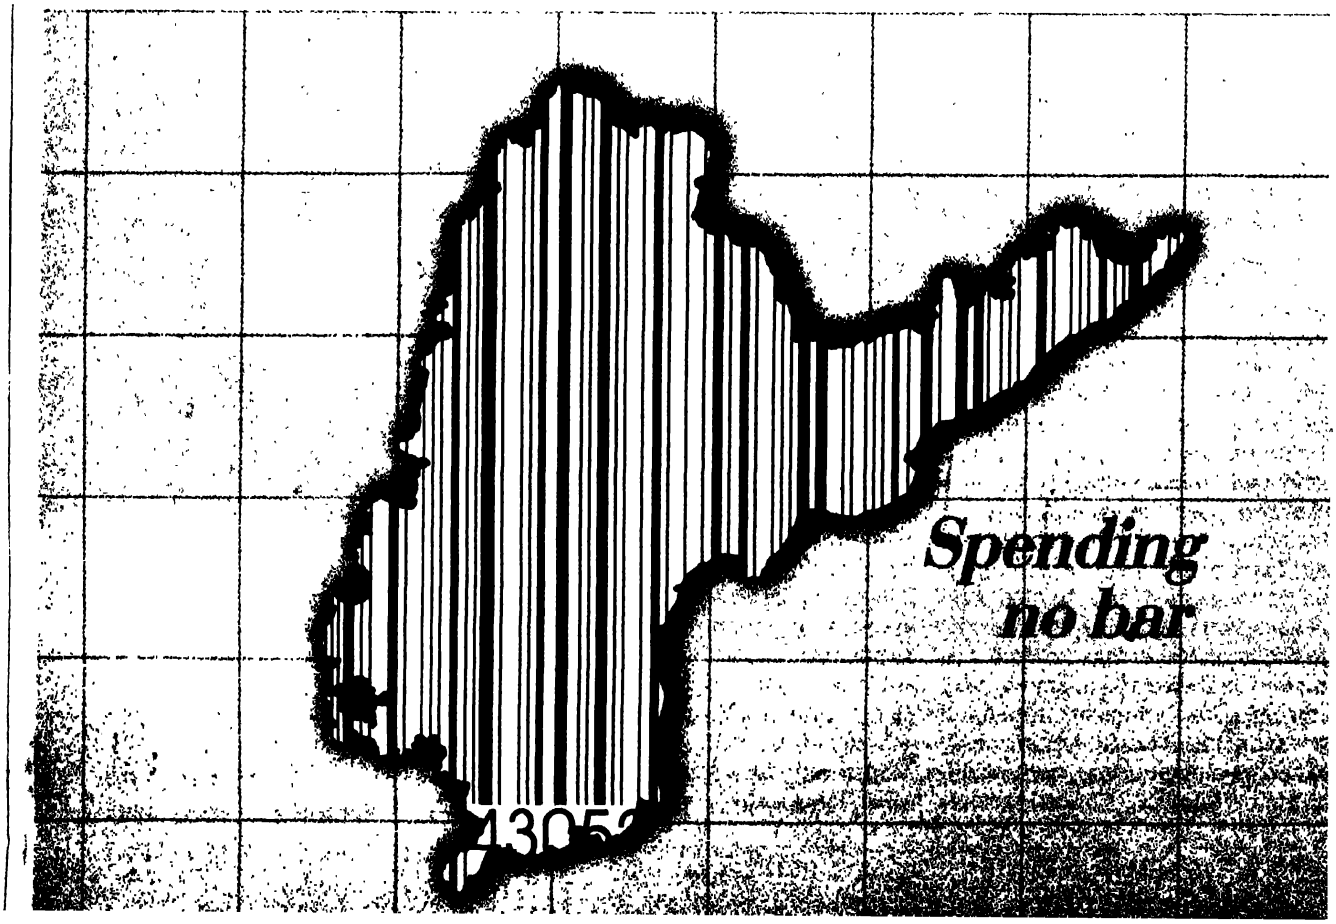
Nevertheless, the majority of the units stick to manufacturing vests and briefs, which account for about 70 per cent of their sales. Bihar and Madhya Pradesh are big markets for Rupa and Lux, and north India including Delhi and Mumbai, is where the hosiery manufacturers units prefer to sell. The vest a necessary item and popular among workers, whether in the farm or industrial sector, everywhere in northern India

"Price is very important," says Ashok Todi, "as the product must be affordable." According to Todi, the real market lies in the rural sector, which accounts for 80 per cent of the total Indian market, followed by the semi-urban (15 per cent) and urban (5 per cent) markets. While Lux has been a success in the hinterland (it is considered a cheaper product in the branded segment), brands like Gopal have preferred to stick to West Bengal and have cautiously explored other markets. One of the oldest brands, Gopal led the prized brands in West Bengal which include P3, Bapi, and Raju.

D.B. Ghosh, senior partner at Gopal Hosiery, says, "We are a conservative company and fairly low-profile." But this has meant being overtaken by the more aggressive companies in the market. According to Ghosh, rather than rush blindly into the market, Gopal has steadfastly "matched quantity with quality, helping the company maintain its quality throughout its 60 years of existence". Gimmickry such as Rupa's sales promotions won't find their way into Ghosh's old-fashioned office next to his factory, which employs around 400 people. "No compromise on prices or heavy dealer discounts, which remain fixed," says Ghosh.

While such marketing sentiments are slowly going out of fashion, Ghosh has managed to entrench Gopal's image among the more discerning buyers, many of whom buy Gopal vests as a matter of tradition. Although overtaken by brands like Rupa or Lux, Gopal was in many ways the first to introduce quality vests like woolly cots for winter or special double-ribbed vests. Ghosh, a former president of the oldest association of hosiery manufacturers which is still housed in Calcutta's Bowbazar area, laments the state of the industry in West Bengal today.

Ghosh says, that although the situation in the state is improving with more modernising efforts by the existing units, numbering around 2,000, it would be difficult to match Tirupur. For one, banks are vying with one another to lend funds to hosiery units in Tirupur. "In West Bengal," says U.S. Roychowdhury, senior deputy secretary of the Bharat Chamber of Commerce, which has a hosiery association, "efforts are on to assist the manufacturers in every way. For instance, we are trying to ensure that a portion of the Rs2,500-crore-odd earmarked by the textile ministry for development of the textile sector is deployed for the hosiery industry."



The state government too is trying to set up an industrial estate which would include land for hosiery manufacturers to set up units. A major benefit has been the textile ministry's decision to subsidise interest on bank loans by 5 per cent. Hosiery manufacturers have welcomed the interest rate cut, but say the industrial estate or access to funds are still a long way off. "This is a time for introspection for both manufacturers and government," says Roychowdhury.

Within the industry too the profile of the units are changing. The industry is mainly in the unorganised sector, which has both small as well as cottage-scale units. Some 40 or 50 years back manufacturing involved running an entire operation in a shed. Today, operations are less integrated and more specialised. Bleaching, knitting, processing, and dyeing are all skilled operations undertaken by a few units. Bigger companies at present prefer to source, stamp, and label the products after rigorous testing for quality. Margins are better that way, they say.

The small-scale sector too benefits as smaller, specialised units sell to bigger ones. Small units have a good deal anyway, as they are exempt from sales tax and have lower overheads. For bigger companies infrastructural and marketing expenses are a major drain. Though few companies have been actually able to nurture and sustain brands in this many-tiered market, focusing on brands is justified

Inside Gopal's Jadavpur factory:

the brand for the quality-conscious

in that people even in small towns are veering more towards branded products compared to wholesale goods which proliferate With the crackdown by city administrators on pavement sales and hawkers more buyers are forced to go to bigger stores, at least in the cities

While the growth potential estimated is a doubling of turnover every three or four years, according to Rupa managing director, P R Agarwal "the Indian industry ought to do better In the developed countries like the US or UK, the hosiery trade accounts for 45 per cent of their textile industry Here knitted fabrics and garments account for just 15 per cent "

The business nevertheless faces a major threat from the multinationals "With liberalisation more global firms are likely to come into this sector, ' says Ghosh "The bigger units will survive the smaller units might be driven out At Rupa too there is concern Brands like Jockey, Calida, Crocodile and B&B are already in the market, and the entry of Fruit of the Loom and maybe St Michael, is expected "We have to keep up with productivity, quality, and marketing, as this is the only way we can compete," says Agarwal He further emphasises that the multinationals have enough resources at their disposal to undercut the market and sustain their presence till they notch up marketshare At present, however, Indian brands continue to dominate this particular market

Dissenters however, point out that multinationals will be unable to cut prices drastically as their costs are bound to be higher than those of their Indian counterparts Pradip Todi, who has taken the Lux brand international by registering it in the Middle East, and will shortly be doing so in London as well predicts "The MNCs are unlikely to get beyond 5 per cent of the market, worth a few hundred crores at best They will focus mainly on the urban market whereas the real market will remain in the hinterland The rural buyers are unlikely to be swayed by foreign brands Such are the hopes on which Bengal's hosierywallahs survive

- MADHUMITA BOSE

In Andhra Pradesh, there's no limit to what you can do with money. The administration is pro-business, and the people are pro-spending.

The facts prove it. The state is not only growing faster than the whole of India, it is doing so in all aspects of development.

From household incomes to education levels. And, urbanisation to occupation. What's more, the growth is even more significant in areas beyond Hyderabad. Areas that are beyond the reach of English dailies.

So, how do you do business in Andhra Pradesh? How do you build a bridge between your products and a market of [illegible]

Not just another buzzword

Linux has opened up limitless possibilities for India

Linux, the Unix-like operating system for a wide range of computers, is unique in many ways, the most important being that its source-code — the actual programme instructions written in the C language — is freely available, and the operating system itself is available virtually free. There now are an estimated 10 million users of Linux worldwide!

Linux is gradually beginning to provide an alternative to Windows NT in the corporate world (it's already a hit among ISPs hackers, and technical entrepreneurs). Apart from its low cost of deployment, Linux is popular because it has a reputation of being quite reliable and robust as an operating system.

In India too, interest in Linux is very high, and several corporates (including companies like Reliance, FCB-Ulka, Mahindra Ugine, etc), small ISPs (Pune-based ISP Weikfield Mnemonix, for example) and entrepreneurial outfits (like Quantum Link Communications), have deployed Linux partially or entirely in their IS set-up. There is a Linux user group in Mumbai which boasts of over 200 members.

Linux is the torch-bearer of the "open-source" movement. The success of Linux indicates that the open-source development model has come to stay. Already, companies like Microsoft are sitting up and taking notice, and the trends indicate that open-source could change the way in which software is designed, coded and distributed, right across the industry. Whether open-source extends to general application areas only time will tell, but the implications of this concept for the end-user are far reaching, and there can be significant benefits for the Indian computer industry and Indian corporate user too.

The open-source paradigm is a simple one. The source code of an open-source programme is made freely available to the development community, usually via the Net. The code can be debugged, modified and enhanced by just about anyone, provided that at each stage the new source code is also made freely available. A team of volunteers coordinates the whole effort, and new releases of the programme are made available periodically for free download, or at a nominal charge if the software is being packaged and sold by some company.

Why does open-source make sense? The cost advantage to the user is obvious. But beyond that, it's the robustness and reliability of the software that results from hundreds (sometimes thousands) of brains being applied to the development process. You might well ask, doesn't this happen at companies like Microsoft, which, arguably, employ the best brains? Not always, it seems, because the programmers there are under corporate compulsions to work within certain parameters and commercial considerations. Even Sun Microsystems visionary Bill Joy admits that when source code is given away, it results in innovation that would otherwise be difficult to come by — no matter how many programmers you hire. Further, customers are in favour of the open-source concept because it doesn't tie them in to one single vendor for purchase, support and upgrades.

If open-source software is virtually free, how do the developers and software companies earn money? Through branding, support, system integration and ancillary services. Companies like Red Hat and Cygnus are doing extremely well with their Linux distribution.

Margins may fall, but revenues are there to be picked up by anybody — not just a big company — who develops expertise or innovates in a particular open-source product/system. This model fits in very well with the current strength areas of the Indian software industry. We can use our expertise to contribute to open-source development and then provide integration services and support the world over; there is lesser need to worry about product software marketing — an area in which we have met with limited success so far.

I heard recently that there is a Web site launched by Hewlett-Packard (http://www.sourcexchange.com) where open-source programmers can bid for projects which companies want to give out. The programmers get paid and the code is released into the open-source community. Individual programmers in India could take advantage of this and establish themselves in the open-source world. Better still, Indian software associations (formal and informal) would do well to latch on to this trend and establish India as a powerhouse for expertise in Linux and other open-source areas, through Web sites of our own. The open-source movement is a positive development for India — whether for the Indian corporate/individual user or for the software industry. So let's open our minds and capitalise on it! •

50, not out!

A single-session instruction in finance by a Pune CA nine years ago is now an increasingly popular training course

There are few corporate trainers in Pune who have been as successful as 39-year-old Anil Lamba. He began training executives of companies like Telco, Atlas Copco, Thermax, Alfa Laval, Bharat Forge, etc, way back in the mid-1980s. Today Lamba, a practising chartered accountant with a doctorate in taxation, teaches at reputed institutes like Tata Management Centre and Symbiosis Institute of Business Management, besides being the founder director of his own company called Lamcon Finance & Management Ltd, of which Lamcon Training is a division.

Lamba created a record of sorts in Pune this month, when he started the 50th uninterrupted batch of his 10-week programme called 'Finance for non-finance executives'. In 1990, when he launched the programme, he told *Business India* that it would probably be a one-time effort. But such was the response that he had to repeat it 50 times over and it's still going on. "What's more," he says, "we hardly advertised for this course, and most of the 1,000-plus executives that we got for these 50 batches registered after they had heard of it from those who completed it."

Lamba, the ace corporate trainer

It all started nine years ago, before which Lamba used to conduct a single session on finance for non-finance executives at various companies in Pune. At the end of each session the students would urge him to start a more exhaustive course on the subject, because they felt that one session wasn't enough. "So, when we first launched this programme in 1990, we consciously decided not to take more than 20 executives per batch and to restrict the course to top decision-makers like CEOs, directors of companies, and the like," he recalls.

Accordingly, the timings and days were structured to allow participants enough time to travel and to attend office. The training was held on the first three days of the week from 7.30 am to 9.00 am, so that executives could be in their offices by 9.30 and had four days of the week to travel. In addition, everyone who registered was made a "life member" of the course and if he or she missed a session, they could make it up by joining subsequent batches.

Each day was structured as a module in itself and if the participants happened to miss class, they were not at a loss as they could repeat the programme as frequently as they liked. This concept was a big hit and the subject itself, which many thought would be tedious, was made lively by Lamba's informal style of presentation. "We covered everything that was essential for a non-finance executive to be familiar with, which included topics like reading a balance sheet, its preparation and analysis, profit & loss account, working capital management, fund leveraging, fund-flow analysis, breakeven and marginal costing, stockmarket investments, personal and corporate income tax planning, tax-saving instruments, filing of IT returns, and what have you," he says. That's not all — guest speakers were invited to talk on topics such as international trade, financing schemes of banks and financial institutions, etc.

More than 1,000 key decision-makers, a list that reads like the Who's Who of the Pune corporate world, including the Kalyanis of the Kalyani Group, the Rathis of Sudarshan Chemicals, the Agas of Thermax, the directors of Forbes Marshall, and the Kalmadis of Sai Service, attended the programme. Lamcon has also recently produced two video cassettes *Figure Out the World of Figures*, which have sold in large numbers not only in India but also in the UAE, UK, and US.

Now Lamba, besides his flourishing practice as a CA, has tied up with Crestcom, the leading management training company in the world, and has obtained the franchise for its most popular 'bullet-proof manager' programme, which is being conducted in 55 countries currently. This is a one-year management development programme which teaches 24 basic management skills, like motivation, negotiation, presentation, etc, through 30-minute videotaped talks by world renowned management experts of Crestcom.

The participants have to meet only once a month for four hours. "At each meeting we teach two skills through a 30-minute videotape, followed by a $1\frac{1}{2}$-hour discussion by participants during which they actually practice the skills they have learnt. At the end of the session each participant takes back a copy of the videotape to his company, where he can then train others. We also ask them to consistently use the skills learnt by them for the rest of the month. Behavioural experts will tell you that if you practise a skill for more than three weeks it becomes a part of your personality and we have seen amazing changes in the behaviour of these executives," explains Lamba. This programme has been very popular despite its high cost, approximately $1,000 per participant.

Mobile cost-savers

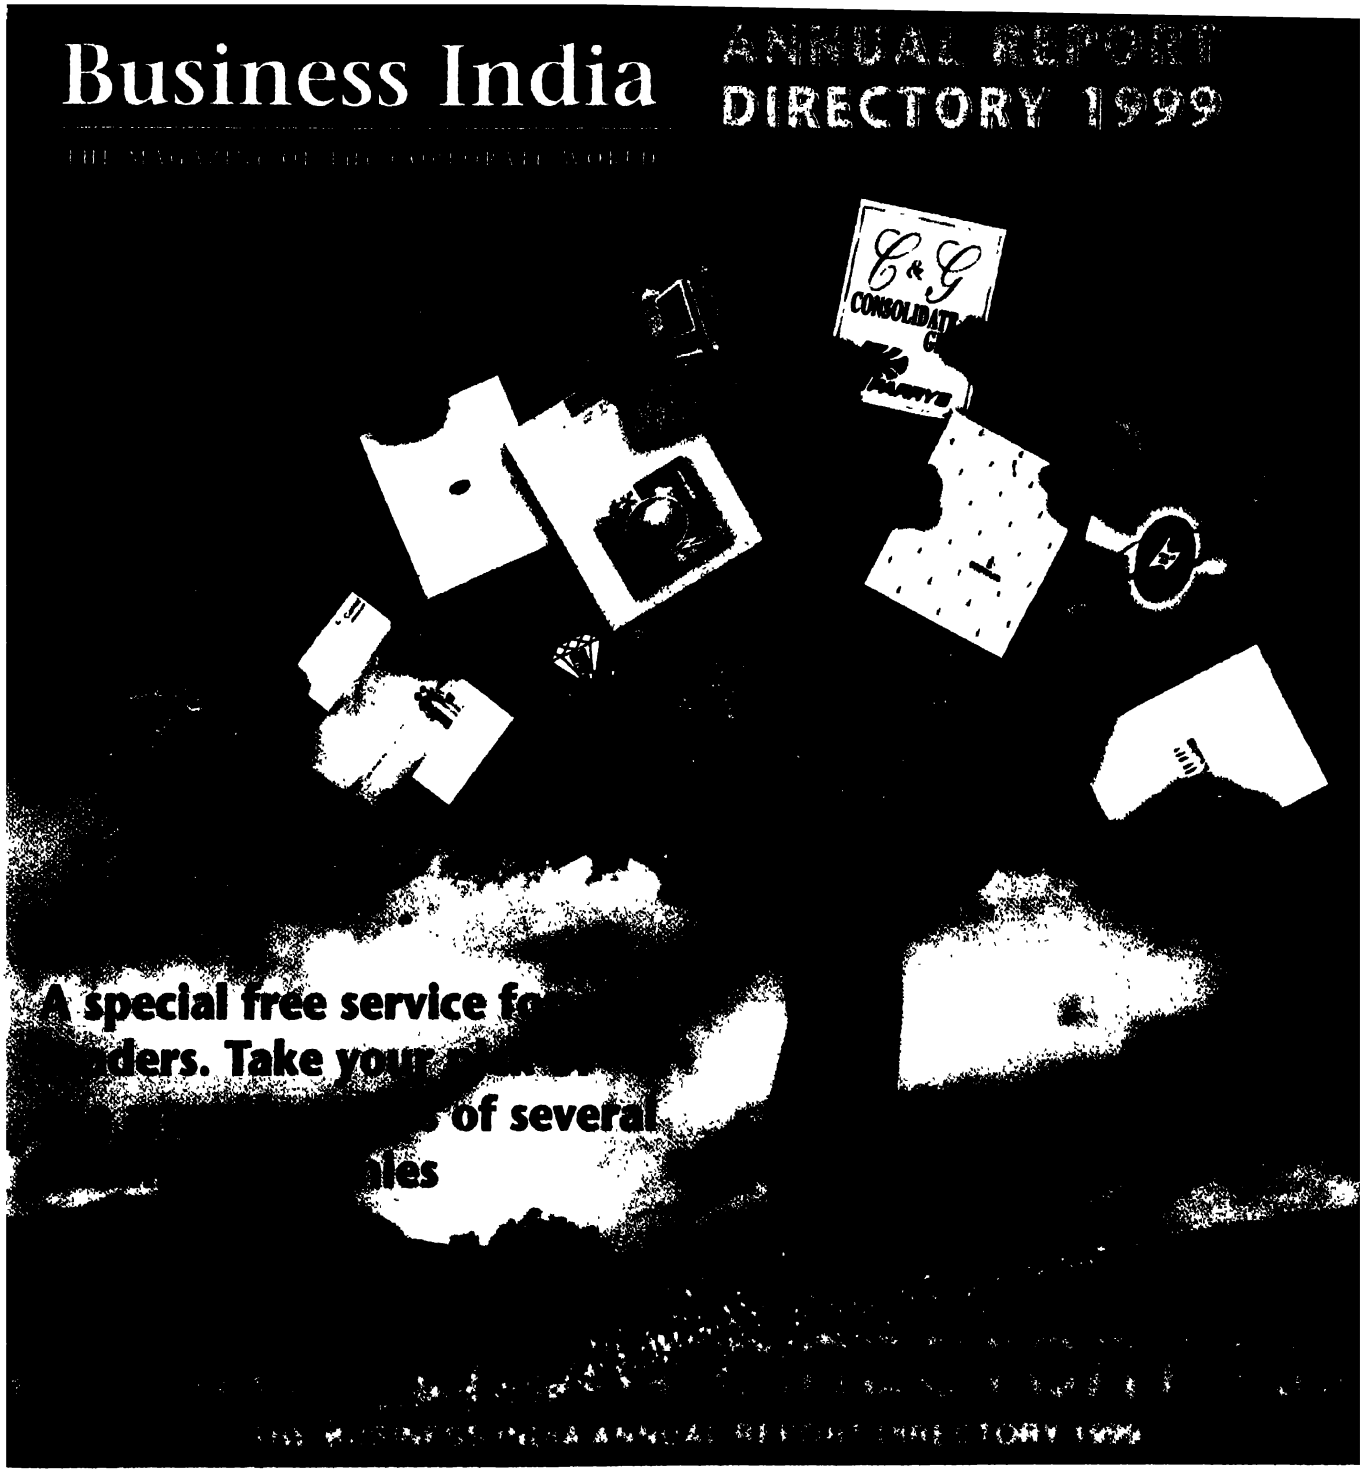
Radio trunking is proving a boon for companies with logistical operations that involve the continuous movement of men, machines, material and money

Cellular telephony may be the most popular form of mobile communication in the country today, but it isn't the only one. Now you have a more cost-effective wireless communication system called mobile radio trunking. Pune-based Omnitalk, a part of the Rs2,000-crore Arvind Mills Group, has been operating a radio trunking service in Delhi, Mumbai, Chennai, Bangalore, Ahmedabad and Pune for a year now. It has a base of 2,500 subscribers, which should grow to 6,500 in the current year, and is targeting 25,000 subscribers all over India in the next five years.

Malhotra and Sarma say airtime is practically free

The way it functions is very simple. The operator sets up a citywide communication network consisting of a control tower with a powerful transceiver and antenna that can receive and transmit messages up to a distance of 50 km. Radio trunking in India operates at a frequency of 800 MHz within a bandwidth of 5 MHz, which has 200 channels, each capable of supporting 100 subscribers simultaneously. The service provider is initially given five channels and can later increase the number of channels in multiples of five as his subscriber base grows. The users are not individuals but groups of people like the field staff of a courier company who are continuously on the move, spread out all over the city, and need to remain in touch with their head office or with one another. The user companies have only to buy small radio sets which are either handheld or vehicle-mounted. As soon as a user presses the Talk button on the handset, he automatically logs on to any free path or channel in the network of the service provider and his call is identified and instantly directed either to his head office or his other colleagues, wherever they may be in the city.

Says Vipen Malhotra, vice-president of Omnitalk, "We pioneered the dial-a-cab system in Mumbai, where 75 Cool Cabs are fitted with our radio sets. When a person, say in Bandra, wants a cab, he just rings up the control room, which then broadcasts a message over the radio trunking network. This is picked up simultaneously by all 75 cab drivers, wherever they may be located in Mumbai, and the driver who is nearest to Bandra calls back the control room to say that he will pick up the passenger." This feature – one-to-many conferencing – is not available with cellphones or pagers. Even if all 75 drivers had a cellphone, the person at the control room would not know who was nearest to Bandra. Calling up all 75 individually would be time-consuming, exorbitant, and eventually futile.



The best part of radio trunking is that the airtime is practically free. The subscriber has to pay only a service charge of less than Rs1,000 a month for which he can talk as often as he wants. "At this price you get hardly 10 pager messages a day, or just 5 minutes on a cellphone per day," says GM Chandramouli Sarma. According to him, Omnitalk has worked out the cost savings for Blue Dart, a courier company and found that, if it switched from pagers to radio trunking, the saving on telephone calls itself would pay the cost of the radio handsets in six months. The handheld and vehicle-mounted radio sets that Omnitalk offers cost upwards of Rs16,000 per subscriber.

Omnitalk's customers include Sony India, Mahindra Ford, Chennai Port Trust, First Flight Courier, Sahara Airlines, etc. N. Norimatsu, GM of Sony India, says: "Omnitalk's mobile radio service has enabled us to attend to 30 per cent more service calls."

Other operators like Punwire, Arya Communications, and Bhilwara Telenet compete with Omnitalk in the eight cities, but none has a network as flexible and that offers as many features as Omnitalk. "For example," says Malhotra, "most of the other networks use only Motorola or Kenwood sets, while we are the only ones who offer a choice between E.F. Johnson, Motorola, and Kenwood." Besides voice communication, Omnitalk's system also offers data transmission and permits such advanced features as automatic switching-off of lights, setting-off of alarms, etc, using the radio network.

"In the near future," says Malhotra, "the government may allow us to interconnect our networks with PSTN landlines. If that happens it will be possible to make telephone calls from a radio handset."

• ROOP KARNANI

ADANI EXPORTS LTD

Adani Exports Limited

Adani Exports Ltd (AEL), the flagship company of the Rs3,000-crore Adani Group, has emerged as a global trading company, clocking 42.7 per cent and 37.8 per cent growth in total income and profit respectively in the last six years. It is the highest forex earner in the public sector. Turnover for 1998–99 was Rs2,188 crore and gross and net profit were Rs96.46 crore and Rs65.69 crore respectively. In the first quarter of 1999–2000 the company achieved a turnover of Rs533.6 crore and net profit of Rs16.3 crore. It has also announced a bonus in the ratio of 1:1.

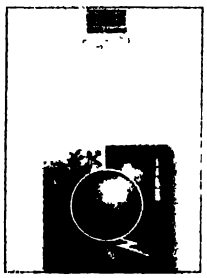
BAJAJ ELECTRICALS LTD

In its diamond jubilee year, Bajaj electricals has registered an 8 per cent increase in turnover to Rs338 crore during 1998–99. High interest costs coupled with VRS expenses put pressure on margins (the PAT was Rs5.35 crore), but the company increased its dividend by 5 points to 35 per cent for the year. With the introduction of new/upgraded products and the commissioning of projects such as the wind farm, the performance of the company will improve in the current year.

BALMER LAWRIE & CO. LTD 3

Balmer Lawrie has a diversified portfolio of businesses in the fields of lubricants, chemicals, packaging, containerisation, cargo, travels and tours, project consultancy, tea exports, and international business. It enjoys leadership in barrels and grease manufacturing activity. The company has undertaken a comprehensive business restructuring plan to combat market competition. In the past year it achieved ISO certification for most of its facilities, besides executing turnkey projects for some public sector undertakings.

BHARAT HEAVY ELECTRICALS LTD 4



This public sector *navratna* has a wide spectrum of products and services for core sectors like power, transmission, industry, transportation, renewable energy sources, oil & gas, and telecommunications. It has exported products to and established projects in over 50 countries. The company has consistently made profits since 1971–72 and paid out dividends since 1976–77. The provisional results for 1998–99 include net sales of over Rs6,987 crore and a gross profit of Rs1,096 crore.

BHARAT PETROLEUM CORPORATION LTD 5

Bharat Petroleum

Bharat Petroleum Corporation Ltd, the second largest oil marketing company in the country, performed impressively in 1998–99, achieving a gross sales turnover of Rs25,649.8 crore, 23.9 higher than in the previous year, and a net profit of Rs701.3 crore, an increase of 31.7 per cent. This translates into an earnings per share of Rs46.75 as against Rs35.51 in the previous year. Its refinery at Mumbai, one of the most technologically advanced in the country, processed a record crude throughput of 8.94 million tonnes. BPCL has recommended a dividend of 125 per cent amounting to Rs187.5 crore for 1998–99.

BSES 6

BSES, India's premier power utility, is engaged in the generation, transmission, and distribution of power in and around Mumbai and, with its subsidiaries, supplies electricity to more than 2.7 million consumers covering an estimated population of 34 million. It operates a state-of-the-art 500MW thermal power station at Dahanu. BSES also provides a portfolio of added-value services in electrical contracting, EPC contracts, and computer services. The company is currently co-promoter of several power projects in various parts of India.

CITICORP INFORMATION TECHNOLOGY IND. LTD 7

CITIL

CITIL, an affiliate of Citicorp, provides a wide range of sophisticated and integrated software solutions for retail, corporate, and investment banking, and mutual funds, using current technologies such as data warehousing and the World Wide Web. The company is a global player — over 200 financial institutions in 60 countries are its customers. It has been growing at a compounded annual growth rate in excess of 50 per cent, with revenues of Rs143 crore for fiscal 1998–99. An SEI CMM Level 4 company, CITIL is the first banking and financial software company in the world to achieve this distinction.

COLOUR-CHEM LTD 8

Colour-Chem Ltd, a group company of Clariant, Switzerland, has reported a 35 per cent rise in operating profits for 1998–99, with healthy growth in all its core businesses. Sales of the cellulose ethers & polymerisates division grew by 27 per cent, leather chemicals by 16 per cent, and pigments & additives by 9 per cent. Local sales of the fine chemicals division registered a substantial increase of 26.5 per cent. Net sales for the year were Rs296.32 crore. The board has recommended a 65 per cent dividend.

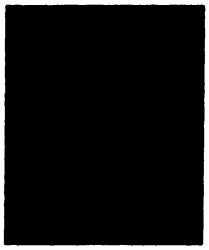
DABUR INDIA LTD

'eponi

Dabur India Ltd, one of the leading FMCG companies in the country, recorded a turnover of Rs914.77 crore and net profit of Rs50.1 crore during 1998–99. The company has been growing at a rapid rate and its well-known brands command substantial brand equity. With a view to taking on the challenges of the new millennium, the company undertook a major restructuring exercise which has led to greater professionalism, greater focus on its core competence, and a higher level of efficiency in its operations.

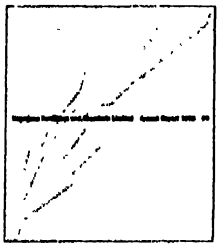
DSQ SOFTWARE LTD 10

DSQ



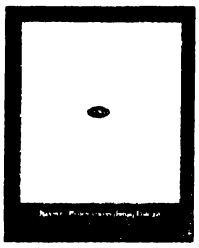
DSQ totted up a turnover of Rs224.32 crore during 1998–99 — 92 per cent higher than in the previous year. During the year it strengthened its customer orientation by shifting its delivery mechanisms from platform- to industry-specific solutions creating seven separate lines of business groups. The company also focused on developing expertise in key technology segments and formed two separate groups to deal with emerging technologies — one for Web-based applications and the other for data mining solutions. Visit www.dsqsoft.com

MADRAS REFINERIES LTD



Incorporated in 1965, MRL went onstream in 1969. It has a total refining capacity of 7 MMTPA, or approximately 12 per cent of the total capacity in the country. MRL has an excellent performance record with profits right from the second year of operations and dividends paid from the third year. Turnover for 1998–99 touched an all-time high of Rs3,747.39 crore, and profit after tax was a record Rs204.93 crore. During the Ninth Plan period MRL plans to implement a number of expansion/diversification projects with a total investment of over Rs3,500 crore.

MODI XEROX

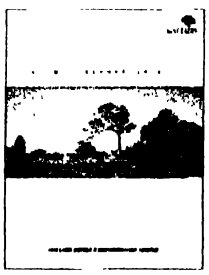


This joint venture between Xerox and ModiCorp was established in 1983. It manufactures and markets a range of document processing products and solutions for customers in India. It is the undisputed market leader in copiers, engineering plan printers, high-end printing systems, document production systems, and copier paper supplies, is also the leader in the organised fax market. The company has established the industry's largest service and distribution network across the country. A fully integrated manufacturing facility at Rampur manufactures and exports copiers, special materials, and consumables. Modi Xerox is rated No1 in the industry in customer satisfaction.

NAGARJUNA FERTILISERS & CHEMICALS LTD

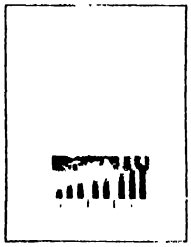
NFCL, the flagship of the Nagarjuna Group, has reported a turnover of Rs1,214.54 crore and a net profit after tax of Rs143.74 crore. The dividend has been enhanced by two points to 20 per cent. With successful completion of the second phase of expansion it has emerged as the largest manufacturer of urea in south India.

NAVNEET PUBLICATIONS (INDIA) LTD



Navneet Publications, a leading educational publisher with more than 2,400 titles, posted 37 per cent growth in profit after tax for the year ended 30 September 1998, to Rs17.75 crore compared to Rs12.88 crore the previous year. The company has a liberal dividend policy and has stepped up dividend payment to 45 per cent from 25 per cent paid in the previous year. The company has franchised five showrooms and plans to franchise 10 more by the end of December 1999. It has decided to foray into electronic publishing by converting its existing titles and creating new titles on CD-ROM.

POWER FINANCE CORPORATION LTD



Established in July 1986, PFC has emerged as India's premier development finance institution, continuously rated in the highest category by the Government of India for its overall performance. The corporation has been accorded 'sovereign rating' by international credit rating agencies Standard & Poor's and Moody's. The year 1998–99 saw disbursements at Rs2,479 crore, a record 22 per cent higher than the previous year, and profit after tax of Rs546 crore. The corporation boasts a recovery rate of 99 per cent with zero NPAs. It paid out Rs106 crore in dividends for 1997–98.

SINCLAIRS HOTELS & TRANSPORTATION LTD

Sinclairs Hotels & Transportation Ltd is engaged in the business of hotels and travel agency. It owns four-star hotels in Siliguri, Darjeeling, Port Blair, and Ooty. A new resort, the Sinclairs Retreat, Dooars, at Chalsa in the Dooars region of West Bengal, is likely to be commissioned in the current fiscal year. Sinclairs also runs an IATA-approved travel agency that has offices in Calcutta and Mumbai. It is also in the process of setting up a full-fledged moneychanging unit in Calcutta. Sinclairs has an equity base of Rs3.16 crore and reserves of Rs13.24 crore.

SONATA SOFTWARE LTD

Sonata Software Ltd, with a 13 year track record, offers software development and consulting services, software products, and ERP services, and has long-standing alliances with IBM and Microsoft. It operates from six India and three overseas offices, and has customers in 17 countries and international revenues growing (annually compounded) 100 per cent over the last four years to Rs126 crore in 1998–99. Sonata's flagship service is it's Virtual Development Centre (VDC) offering for software product companies. On the subcontinent it is a leader in technology-led consulting solutions and ERP consulting, with the highest number of implemented ERP sites (40 sites of Scala).

STATE BANK OF HYDERABAD

State Bank of Hyderabad, established in 1942 as Hyderabad State Bank, is the largest among all associate banks of the State Bank of India. It has a 'no loss' track record since incorporation. Turnover for 1998–99 crossed Rs15,000 crore. Deposits stood at Rs10,614.88 crore and advances at Rs5,331.97 crore. Net profit increased by 14.84 per cent to Rs111.53 crore. SBH spread its wings in many parts of the country and now operates more than 855 branches, out of which 255 are computerised. Business per employee also crossed Rs1 crore at Rs1.09 crore.

TITAN INDUSTRIES LTD

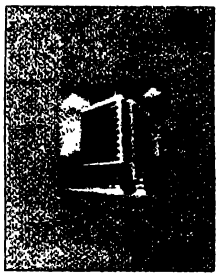
27

Titan Industries Ltd, belonging to the Tata stable, has in the past decade grown into one of the largest integrated watch and jewellery manufacturing organisations in the world. Titan has invested over $120 million in factories that produce over five million watches and 150,000 pieces of jewellery annually. Titan products are sold through over 6,000 retail outlets across 32 countries. It has a significant presence in Europe, Australia, the Middle East, South Asia, and the Far East. Titan was voted India's 'Most Admired Consumer Durable Marketing Company' for five years in succession and has been adjudged amongst Asia's top 200 companies by the *Far Eastern Economic Review*.

TVS-SUZUKI LTD

28

During 1998–99 TVS-Suzuki grew at twice the industry growth rate, registering a market share of 20.7 per cent in two-wheelers. The company sold over 7 lakh units, taking it to second spot. It sold over over 3.33 lakh mopeds for a 53.5 per cent share of that market; it is the second largest in the Indo-Jap motorcycles segment with sales of over 2.68 lakh units for a share of 22.8 per cent; with sales of more than 1 lakh scooters it has a 7.5 per cent share of that market.



USHA BELTRON LTD

29

Established in 1960, the company is a global market leader in steel wire and wire ropes, and is among the top 5 manufacturers worldwide. It is a multiproduct, multilocational conglomerate with facilities in India and abroad and interests in steel, jelly-filled telephone cables, telecom, telecom infrastructure, and software. In spite of the worldwide recession in the industry, the company posted a 14 per cent increase in turnover and 75 per cent increase in PBT (Rs8.81 crore) in the first quarter of 1999–2000. On top of its agenda are a focus on services, greater excellence in manufacturing, and an ROCE target of 23 per cent by 2001–2002.

VIJAYA BANK

30

Vijaya Bank, established in the year 1931, has been providing quality financial services to its customers. It has witnessed an eventful 1998–99, when its operating profit increased by 82.2 per cent to Rs116.14 crore. Net profit grew 29.7 per cent to Rs30.23 crore. Aggregate deposits increased from Rs8,215.82 crore to Rs9,690.23 crore. The capital adequacy ratio stood at 10 per cent; advances increased 25.6 per cent to Rs3,767.2 crore; and average business per employee increased 25.4 per cent to Rs89.86 lakh.

FAROUKH IRANI

The author is the managing director of First Leasing Company of India Ltd

Leasing's lamentation

The issue of depreciation claims of the leasing industry is far from resolved

The fate of the Indian leasing industry is similar to that of the Greek mythological hero, Sisyphus, who was directed by the Gods to roll a huge boulder up a steel hill daily. Sisyphus would almost succeed by sundown, only to find out the next morning that the boulder was once again at the bottom. And thus it went on daily *ad nauseum*.

The leasing industry established its claim to investment allowance and depreciation after a 15-year legal odyssey. Regrettably, like Sisyphus, we find the income tax authorities and the CBDT having second thoughts on whether depreciation should be allowed to leasing companies on finance leases or whether it should be permitted in a restricted fashion to "operating lessors". This, despite the fact that for all practical purposes, there are no operating leases written in India.

Alternatively, the department is considering a proposal to go to the other extreme of allowing depreciation to be claimed by lessees. The department's renewed concern arises from the phenomenon that there is considerable litigation to be addressed, on depreciation claims primarily related to sale and lease back transactions.

Admittedly on a historical basis there apparently were defective claims to depreciation by companies (not necessarily leasing companies), primarily in sale and lease back transactions but today this issue is almost a closed book. The department's ruling on adoption of "book value" for sale and lease backs eliminated contention; which is why we emphasise that to introduce still stronger medicine via an amendment to the Income Tax Act's provision for claim to depreciation, will lead to destruction of the leasing industry.

We recognise that in the mid-1980s and early 1990s there were approximately 400 leasing companies. Self-evidently many were unprofessional, did not fully understand their trade or tax regulations and as a result, there were irregularities perhaps some of them intentional, but most of it driven by ignorance. The Reserve Bank of India completed major surgery on the industry which led to a traumatic shakeout. Today not more than 10 major leasing companies operate in the Indian market and write leases. What this means is that the income tax department by addressing itself to the financial statements of roughly 10 finance companies will be in a position to monitor the depreciation claims originated by the authentic leasing industry throughout the economy.

Secondly, the income tax department modified rules relating to the sale and lease back transactions, requiring that all sale & lease back transactions completed from 1 October 1996 be written with the strict understanding that the price at which the asset transferred title would be the "book value" on the financial records of the former owner of the equipment. This development eliminated over 99 per cent of the depreciation problems and to the best of our understanding once the 1995-96 assessments are over, problem cases will most probably drop to a handful.

Thirdly, the claim for depreciation continues to be exaggerated by the action of several manufacturers and traders, whose primary business is not the "business of leasing" but to tax shelter their income regardless of the source of this income. These manufacturers and traders write leases primarily during March of every fiscal year so as to diminish their tax liabilities.

The government if it so chooses could further reduce the claim to depreciation by issuing a circular that those bodies/economic entities, whose business is not predominantly leasing and financial services, will not be permitted to claim depreciation to tax shield their non-lease related income. Such depreciation benefits will be applicable only to companies involved predominantly in the business of leasing.

We must emphatically point out that if the Income Tax Act is modified, to deny depreciation on finance leases completed by bonafide leasing companies, such an action will destroy the infant leasing industry in India, at a time when it is needed to help grow key infrastructure areas such as power, railways, telecom and roadways.

We emphatically draw the attention to the fact that Indian lessors do not have operating lease capabilities, a capability that tends to accompany more advanced levels of economic development. If the Indian leasing industry is compelled to write operating leases without the capacity to maintain, renovate equipment the present leasing industry will be destroyed. The

same eventuality would take place in the absence of an enabling infrastructure (that accompanies an advanced economy, such as Residual Value Insurance) like a well developed second-hand market for equipment.

Let's keep in mind that if depreciation on leased assets is restrictedly permitted to lessees in India, this would create an astronomical enforcement problem. CBDT will be confronted with the Himalayan task of scrutinising the tax returns of lakhs of lessees to ascertain the genuineness of their claims instead of checking the returns of around 10 lessors.

Contrary to the general perception of income tax officials, lessors nine times out of 10 are not the perpetrators of fraud but the victims of unprincipled lessee companies/ economic entities that used our funds to acquire assets only to thereafter sell them behind our backs and pocket the money. Alternatively, such entities create fictitious suppliers, or work with unethical suppliers to receive payment from the leasing company and then not supply the equipment but rather share the proceeds between themselves.

Similarly we have noticed that time and again there have been unscrupulous lessees who have cheated leasing companies and not the other way around. We wish to point out at this juncture that on several occasions leasing companies have been deceived by lessees and suppliers with the latter colluding and pretending to supply equipment. The leasing company has been induced to part with large amounts of money to a supplier named by the lessee.

The British and Indian *Sale of Goods Act* recognises that a party cannot transfer a good that he does not own but it does make exceptions in a case where a buyer (read leasing company) has parted with valuable consideration with no notice that the seller did not have the concerned underlying asset.

We recognise that from an enforcement point of view, the department can more comfortably deny the leasing company's claim to depreciation, but justice demands that the department proceed against the party who cheated both the leasing company and the government and who has been the cause of the fraud. In such a case, since the leasing company and the Revenue Department both have vested conflicting interests, that it is only fair that an objective third party, such as Courts of Law render justice and penalise those who have actually been responsible for causing all these problems rather than the leasing company that in fact has been victimised. •

When It Comes To Precision Control, You Either *fit* The Mould Or You *don't*

When it comes to precision control in the process of blow moulding of plastic containers, MOOG Parison Programming System is the only system in India that guarantees worldwide standards of performance

The International expertise of MOOG, built over 30 years all over the world has now been brought to India. Thus MOOG has fitted and demonstrated the advantages of their systems on all Indian make Blow Moulding machines, like DGP Windsor, CMPP, Rana & Sons, Jagmohan and others.

The big challenge was to prove the effectiveness of these systems on Indian machines in the Indian working environment and to help the operators learn to work with the systems, by providing proper support and training.

Having successfully met the challenge, we have a number of satisfied moulders and end users who will testify that our systems are extremely reliable, cost effective and user friendly.

Using the MOOG Parison Programming System results in many advantages such as :-

- Reduction of weight of the component, thus saving raw material and cost
- Better quality through better control of wall thickness of container
- Negligible rejections
- Increase in productivity
- Higher profits

We invite you to take advantage of these benefits that MOOG brings your way

- Backing of an internationally reputed organisation
- Technical excellence proven all over the world
- Sound financial health to take on major developments and support customers
- All products of the system are MOOG make hence total accountability
- On site training of operators in usage, maintenance and trouble shooting
- Well trained associate companies for better reach and support

MOOG
Nothing can be more precise.

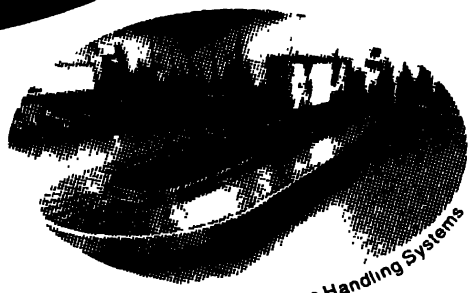
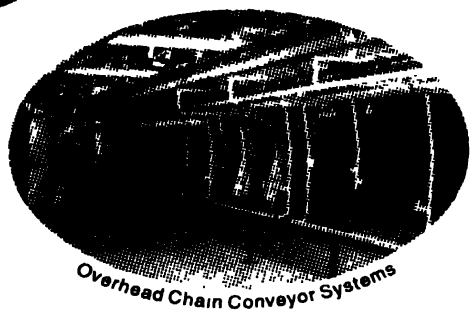
(An associate company of the J K Organisation)



Transtech Systems

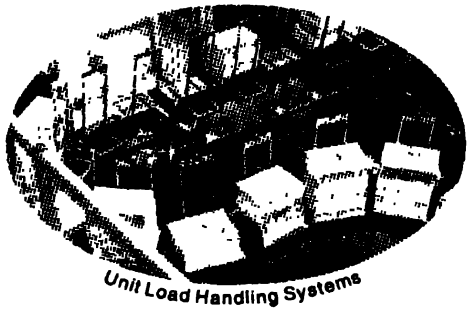
for



one-stop material handling solutions

Bulk Material Handling Systems

Airport Baggage Handling Systems



Overhead Chain Conveyor Systems

Transtech Systems (Fenner Material Handling Division) provides total material handling solutions from concept to commissioning :

- **Wide range of systems** : Bulk Material Handling, Overhead Chain Conveyors, Airport Baggage Handling, Unit Load Handling, and Bagging Plant.
- **State-of-the-art technology** : Collaborations with world leaders – Connell Wagner, Australia; Conveyors International Ltd., UK.
- **Project management skills** : Collaboration with John Holland Construction and Engineering Pvt. Ltd., Australia. Qualified and experienced team for turnkey project execution.
- **Partnering your progress** : Solutions for smoother work flows, minimum wastage and improved productivity.
- **Serving diverse industries** : Ports, Power, Steel, Cement, Food Processing, Mining, Automobile, Garment, Aviation, and many more industries all over India.

Backed by these strengths, Transtech Systems has achieved a remarkable growth of 500% in just 4 years' time.

Stealing a march

Tough times have beset Tisco and it is taking corrective measures to stem the slide

It's steeling itself to combat tough times. The country's second largest producer of steel, Tisco, has expanded its product range through acquisition and has also undergone a restructuring exercise and downed shutters on some of the uneconomical facilities. With the steel industry undergoing a cyclical downturn since the past three-four years, the company has tried to bring about higher efficiency in productivity and improve its product mix. And the effort does not seem to have gone unnoticed by stockmarketmen: the Tisco scrip has risen from a low of Rs69 to around Rs150 at present.

The drop in steel prices during the past year has led to a squeeze in Tisco's margins. Besides, the dumping by CIS countries and South Korea only aggravated the situation. With the steel market showing little signs of revival, the company decided to restructure its operations. It sold off its cement facilities to Lafarge SA of France for a consideration of Rs550 crore. Besides, the sale agreement also stipulates a long-term contract for supply of slag to one of the units to produce Portland cement.

To ease its cash flow position even further, Tisco has sold off its 40 per cent stake in Tata Timken to the US parent at a cost of Rs135 crore. Though the company has completed its fourth phase of expansion at a cost of Rs2,000 crore, it has put on hold other investments such as the one in the long products complex and has spiked the greenfield steel unit at Gopalpur. The company has also continuously focused on pruning workforce. In the last five years, it has succeeded in wooing almost 2,000 workers to opt for VRS. Other remedial measures have been to close down the unremunerative seamless tube division and a sheet mill at Jamshedpur.

The measures adopted by Tisco have helped the company to stay afloat. The completion of the IV phase of expansion in March this year, would help in bringing about substantial savings. "The focus of this phase has been to produce high value-added steel and the production of semis will be limited to only 5 per cent," according to a research analyst. Tisco has also embarked on its plan to put up a 1.2

Tisco is fighting back

million tonne per annum cold rolling mill at a cost of Rs1,800 crore. Coming up at Jamshedpur, the mill is expected to begin humming by mid next year. The project has been financed through debt amounting to Rs1,500 crore.

Tisco is a major in the top-end hot rolled segment. It has a capacity of 2 million tonne of HR coils. The average price of HR coils is around Rs14,000/tonne. The prices of the commodity firming up augurs well for the company's bottomline. Already, there seems to be marginal revival in prices and analysts expect prices to firm up during the current year. Besides, the demand for steel would be fuelled by the increased infrastructure development in the coming years. Realisation in the prices of long product have also been hit. However, analysts expect to see a pick-up in demand for these products because of increased activity in the housing sector.

Tisco has a 15 per cent marketshare of total domestic production in the country. It rolls out a variety of steel sheets, plates, strips, bars and rods structurals and billets, besides a range of tubes and ball bearings. In spite of the problems of overcapacity and a stagnant domestic demand and the price cuts, the company has managed to put up a not so disastrous performance compared to its peers. On a turnover of Rs5,905 crore for the year to March 1999, the company netted a profit of Rs282 crore (compared to Rs322 crore the previous year). Had it not been for the sale of investments and non-recurring income, the company's bottomline would have been bruised.

For the first quarter of the year to March 2000, though Tisco posted increased sales of Rs1,427.34 crore (Rs1,352.76 crore in the corresponding period of last year), post-tax profit dipped 8.5 per cent to Rs24 crore. With the prices of the commodity expected to firm up over the next 6-8 months, analysts expect to see Tisco regain its past glory over the next one year. For it has already begun paying greater emphasis on cost reductions, improving productivity and offering a better product mix. Analysts feel that the company is making an all-out effort to emerge as one of the lowest cost manufacturer in the international market. The energy consumption rates are improving constantly, though they may not be near the international levels. Even the labour productivity both in crude steel as well as saleable steel is making an impressive rise.

With the revival in the Southeast Asian economies the average sale realisations in steel are bound to improve. And with cost-cutting measures and a shift to high value added products through conversion of hot rolled into cold rolled, Tisco seems certainly a good investment bet in the medium to long term.

◆ ROY PINTO

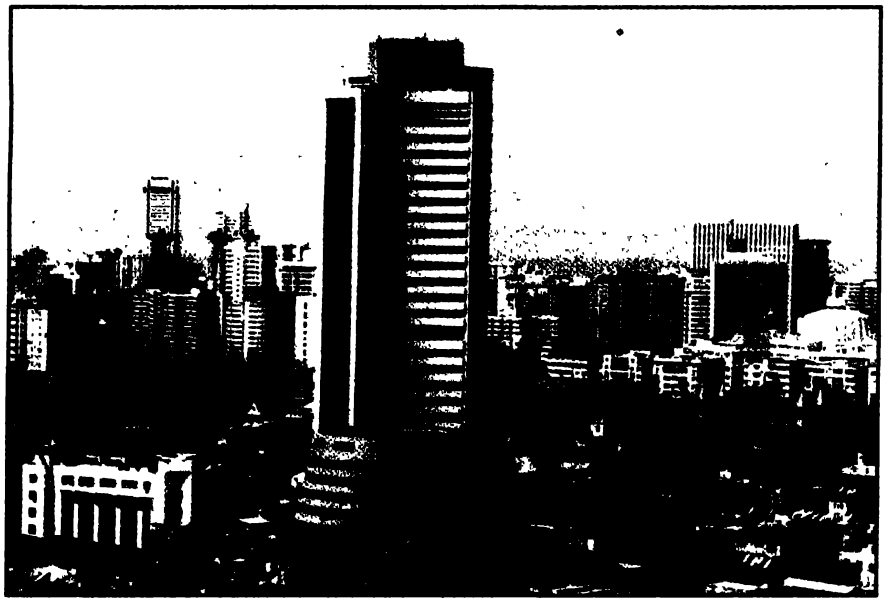
Tango times

The Sensex has risen in the past couple of months. And the mid- and small-cap stocks don't want to lie low

It's euphoria with a capital E. And it is not just the pivotals that are piercing newer peaks, the mid-cap and small-cap stocks have also joined in the upward march. The sentiment is such that even the cats and dogs have begun doing the tango.

The rise in the sensitive index that marketmen have witnessed over the past one year was largely centred around the 'A' group shares. But now for the first time in over four years one can see the 'B' group (both 'B1' and 'B2') scrips outnumbering the pivotals in breaking new highs. Not that the 'B' group has not outnumbered the pivotals in this period. But that was when the market was falling and there were more 'B' group casualties than 'A' group.

A clear indication of the rally shifting to the 'B' group or for that matter the bullish sentiment getting broad-based is the fact that the S&P CNX 500 (comprising 79 industries encompassing mid- and small-cap stocks) has outperformed the Sensex almost by a third. Several of the fairly active stocks in the 'B' group have seen their prices spiralling. Even a number of scrips which were hitherto inactive or witnessing low volumes of 100-500 shares began to be traded in several thousands or even lakhs.



The investments are not centred around just the software, pharma and FMCG stocks but also around other sectors such as cement, auto-ancillary, metals and even finance. "The feel good factor seems to be seeping to other groups too," says a Mumbai-based broker. "It's the belief that the economy is doing a U-turn that is driving the market up," says a merchant banker.

The feel-good factor had for the past several months played a crucial role in stoking the Sensex. Added to this were reports in the press stating that the BJP government, which is said to be well placed to secure a clear mandate, had on the agenda plans to allow provident funds to invest in the stockmarkets. What fuelled the north-bound journey even more was the decision by the Bombay Stock Exchange authorities to place some of the 'B' group stocks into the 'A' group. Needless to say, all of them saw wild activity — largely net buyers.

Does the rally signify that the small investor, whom most of the bigger players were waiting for, has come out of hibernation? Efforts to gauge whether the small investor has returned yielded a mixed response. "Given the circumstances where all looks rosy, operators are making it look even rosier," says a past-master on the BSE. "I don't know much about the market but I have some friends who tell me when to invest and when to get out during the trading week and I end up making a good packet," was what one overheard at a tea-stall on Dalal Street. "An old client resurfaced after two years to find out what's happening on the stockmarket," says a broker. "Real estate has been down for years and returns on fixed deposits, plantation schemes and bonds are either not good or have turned bad and bullion has been a bad investment. So where does a person having a risk taking ability look at? The stockmarket naturally. And that's what is happening," says a mutual fund manager.

The investing mood may be picking up. The recent offering from software companies have met with resounding success. Even fund raising through the rights offerings has met with good response — Rs400 crore raised since April compared to about Rs140 crore raised in the corresponding period of last year. A score of companies are expected to come out with rights offerings in the next couple of months. "The successes of these issues could well spell the revival of the primary market," says a merchant banker.

If the primary market revives, it could provide some impetus to corporates which were forced to put their plans on hold for want of alternative avenues of raising resources. It may be recalled that term lending institutions had turned 'conservative' for fear of carrying additional non-performing assets. Not that all corporates would be genuine. Similarly, all price rises of mid- and small-cap stocks are not likely to be backed by fundamentals. Investors need to be cautious: the action in 'A' has percolated down to 'B', but the euphoria should not carry them to 'Z'.

Shifting some 'B' stocks into the 'A' group also fuelled the north-bound journey

• ROY PINTO

Fortune Informatics

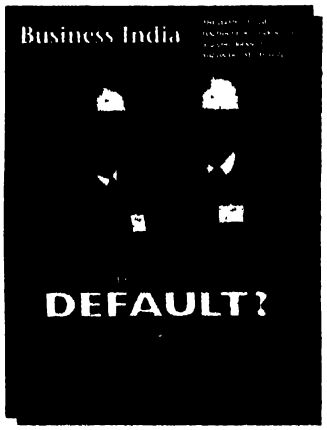
Leopards can never change their spots, thus goes an old saying. Ditto is the case of Indian promoters who ceaselessly explore ways and means of extracting moolah from investors. The latest trick up many a promoters' sleeve is to approach the investor in the garb of a software company. Falling in this category is Fortune Informatics.

Fortune Informatics née Fortune Office Systems in its earlier *avatar* was a trader in computer hardware and office automation equipment. The

Instrument	Equity shares of Rs10 at par
Issue size	Rs2.10 crore
Issue opens	28 August 1999
Issue closes	4 September 1999
Listing	Hyderabad & Calcutta
Project cost	Rs6.99 crore
Post-issue equity	Rs7.16 crore

company got "converted" into a software firm in 1997-98, which incidentally coincides with the period when the infotech boom started. Although audited figures for the past five years are available, they serve little purpose because the company has changed its line of business. Fortune started developing software in 1997-98, the benefits of which got reflected in the ensuing fiscal. During 1998-99, Fortune's revenue stood at Rs3.97 crore (software business chipping in 25.51 per cent) and profits were Rs0.14 crore.

In order to expand its software business the company is tapping the capital market. The cost of the project as estimated by APIDC (Andhra Pradesh Industrial Development Corporation) is Rs6.99 crore, with Rs6.09 crore in the form of equity and the balance term loan from APIDC. Till the first week of July the company has deployed Rs2.20 crore and it expects to begin commercial operations from August. As per the estimates made by APIDC, in its first year of operation, income is pegged at Rs7.86 crore and earnings per share slated to be Rs2.22. In the second year, income is put at Rs9.50 crore and net profit at Rs2.05 crore.



Kaashyap Radiant Systems

Kaashyap Radiant Systems (KRS) is an existing company engaged in computer training and software development. At present, the company has 12 training centres (owned and franchised) in Tamil Nadu and Karnataka. In order to fund its expansion programme it is tapping the capital market. The plan envisages setting up of two ERP training-cum-software development and consultancy centres and eight non-ERP education and training centres. The whole project will go on stream in stages with the last phase slated for November 1999. The cost of the project as appraised by IDBI is Rs10 crore and the same is funded by equity (Rs7.30 crore) and term loans from IDBI amounting to Rs2.70 crore. Till June, the company has spent Rs4.68 crore.

Instrument	: Equity shares of Rs10 at par

Issue opens	: 30 August 1999
Issue closes	: 6 September 1999
Listing	: Chennai & Hyderabad
Project cost	: Rs10 crore
Post issue equity	: Rs10.30 crore

The prospectus contains the financials of two accounting periods which are not comparable: one is the 17-month period ending September 1998 and the other for five months ending February 1999. For the period ended September 1998, the company has clocked in a revenue of Rs3.58 crore (revenue from education and training Rs3.10 crore and from software Rs0.48 crore) and profit of Rs0.73 crore. The same for the period ended February 1999, stood at Rs1.94 crore (revenue from education and training Rs1 crore and from software Rs0.94 crore) and Rs0.43 crore. For the current year, the company estimates total income at Rs25.81 crore (Rs10.55 crore from education and Rs15.26 crore from software) and net profit at Rs2.21 crore. The track record of one of its associate companies viz. Ram Kaashyap Investment, which is listed company, is not praiseworthy. Secondly there are no underwriters to this issue. •

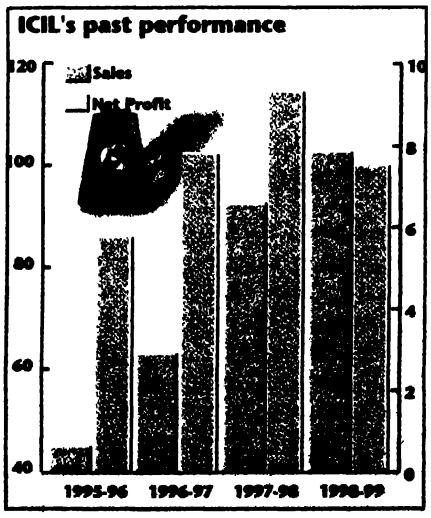
Count on this

With yarn prices firming up, Indo Count Industries has chalked out its gameplan to gain an edge over competitors



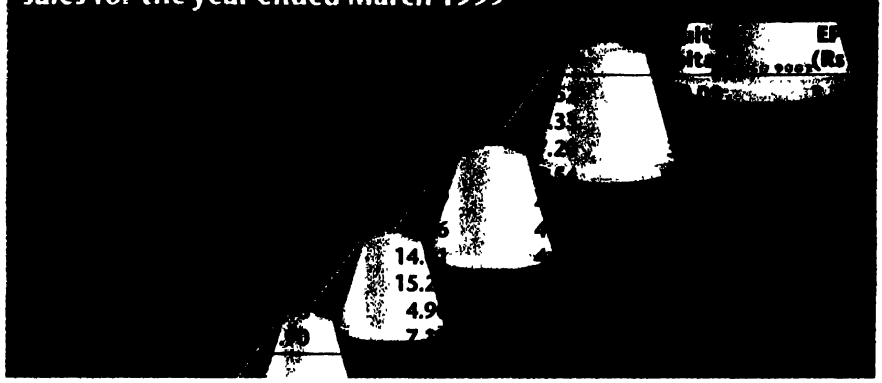
The cotton yarn exports in the last 10 years. Beginning 1987-88 nearly 30 export oriented units manufacturing cotton yarn have sprung up. The value of cotton yarn exports pole-vaulted from Rs343.10 crore (1987-88) to Rs5,368.20 crore (1996-97). However, good fortunes do not last forever. Uneconomical size of the units, wrong locations (regions where the power cost has spiralled) or in some cases erroneous selection of machinery, have ensured that only a third of the EOUs now survive. Besides, beginning mid-1997, yarn prices in the international market moved south. Many of the surviving EOUs are not making enough money to service their borrowings. Hence the need to come up with survival plans of either expanding capacity, containing the cost of production or diversification.

Jain promises not to dilute ICIL's earnings

"The immediate remedies are to go in for a value-added product mix (using cotton yarn more for fabric manufacture), stressing on processed fabrics and providing more quality process fabric for making garments," says a textile analyst.

In view of this scenario, Indo Count Industries (ICIL) can be said to be one company which has got its act together. ICIL which started in 1991 with 12,000 spindles today has 52,000 and is now hiking it by another 4,000. "We have the infrastructure, all we need is the balancing equipment. This will not only reduce expenditure but also economise the operation," says the CMD, Anil Jain. He assures, "The money will come from internal accruals and there will be no equity dilution. We have placed orders for both imported and local machines which should be in place by August-end. Hence the result of the expansion will be reflected in the second half of the current financial year."

Over the last two years, ICIL, at a cost of Rs1.50 crore, has installed four knitting machines with a production capacity of 700 tpa of knitted fabric. "This has been financed through a 3:1 ratio of internal accruals and debt. During the current fiscal we have chalked out a plan to double this capacity. The company through its agent network supplies the grey knitted fabrics to international chain stores such as Marks and Spencer, Mother Care, etc," says Jain.



Till 1997-98, crucial financial parameters like gross fixed assets, sales, networth and net profit have been positive. However, for the year ended March 1999, while ICIL's sales rose by 13 per cent to Rs104.82 crore, gross profit has remained static at Rs14 crore. And with the higher depreciation provision of Rs6.37 crore (previous year: Rs5.31 crore), net profit slipped from Rs9.35 crore to Rs7.54 crore. This pressure on profitability has adversely affected the earnings per share, which is Rs3.20. The scrip is close to par value, discounting these earnings by three times. However, compared to its peers, ICIL continues to be the frontrunner. An analysis of the top 10 companies in terms of cash profit as a percentage to net sales, reveals that ICIL occupies the fourth rank after Cheslind Textiles, Maral Overseas and Shamken Spinners.

Interestingly, during the last couple of years, ICIL has gone in for a cost cutting exercise. Power costs are almost 7 per cent of input costs. ICIL has halved this from Rs5 to Rs2.40 per unit. "We have installed our own captive power unit of 9 MW based on heavy fuel and diesel oil. Our plant is

2 km away from the Karnataka border, hence we bring diesel from there," explains Jain. ICIL's power cost is 50 per cent cheaper than the average of other players, which is Rs4.95 per unit. "We definitely have an edge over others. Besides, ICIL is the only company in India to get a licence for the use of the 'Rieter Yarn' mark. This mark is given to companies which maintain strict quality norms," adds Jain.

Now let's look at the state of the industry. Last fiscal (1998-99), almost all the players improved their bottom-lines. The commodity continues to occupy the top slot in cotton textile exports. However there has been a slowdown in its growth. Since mid-1997, prices in the international market started sliding from an average of $3.46 (May 1997) to $2.85 (May 1998) per kg, a drop of a whopping 117.63 per cent. In fact, the average unit realisation in March 1999 touched $2.70 per kg as against $3.08 in March 1998. However, the price of yarn in global markets has bounced back and the current year's outlook is positive, says Jain.

Top 10 cotton yarn manufacturers: ranked by cash profit to net sales for the year ended March 1999

Another reason for last year's slowdown in the domestic industry was that export shipments were hit. "This was on account of the Southeast Asian currency crisis. Southeast Asia is our major market," says Jain. But that's a thing of the past. Now that Southeast Asian economies have revived and demand picked up in other countries, Jain expects to close the current year (ending March 2000) with a turnover of Rs130 crore, a jump of 24 per cent over Rs105 crore of last year. He predicts ICIL's profit to be Rs9 crore, which on an equity base of Rs23.54 crore, translates into an EPS of Rs3.82. "Judging by the first quarter ended June 1999, wherein ICIL reported a turnover of Rs29 crore and a gross profit of Rs3.50 crore as against Rs24 crore and Rs3.46 crore respectively for the corresponding period last year, this seems like an achievable target," points an equity analyst.

Upgrade the Knowledge Base of Your R&D Engineers

In today's world of hi-tech competition, you are left with no choice but to have the best brains in the industry. All the more when it comes to your R&D. Unfortunately, the present courses as they exist do not equip them fully to meet these challenges.

The INDIAN SOCIETY FOR AUTOMOTIVE TECHNOLOGY, founded by the captains of the Indian Automotive Industry, has collaborated with the Insitut Francis du Petrole (IFP) to organise an M.Tech. programme in IC Engines. The course will be conducted by IIT Madras.

With already one batch having completed the course at IIT successfully, ISAT is all geared to help upgrade your technology. To cope with competitive pressures for better product performance. And to meet increasing stringent emission norms.

ISAT's 1st M.Tech. Batch

Net mania

Net companies are mushrooming the world over, driven to a large extent by crazy valuations. A major shakeout is on the cards

A Dilbert cartoon strip carries a very telling comment on the Net mania sweeping the world at this very moment. A new venture fund approaches Dogbert, proposing to give him some money. The reluctant Dogbert explains: "I do not have a Web business and I am just an engineer with a ponytail." The fund managers are delighted: "We would like to get in early."

The business of dot com is the sexiest happening thing today. Notwithstanding hundreds of lessons in the history books, greed can never be overpowered. It is not money of venture funds alone, but also mutual funds, retail and institutional investors, all have been chasing Net stocks. While one can count a number of international examples from the Florida boom to Tulip Mania, there are several back home too.

Not too far in the past (1994), acquiring a broking card was a craze. It is not that the broking business has ceased to exist, but we have already seen a lot of consolidation and a major correction in prices of broking cards. But when the mania was prevalent, everybody believed that India was globalising, the financial services industry had to endlessly grow at an explosive pace, foreign brokers and institutional investors were coming. Whatever had happened till then was not even a drop in the ocean. Look at China... and so on. In all mania, at the beginning the erudite discover a new thing, and some time later the ignoramuses follow. At the peak of the boom, there is a general consensus.

In the Internet business also, the crazy valuations, listing bounties, the insatiable appetite of funds, etc have captured everyone's imaginations. Men and women, old and young, small and big, all want to be a part of the Net business in some way. A number of new entrepreneurs have jumped in, many nurturing their ambitions on the crazy price that some venture fund will give or on the hope that they will have a windfall of a lifetime when they sell out. Some of my young friends are indeed planning to retire at Miami beach.

Anybody who understands the theory of geometric progression would know that in no business, valuations can double every three months for any reasonable length of time. Nobody today would contest that the Net is the greatest revolution of the century and it has the power to change business dynamics dramatically. But this does not imply that anybody who can attach a suffix dot com would become a millionaire overnight. Most people fail to realise that the Net is a more effective way of doing one's existing business wherein one has core competencies rather than making a new business out of the Net itself. A number of Indian companies battered by the stockmarkets are also looking for opportunities to set up a new IT or a Net company.

Nobody today would contest that the Net is the greatest revolution of the century and it has the power to change business dynamics dramatically. But this does not imply that anybody who can attach a suffix dot com would become a millionaire overnight

In stockmarket parlance, a significant increase in stock supply is the first indication of trouble ahead. There are about 25 initial public offerings of Net companies planned on Nasdaq in the last quarter of the current year. Already some of the IPOs have started getting listed at below issue price. In the past few weeks, even the popular and established Net companies in the US have seen their values almost halving.

In India only 0.03 per cent of population have acquired Net connections. This implies that all the Net companies have a long way to go before they can get critical mass for businesses in day-to-day life. In some of the segments catering to the rich and educated, the proportion of Net penetration would be higher. The mania has already seized the entrepreneurs probably a little ahead of time. A major shakeout is inevitable. The trigger can come from the US or somewhere else. It may happen tomorrow or a few years later. But the ones with a sound business strategy and the wherewithal to survive will be part of a sector that grows at 15 per cent per month for many years. ♦

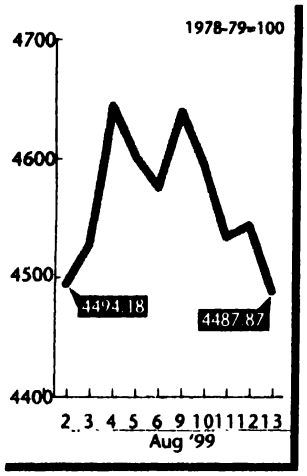
NOTES

1. Shortlisted schemes are those with common investment objectives and an NAV history of at least one year.
2. Scheme returns are adjusted for dividend, rights and bonus payouts.
3. Price-based returns are fairer indicators and consider "real" entry/ exit facilities. These are based on market-price (including entry and exit brokerage cost), and/or/resale/repurchase price offered by the funds.
4. Risk grades: I - Least downward risk (relative to other schemes), V - Most downward risk. Downward risk measures how often, and to what extent, NAV declines on a month-to-month basis.
   Grades are based on relative downward riskiness of scheme within its peer group.
5. Scheme Peer Group returns are median returns on all short-listed schemes.

COMMENTS

The short-listed growth schemes have marginally under-performed the benchmark, the broad-based SNP CNX 500 index. The annual median return of these growth schemes is positive 47.53 per cent versues positive 50.75 per cent of SNP CNX 500 index. The present rally in the market have been broad-based as SNP CNX 500 index since it has out-performed the premier index BSE Sensex marginally. The expectations of an impending turnaround in the economy have caught the investors attention on small and medium cap stocks too. Of the shortlisted 66 schemes, 45 per cent of the schemes have out-performed all the benchmark indices.



The investment performance however is not uniform across the schemes, with top five schemes generating an annual return of over 90 per cent while the bottom four schemes managed to return less than 10 per cent. Most of top performing schemes are open-ended and has got a low corpus. These schemes have taken up significant exposure in the so-called golden triangle of Infotech, FMCG, and Pharmaceutical sector. After the news of an imminent economic recovery, the prices of cyclical and commodity stocks have appreciated remarkably and select funds have started taking fresh exposure in cement and automobile stocks.

Compared to last mutual fund ranking (as on June 26, 1999) on growth schemes, DSP-ML Equity Fund from DSP Merrill Lynch, Apple Midas Fund- Goldshare from Apple MF and HB Libra Leap from HB MF have been added to the top 10 rank while Zurich Quantam Growth from Zurich India MF, Tata Twin Option (Equity) from Tata MF and KP Blue Chip from Kothari Pioneer MF have dropped out of the list.

Snapshot

The gilts market witnessed a sharp reversal after rallying to new highs this fiscal. Liquidity tightened as funds were scarce following big purchases. Call climbed to over 20 per cent levels at the end of the period as players rushed to cover reserve requirements. No rate cuts and fresh tensions at the border dampened sentiment and the resulting bearishness caused pricess to react sharply. Good demand for gilts saw the auctions sail through. OMO purchases were over Rs3,500 crore. The SBICAP-SYC fell sharply before climbing again. TB-cut-off yields moved up for 14D and 91D TBs but fell for 182D and 364D TBs. Secondary volumes were high. Call rates expected to guide the move in gilt yields in the coming week as the tightness will dampen sentiment.

'Dollarization' could change the politics of money

Can you import financial credibility?

By Roberto Salinas-León

IN MEXICO, THE OLD "d-word," devaluation, seems to have been replaced by a new "d-word"—dollarization.

In the crowded streets of Tijuana, for instance, you'll find street vendors selling the popular weekly, *Zeta*, sporting the catchy headline: "Silva Herzog denounces dollarization." This man was Minister of Finance in the government of Lopez Portillo (1976-82), who promised to "defend the peso like a dog." Portillo ended his term with the peso worth 10 percent of its value when he took his oath of office, ushering in the "lost decade" of economic stagnation.

If you are aware of his role in Portillo's government, you may wonder if Herzog's bark against dollarization is worse than his bite. So you buy the newspaper, which sells for exactly US$1. The exchange is simple. But it is conducted in foreign currency.

As a Mexican, this may surprise you, triggering a desire to find out more about this dollarization debate. So you give in to the vendor's insistence that, for two extra bucks, you also buy *Newsweek*. You open it and find Robert Samuelson's column, in which he expresses serious doubts about the current ties for dollarization. "When a country abandons its currency, it surrenders a central symbol of national identity," writes Samuelson.

REPORTING FROM **MEXICO CITY**

Ah, the political argument.

You ask if it makes sense to have patriotic pride in outrageous interest rates and a cumulative inflation rate of 275,000 percent in one generation. So, you read on: "[the country] also loses an instrument to control its economy" and "throws itself at the mercy" of foreign monetary policy, to wit, the US Federal Reserve. This is the technocratic argument. In Herzog's own flamboyant terms, dollarization would be "the equivalent of amputating the economic body's right arm."

This kind of I-know-so-much-more-than-you-do policy advice defies the common sense logic of radical currency reform. Businessmen, big and small, support dollarization out of a desire to rule out ex-

▶ **POLITICS OF MONEY** INSIDE

▶ Establishing, maintaining and defending a national currency is an expensive and uncertain business. If you can swallow your national pride, there is a lot to be said for adopting one with a proven track record and going along for the ride. The appeal of this line of reasoning is growing: a number of countries are seriously considering whether or not to adopt the US dollar (or, in West Africa, the French franc) to replace their national currencies. But, while one size may fit all, a straight jacket is never that comfortable. And, as many people seem to have forgotten, the stability of the dollar that is now so attractive was conspicuously absent in the 1970s

Russians can't wait to send the almighty dollar back overseas

Widespread support, but pride in the ruble still comes before a fall

By Brad Durham

REPORTING FROM

DESPITE SEVERAL NEW scripts, all of which cast the ruble in a starring role, the dollar still plays a major role in Russia's long-running financial drama. The show's producers have still to convince the audience that it should shift its allegiance.

Putting the ruble on the marquee has had some effect. Since Russia finally got serious about treating it like the national currency in the mid-1990s, the almighty American dollar has slipped a notch from its perch as Russia's de facto tender. And while the ruble devaluation and debt default of last August caused oligarchs and babushkas alike to flee again into the safety of the dollar, strict currency controls have managed to breath life into the ruble and prevented Russia from printing its way back into hyperinflation.

The dollar is not the omnipresent currency that it once was in Russia, when street urchins were as agile with dollar exchange rate fluctuations as London foreign exchange traders and kiosks sold a wide range of items, including bath towels and brassieres, in the image of the dollar.

The dollarization of the Russian economy was so widespread that after being forced into a series of dollar-denominated transactions in Russia, this reporter—in Moscow living on a ruble salary for most of 1990 - -began telling merchants and waiters that I hailed from Novoe Zeelandia (New Zealand) when presented with the probing question: "What country?"

This answer ensured ruble instead of US dollar payment at most establishments, accounted for a shaky grasp of the Russian language and led to an awkward conversation about opportunities in the wool industry "back home" with a Russian shopping for a place to emigrate.

Admirable comeback

But since Russia made the transition to a reasonably strict monetary policy and banned use of the dollar for everyday transactions on Russian territory, the ruble made an admirable comeback in the hearts and minds of many Russians.

By the mid-1990s, the currency black market was resigned to offering a rate just a shade above the market rate on the Moscow Interbank Currency Exchange. And dollar symbols that used to roll in the eyes of taxi drivers like the lemons and oranges of a slot machine when negotiating a ride all but flickered out.

Many ordinary Russians rallied around their ruble, moving money from mattresses into bank accounts and believing th government's mantra that it was sticking t a stable currency. The Russian Centra Bank nobly swore off using the printin press and both inflation and the mone supply were held in check.

The price of faith: Russians queue up to buy foreign currency after the ruble, which had been supplanting the US dollar as the money of choice, lost half its value

But, given Russia's oppressive do mestic tax laws and the ruble's unstabl history, oligarchs, exporters and busines interests raised the practice of movin dollars into Swiss bank accounts and rea estate in Florida into an art form. The dol lar remains the vehicle of choice for trans porting Russian wealth to safety abroad.

Russia was committed to what som called "sado-monetarist" policies tha held the ruble stable, while seemingl helpless to stop capital flight estimated a a whopping US$15-18 billion a year. The country's fiscal deficit ran rampant, totaling $108 billion between 1994 anc 1997, which was financed by flighty foreign investors and wobbly Russian banks supporting an unsustainable pyramid of domestic debt.

Dollars in, capital out

"It was a dollars in, dollars out game until the dollars stopped coming in," says Sergey Prudnik, an analyst with the Moscow-based investment bank Troika Dialog. "Capital flight has become one of the most transparent indicators of—and one of the fundamental reasons for—the country's economic crisis." As $58 billion in foreign capital came into Russia between 1994 and 1997, more than $66 billion of flight capital made the outbound journey.

The culprits of this particular strain of dollar lust are not necessarily the shifty "men in black" smuggling out overstuffed suitcases of greenbacks. Instead, the main sources of capital flight are Russian exporting companies that have concocted a dizzying ar-

ntinued from page one

ange-rate risk and episodes of unforeen volatility—two staples of a monetary stem ravaged by 25 years of debt, devalation and a long list of broken promises.

For the 70 percent of Mexicans who e under the age of 30, dollarization repsents a chance to import fiscal credibil- from the US. These young people are ndamentally ignorant of the privileges low inflation, and will be until someng radical is done. To amend Herzog's alogy, the arm should be amputated, ce it is riddled with the cancer of peso valuation and persistent inflation.

Indeed, Mexicans are already voting th their monetary feet. The newspapers ndor does business in dollars, as does e real estate agent. In the maritime ports most all transactions are dollar denomated. A good number of businesses calate projections in dollar terms, or use exceedingly conservative exchange- te calculation. The risk of volatility and valuation imposes a huge cost in terms time and freedom to plan. With this in ind, the objection that flexibility would lost begs the very question.

In reality, the technocratic claim that llarization entails loss of flexibility hars a crucial caveat: "flexibility" in Mex- usually means the discretionary abuse workers' salaries. By unleashing inflation, for instance, the government minimizes the cost of its debt.

Mexico's systematic violation of the monetary contract with its citizens stands in stark contrast to what goes on north of its border with the US. You don't see Texas announcing the introduction of a new currency, then devaluing the exchange-rate to neutralize an external shock such as a drop in the price of oil.

In countries with a sound currency, adjusting to external economic shocks is done by a mixture of workers migrating to another state, an increase in internal productivity and a helping hand from state governments (via a reduction in taxes or in red tape). A flexible labor market is essential to mitigate the pain that such shocks inevitably bring.

Far to the south, Argentina adopted a currency board scheme tied to the dollar which has, so far, survived speculative onslaughts and financial turbulence. The absence of exchange-rate risk allowed Argentina to kill the hyper-inflation cancer. Inflation is also zero, and the benchmark interest rate is significantly lower than in other Latin American countries.

What about the argument that Mexico would lose "an instrument of control?"

It rings equally hollow. Consider the young street vendor who sold *Zeta* and *Newsweek* for $3. At the current exchange-rate, this amount is worth 28 pesos. Or 28,000 old pesos, before the government decided to lop three digits off the currency in 1993. This is enough to finance a simple lunch -a coke and a hamburger. Yet, with 28,000 pesos, the father of the young vendor would have been able to buy a compact automobile in the early 1970s. The dollar value of the peso has fallen by over 80,000 percent in just one generation.

The peso, viewed in this light, is a product of low quality. It is not a reliable store of value and it hardly performs its duty as a unit of account. Dollarization would entail abolishing the peso's legal tender privileges and giving Mexicans the right to conduct their business in either currency.

Dollarization is not a panacea. It is more akin to a monetary straight-jacket. In Panama, for example, there is no monetary sovereignty and the economy certainly has problems that, with prudent adjustments, might be eased. But, by wearing this imported straight jacket, Panama enjoys a climate of zero inflation, with a robust banking system capable—among other things— of extending 30 year mortgages.

In the case of Mexico, only dramatic reform can remove fears of a future devaluation. If the country dollarizes, inflation and interest rates would fall to levels similar to the US. A lot of money would be saved and a lot of pain averted. ◐

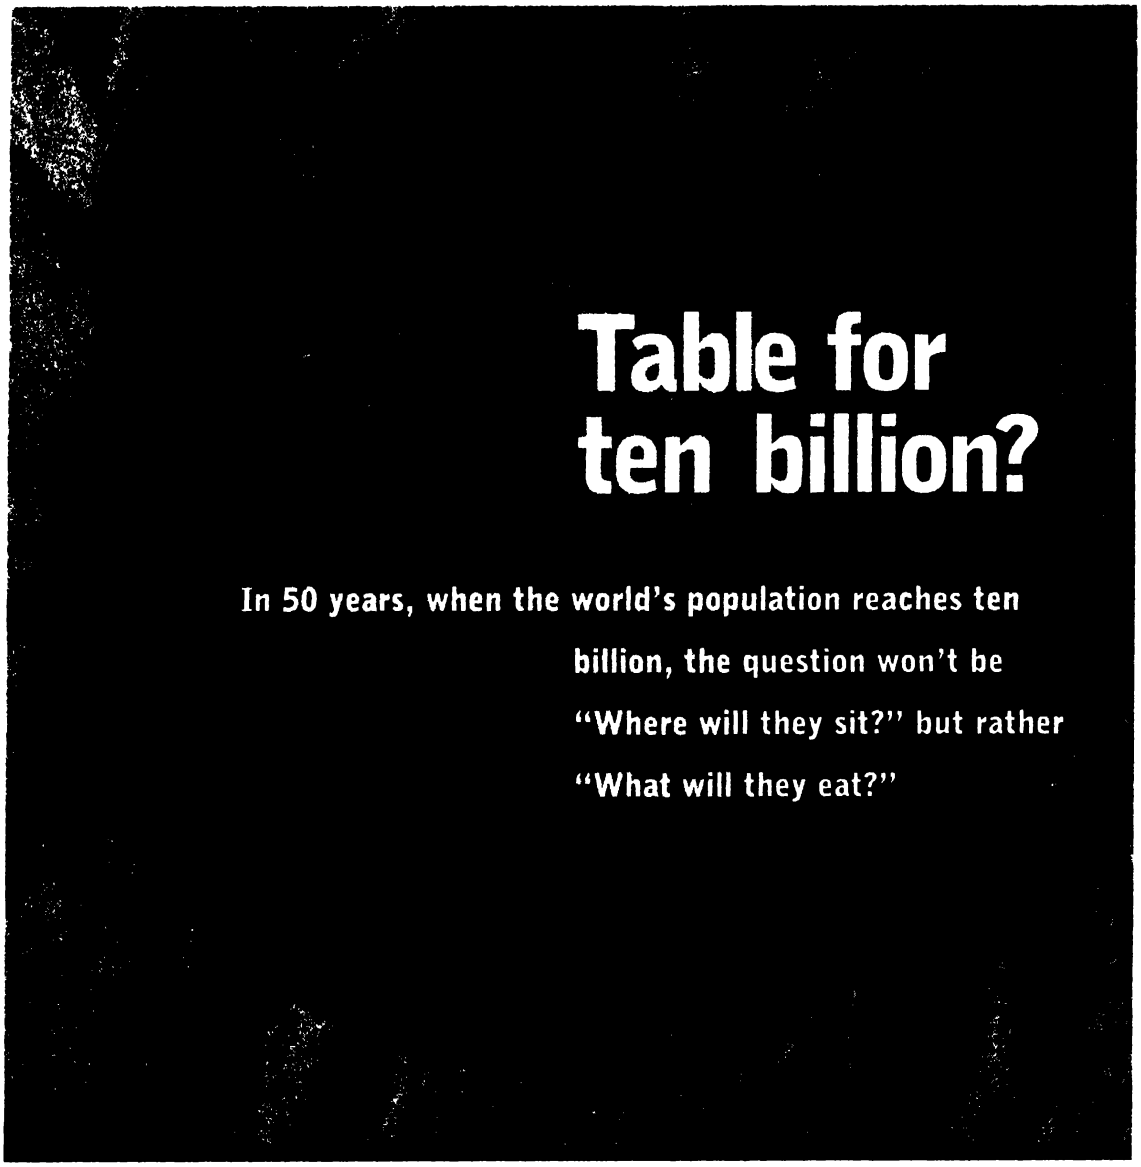
v of schemes for keeping dollar revues out of Russia.

By early 1998 many Russians must e known that the end was near-- movinto dollars or awaiting darker news h a finger on the ruble-dollar switch— the Asian financial crisis and dessed commodity prices slowly erodRussia's financial health.

A group of Russian mutual funds were ched with great fanfare by both homewn institutions and foreign asset mans such as Templeton and Credit Suin late 1997. It was hoped that the ds would draw Russian ruble savings the capital markets, since most of the ity market is dollar-denominated and transactions are conducted offshore. It was an ominous sign when only a trickle of the estimated $20 billion in ruble savings held by Russian citizens made its way into the funds prior to the August 1998 collapse.

The value of controls



The August ruble devaluation and domestic debt default sent Russians into the streets in a quest for dollars. But as the panic sent the ruble sinking farther and faster than expected, the government cracked down with a range of currency controls, including a requirement that exporters sell 75 percent of their foreign currency earnings over a highly restricted foreign exchange system, and prevent what remains of Russian banks from speculating in foreign exchange markets.

These currency controls, while not earning Russia any gold stars from the IMF, managed to boost dwindling foreign exchange reserves for the first time this year in May.

So, once again, the dollar is heading towards the wings on Russia's financial stage. But history has proven that the beloved greenback will return, triumphant, with the first sign that the ruble is forgetting its lines. ◐

The currency of colonialism won't pay for a future

West Africans reaching a consensus

Areh Sunday

REPORTING FROM LAGOS

FOR MUCH OF THE 1990S, the Economic Community of West African States (ECOWAS) has been discussing ways to introduce a common unit of exchange among the 16 member-nations. But efforts to make the leap from theory to practice have fallen flat three times so far.

One of the reasons for this is the split between former British colonies, which have their own national currencies, and most of the francophone countries which remain tied to their former colonial master through the use the French franc, better known as the CFA (pronounced cefa). Arguments still rage over the merits of the respective approaches, with the advocates of the CFA citing the reliability of the currency and the fiscal discipline its use imposes, while critics decry the colonial associations and the inability of sovereign governments to set policy.

Guinea is one francophone country that has broken ranks with the CFA. In the early 1970s it introduced its own currency—known at the time as the syril—after its attempt to expand the money supply was rebuffed by the collective central bank, Banque Centrale de l'Afrique de l'Ouest (BCEAO), based in Ouagadougou, Burkina Faso. It is noteworthy that around the same time the late Kwame Nkrumah pulled Ghana out of West African Currency Board, linked to the British pound, because the board would not approve his government's request to boost the money supply.

The Guinean experience, according to M. Mohammed Diallo, a Guinean engineer in Nigeria, demonstrates the frustrations of West African countries that use developed countries' currencies. "Once you change your currency to another dominant nation's currency, you become dependent, you stop being the master of your economy. You submit yourself to the rules and regulations of another country," Diallo says,

"It becomes impossible for real economic planning to take place," he adds, explaining that the dependent country cannot determine the real value of its currency. "When we were using the CFA, we waited each year for France to release her rate of exchange before we planned and released our annual budget. It was that bad!"

Besides the fact that the socio-political identity of any nation is strengthened by a national currency that has no ties with a seemingly stronger, dominant currency, there is the issue of setting policy. A sovereign fiscal and monetary policy requires that a ruling government have untrammeled freedom to expand, contract or stabilize the money supply.

The dictatorship of Mathieu Kerekou in Benin Republic lacked such freedom in the late 1980s. The BCEAO would not let him expand the currency supply, forcing him to reduce the number of his ministries and lay off large numbers of workers. This, inevitably, spread ill-will against him and his government, leading to the eventual collapse of his regime.

"When we were using the [franc], we waited each year for France to release her rate of exchange before we planned and released our annual budget. It was that bad!

Proponents of the continued use of the CFA by francophone countries in West Africa argue that the CFA enjoys credibility and convertibility since it is tied to the French Franc. They also point to the fact that, most of the time, the French treasury writes off the current account deficits incurred from purchases abroad (this amounted to about CFA 213 billion in 1992) and that CFA affiliated member countries benefit from their access to booming European markets.

But what has been over-looked by such arguments is that, lacking control of the CFA, the francophone countries have had to cope with arbitrary devaluation of the currency. This happened in January, 1993 when the French government lowered the CFA's value by 50 percent—with far-reaching consequences for the economic and political stability of the sub-region.

It has also been argued that use of the CFA prevents a profligate government from deciding, regardless of predictable inflationary consequences, to finance its activities and diminish the value of its debt by printing money. This, the argument goes, creates a climate that deters investment and makes people reluctant to save.

But what investment has taken place within the francophone countries that use the CFA? Apart from Nigeria and Ghana, two anglophone countries with a minimal manufacturing base, the countries in West Africa especially those that use "alien" currencies—are dependent on the export of agricultural products and raw materials, a major factor in the stagnant economic growth of the region. It is worth considering whose interest is served by this state of affairs.

It is all too clear that, as the next millennium approaches, West Africa will remain in its economically backward state unless urgent measures are taken to create stable economies. To do this requires political stability and economic planning based on national goals and assets, both of which depend on the will to remain independent of external currencies.

As to the debatable benefits of a pan-national currency, these may be achieved in a way that benefits West Africa rather than France with the scheduled introduction of a uniform monetary unit—the ECOWAS check - this month. But it remains to be seen if foreign interests will let that happen. ◐

AREH SUNDAY WRITES FOR THE LAGOS-BASED VANGUARD NEWSPAPER GROUP.

Remember, it's money, not a panacea

Time to export the symbol of American values?

In April, a subcommittee of the US Senate's Committee on Banking, Housing and Urban Affairs met to discuss the issue of dollarization in emerging economies. *WorldPaper* has edited and condensed the transcipt of that meeting:

SENATOR MICHAEL B. ENZI, (REPUBLICAN-WYOMING), SUBCOMMITTEE CHAIRMAN: The reason we are here is to talk about dollarization. This is an important issue because of the continuing struggle in emerging markets to generate long-term price stability, especially in Latin America...the advantages [of dollarization] would include less inflation, more fiscal discipline, lower interest rates, more investment, and faster economic growth.

Let me be clear: dollarization does not mean the [US Federal Reserve] will become the lender of last resort for these countries; nor does it mean the Fed will stray from the goal of price stability in the United States. However, we ought to explore the idea of sending back the extra profits we would earn from issuing the dollar—what economists call seigniorage.

LAWRENCE H. SUMMERS, DEPUTY SECRETARY, US TREASURY: To make another country's currency one's own is a momentous decision for any country...on the one hand, the presumed irrevocability of dollarization holds possible benefits in terms of lower interest rates, greater stability and possibly deeper financial markets. It is striking that dollarized Panama is the only country in Latin America with an active 30-year fixed-rate mortgage market.

On the other hand, countries must also be prepared to embrace an equally irrevocable subordination of monetary policy to discipline. In addition, a dollarizing government will have to accept losing the seigniorage revenue that domestic currency creation produces.

As I noted earlier...if dollarization helped to achieve greater economic stability and growth in countries in our hemisphere which have suffered instability in the past, this would be in the economic and broader national interest of the United States... but there would be the opposing risk that at difficult times, the loss of domestic monetary sovereignty would foster resentment and encourage policy m to deflect blame for problems.

ENZI: Chairman [Alan] Greens since there are substantial amounts of dollars already circulating abroad, see it [as being] more or less diffic you to conduct the appropriate mo policy and price stability and the things that you do? How will this be ed by dollarization?

ALAN GREENSPAN, CHAIRMAN OF FEDERAL RESERVE'S BOARD OF GOVER Well, Senator, as you point out, there is ready a very large amount of US curren in circulation outside the borders of United States . We know roughly much it is ($300 billion). We've to adjust our monetary policy to that. So on a technical sense, the be no particular problems if individual ditional countries were to dollarize so far as our mechanical capabilities of implementing the appropriate monetary policy for the United States is concerned.

But I think the secretary is raising a much broader question which goes beyond the technical aspects of monetary policy and to a large extent goes to the issues of foreign policy and diplomacy.

And I have no question that were we to find ourselves in a world in which there was a very significant amount of dollarization, wholly independent of what we did, it would be to the political interests of certain parties in other countries whose polices were less than perfect, if I may put it that way, to blame us as the root of their problems. I know of no way to avoid that.

ELTON, EMPOWER AMERICA: larization is not a new one. makes this issue one of critical im- rtance...is that the dollarization option now reached the highest levels of poli- liscussion and public debate in such tries as Mexico and Canada—our two portant trade partners.

countries are talking about ing to the US dollar to effectively re- their own domestic money or grant itizens a choice in currencies.

ould mean, at least for the three nations to the North American rade Agreement (NAFTA)—the , Canada and Mexico—establishment a common currency to more fully hieve the economic benefits of free rade and open markets: no more sur- rise devaluations; no more "competitive depreciation" tactics to gain a price advantage in shared markets; no more pro- ionist responses to exchange rate-in- ed market distortions.

I find that here we have this unique opportunity because almost spontaneously these dollarization movements have gained momentum, particularly in Mexico. We have a chance to depoliticize money.

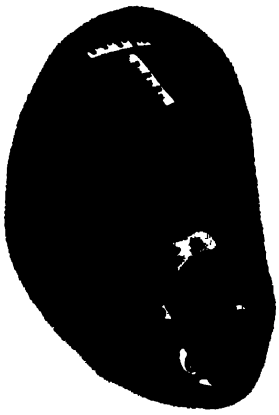
Coca-Cola may be close to creating the world's second-biggest Coke bottling operation. Hellenic Bottling Company, which distributes Coke in the Balkans and Greece, is close to agreeing to merge with Coca-Cola Beverages (CCB) which is the group's London company. Talks between the two had begun in June, but now Hellenic is insisting that the cash portion of the $2.9 billion offer to CCB shareholders be reduced to $400 million as compared to an earlier commitment to pay as much as $850 million. Hellenic has however agreed to take on CCB's $563 million debt. Hellenic's new terms only reflect its unwillingness to incur additional debt after Coke products were temporarily withdrawn in Belgium and France as well as the European Commission decision to investigate charges that Coke has abused its dominant position in several EU markets.



◆Wall Street seems impressed by the appointment of Carly Fiorina, a former Lucent Technologies executive, as Hewlett-Packard's (HP) president and chief executive. HP has boosted the sales of its computer and printer products in the third quarter to achieve a revenue growth of 11 per cent. The hike in

revenue is heartening for the company as it comes after several quarters of sluggish performances. HP shares are trading close to an all time high of $118. Investors are also optimistic about HP's spin-off company, Agilent Technologies, that is planned for launch later in the year. HP's third quarter earnings jumped 37 per cent to $853 million versus $621 million in the corresponding period last year. HP's revenue figures drew special attention from analysts as net revenue for the quarter was $12.2 billion as compared to $11.0 billion last year.

◆Jaguar, the luxury car from the UK, is planning an aggressive sales and marketing drive targeted at the German and Japanese markets. The company is a subsidiary of the US company, Ford, and has asked its German and Japanese management teams to draw up proposals to increase its share in markets dominated by its rivals Mercedes-Benz, BMW and Lexus. The idea is to raise Jaguar's output and sales from a record 50,000 cars last year to 85,000 this year. Jaguar's new S-type model developed at a cost of $644 million is the hope against which the increase in production is being planned. The year 1998 saw the US market accounting for almost 45 per cent of Jaguar's total sales while the UK accounted for 23.2 per cent. Germany and Japan on the other hand only accounted for 8 and 4 per cent sales respectively.

◆German engineering group Linde has made a bid for one of the top slots in the global industrial gases industry with a $3.7 billion cash offer for Aga of Sweden. The takeover move comes a month after French company Air Liquide and US company, Air Products and Chemicals, agreed to a joint $11.52 billion takeover of the BOC group. The entire exercise only increased competition for Linde's most important business areas. The Linde Aga combination will jointly control 11 per cent of the world's market for industrial gases as compared to more than 40 per cent for the combined operations of

Air Liquide, Air Products and BOC. Linde has gone from being a medium-sized industrial gases company with a strong European base to facing prospects of being dwarfed in the world market. Aga's considerable market presence in North and South America and Scandinavia have only made it an extremely attractive target for Linde.

◆The impasse over Societe Generale's (SG) future continues. French regulators have postponed announcing a decision on whether Banque National de Paris (BNP) should be allowed dominant shareholder status in the former. The postponement is being regarded as a move towards a fresh round of negotiations to seek a friendly solution to the unresolved three-way banking battle. In the past few months several attempts to broker deals have proved unsuccessful. While SG had valiantly defended its proposed friendly merger with Paribas, BNP has insisted on a triangular alliance. Shareholder voting earlier this month gave BNP a clear majority of Paribas shares and only 36.8 per cent of SG shares.

◆VNU, the Dutch publishing giant, has joined the heavyweights of the US marketing information industry by buying Nielsen Media Research for $2.7 billion. Nielsen is the monopoly supplier of the country's television audience ratings in the US. While the Dutch company paid $2.1 billion for ITT world Directories, this deal is VNU's biggest takeover ever. VNU bid $37.75 cash per share for Nielsen in the deal that will be partly funded through a global equity offering worth $1.25 billion. The rest of the money is to come from VNU's own funds and borrowings. For VNU, the takeover comes at the right time as US television audiences are able to choose from an increasing number of channels. The Dutch group sees this as an increased client base among broadcasters and advertisers anxious to know who is watching commercials on which a whopping $45 billion is spent annually. ◆

Where brashness dares

Sleepy. A good word to describe Hollywood studio Columbia Tristar's Indian outfit a few years ago. Although Hollywood companies have traditionally distributed their own films in India, it's been strictly promotional activity related to imported films and nothing more. This lack of activity was reflected in Columbia's offices — large, gloomy-looking, and piles of files with only the occasional film poster to liven up the place.

The setting, in more ways than one, was ripe for change. In 1996 the big bosses at Columbia Tristar Films (CTF) woke up to the fact that their Indian operations needed some serious rejuvenation. The first step: hire a new CEO. That's when mild mannered Uday Singh entered the picture. He was handpicked, he says, "to take forward Columbia Tristar's presence in India kicking and screaming into the 21st century". Given this mandate, Singh has wasted no time in translating it into concrete action.

Gone is the drab office. Everything is bright and spanking new. And there's a noticeable buzz in the air, what with Singh's team of media-savvy young business management graduates trooping around the place. Now Singh is talking of his most ambitious proposal yet — bringing Hollywood right into the arms of Bollywood. It seems almost unbelievable that Columbia Tristar will venture into the big and bustling world of Hindi films. But ever since it received FIPB approval in April for a 100 per cent subsidiary to distribute and produce Indian films, it has become the talk of the town.

Singh, the man at the centre of it all, confesses that life's suddenly moved fast forward. "I'd expected to get to this stage over a longer period." As he sees it now, getting into distributing and then eventually producing Indian films is a natural transition for CTF. Although Hindi film distribution has traditionally been a family-run business, it made perfect business sense for Sony to enter the Indian market in order to feed its television and music divisions. "With the setting up of Sony Entertainment Television (SET) and Sony Music, the theatrical arena was left open for us to explore," asserts Singh. In India since 1934, Columbia also happens to be Sony's oldest company.

When CTF announced that it was to distribute débutant director Raj Kaushal's, *Pyar Mein Kabhi Kabh* (*PMKK*), expectations reached a crescendo. "It was a perfect film to understand the business as well a quick platform in which to get into

lindi films with actually no financial nvestment," he says. High expectations coupled with a delayed release owing to the cricket World Cup, the box office performance of *PMKK* has been described in trade circles as abysmal. "It was a small niche film but here are no regrets," is Singh's rueful observation. Although *PMKK* is over and done with, Singh confesses an admiration for the new kind of financial model it represents — low budget, good music, good promotions. "It's still possible to make a profit on a project that is not of the blockbuster variety," he avers.

One of the high points of Singh's time at Columbia has been bagging the rights to market and distribute Disney films in India since September 1998. "We are also rated as one of the best-run offices in the Columbia chain," he boasts. As for the future, Singh envisages being involved in the distribution of 3–4 films a year, perhaps a co-production, eventually heading into actual production of Indian films. "We plan to be part of the developmental process of filmmaking which is a completely different ball game altogether. I see Columbia as a pan-Indian company — after all, we dubbed *Godzilla* in four languages."

For someone who has been involved with distribution since the beginning of his career, Singh has taken naturally to the business of cinema. While he was behind the setting-up of Philips' distribution plan for the entire southern region, in the second phase of his Philips career Singh was a business unit head for multimedia. A combined background in distribution and the media is what obviously made the Columbia bosses opt for the Hyderabad man.

He confesses liking grand-scale films like *Lawrence of Arabia*, *Gandhi*, and *From Here to Eternity*. Favourite Indian actors range from Amitabh Bachchan and Rekha of the past and Aamir and Kajol in the present. A good way for him to relax is a swim every day. Described by some in the film trade as brash and by others as dynamic, Singh's had the gumption to enter unknown territory. But the big challenges still lie ahead.

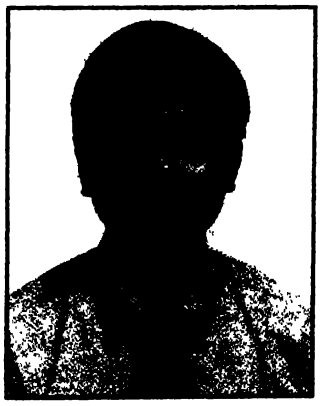
FRONTRUNNERS

Churning assets



SANJAY BORDE

An action-packed nine years of professional life and five job changes later, N. Krishna Kumar is excited about the newest turn in his career. A qualified chartered accountant, 30-year-old Krishna was recently appointed fund manager at Prudential-ICICI Asset Management which has Rs1,580 crore under management in its 10 schemes. He seems a natural for the job. "I've been investing in stocks since I was 18 years," he says gleefully.

Krishna started his career as an article clerk with Calcutta CA firm, LB Jha & Co, in September 1990. After three years of management, internal, statutory and tax auditing, he moved on to pharmaceutical company, Infra India Ltd. At Infra for a year, Krishna got a taste of international accounting standards as he had to constantly report to the parent company in the Netherlands. It was in 1994 that Krishna moved closer to his future when he joined Platinum Finance as a research analyst specialising in small and mid-cap stocks. A year later, he decided that Mumbai city, the financial capital, had to be his next stop.

For two years, Krishna researched the cement, cotton, textiles and non-ferrous metal sectors at UTI Securities Exchange Ltd. Then June 1997 saw Krishna joining Dresdner Kleinwort Benson India as vice-president, equity sales. Two years later, Krishna is thrilled to be part of Prudential ICICI Asset Management. "I've been lucky to be able to move from the sales side of finance to brokering." A keen oarsman in Calcutta, Krishna rues that he cannot find the time to keep up his rowing activities in Mumbai. But that's a small price to pay for being in the centre of action.

• GAURI VIJ

A stimulating sector

At 30, Vivek Mathur says his search for a job with both creative satisfaction and intellectual stimulation has finally ended. As the youngest manager in the management consultancy firm KSA Technopak, Mathur has been working extensively for the last one year with ITC for the company's soon-to-be-launched retail business. "Retail is the next best thing to have happened to India after the software revolution," says Mathur, who has also worked with Shoppers' Stop and a host of other projects overseas in the four-and-a-half years that he has been with KSA Technopak. "There is never a dull moment in consulting and retailing. You have to keep your antennae up all the time for new business," says Mathur.

The situation, however, was not always so satisfying for Mathur. An electronics engineer from ITBHU, Benaras, he started his career with HCL where "he put all that he had learnt to test" working on a mini computer but realised soon enough that he found the work atmosphere claustrophobic. He took a year off to do his MBA from FMS, Delhi. A marketing job with Arvind Mills (Mathur was instrumental in starting the company's office in Chennai) too became monotonous for Mathur after a-year-and-a-half. "Selling fabric day in and day out to the same set of manufacturers wasn't intellectually satisfying," explains he.

All this changed when Mathur joined KSA Technopak as a consultant in 1995. "The organised retail sector is just coming up. I see myself working in this field in the forseeable future," says Mathur.

• PUNAM THAKUR

Room for more

Indian Hotels Company or the Taj group of hotels, resorts and palaces continues to look outwards as it re-engineers and adopts an across-the-board best practices methodology. New professionals continue to be taken on board to provide the cutting edge of contemporary management.

Nihar Rao has been roped in from Reliance Telecom and has joined as chief information officer heading infotech systems. With Indian Hotels centralising operations out of Mumbai, Rao is expected to play an important role in broadbasing the common technology thrust. Shiv Kumar meanwhile has taken over as finance controller for the leisure brand, while Sandhya Kunjur joins the same division as marketing manager from Trikaya Grey.

But these are mid-level changes. There's lots going on at the top-level too, say Taj insiders. The biggest change is a consequence of S. Ramakrishnan's departure to Tata Teleservices as managing director as of September. This will naturally create a lacuna at the top since Ramakrishnan, who is part of Tata group chairman Ratan Tata's inner circle, was deputed to the hotel company as number two to managing director R.K. Krishna Kumar, after the 'resignation' of chairman Ajit Kerkar.

So who's going to be the new number two? Some say that Zubin Dubash, presently executive director-finance, has a good chance to get a leg-up. But the other buzz is that since this position was a transitionary one to enable the new management team to grapple with the changes, no one will be elevated to this position. That leaves a question mark over long-time director Camellia Panjabi who heads up marketing and what role she'll be playing in the new dispensation. Wags are seeing something in the fact that the widely-respected Panjabi has taken a sabbatical from her job recently.

PALASHRANJAN BHAUMICK

Ramakrishnan's exit from the Taj group has created room at the top

One-way tickets

Foreign postings are much sought after in most multinationals. Indeed, many of them use that as a bait to lure newly qualified MBAs. But if you happen to be a senior manager in Hindustan Lever, you'd be justified in viewing them warily. It is an open secret that at a certain level, these postings are one-way tickets. Between themselves, Lever managers openly talk about their colleagues posted abroad who are not likely to return simply because the Indian system cannot absorb them at the level they would be entitled to. And these cases could be of very senior managers who are even country heads at the moment. Such talk isn't idle. Recently, two managers working overseas have been given golden handshakes. Anjou Choudhry, formerly general sales manager in Mumbai, has quit his post in China and returned to Delhi. Vinod Punshi, once head of chemicals has also resigned. His last job was at Unilever, London.

Rolling stone

Sometime back we had reported that cigarette giant ITC was busy scouting around for a successor for vice-president, corporate communications, Adity Shyam, who is slated to retire next year (see *Business India* 22 February 1999). Apparently the search, in which chairman Y.C. Deveshwar has taken a personal interest, is over. The new man is former journalist S.H. Venkatramani who's been a bit of a rolling stone in the PR world. His stint at Essar in Mumbai lasted a few weeks after which he joined ICI in Delhi. A few months later he opted out for Ranbaxy, an assignment he took up less than a year ago. It was a well-known fact in PR circles that Venkatramani didn't take long to get disenchanted with the pharmaceutical company as well. Hopefully, the ITC bigwigs won't smoke him out too quickly.

Pricey CEO

Amongst the host of problems that ailing companies face, attracting people is one of the biggest headaches. Who wants to come on board a sinking ship? And if the post happens to be that of CEO then they'd better be prepared to shell out big bucks. The beleagured NRC Ltd of the G.P. Goenka group faced such a situation when it began scouting for a turnaround man.

They finally found him recently in P.S. Sharma who is the new CEO of the company even as Satish Budhiraja continues as managing director. Both report to the chairman. Sharma, who was president-plant operations at Sriram Rayons, is credited with turning it into a profit making entity. Getting a board level position and a generous package no doubt contributed to Sharma's decision. And of course, the challenge of turning around NRC. •

LG

PRESENTS

The Brand Affaire

14 - 17 Oct., 1999 Nehru Centre, Worli, Mumbai

A rendezvous of Brands

The Brand affaire is an opportunity for Organisations to exhibit their brands to a larger segment of population which is the end user of the brand. A LEADING INTERNATIONAL TRADING COMPANY, WITH WORLDWIDE OFFICES IS LOOKING FOR

PRESIDENT BUSINESS DEVELOPMENT

TO HEAD ITS OPERATIONS IN INDIA. THE INCUMBENT'S PRINCIPAL RESPONSIBILITY IS TO DEVELOP NEW BUSINESSES AND TO GROW THE EXISTING OPERATIONS OF THE GROUP. THE OBJECTIVE IS TO CREATE A DYNAMIC MARKETING ORGANISATION TO DEAL WITH THE EMERGING OPPORTUNITIES AS ALSO TO MEET THE FUTURE CHALLENGES.

THE APPLICANT SHOULD HAVE EXCELLENT EDUCATIONAL BACKGROUND WITH PROVEN RECORD OF SUCCESS IN THE RELEVANT AREA. THE APPLICANT MUST POSSESS GENUINE INTEREST IN BUSINESS DEVELOPMENT WITH INNOVATIVE IDEAS. ADDITIONALLY, THE JOB ENTAILS A HIGH DEGREE OF INITIATIVE, CREATIVITY AND LEADERSHIP QUALITIES.

BESIDES A PROFESSIONAL WORKING ENVIRONMENT, THE PACKAGE OFFERED SHALL COMMENSURATE WITH THE SKILL OF THE INCUMBENT AND SHALL BE COMPARABLE WITH THE BEST IN THE INDUSTRY.
AGE GROUP 40 YRS.

SerbyMAJ5105

CORPORATE MANAGER

We are a rapidly growing twenty-three year old Oman - based group of companies. The group of companies operate currently in Oman, UAE, Qatar and India and are involved in diverse activities such as interior decoration, real estate development and construction, trading pre-engineered buildings and manufacturing. The company's inherent strength is its commitment to quality standards.

The company intends to recruit a dynamic Corporate Manager to be based at Muscat, Oman reporting to the Group Chief Executive. The incumbent will be required to carry out a varied range of functions which include the responsibilities of co-ordination of the group's diverse activities and implementation of new projects. The candidate must possess drive and initiative to independently carry out assignments. The applicant should be an engineering graduate from IIT with post graduate management qualifications from IIM or XLRI. The applicant should be in his early thirties with experience in production of about 3 years. Salary and benefits will not be a constraint.

Applications accompanied with a detailed curriculum vitae and a recent passport sized photograph are to be mailed to:

Box No. AA/560/DS/2,
Business India, 68/1, 2nd Cross, Lavelle Road, Bangalore 560 001.

Product Managers

Location Metros/Mini Metros

You should be a Post Graduate in Business Administration with a minimum of 5 years of experience or graduate with 7 years experience in direct selling (preferably in the express/courier industry) of which atleast 2 years are at a supervisory level with involvement in developing sales infrastructure & systems, introducing new products, achieving targets through a sales force.

The job involves formulating of sales strategy for the courier product, market penetration, motivating large sales forces, building systems and be responsible for sales targets and realisation.

Exposure to computerised environment is essential.

Asst.Managers-IT

Location Metros/Mini Metros

You should be an MCA or Post Graduate/ Graduate with PG Diploma in Computers with around 4-5 years of experience of which 2-3 years should be in the managerial position.

The candidate should have sound knowledge of Oracle, NT & Networking (LAN & WAN) and good working knowledge of Foxpro/ Clipper and Novell.

The job involves managing the Regional IT activities, managing multilocational infrastructure, implementation & maintenance of application, training & handling of a big team.

The company offers ample opportunities for professional advancement along with excellent remuneration package. Interested candidates may mail/fax in their curriculum vitae along with passport size photograph in confidence within 7 days to : General Manager - Personnel & HR

Gati Corporation Limited, 1-7-293, M.G. Road, Secunderabad - 500 003. Fax : 040 - 7845808.

Nibbling away...

.at the original byte, Apple Computer, maker of the world's first popular desktop computer

APPLE

By Jim Carlton
Random House Business Books, 1997
pp469, £8.10

After Tracy Kidder's seminal *The Soul of a New Machine*, this book probably qualifies for the award for the best in-depth look at the workings of a 'leading-edge' technology company. Apple Computer is the brainchild of two seriously nerdy computer freaks, Steve Jobs and Steve Wozniak. It made the world's first popular desktop computer, the Apple II, and followed up this success with the wildly successful Macintosh. That propelled the company into the stratosphere, with sales touching well over $9 billion in 1992.

Unfortunately, the company has never been able to touch those heights again. It has lost both share and sales ever since, repeatedly disappointing a huge and loyal band of users and dealers again and again with market and product decisions rapidly reversed even before they are properly implemented. More than any appliance ever, this company's products have evoked a fervour from users that verges on religion.

To attempt to analyse this amazing roller-coaster ride Jim Carlton, a *Wall Street Journal* writer based in California, spoke to literally hundreds of insiders and other Silicon Valley residents.

People from the subcontinent may find the omission of well-known Indian names from the slew of interviewees slightly strange. About the most familiar recent voice missing from this opus is Sabeer Bhatia, who left Apple to found Hotmail. Satjiv Chahil, another Indian whose influence on the company in the 1990s was phenomenal, finds mention, but no direct quote. Gursharan Sidhu, whom Jobs wheedled to Silicon Valley from his assignment with Salinas' Mexican government in the early 1980s, came in to invent desktop publishing, giving the Mac a tenacious hold on an entire industry, and ended his career with Apple as a Fellow, a sort of director without specific portfolio, a post given to the company's most valued employees. Sidhu finds no mention at all in the book, surely a bit odd when other Fellows do crop up here and there.

Having missed some of these notables, the author does manage to meet just about everybody else, even people whose record does not come off too well (which is most of Apple's senior management from time to time) in his effort to unearth the story of how a dream gets tarnished.

As is mostly acknowledged, a large part of the blame lies in the company's intransigence in sticking to its proprietary format (it held tight patents on both software and hardware, and except for a brief period in the 1990s never licensed other manufacturers). The IBM-designed personal computer, on the other hand, while never "insanely great", was accessible to anyone with the drive to design a better manufacturing process. Companies like Dell and Compaq could not have succeeded (or even existed) had the IBM-compatible not been a viable concept.

Apple, we find out, did not maintain its inward-looking approach by choice, but by sheer bloody-mindedness. Time and again senior executives crafted alliances with the industry's best names, all of whom needed to be in the desktop market space. Apple, too, could have done with some support away from the desktop, but it was not to be. Sun, Silicon Graphics, IBM, Oracle, and others came and went. There were talks of mergers, strategic alliances, acquisitions. Jobs went away and came back, following several generations of variously enabled and disabled chief executives.

The revolving door began with John Sculley, the Pepsi man who made "the other guy" blink. After a while he made Jobs blink, too, and forced him off the board. Jobs moved to found his own high-technology venture, NeXT Computer, of which more later. Sculley had to move on after a while, as Carlton describes, primarily because he thought of himself as technologically abled in a world of nerds. He was replaced by Michael Spindler, who fancied himself as the salesman *par excellence*. Spindler spun off when sales drooped, to be replaced by Gil Amelio, who had built a reputation for himself as a turnaround artist at National Semiconductor.

Turnaround meant cost-cutting, in a technology industry where falling behind can be terminal. However, the company found the cash to buy off NeXT, mainly for its operating system, because MacOS was beginning to creak and sway. The NeXT OS hybrid, codenamed Rhapsody, was to revolutionise the Mac operating systems with its advanced features, but alas, it also ran into a revolving door when...

...Jobs came back to Apple as acting chief executive, easing Amelio out. He also retired Rhapsody, bringing MacOS8.0 back into focus. He brought in $150 million of cash support from 'arch-enemy' Microsoft. And, most importantly, he introduced the next "insanely great" Mac, the iMac. This product, built on the fruit of a collaborative chip design effort between Apple, Motorola, and IBM, surpassed all previous bounds in PC design. While Compaq had introduced the 'one-piece' home PC some years before, it never had such an appealing design and performance. Amelio had succeeded in reducing the complex Mac product offering, spanning some 40 models, to the minimum, but Jobs enhanced that decision by creating the world's first true home product.

This is where the book, 'revised and updated' as this edition is, ends. Carlton predicts that Jobs has really blown it, this is goodbye Apple, the iMac can't possibly succeed, and most

importantly, it can't rescue Apple. Having spent most of the book in subtle and not-so-subtle attacks on the poor performance of Apple chiefs and department heads (Sculley, Spindler, Gassee, Diery, Bastiaens, Amelio, and, of course, Jobs, among the many), Carlton now tacks on a hurriedly written chapter to bring the book as near the day as possible.

As we all know now, the tables are truly turned on Carlton. The iMac, far from flopping, has been a brilliant success. Demand has not flagged, the product is getting ongoing improvements, which keeps the market buzzing, and best of all, the company has reported profits for seven straight quarters, something that it hasn't managed since 1995. Jobs has just announced the iBook, a laptop designed for aesthetics with performance, which has been getting rave reviews and, more importantly, positive sales since July.

All in all, the book is unputdownable for anyone who ever aspired to own a Mac but never knew whom to ask for help when things went wrong (Apple India, which doesn't figure in the book, is another of Apple's unpredictably poor decisions, neither providing good service and support nor getting recognition from the head office), especially if you live in India. The iMac has not had the stunning success here it enjoys in other markets, and this is largely because the company is unable to meet the stringent price barriers set by the Wintel (*Win*dows, from Microsoft, with In*tel*, the chipmaker) alliance. At over Rs60,000, the iMac is singularly more expensive than the Pentium III machines running Windows, which can be got for as low as Rs40,000 with somewhat similar configurations. In the US, contrastingly, the iMac retails for around $1,300, comparing to above $1,000 for a decent branded PC. Be that as it may, Apple is back to stay a while, and given a much more comfortable relationship with its principal software supplier Microsoft, should be around for another look through rosier-tinted spectacles than this otherwise excellent book provides.

Gang of forty

FACES
Forty In The Fray

By Janardan Thakur
Business Publications Inc, 1999
pp241, Rs150

For whom are you going to vote in this election? Not too sure? Well, it's hardly your fault for today even a Laloo or a Mayawati can tilt the scales in favour of a political formation. However, what can help you make a decision is *Faces* by veteran journalist Janardan Thakur (who incidentally is no more), released at this very opportune moment.

Our politicians are as alike as chalk and cheese. Or to put it another way pasta and *sarson ka saag*. However, Thakur manages to detail these disparate personalities with elan. No ordinary narrating for Thakur. The politicians are treated like characters of a play; the titles too hit the nail on the head, in a manner of speaking. So Farooq Abdullah is 'Kashmir's Middleman', K. Karunakaran the 'Malayalee Manipulator', Sharad Pawar is the 'Clever Go-getter', and Uma Bharati, what else, but 'Glamour in Saffron'.

The book is loaded with interesting anecdotes, hits and misses in the lives of politicians, the behind-the-scenes manoeuvering that is an inseparable part of Indian politics, and of course the role destiny has chosen for the leading lights. Deve Gowda clearly emerges as a man of destiny. Gowda, who must have never in his wildest dreams even thought of crossing the borders of Karnataka, became prime minister thanks to his equation with Narasimha Rao. And this, when the NF–LF leaders were only considering Jyoti Basu and the Raja of Mandi (V.P. Singh) for the top job.

Thakur compares Atal Behari Vajpayee and Lal Krishna Advani — the two most happening people of the coming millennium — to General Patton and Bradley, who led the Allied onslaught on the Nazis. Carrying the analogy further, the author writes that though it was Patton's charisma that is the most remembered, those who fought in the Second World War would tell you that Bradley's (Advani's) contribution was no less vital in winning the war. 'Always The Regrets' on Advani is the tale of a politico who could have become prime minister of the world's largest democracy were it not for the tragic events of 6 December 1992.

Though politics is a written-to-death topic, it is the disparities in the personalities of politicians that makes for interesting reading. On the surface, Vajpayee and Jyoti Basu belong to a different league altogether from Laloo and Kanshi Ram. But Thakur firmly believes that when it comes to Indian politics there's place for everyone; the common thread running through all of them being that they are all consummate politicians who have their fingers on the pulse of the common man.

Though on personalities, the book also offers a bird's-eye view of post-Independence Indian politics. It is recommended for those who want to know what makes Indian politicians tick. Each personality receives fair treatment in terms of number of pages and the sequence is not of any particular importance. For example, you find the chapter on Vajpayee almost at the fag end of the book.

A surprising omission from the book is Narashima Rao. Is the man responsible for setting in motion liberalisation, which has changed the face of India forever, not worth a mention? Maybe his lacklustre personality, and the fact that Rao is now forever consigned to the rank of the has-beens, may have something to do with his omission from this otherwise very comprehensive book.

Some of the important chapters like the ones on Vajpayee, Sonia Gandhi, and L.K. Advani could have done with more biographical information However, standing out in the glut of other political books, *Faces* seems to be a winner, entertaining as it is, also saving the reader the trauma of going through endless facts and figures.

♦ ROY VARGHESE

The official version

THE SENA STORY

By Vaibhav Purandare
Business Publications Inc, 1999
pp462, Rs250

The 1960s were a decade of ferment in Indian politics. The innocent idealism of the Independence generation was fast losing its sheen. Independent India realised that political idealism was ill equipped to deal with the multitude of problems that the country and its people faced. The decade saw the end of the Nehruvian era, and with it the beginning of the politics of degeneration; politics based on the narrow perspective of regionalism. Regional aspirations were barely contained during Nehru's times; after him, the floodgates were forced open.

The Dravidian movement in Tamil Nadu began in the 1920s, but it acquired political teeth only in the 1960s, as did the Akali Dal in the Punjab. The communists in West Bengal would not like to be called a regional force, but they were among the first in the 1960s to demand the implementation of the policy of preference for the *bhoomiputras* of Bengal.

At that time Jyoti Basu became, for a brief while, the deputy chief minister of the state, largely on regional appeal, and his party formed the government in coalition with a regional variant of the Congress, the Bangla Congress. The obvious explanation for the rise of regional forces was the weakening of the Congress. For the first time the party was voted out of power in the states and could barely manage to hang on at the Centre.

The Shiv Sena was born out of the turmoil of that decade. The Bombay Presidency's trifurcation in the 1950s was incomplete and the Samyukta Maharashtra movement led by the socialists and communists in the latter part of that decade forced the Congress to include Bombay (now Mumbai) in Maharashtra.

However, soon thereafter, the left-oriented liberals went their separate ways and the Congress soon re-established its hold in the newly created Maharashtra. While attempting to explain the rise of the Shiv Sena, popular journalism and political storytelling always resort to the much-(ab)used theory that the local population was not given an adequate share in the economic spoils of new state. Unfortunately, Vaibhav Purandare's book also falls into the same trap.

This caused resentment against the "outsider" and gave an impetus to forces like the Shiv Sena. If this was, indeed, the Sena's aim, it should have stuck to it, instead of discarding it at as soon as it realised that the Marathi *manoos* plank could not give it any major political dividends.

Purandare's book details the rise of the Sena meticulously and with dexterity. Though it is not mentioned anywhere, the book is virtually an official history of the Shiv Sena. Nothing wrong with that. The Sena has a particular ideological mooring that it has never cared to hide or camouflage. But the almost one-sided presentation of the 'facts' deprives the book of a richness it otherwise could have had.

The author adds his own observations to balance and even out any adverse remarks and provide a perspective which is often the Sena's official line of thinking

Purandare quotes some of the harshest critics of the Sena (Mrinal Gore and Ahilya Rangnekar, for instance). He also quotes well-known academic experts on the Sena like Dipankar Gupta. But after every quote that seems even remotely critical of the Sena, the author adds his own observations to balance and even out any adverse remarks and provide a perspective which is often the Sena's official line of thinking.

This too-clever-by-half ploy does not serve any purpose. In fact, it robs the book of its seriousness. After a point the book begins to read like an official text prepared by the Sena leadership to explain every critical observation raised since its inception by people opposed to the Sena's ideology.

This first authentic history of the Shiv Sena also fails to live up to expectations because, like most Shiv Sainiks and sundry political commentators, Purandare equates the Shiv Sena with Bal Thackeray. For the followers of the party, the two are inseparable. But this is strictly not true: it hasn't been for nearly two decades now.

The party has grown to its size during the last decade and a half not because of, but in spite of Bal Thackeray. While not denying Thackeray his claim to fame, what cannot be overlooked is that, during the late 1980s and the 1990s, the Shiv Sena has been filling up the political vacuum created by the shrinking base of the Congress.

The role other backward castes have played in its rise is also not properly explained. The author fails to comprehensively understand several political nuances that have made the Sena the force that it seemingly is at present. What is also not adequately explained is the Sena organisation's inherent weaknesses.

The recent spat between Uddhav and Raj Thackeray may not lead to a split that followed an earlier one between Chhagan Bhujbal and Manohar Joshi, but is indicative of an impending crisis that may completely destroy the party after Bal Thackeray.

Though the book only mouths the Sena's official line, it is nevertheless important because it is one of the few books on the Shiv Sena. It is surprising that academicians or journalists have not adequately explored a phenomenon like the Shiv Sena. There are just a handful of books and research studies on the Sena; most of them rather outdated. Even in Marathi there has been nothing substantial on this sociopolitical and cultural phenomenon called the Shiv Sena, the notable exception being Prakash Akolkar's *Jai Maharashtra*, which is a far more politically mature book.

MAYANK BHATT

FILMS: WORLD'S FAVOURITE STARS

Not the usual suspects

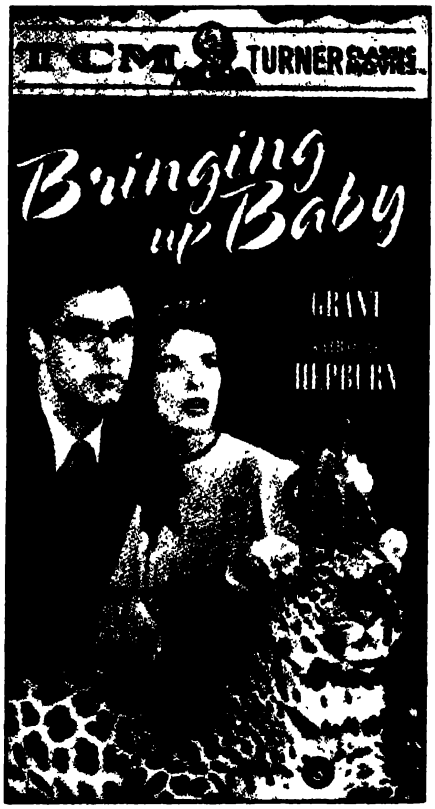
What? A list of 25 greatest male stars and no Robert De Niro? No Dustin Hoffman? Not even Tom Cruise? And a list of 25 female stars *sans* Meryl Streep? Has America gone mad? No, it's just that the American Film Institute (AFI), smitten by the idea of publishing 'best' lists, decided that, to be nominated for its list of 50 greatest ever film stars, the actor should have debuted before 1950. Which left the likes of Sharon Stone and Jessica Lange no chance of being acclaimed as all-time greats. Had Sean Connery been around in films in the first half of the century with a few black-and-white films to boast of, he would have made it to the list. Since, he wasn't, he hasn't.

Poor De Niro. He made a black-and-white film and turned in one of the greatest performances in screen history as boxer Jake La Motta; pity is Martin Scorsese made *Raging Bull* (1980) in the wrong half of the century. So, who's made it to the list of 50? Humphrey Bogart, the archetypal lone wolf and star of classics like *Casablanca* and *The Maltese Falcon*, has been rated the greatest male star, while Katharine Hepburn, the beautiful and gifted actress of *The Philadelphia Story* and *Bringing Up Baby*, is the number one female star in history. Bogart and Hepburn came together in John Huston's *The African Queen* and turned the picture into a sheerly enjoyable, scintillating affair.

Bette Davis, Audrey Hepburn, Ingrid Bergman, and Greta Garbo take the next four spots after Katharine Hepburn, while Cary Grant, James Stewart, Marlon Brando, and Fred Astaire follow Bogie on the list of male stars. After naming the top 100 films last year, AFI announced a list of 500 nominees for history's greatest movie stars. Film directors, actors, critics, Hollywood industry types and high-profile cineastes were invited to pare that list down to 50–25 male and 25 female stars. (The last time round Bill Clinton sent in his list of top 100 films).

The results are provocative, to say the least. American domination was only to be expected, but since Ingrid Bergman (4), Greta Garbo (5), and Sophia Loren (21) have made it, it is difficult to understand why Anna Magnani didn't. French actress Jeanne Moreau was not even nominated. Accomplished British actresses Joan Fontaine and Jennifer Jones fail to make the 25, as do Deborah Kerr, Olivia de Havilland, Lana Turner, and Louise Brooks. This is particularly surprising considering the presence in the list of Mae West and Shirley Temple. You might have expected to see Gloria Swanson somewhere, if only for her unforgettable performance in Billy Wilder's *Sunset Boulevard*.

The absence of several distinguished British actors in the male list is no less surprising. Charlie Chaplin is at number 10 and Laurence Olivier, who many would rate among the greatest stage and screen actor of this century, is at 14. Apart from them, there is no Alec Guinness, he of the magical chameleon talent, John Gielgud,



1

❶ *Katharine Hepburn*
❷ *with Humphrey Bogart in* The African Queen
❸ *with Cary Grant in* Bringing up Baby.
❹ *Bogart and Ingrid Bergman in* Casablanca.
❺ *The greatest actor of them all?*

23. Robert Mitchum	23. Carole Lombard
24. Edward G. Robinson	24. Mary Pickford
25. William Holden	25. Ava Gardner

Charles Laughton, and Ralph Richardson. It's strange to have Edward G. Robinson as the 24th most admired male star in history when the marvellously talented Trevor Howard, the pride and glory of David Lean's *Brief Encounter*, fails to find a place.

The omission of Richard Burton is a little striking too. Peter O'Toole was not even among the 250 nominated actors, though it is possible he made his debut after 1950. But that certainly isn't the case with Marcello Mastroianni, whom AFI historians perhaps forgot. It is amazing that they did not consider the Italian actor even worthy of nomination. Montgomery Clift – who can forget him in Howard Hawks' *Red River* – doesn't make the grade, while Robert Mitchum does. Paul Muni, the original *Scarface* much before Al Pacino was even born, isn't there either, while Kirk Douglas occupies a relatively high perch at 17. More surprisingly, how come America forgot its love affair with Ol' Blue Eyes? Frank Sinatra is not in the list. Ditto swashbuckler Errol Flynn, whose action-adventures in the first half of the century wowed the world. And John Huston?

AFI has certainly touched off what it wanted to through its list of greatest stars — a controversy. AFI spokesman Seth Oster said, "We hope that this list will ignite passions and spark debate. We embrace any controversy about this year's list because it shows people are passionate about the movies." Apart from the controversy surrounding the names that are on the list and those that are not, the AFI's list has ignited some passion about its brazen attempt to collaborate with CBS Television to bring in bagfuls of money. AFI is a respected, publicly-funded arts body that encourages that study of cinema as an art form, but in recent times it has been indulging in controversial exercises to bring in money through television shows. Its collaboration with CBS last year for a programme on the 100 greatest ever films (which had Orson Welles's *Citizen Kane* at number one) earned very high ratings and top sponsors rushed in with advertising support.

The star list programme shown a few weeks ago brought in similar sponsorship gains. The star list has surprises, though nothing quite as stunning as the ones thrown up in BBC's online list of the greatest stars of the century, which has Amitabh Bachchan at top spot and, would you believe it, Govinda at number ten. Looks like it's the season of mad lists.

• SANJEEV VERMA

GOURMET: INDIAN COOKING

A culinary kaleidoscope

The story of Indian food is wondrous and sumptuous. If food means a little more to you than merely a means to sate the urge to eat, you are unlikely to tire of the countless tales and legends behind Indian cuisine. You could at random pick any favourite dish - 'Haleem', 'Meen Moily', 'Yakhni Pulao', or the plain and simple 'Adraki Khichdi', for that matter – and discover a rich and fascinating tale behind it. No wonder the historical, regional, and religious resonances of Indian food keep gourmets spellbound, ever on the lookout for information to sink their teeth into.

The search for good, authentic writing on Indian food, just like the quest for new recipes, is far from easy. Published research material on the history of Indian cuisine is astonishingly meagre. The best hope for dogged foodies usually is to speak to families that still use traditional recipes in the kitchen. You find these families in Delhi, Lucknow, Hyderabad, Calcutta, or Goa, and from their reminiscences of their grandmothers' recipes string 'together some fine stories about Indian food. Any effort made to add to the insufficient body of food literature can only be lauded.

The Pleasure of Indian Cooking, a new CD-ROM produced by Pune-based Ascent Interactive Multimedia Services and marketed by BPB Multimedia, offers a remarkable journey into some 5,000 years of Indian cuisine. Both in technique and style it lacks the slickness of a first-rate multimedia product, but the culinary insights it provides turn it into a significant addition to the grossly inadequate body of authentic published material on Indian cuisine. The quality of sound and images contained in the disc, apart from the choice of these excerpts, is far from good, but the rigour that has gone into the information researched, culled together, and offered is never in doubt.

Particularly fascinating are the recipes from the Harappan and Aryan periods. Many of the current food habits in India can be traced to the Aryan civilisation, which did not see food merely as a means of physical sustenance but as part of a cosmic circle. Food at that time was a part of spiritual and temporal life. "What you are is what you eat," was the Vedic dictum and food was eaten according to region, season, and climate. The ginger-flavoured rice and lentils

oday's Adraki Khichdi), for instance, widely considered poor man's food, ut had with all the accompaniments ghee, papad, curds, and pickle – it has een a favourite for nearly 3,500 years. Emperor Akbar enjoyed it on days of abstinence, when no meat was used.

It is these simple recipes that make his disc unusual. From the Buddhist period there is the recipe for 'Shashkuli', today's 'Tilkut' — sesame seeds, one of the nine sacred grains, compounded with coarse rice and jaggery and rolled into balls. Haleem, cooked in many kitchens, especially Hyderabadi, is offered as an example of other faiths and their influences on Indian food. One of the Nizam's favourite dishes, this dish from the Hyderabadi royal kitchen is a finely ground paste of wheat and meat. It is one of those dishes that is difficult to get right; it tends to be either great or disastrous. Ditto for 'Dalcha', mutton stewed with dals and tamarind, and 'Shahi Kaleji', liver roasted on charcoal and fried with spices and placed in curd.

Indian food is broken up into sections: history, spa cuisine, regional, popular, and festival. The section on festival food is particularly interesting, with video clips setting the scene for various festivals – Id, Diwali, Onam – and with suggestions made for an authentic festival platter. The Baisakhi platter is absolutely mouth-watering, with 'Bhuna Gosht', 'Palak Paneer', 'Chana Pindi', 'Dahi Wada', 'Matar Chawal', 'Imarti', and 'Kheer', but the rumbustiousness associated with the Punjab festival is missing in the video lip. It is presented almost as a staid *irtan* and *langar* affair in a gurdwara. The Ramzan Id platter with its mutton delicacies and savouries, like the classic 'Sheer Khurma', is no less delectable. Ditto Diwali, though, inexplicably, it's mostly sweets that are suggested for the festival meal; the puris and kachoris, and the inevitable 'Seviyan' (vermicelli kheer), are missing. For Holi food there no mention of 'Gujiya'.

The section on festival food proves one thing: most Indian festivals are not so much about fasting as feasting. In particular, the food associated with Ramzan is a gourmet's delight. As is the case with Durga Puja and Onam. The regional food section is comprehensive and has some interesting recipes, though the absence of 'Gushtaba', 'Rista', and 'Tabak Maaz', the Kashmiri delights, from North Indian food is surprising. A Kashmiri meat spread is for most carnivores the jewel in the crown of Indian food. There is also not enough about Malabar and Mangalorean food. Its technical limitations apart, *The Pleasure of Indian Cooking* clearly reveals that CD-ROM is the right vehicle for a journey through the stunning variety and richness of Indian cuisine.

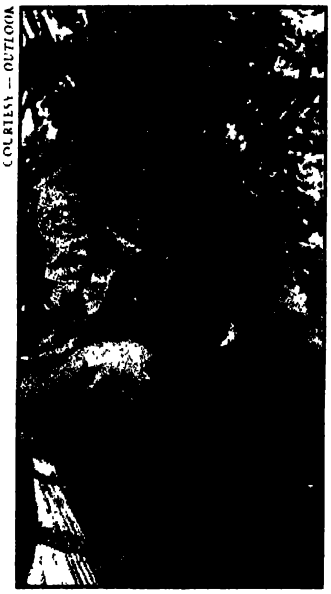
• SANJEEV VERMA

HINDI CINEMA

Return of the musical

Remember the golden age when Bharat Bhushan was the presiding deity — as movies like *Baiju Bawra* and *Mirza Ghalib* dominated the national consciousness? For years Hindi movies ran out of tune with reality after the eclipse of Rajesh Khanna with the gargantuan Amitabh Bachchan bestriding Hindi cinema like a colossus. Salim-Javed's pen and Yash Chopra's, Manmohan Desai's, and Prakash Mehra's cinematic craft took Bachchan to the zenith. Movie after movie showcasing his histrionic talents ran to packed houses.

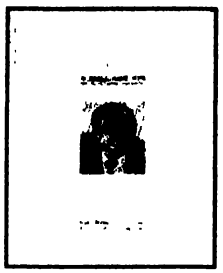
Till the audiences were simply devastated. Before Rajesh Khanna, who used the team of Kishore Kumar and R.D. Burman to great effect, Rajendra Kumar, Shammi Kapoor and Dilip Kumar had played the romantic hero to perfection. Music was all-pervasive till the dawn of the Bachchan era. Bachchan with the Paul Muni voice was a revelation; tall, gawky, and yet intense, with a penchant for dramatic roles. *Zanjeer, Deewar, Trishul, Kala Patthar, Lawaris, Muqaddar ka Sikander, Adalat, Kaalia, Don, Natwarlal, Naseeb, Amar Akbar Anthony, et al* displayed emotional angst hitherto unknown and unseen.



But the advent of *Qayamat Se Qayamat Tak* changed everything, Bachchan suddenly appeared over the hill as the neoteric generation lapped up Aamir Khan singing *Papa kehte hain*. This was followed in quick succession by *Maine Pyaar Kiya* and *Hum Aapke Hain Kaun*, the chatterati describing them as three-hour-long *chitrahaars*. Music was back and how! Yash Chopra, who had tried to change Bachchan's image with *Kabhi Kabhi* and *Silsila* with excellent music, now moved into overdrive. *Chandini* was followed by his son's maiden venture *Dilwale Dulhaniya Le Jayenge* and then his own *Dil To Paagal Hai*. All three movies gave hit music. Jatin-Lalit and Uttam Singh became household names in the bargain.

So, the importance of music became a vital ingredient all over again. This year we have seen *Hum Dil De Chuke Sanam*, brilliantly photographed, with rich sets and colours set to the incomparably refreshing music of Ismail Darbar. The first half of the film just hits you between the eyes. *Dol baje, dum dum baje dol* and *Chand chupa anchal mein* are exquisite compositions, not just the way they've been shot by director Sanjay Leela Bhansali but also for their canvas and colours. Now Subhash Ghai has also attempted a musical – *Taal* – with *Ishq bina kya jeena yaaron, Ramta jogi*, and *Taal se taal mila* standing out for A.R. Rahman's music. Coming up is Ramgopal Varma's *Mast* with music by Sandeep Chowta. In fact, Ramgopal Varma created a brand new genre with *Rangeela*, which zoomed to the top of the charts with its fascinatingly modern fusion music. Rahman's music for *Roja, Bombay*, and even *Dil Se* set the tone of for the change in Hindi cinema. Rajshri's *Hum Sath Sath Hain* is also slated for a Diwali release. One can expect it to be another musical bonanza.

There's no escaping the importance of music in contemporary cinema. Television has proved to be the whetstone for Hindi film music as it enables the movies to generate extra cashflow streams. This is the locomotive for audio sales as it takes music into the living rooms of the hoi-polloi. This trend has meant that producers and directors are waking up to the need of more songs in their movies.



• SANDEEP BAMZAI

Nobel aspirations

COURTESY — OUTLOOK

Booker in the bag, Arundhati Roy seems to be aiming for the Nobel. This fortnight, she was leading the "Rally for the Valley" in Gujarat and Madhya Pradesh and then hurrying to catch the last leg of the Global Peace March, a protest against nuclear weapons. After her Booker prize-winning novel, "The God of Small Things", Roy has provided further evidence of her prowess by writing emotively, and not a little hysterically ("I secede," she wrote after the Pokhran blasts!), on the nuclear blasts and the Sardar Sarovar Project Both times her unlikely vehicle was a weekly news magazine. Clearly carried away by the response to her espousal of the two causes, Roy's ambition has soared and she is busy whipping up frenzy on important issues. Treated like a celebrity by crowds unlikely to have heard of "The God of Small Things", Madam Roy explained that "the people, seeing a famous writer fearlessly on their side, know their whisper of protest is being heard". Meanwhile, *amicus curiae* K.K. Venugopal wants the Supreme Court to warn 'the famous writer' because she is violating the apex court's order restraining her from commenting on the pending Sardar Sarovar case. Venugopal and the Supreme Court had better watch out: Roy's next rally might be against their effort to muffle freedom of expression! •

Fitting tribute

Last fortnight, a tribute was paid to two leading industrialists — Aditya Vikram Birla and Ghanshyam Binani. 'A Brilliant Sun,' is a biographical movie on Birla directed by Zafar Hai. In spite of adequate quality material

HARSH MAN RAI

UMESH OSWAMI

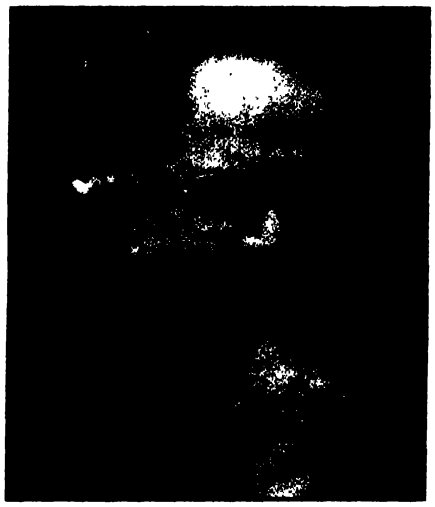
He asked you eight years ago if "you were you ready for the magic?" with the Pepsi commercial that starred Juhi Chawla and Remo Fernandes. Today Vidhu Vinod Chopra is trying to "add a little magic to your life" with his ICICI commercial. Chopra's canvas has always been large so don't be too surprised to spot an artistic touch in the commercial, along with a catchy tune composed by the trio — Shankar Mahadevan, Loy Mendonsa and Ehsaan Noorani — in crowd sequences with 2,500 ICICI bank employees, shot by four cameramen at Mumbai's busy, bustling Flora Fountain. "It's really been a collaborative effort between Contract's Ravi Deshpande and ICICI, just like all film making is." Although, Chopra is open to working on four to five ads a year, make no mistake, he's clearly a feature film maker first. Known best for his gritty film *Parinda*, Chopra is busy recording music for his next production, *Mission Kashmir* and gearing up for a June 2000 release. •

on Birla not being available in the form of photographs and video sources, Hai has tried to capture the relentless thrust of Birla's business interests across the globe. *A Brilliant Sun* is possibly one of the biggest documentaries produced in India with contributions from Shiv Kumar Sharma, Hari Prasad Chaurasia and Roshan Seth. On the other hand, the Binani Trust released the book 'Many Splendoured — Ghanshyam Binani' the story of the House of Binanis written by veteran journalist M.V. Kamath and 'Karmayogi ke Pathik' memoirs penned by Ghanshyam's wife Padma Binani. •

Distinguishing marks

Vijay K. Thadani, CEO and one of the founder members (employee No 2) of NIIT Ltd, was given Distinguished Alumnus of IIT Delhi status by the institute's governing board chairman, Vijay R. Kirloskar, on 14 August, 1999. The previous evening, Thadani was feted by his hostel, Jwalamukhi, which counts him among its more memorable former inmates, for reasons that aren't all academic. Thadani was a first class student of the class of 1972, together with Rajender S. Pawar, vice-chairman of NIIT, who also won the Distinguished Alumnus award, the very first year it was instituted. The two got together nearly 10 years after graduating to start NIIT, after working in industry. They have brought the company full circle now to their academic days, having moved the company's research and development activity in education to a special on-campus facility at IIT(D) called Synergy Labs. Other awardees include Rajat Gupta of McKinsey and Y.C. Deveshwar of ITC. •

Scoring an eagle



Tandon. Turnaround. Teeing off. After putting the Pune-based Alfa-Laval (India) Ltd back on even keel, the Rs132-crore company's managing director Satish Tandon, returned home to Delhi to organise a golf tournament. His old cricketing buddy, Kapil Dev, won the first Alfa Laval Ambassador's Cup in a field of 20-odd industrialists and the same number of foreign and Indian cricketers who participated. "The idea was to brand Alfa Laval outside Pune," Tandon explains. "I was very excited by the idea when Ajay Jadeja suggested it to me." The invitations to and confirmations by all the cricketers including the 10 from abroad — Craig Evans, Allan Border, Lance Klusener and Mark Boucher among them — were handled by Jadeja, while Tandon invited the CEOs of various client companies. To bring in a spirit of conviviality, Tandon, his wife and daughter also played. "This was a mega-event in the north," says Tandon, who moved out of Delhi for the first time in his 31-year-old career with the company when he was made MD in the beginning of 1998. "We will now have similar tournaments in the south and the east too," he says. •

"Influx into Mumbai must be curbed"

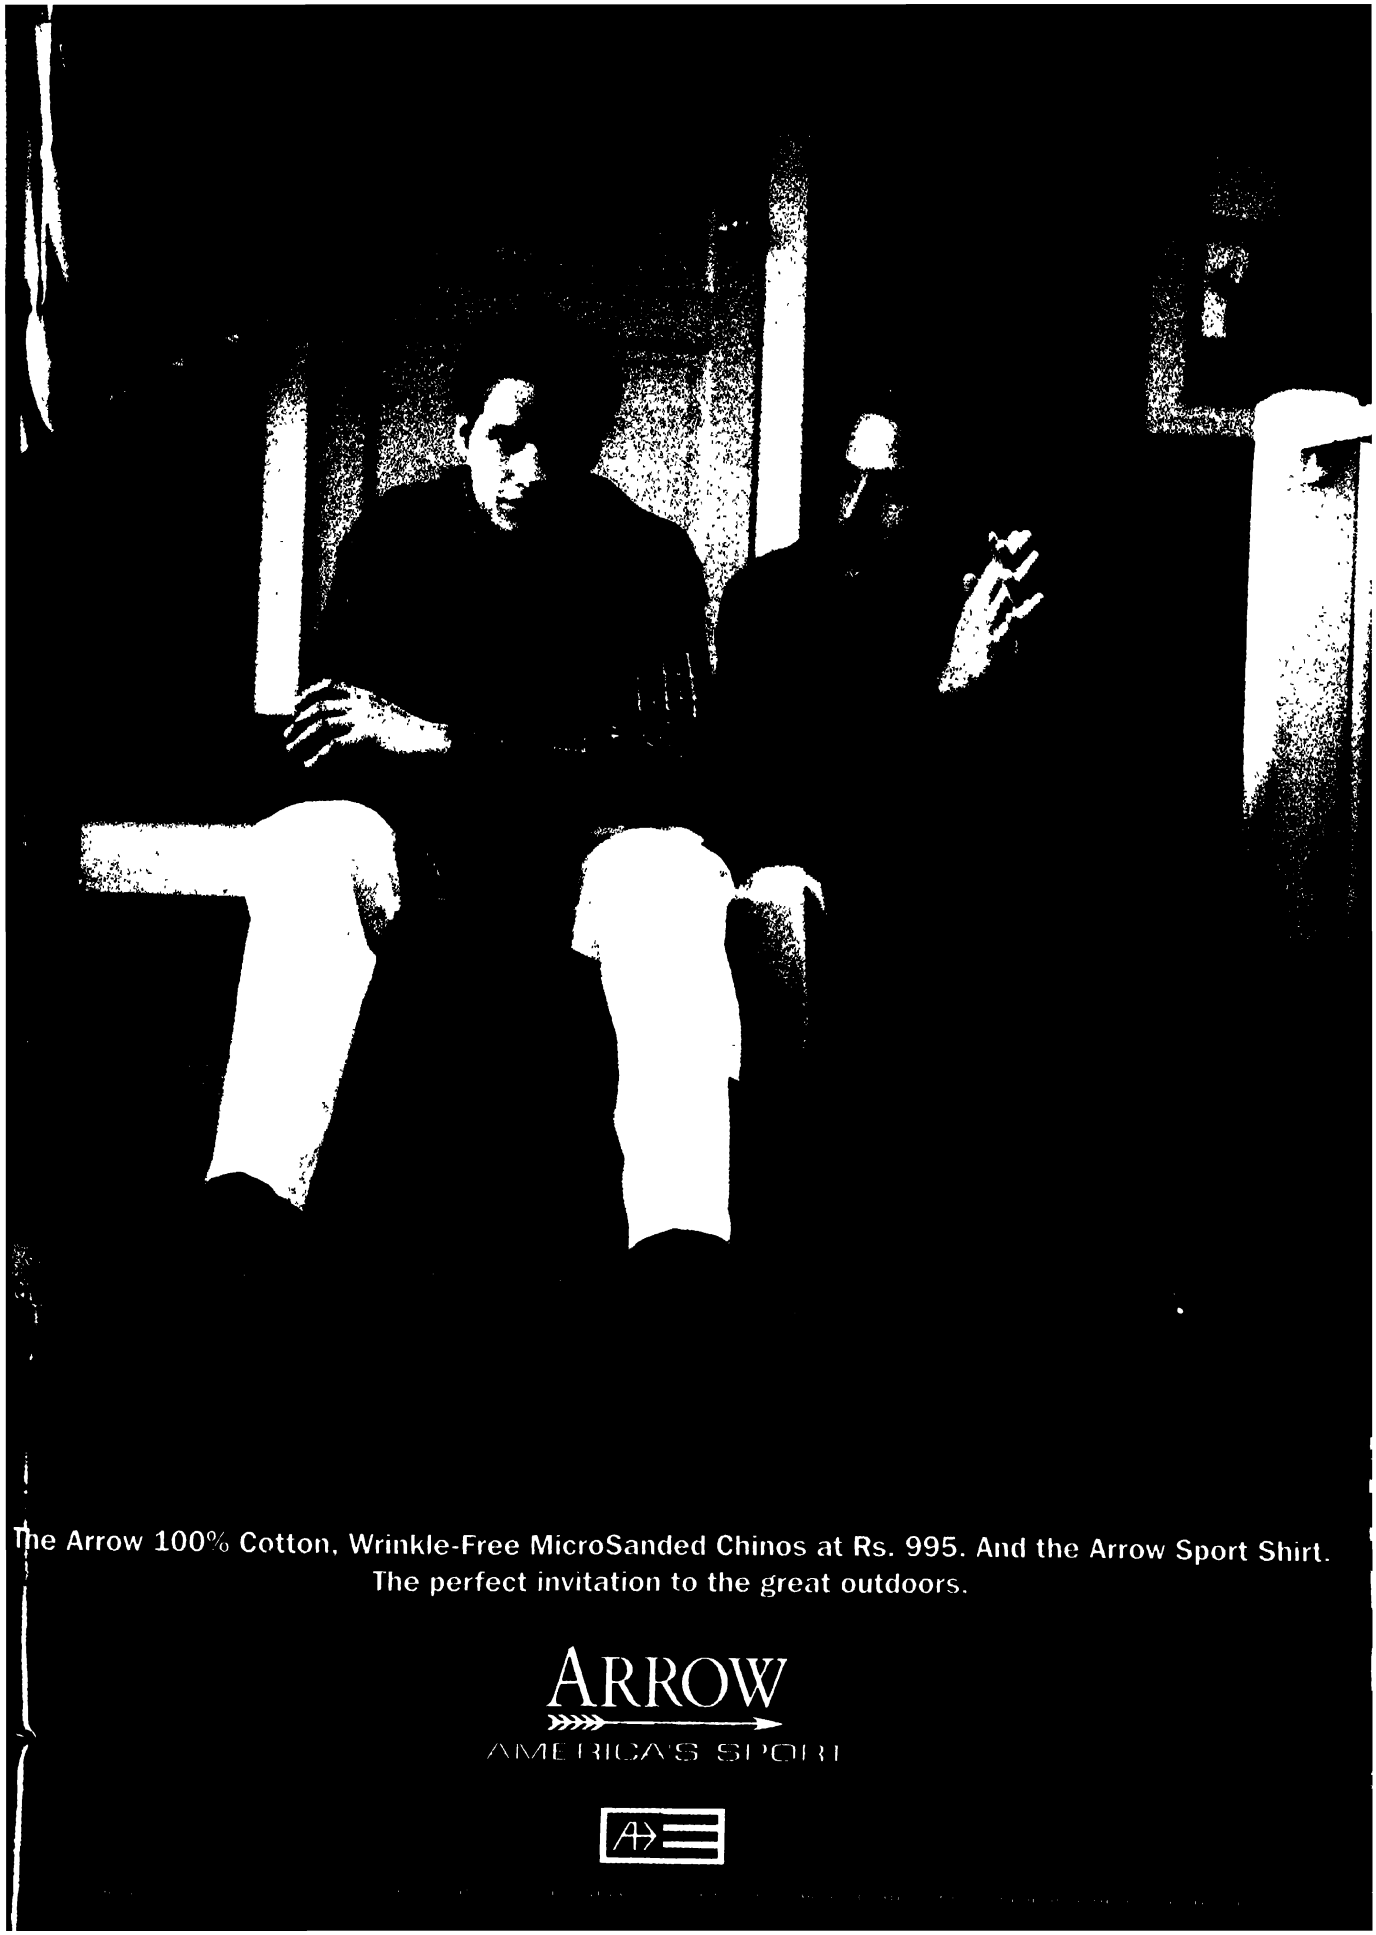
Cultural affairs, general administration and prohibition propaganda minister **Pramod Navalkar** has stirred many a hornets' nest in his singleminded resolve to purge Mumbai of what he perceives are its cultural aberrations. The veteran Shiv Sainik and close confidant of Sena supremo Bal Thackeray has pursued his own social agenda by fettering the city's nightlife through stringent time limits imposed on pubs, restaurants and entertainment events, as also on public places like the city's beaches. "Don't term it moral policing," he corrects **Sarosh Bana**. "This is moral discipline; we won't get anywhere if we fail to discipline our minds."

Q *Has your Sena-BJP government succeeded in fulfilling its claims of beautifying Mumbai that it made when it came to power in March 1995?*
A The problem with Mumbai is that just about everyone wants to be here, because the city spells lucre for the immigrant entrepreneur, professional and slumdweller alike — ill-gotten wealth runs through the city like an underground sewer. The hordes of fortune-seekers have overwhelmed the city and its civic services, rendering it difficult to implement the periodic development plans. We should now plan for only what we can sincerely implement. There is no doubt that the city is dying. We have lost the best city in the world.

UMESH GOSWAMI

Q *Do you see any solution to this malaise?*
A There is a pressing need to curtail the unabating influx into Mumbai. There is no area that is not encumbered or encroached upon, giving rise to alarming levels of pollution, traffic snarls, overcrowding and density, and affecting the quality of life. But let alone imposing legitimate curbs on such an influx, even the eviction of slum dwellers from public properties they have encroached upon raises cries of violations of fundamental rights. The law is weak and vested interests exploit this to the hilt. While the government has not exactly failed in discharging its responsibilities, it has not performed up to expectations either. A well-intentioned scheme for decongesting the city has remained for years in limbo with even the state secretariat and government offices showing an unwillingness to move out, contending "democratic privileges". Aggravating the situation at the municipal level is the nexus that prevails between the corporators and the slumlords. Unfortunately, the bottomline is that slums provide votes to us politicians.

Another solution is to totally freeze all construction in Mumbai, creating accommodation only for expanding families already resident in the city.



Q *Would the situation not improve if the government were to revoke the Urban Land Ceiling (Regulation) Act?*
A Repealing this enactment will not help as it would pit the common man against the moneyed builders and landlords. Our government instead sought to promote the concept of the transfer of development rights (TDRs) which is essentially cross-subsidising reconstruction, but the present recession in the construction industry has proved to be a dampener. Even the government's slum reconstruction scheme of Shivshahi Punarvasan Prakalp Ltd has been similarly affected.

Q *Instead of tackling such basic problems head-on, is not the government involving itself with non-essentials like moral policing?*
A I prefer to use the term 'moral discipline', because unless the mind is disciplined we cannot hope to beautify our environs and make them liveable. For instance, while people commend the Gulf countries for making their deserts bloom with public parks and gardens, they should realise that through concerted efforts, I have been able to clean up the beaches of Mumbai of their litter and encroachments and provide green spaces there for both children and senior citizens.

Q *Does Mumbai stand a chance of evolving into an international financial centre?*
A Being India's commercial capital and the focal point of financial and business activities, it is already a global financial centre. Because of this, our government's priority is not the further development of Mumbai, but of the hinterland that needs to be coupled with a planned development of Maharashtra's 720 km long coastline. This will in turn provide a boost to shipping, modernised ports and tourism.

Unfortunately, the current recessionary trend and political uncertainties at the Centre are deterring foreign investments. Only a stable government can reverse this trend. Many NRIs and other potential investors interested in doing business here are hesitant because the governments change every few months.

Q *How do you rate your government's chances in the forthcoming Lok Sabha and assembly elections?*
A Quite good.

Business India

Training outside the groves of academe has not enjoyed a particularly savoury reputation in India. The local equivalent of the crammers in the UK has been the coaching class — a system designed not to impart any modicum of knowledge but with the specific purpose of "cracking" a particular examination.

Even the relatively new area of computer training has had more than its fair share of fly-by-night operators. It is not unusual to read advertisements from organisations that offer to "familiarise" you with, say, Web designing in a two-day course. Numerous mom-and-pop outfits have sprung up to woo the gullible into parting with their money for what they believe is a passport to the latest El Dorado – a career in software. On a more organised level, there has been the recent scandal over Enterprise Resource Planning (ERP) courses which were run using pirated software and by people of doubtful credentials. Individuals paid lakhs for the "training" programme only to discover later that they were taken for a ride.

In this environment, it is evidently difficult for a company to not only make it big but also acquire a sterling reputation. NIIT is one of the few that has managed to do it.

This was achieved in the first place by focusing on developing credibility and quality. Achieving credibility is not as simple as it may seem, for it encompasses maintaining a presence and also ensuring that courses run to schedule, no easy matter in an industry fraught with attrition. The principle of success for NIIT has, however, been its emphasis on research and development, not just in software but the very basics of human understanding, the science of cognition.

Building from a sound foundation, NIIT has capitalised its position, vaulting upwards in both education and software. As its 18th birthday approaches, the company is readying to take another couple of leaps forward, launching itself into the world of branded software on the one hand, and of growth through acquisition on the other. Although the company is still largely held by entrepreneur Shiv Nadar and his close associates, this has not fazed founder and vice-chairman Rajendra (Raji) Pawar.

NIIT's success to date and the obvious faith in its future plans is reflected in the stockmarket rating of the company. The share is today priced at Rs2,055, rubbing shoulders with the other infotech high-fliers. These are the companies that have the potential to be the star performers even among the best in the world.

The other point to note about NIIT is that it has grown out of its geographical roots. Its senior staff are based all over the world and, in these networked days, it does not matter where they are. Its business too will be even more Internet-centric with the passage of time. In some sense, it is India's premier virtual company. It serves as an inspiration to the thousands of Indian entrepreneurs who are riding technology and the Internet to get out of the throttling clutches of a command economy and a Big Brother government.

Whether rural India is really the far-flung villages or C-class towns and their surrounding areas remains a matter of conjecture

◆ Reality check

The days ahead will be tough for State Bank of India as liberalisation continues to change the face of the banking sector (Cover Feature, 9 August). SBI has had to accommodate government-sponsored loans which adversely affect its profits. That is why it cannot perform as well as the foreign/private banks. But it will have to get its organisation up to the standards of the well-established foreign banks in India if it hopes to compete.

AKHILESH KUMAR SAH
Faizabad

◆ The government generally appoints the seniormost banker from within SBI as its chairman. He would have put in a service of 30–35 years to reach this elevation. I am therefore surprised to note the comment of SBI's former chairman M.S. Verma that a chairman needs a minimum of one year to understand SBI.

SUMANA PRABHU
Belgaum

◆ Simple solutions

Your Special Report on Mumbai (9 August) makes reference to the mushrooming slums in cities and the resulting problems of hygiene and public health owing to the lack of public toilets and other facilities. My observation as a long-time resident of Mumbai and Chennai is that, regardless of the availability of public toilets, the tendency is to use the railway tracks and roadsides for defecation. This cannot be ended. Hence the proper cost-effective solution would be to use the stormwater drains along the tracks and roads as open toilets. The refuse generated during the mornings and evenings can be cleared by pumping seawater into the drains. This would be a practical approach.

In the same issue, Cities refers to the setting up of rail tracks under MUTP-II costing crores of rupees. Pending a decision a very cost-effective solution would be to study the traffic pattern in the Mumbai suburban railway system, particularly the Western Railway section. Since the flow of traffic is unidirectional it should be easy to regulate the flow by means of one-up-three-down movement of suburban trains in the mornings and one-down-three-up movement in the evenings. This would be a simple matter of changing the signalling system and certain change over points. This should be easier than going in for additional lines and other costly methods.

B.S. SHARMA
Chennai

◆ Kindly clarify

We are happy to note that a prestigious magazine like yours has shown interest in the growing popularity of tenpin bowling in India (Marketing, 9 August). But it is surprising to note that the article mentions AMF as the largest manufacturer and marketer of bowling equipment in the world. We would kindly bring to your notice that the information you have provided is totally untrue. Brunswick Bowling & Billiards Ltd, 154-years-old, with an annual turnover of $4 billion, is the largest manufacturer and seller of bowling equipment and allied products in the world.

We enclose Brunswick's corporate report for 1998, and request you to kindly judge yourself by asking AMF for any such report as proof of its claims. Our report categorically states that Brunswick is No. 1 in bowling. No American company can get away with publishing wrong statements in its annual report.

We are also quite upset to read in the article that Brunswick has 49 lanes in India. Please find enclosed the names and addresses of Brunswick Bowling Centres installed as of date in India which add up to 85 lanes. We would be interested to know how you got the figure you have quoted. Kindly clarify.

◆ Ex-servicemen get their due

Officers and gentlemen (Feature, 9 August) was informative and revealing. It's high time the nation realises the ability and suitability of ex-servicemen so that it can make good use of a readily available, dependable human resource.

Other very successful ex-servicemen could have been included – for example, Capt Nair of the Leela group; Col Wahi, ex-chairman of ONGC; Adm Krishnan, ex-chairman of Cochin Shipyard; Lt Gen A.C. Aiyappa, ex-chairman of BEL; and Lt Gen P.S. Bhagat, ex-chairman of Damodar Valley Corporation – apart from numerous others in the IAS and IPS cadres who have reached to top positions.

Ex-servicemen have also proved to be excellent governors and ambassadors. Remember, even the Government of Australia wanted Field Marshal K.M. Cariappa to be their governor-general.

Bangalore

◆ Cheats we call leaders

Intense propaganda is being carried out by the BJP and its allies that if Sonia Gandhi, a foreign-born national, gets elected, the secrets of India wil be sneaked out and the secu rity of this nation will b thrown into jeopardy. The so called progressive Nationa Democratic Alliance also prop agates that Swadeshi is th only path to progress an economic prosperity.

It is now clear that when i comes to pronouncin national policies the BJP and it allies project one image an one idea, but in their persona lives they adopt a differen approach. Most of their MP and MLAs would not hesitat to send their children t schools and convents run b missionaries. They would als gladly send them to foreig universities, spending lakhs o rupees. They also want foreig technology, foreign cars foreign investments, an foreign technocrats to build petrochemical complexes, huge motor vehicle plants, large-scale power plants like Dabhol in Maharashtra, etc.

They contend that Sonia Gandhi is a spy who will leak out the secrets of this nation. However, she has lived in this country for the last 30 years and more than 20 years in prime ministers' houses during Indira and Rajiv Gandhi's time and nobody said a single word against her then. All that time nobody doubted her patriotism. Their shrill invective is only a manifestation of a greed for power.

The price spiral

The current low inflation carries latent danger of surging back in time for the new government

As the nation went into vote for the 13th general elections, the BJP-led coalition felt that it could make proud claims about its record in managing prices during the latter part of its period in government. Recent and current price trends may indeed encourage the BJP and its partners to wallow luxuriantly. However, such statistical flows tend to conceal whirlpools of danger. Any new government would be foolhardy to take inflation for granted.

Admittedly, contemporary figures make a strong impression of runaway prices being a thing of the past. The Wholesale Price Index-based inflation has been below 2 per cent for some months now. The latest available data, for the week ending August 14, shows the WPI inflation to be at 1.56 per cent. The Consumer Price Index-based inflation seems to be behaving similarly; and the latest data for July shows it to be 3.2 per cent. On a point-to-point basis, it measured 14.8 per cent at this time, last year. Nonetheless, this could still be the calm before the storm.

There are two reasons for wariness on the price front. First, food prices. Silently, but steadily, prices of key items among what Indians eat having been spiralling upwards. While this trend has been markedly continuous since March, the more recent figures give cause for alarm. The latest disaggregated data on consumer prices released by the government is for June. That month, prices of food grains increased by 16.4 per cent, in comparison to the previous year. The prices of rice and wheat showed a hike of 15.32 per cent and 15.03 per cent respectively, notwithstanding the record procurement by the government for its public distribution system. The prices of coarser grains, consumed by the poor, have climbed still more; 47 per cent for maize and 40 per cent for *bajra*. Prices of pulses, which constitutes the principal source of protein for millions of Indians, have climbed in the region of 14 per cent.

Paradoxically, these items carry only a small weightage in the overall basket of goods that are used to calculate inflation based on the WPI. All the food items taken together constitute only 7.92 per cent in the WPI, and this is the principal reason why the official inflation rate has still to acknowledge the creeping food inflation. Any further increases in food prices will have an cascading impact on the inflation rate. Which is why governments should look for deeper price currents instead of crowing about the low rate of inflation at any one point in time. Any incoming government could very easily be floored by food prices, just akin to the BJP-led coaltion's predicament over spiralling retail costs of potatoes and onions, last November.

The looming clouds

The second reason is even more compelling and represents a trend over which the Indian government may have no control. In the past few months, international oil prices have been rising. With an eye on elections, the BJP-led government has desisted from making commensurate adjustments in the domestic prices of petrol, diesel and other petroleum products. The steady prices of these products are a very significant factor in dampening the WPI based inflation that has been credited to the BJP-led government. That is a luxury that governments can enjoy only briefly and certainly the incoming government will not be able to follow this policy. Any attempt to yield to the tempatation of keeping domestic prices low will create controllable balance-of-payments problems as well as a runaway fiscal deficit (which is already yawning uncontollably). Remember that even the BJP-led government has taken a decision to maintain parity between domestic and international prices of petroleum products. The slippage, for electoral considerations, has been such that an estimate by the Union petroleum ministry gauges that a 30 per cent hike would be required in the price of diesel alone. Even a partial hike would set off transport costs, and other cascading impacts on goods and services, even as it exposes the new government to heightened expenditure on energy.

Finally, there is a more generic reason to believe that higher inflation is going to accompany any incoming government. The 1970s and 1980s saw election years marked by surges in populist spending by governments. The 1990s saw the reverse with governments committed to cutting expenditures. An economy that is poised at the threshold of growth requires that spurt of spending that only governments can provide. ♦

The crisis in exports

The malaise that afflicts the exports sector is the contribution of many besides the government

Even as the industrial economy of this country undergoes subtle but fundamental changes as witnessed in the dramatic rise of the new services industries, one area of the economy that seems to have got tied itself in a time warp is the export sector. The latest figures of export growth for July, a niggardly 2 per cent, after recording double digit growth in the previous two months, do not reflect the ups and downs of a business cycle but the malaise that has struck deep roots in the sector that was supposed to take India into the global market with a bang. The fluctuating fortunes evident from one month to another in other words suggest a structural problem in the export effort that continues to place reliance on the traditional items.

Consider the following dissonance; Indian IT companies are making waves in the global and national market with their high value addition estimated by the CSO to be in the range of Rs18,000 crore but none of these are reflected in India's exports. The items that do figure are the same ones that figured as star exporters in the 1980s, namely textiles, gems and jewellery, light engineering, marine products, hides and skins, leather and bulk drugs. All of these are low value addition items; some have relatively high import intensities and others face by their very nature non-tariff barriers, like environmental concerns in the case of leather. And most of all, all these items face competition from other developing countries with higher levels of technology. The most telling example is in the case of textiles and readymades; walk into any department store in America and you are going to find shirts made in Korea, Mexico, China and trousers with top brand names from Bangladesh.

The problems that beset India's exports are in the nature of an affliction that has to be excised. There have been five medium term export promotion policies in the past six years and the most distinguishing feature of all of them has been the lack of strategies for altering the export basket to take account of India's new core competencies and advantages.

But why blame policy or their authors at the commerce ministry for treading the beaten path? Policy is nothing more than an abstraction, a summation of the inputs and the received wisdom from those that are in the business of exports. It is surely the task of export promotion councils, of agencies and experts not to forget the producers themselves who should be providing the kind of data needed for the mandarins in the ministry to fashion policy.

There is no doubt that almost every economic policy is sustained on some kind of input or the other. The finance ministry draws on representations from industrial bodies to fashion tax proposals, the commerce minister draws on representations from trade associations. But the key issue here is the character of representations; most associations reflect partisan interests and that is not enough to hone a policy that plans on steering exports into uncharted seas. The commerce ministry needs to take into account the emerging competition and the shifts in the competitive advantage for a meaningful medium term perspective.

Look elsewhere

Only if this is addressed will India get a clear direction from policy makers. India is losing its competitive advantage in most of the traditional exports. For instance, the share of leather goods in total exports to the US has dipped from 3.76 per cent in 1992-93 to 1.37 per cent in 1998-99, the share of readymade garments (RMG) including accessories has remained at approximately 15 per cent , textiles excluding RMGS has fallen from 12.06 per cent to 10.44 per cent in the same period. On the other hand, software exports have increased their share from around 21 per cent in 1992-93 to 64 per cent in 1998-89.

Belatedly, software is getting some major policy reforms to boost its export capacity. But there is an urgent need to recognise IT services other than software that provide this country a unique chance to acquire a new competitive edge. Teleworking and remote processing are big business for the developing countries and entrepreneurs are grabbing a major share of the business. It is time for the country to recognise the great potential that the new businesses in the IT industry have not only to alter the character of the services industry but also to help India's forex reserve grow by leaps and bounds. According to experts India has a potential to grab the major chunk of the new business. Recognising that reality would help India's new exports thrust. •

Dawn of correction

The revision of GDP estimates to reflect the growth of IT services should be welcomed

Not before time, the government has woken up to confront the fact that data on India's national income have not kept pace with the changing composition of Indian industry. Everyone in the know of things has a good word to say about IT stocks on India's bourses. Indian IT companies have turned in impressive performances in terms of all the profitability ratios, drawing the attention of international analysts too. Yet national income data have not been able to capture this shift so as to reflect the growing contribution of the new services to the country's gross domestic product.

According to a daily report, the Central Statistical Organisation is in the process of filling in the gaps. Current estimates show the industry to contribute only Rs500 crore to the GDP, a figure the CSO intends to revise upwards to Rs18,000 crore. The impact on the GDP will work out to something in the range of a 1 per cent increase. This should be a significant contribution considering that the GDP estimates had been revised earlier taking into account the inclusion of the services sector, especially the small businesses in the GDP.

The attempts of the CSO to include the value-addition of the IT industry will lead to an increase in the GDP and significantly alter the perceptions of the international community about the dynamism of the country's economy. That is how the world has recognised the changes in the East Asian economies and the miracle that transformed one-crop or one-commodity-exporting economies into modern industrialised nations. The strength of the American economy has been measured by the increasing importance of services over traditional manufacturing.

Comparisons are likely to be drawn between the experiences of the American economy and the Indian; admittedly the services sector has not reached the dimensions of the American one nor overshadowed manufacturing to the degree it has in the US. There are two points, however, that need emphasis. One, the services sector in the American economy overshadowed manufacturing because companies found it more profitable, that is, less expensive, to shift production bases to the developing countries. That has not happened in India and that leads to the second point of difference. In the case of the Indian manufacturing companies, they may not have the luxury of relocating to lower-cost centres, not because the promoters may not have thought about such a move but because our laws would not permit closures and relocation outside Indian borders. No-one needs to be reminded that IT companies enjoy just about every advantage in terms of cost over traditional manufacturing firms and, in India's case, it is just possible that the growth of one industry may turn out to be at the cost of the older one.

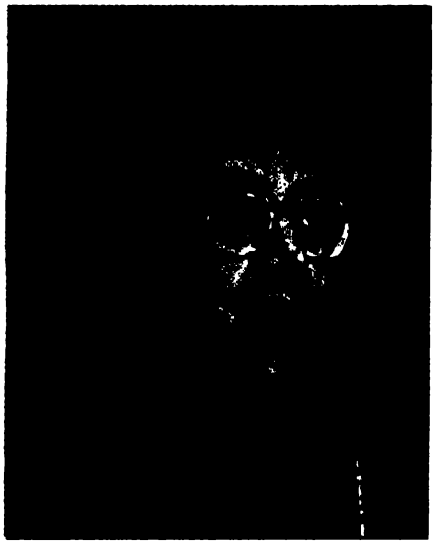
The growth factor

The future growth of the IT and, in general, the services industry will depend on the availability of capital from domestic sources, especially seed capital. To be sure, venture capitalists are the best bet so far, but as the range of IT services expands, banks and financial institutions will also need to look at the nature of their lending. In the Indian financial system, services have been traditionally identified with industries like hotels, hospitals and the like, all of which share with manufacturing the fact that they have physical assets to offer as collateral. Unlike the IT industries.

This is where the work of the CSO acquires importance. A computation of the value-addition of the IT industries would offer the financial system a basis on which to extend lending to firms that have few physical assets to offer against loans. A recognition that the section of the services industry that can create a great deal of value without having large assets would give the financial system the confidence to venture into areas they have considered risk-loaded.

Finally, isn't the CSO still behind the times? Even as it looks at the IT sector, will it not be computing the value-addition of 'traditional' IT activities? Today there is increasing evidence that India is becoming a favourite with international firms looking for low-cost centres for activities like teleworking, remote processing, and data storage and retrieval systems. Trips to cities like Bangalore, Hyderabad, and Chandigarh could enlighten CSO officials considerably as to the need for including these activities in their new estimates of the GDP. ♦

Express news



Indian Express-north chairman Vivek Goenka's new management team has got a Rs80-crore long-term loan sanctioned by ICICI. Of this, practically half is for rescheduling of existing loans, while the balance is for expansion plans. This could include the purchase of a financial daily.

The other buzz is that the Indian Express group has sold the Vadodra, Ahmedabad and Rajkot editions of *Loksatta-Jansatta* to B. Vadodriya of the Sambhav group, known for the Gujarati publication *Abhiyan*. Indian Express, which is trying to reinvent itself, has struck the deal for Rs7 crore. The entire deal has been financed by Nikhil Gandhi of Pipavav port. Vadodriya's sons — Kiran and Manoj — are expected to be running the new operation. As part of the deal, *Abhiyan* will be printing the Ahmedabad edition of *Indian Express* as well. This may well be a fallout of the Andersen Consulting restructuring programme.

Cricket Board's bonanza

With A.C. Muthiah, vice-chairman of the Southern Petrochemicals Industries Corp, all set to take over as president of the Board of Control for Cricket in India (replacing Raj Singh Dungarpur who will be completing his term later this month), the Board will also be passing its accounts at the annual general meeting. *Business India* learns that board's surplus is down from Rs11.5 crore in 1998 to Rs8.5 crore this year.

But with the mega deal having been cracked for the telecast and multimedia rights with Prasar Bharati Corporation at Rs40 crore per annum for a period of five years, the Board's coffers (unarguably the richest sports body in the land) should show a handsome increase next year. Board treasurer Kishore Rungta reckons that last year saw substantial subsidies being given to staging associations (since not many internationals were played), but this year the trend will be reversed as five Test matches — three against New Zealand and two against South Africa — as also 10 one-day internationals will play a big part in boosting revenues. For every Test match, the Board gets guarantee money in the vicinity of Rs20-25 lakh while for each one dayer, it is around Rs15-20 lakh. Further, it is expected that Muthiah will bring in some sort of corporate ethos after the Board has seen a spate of politicos — S.K. Wankhede, N.K.P. Salve, Madhavrao Scindia, bureaucrat Inderjit Singh Bindra and ex-cricketer turned administrator Raj Singh — at the helm in the recent past.

S. NAYAR

Muthiah is expected to professionalise the cricket board

Times Bank tie-up?

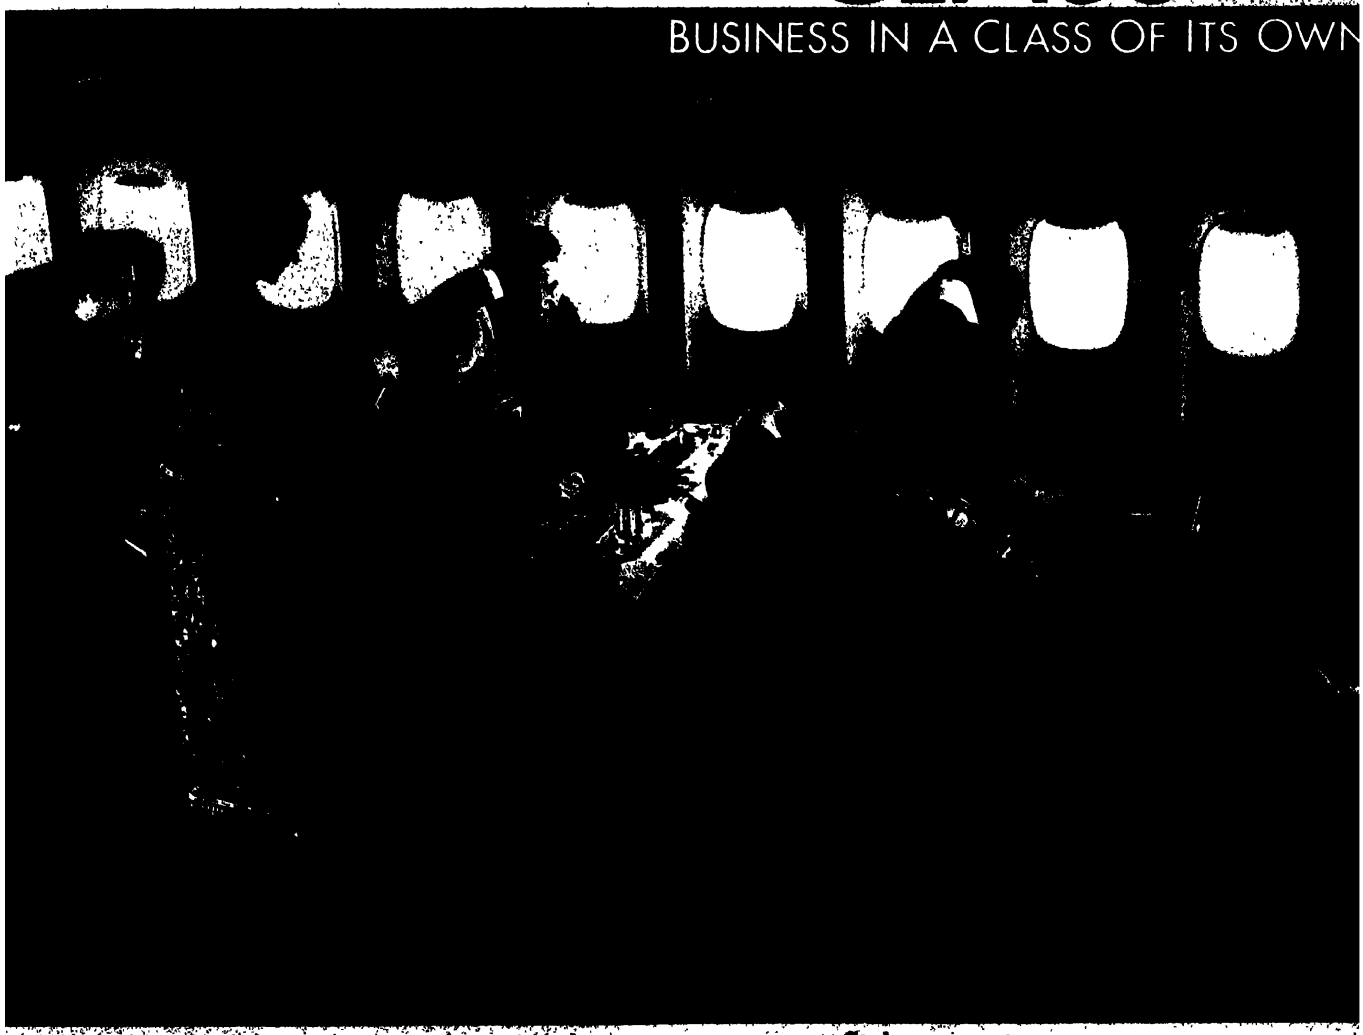
The news has been doing the rounds for quite some time: Times Bank is scouting around for a strategic partner. Today, the grapevine has it that it could be Chase Manhattan Bank. It is widely known in banking circles that the Jains want a strategic alliance for the bank which will eventually crystallise into a sale. (The Jains cannot sell the bank as per Reserve Bank of India guidelines, which don't allow the the initial promoter to sell his entire stake till they complete five years which in Times Bank's case is October 2000). Last year the Jains had made overtures to Housing Development Finance Corp (HDFC), but the impediment was the price being quoted — a whopping Rs170 crore. HDFC found that too steep. However, with Chase having entered into a strategic alliance with HDFC Bank, the deal appears to have come full circle. Any deal with Chase will now automatically have to involve HDFC.

Big bucks property deal

Just when Mumbai's realty market had once again switched to somnolent mode, comes news that one of the largest property transactions in the megalopolis has been sealed. French Bank Credit Agricole Indosuez has purchased an entire floor in Mafatlal Centre in the business district of Nariman Point. Cushman & Wakefield acting on behalf of Credit Agricole has transacted the deal for over Rs26 crore. Mitsui & Co, ICICI and Chase Manhattan Bank are some of the tenants in Mafatlal Centre and with Cushman & Wakefield having the mandate for the building, several more mega deals are on the anvil.

P&G's new strategy

Procter & Gamble (P&G) has ushered in its new strategic imperative for India: Look at yields, rather than get into the distribution battle zone. Top-of-the-line brands — Pantene, Head & Shoulders (shampoos), Ariel detergent, Whisper, Camay and Vicks — will be advertised heavily to increase market penetration. The first round of TVCs (television commercials) are already on air. The distribution of the smaller brands (totalling nearly 10 per cent of the turnover) has already been shifted to Marico.



Paras' acquisition plan stymied

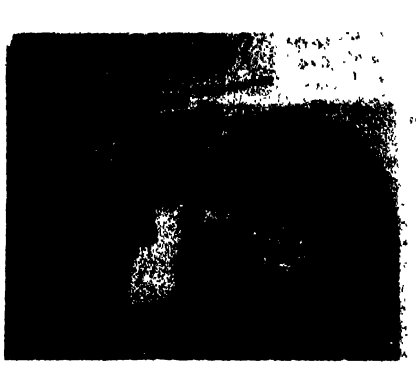
Paras, manufacturers of the popular Moov and D'Cold, is yet another company that has been left out in the cold by the financial institutions (FIs). The company was looking at establishing or acquiring flanking products for its best-selling brands. But when it went looking for structured finance, a prominent FI shot the proposal down. The search for the elusive financier continues.

Raffles Class

SINGAPORE AIRLINES NEW RAFFLES CLASS

BUSINESS IN A CLASS OF ITS OWN

We've searched the world to bring you the finest business class in the sky. Celebrated French design house, Givenchy, has created a cabin environment of unparalleled elegance, in which every detail



luxurious legroom, in-seat laptop power and personal entertainment screens – a world first for your flying pleasure. Our Raffles Class cuisine is devised by an international panel of acclaimed chefs. And KrisWorld, the

Ice-cream flavours...Supermarket hi-jinks...Sonia Gandhi online

Students and staff at the University of Missouri have been guzzling a lot of ice-cream these days. All in a good cause however; they have been

participating in a study to discover whether low-fat ice-creams are significantly inferior in taste as compared to regular ice-creams. Low-fat products are enjoying a big boom in the developed world thanks to increasing health consciousness.

The study, conducted by the university's department of food science, has discovered that there are no significant differences when it comes to chocolate ice-cream. This is possibly because the flavour of chocolate is a mixture of many chemicals, unlike vanilla where a single compound carries the flavour. The reduction of fat in vanilla ice-creams results in a smoother and harsher taste. In strawberry too, as a study at the University of Helsinki in Finland discovered, fat-free ice-cream is far inferior in taste to the regular version. Vanilla is the most popular ice-cream flavour in the world with chocolate coming in second. But, with the fat-free variety increasing in popularity, the tables may soon be turned.

What new at Tesco, dubbed Britain's most eccentric supermarket chain? According to MSNBC, some of the recent highlights are:

- Considered allowing its Hastings store to run a nude-shopping night after the normal closing hour (but eventually declined because of the potential for mishandling of fresh fruits and vegetables).
- Told farmers to grow smaller melons after focus groups reported that large melons made small-busted female customers feel inferior.
- Tested its pies ballistically after receiving a surge of requests for recommendations on which of its pies is best for throwing (answer: egg custard).
- Began a programme to sew instructions on self-testing for testicular cancer into men's underwear.

With the rash of retail outlets coming up in India, can we expect such innovation here too?

If you are one of those who worry about having a male child to continue the family name, the chances are that you may end up with a girl instead. According to researchers from Denmark, if there is a great deal of psychological stress around the time of conception, the odds favour a female child. Researchers at the Danish Epidemiology Science Centre and colleagues from the Centre for Research in Health and Social Statistics report in the *British Medical Journal* that the proportion of boys was 49 per cent as opposed to 51.2 per cent in their control group. The sample size was 3,072 babies who had been conceived amid traumatic events.

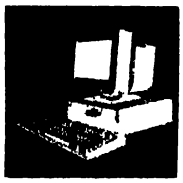
The conclusion is that psychological stress related to severe life events may alter the sex ratio of offspring through changes in sexual activity, changes in hormones around the time of conception,

reduced semen quality or an increased rate in miscarriage of male babies. Earlier other researchers, without too much of empirical evidence, had concluded that there is a similar increase in the percentage of female births during times of war. This has been linked to the genetic disposition to increase fertility rates in situations that can be considered to be threatening to the established order.

International pharmaceutical companies often project themselves as the saviours of the disease-ridden Third World. But, if truth be told, commercial interests often come first. This is not only evident in the sort of research they conduct, but it is also true of their interactions with medical practitioners in developing countries.

According to a study by Assad Hafeez from the Khan Research Laboratories Hospital in Islamabad and Zafar Mirza from The Network for Rational Use of Medication in Pakistan, many doctors in the developing world do not receive adequate or appropriate responses when they request product information from drug companies. They claim that the decision to respond to a request for more information seems to depend on how favourable it might be to the interests of the company.

The authors assess how seriously pharmaceutical companies take their responsibility to provide information on request, by recording the promptness, nature and adequacy of their replies to doctors. They found that of 152 requests to 45 companies (made by 24 doctors in the different cities of Pakistan), only just over a quarter (26 per cent) received a response. Of these 39 responses only six met the World Health Organisation criteria for optimal drug information. The duo also found that the specialists who made requests received twice as many responses as general practitioners. Their conclusion: "Specialists are seen as opinion formers and more important to the companies than general practitioners."



The media is full of the Internet-savvy leader of the Congress(I) Sonia Gandhi and her website on which she undertakes to answer all questions put to her by e-mail. Surfers who have been to the site — www.soniagandhionline.com — have come away a shade confused. True, you can ask a question and get an answer e-mailed to you later (obviously not from

Sonia Gandhi but her thinktank). But the other features of the site are apparently only decorative. A link to 'Speeches' takes you nowhere. That can be explained: with all her speeches ghost written, it is easy for them to have got disembodied on the World Wide Web. But what can be said of the similarly non-existent 'Opinion'? Or does it, as the BJP would opine, have a simple explanation? There is no opinion.

Number of companies in India who registered a turnover of Rs1,000 crore and more eight years ago, in 1991: **39**

Number of people killed in 381 train accidents in 1996-97 as per the figures released by the Indian Railways authorities: **363**
Number of people killed in train accidents in 1996 as per the figures published by the National Crime Records Bureau, Ministry of Home Affairs: **14,975**

Number out of every two youngsters in India in the age group 15-24 years who say that one should have sex only after marriage: **1**
Number out of every three youngsters in India in the age group 15-24 years who say that there is nothing wrong about premarital sex: **1**

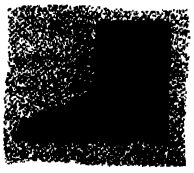
Chances that Indian girls in the age group 15-19 become mothers: **118 in 1,000**

Chances that Chinese girls in the age group 15-19 become mothers: **15 in 1,000**
Percentage of births in India that are attended by skilled health personnel: **35**

Proportion of Indians who say they are deeply religious, having prayed 'yesterday': **2/3rd**

Number out of every 10 Americans who regularly attend a church, synagogue or a mosque: **4**
Number out of every 10 Britons who are religiously observant: **1**

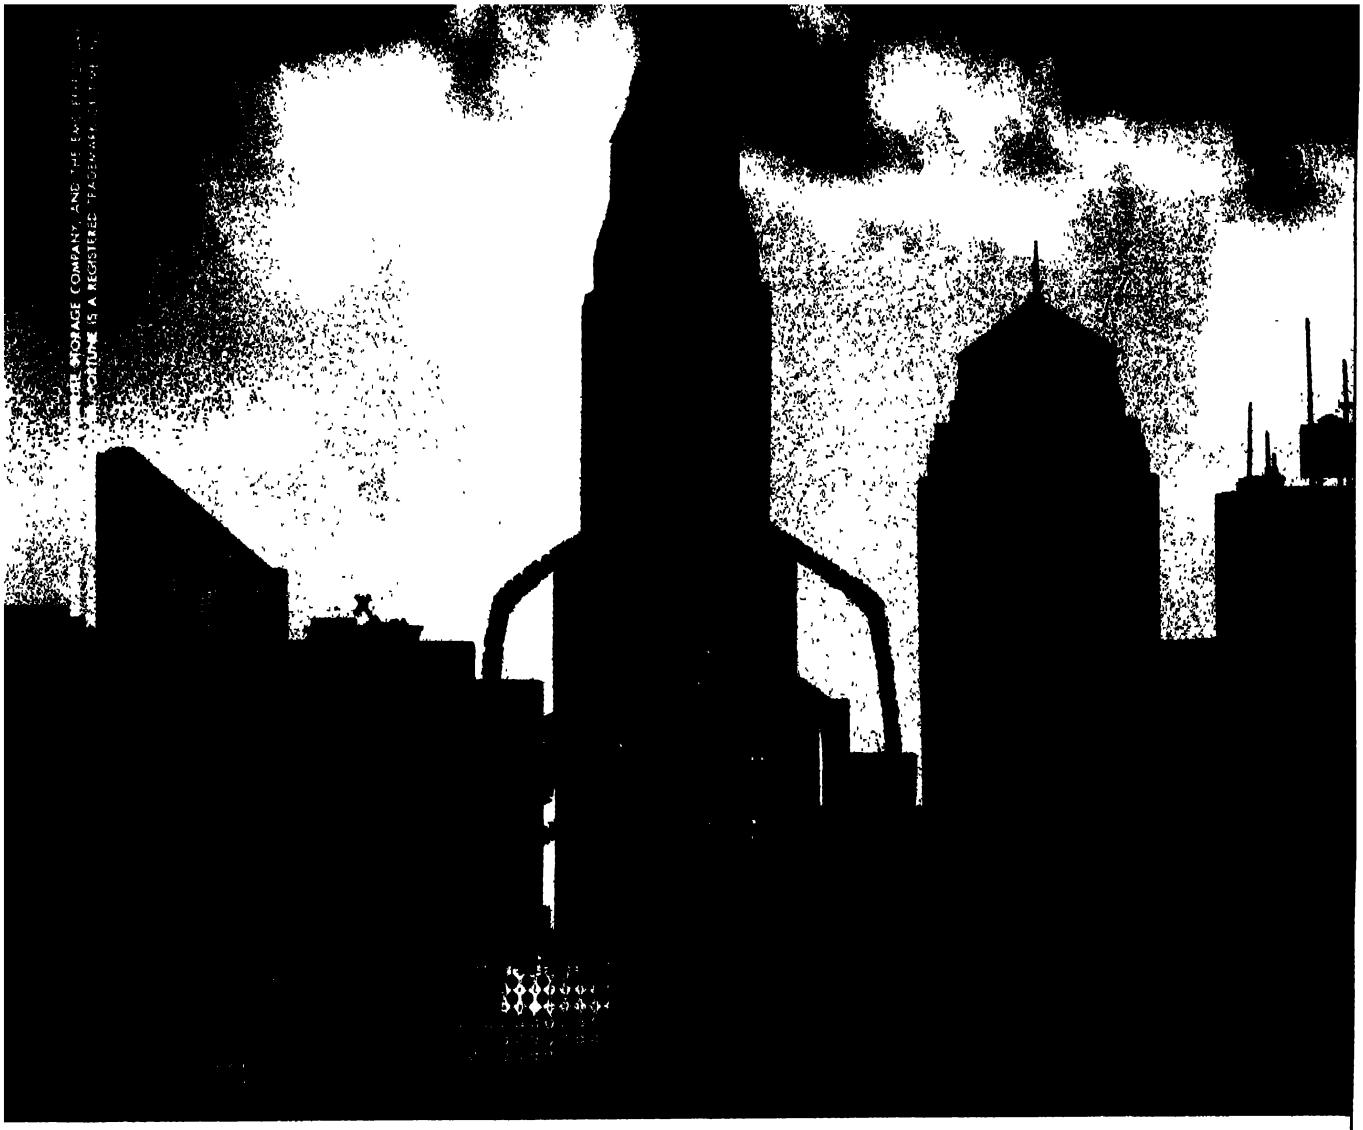
Average duration during which men and women are biologically and mentally predisposed to be "in love" with each other, in months: **18-30**
Chances that men fall in love more quickly and easily than women: **7 in 10**
Chances that relationships are terminated more by women than men: **7 in 10**



Number out of world's top 60 brands that are of Asian products: **3**
Number out of these three Asian brands that are Japanese: **3**

Rank of Mauritius among all low- and middle-income countries worldwide in terms of fax machines per 1,000 persons: **1**
Fax machines per 1,000 people in Mauritius in 1998: **22**
Fax machines per 1,000 people in Belgium, Italy and Spain in 1998: **18**

Proportion of Japanese households who have a fax machine at their home, in per cent: **65**



Number of pairs of shoes owned by Imelda Marcos, widow of late Philippine dictator Ferdinand Marcos, before her collection was seized in 1990 popular uprising in Philippines against Marcos: **3,000**
Number of pairs of shoes owned by Imelda Marcos currently: **3,000**

Chances that American couples aged 75 and above have sex at least once a week: **1 in 4**
Chances that American couples in the age group 60-74 years have sex at least once a week: **1 in 3**

Protect, manage, and share information in a way that takes your company to new heights.

THE EMC EFFECT

EMC²
The Enterprise Storage Company

EMC Enterprise Storage™ consolidates your company's information and makes it available to all who need it, regardless of the computers in use. It's the new strategic weapon over 90 of the FORTUNE® 100 companies deploy to achieve their most challenging goals. Cost control. Improved customer service. Y2K compliance. Risk reduction. Faster time-to-market. Plus the advantages of EMC's Enterprise Storage Network (ESN): enhanced data access, more efficient network performance, and automated storage management. We call it The EMC Effect.™ Imagine where we will take your business. For more information on how we can assist your organization through our partners' network in India call us in Singapore 65-333-6200 or fax 65-333-6878. Or reach us at www.EMC.com.

Net Care

Credit Analysis & Research Ltd (CARE) has recently set up shop on the Web christened **www.careratings.com** Promoted by IDBI jointly with investment institutions, banks and finance companies, CARE commenced operations in October 1993 and offers services like credit rating of debt instruments, credit assessment of companies, infrastructure financing, securitisation transactions, structuring financial instruments, financing of infrastructure projects, mergers and acquisitions and financial restructuring. So far, the company's website informs us, CARE has completed 1,291 rating assignments which cover 1,140 instruments and involve a total debt volume of Rs1,35,500 crore. Apart from explaining various services provided, the CARE website details the methodology of rating as well as explanations of symbols that it accords to ratings, i.e. AAA (L), AA (L) and so forth. CARE also publishes two monographs, 'Rating Reckoner', an update on accepted CARE ratings, and 'CAREVIEW', a quarterly bulletin providing information on CARE ratings.

Political fundas

Launched on 1 May, 1999 **www.indiamap.com/elections** offers an interactive ringside account and analysis of the forthcoming general elections. Some of the features include analysis, manifestoes of different political parties, symbols and a brief description of each party, space for placing your views, etc. The site also has a Web directory, a compilation of websites that offer information and updates on the Elections '99. These include sites of political parties, candidates and other independent government and non-government organisations. The site also carries detailed profiles of Lok Sabha constituencies, parties contesting the elections and the candidates who are being nominated by their parties for various constituencies. According to a company release, the site is updated every hour and soon the company plans to organise chats wherein the party spokespersons will participate and air their views. All in all, a useful site for background information on the forthcoming mammoth electoral exercise.

Rich in information

ICCS Info Com Ltd, part of the Delhi-based software consulting group, has set up an tourist information site on India called **www.infoindia.net**. Rich in content and creatively packaged, the site caters to the diverse information needs of tourists. For instance, it has regularly-updated sections on airlines, railways, hotels, locations and weather. A visitor to the site can find out details of a particular flight or train after submitting the required information. Similarly, the site offers choice of hotels to a user depending upon his or her budget, location, room requirements and so on. Recently, the company tied up with 30 large and medium hotels including Hyatt Regency and Vasant Continental in New Delhi and several other hotels in Mahabaleshwar, Mussoorie, Agra, etc, to provide online reservation facilities. The site also carries information on varied aspects like Indian ceremonies, dance, music, handicrafts, wildlife, food, fairs and festivals, etc. Interestingly, the site also carries regularly-updated, travel-related news.

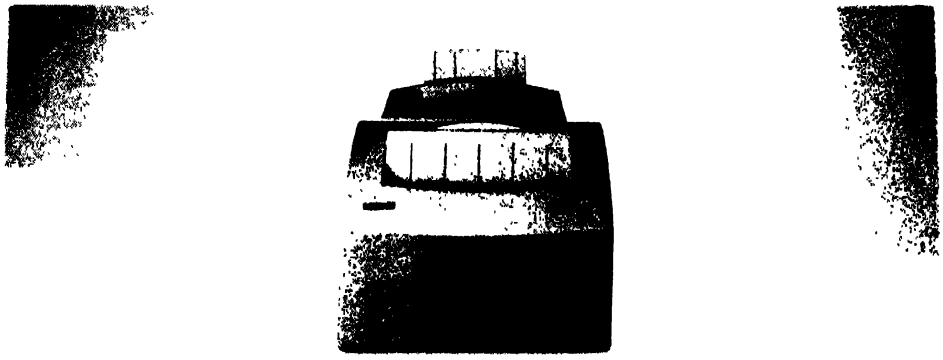
Subhash Ghai Netted

Log on to Bollywood biggie Subhash Ghai's website **www.subhashghai.com** and you will come across pearls of wisdom like this one: "In the field of Movie Making, we do not change with the times but instead make certain that we change the times we live in." The website gives details of Ghai's life as an actor and director — the filmmaker has directed 13 movies in 22 years and chalked up 11 out of 13 as silver and golden jubilee hits — and the comments of others in the film industry about him. What is of importance to film buffs and historians is the filmography. The site carries a brief description of all the films directed by Subhash Ghai. The other interesting feature is a glimpse of Mukta Arts, the company owned by Ghai. The company has a post-production studio and shooting floor, and an equipment division consisting of sophisticated editing and recording facility.

WebWatch

Indian E-com to top $150m

E-commerce is set to boom India in the coming three years, if Department of Electronics is to be believed. Speaking recently at a Nasscom-organised seminar, Ravindra Gupta, secretary, DoE, pointed out that e-commerce in India will account for $150 million over next 2-3 years. The seminar had been organised to suggest initiatives to establish a conducive environment for e-commerce in India. Nasscom had a 20-point agenda in this regard. Apart from speedy drafting and implementation of cyber laws, it was suggested that government should not levy any tax on e-commerce transactions for at least three years. Other suggestions included allowing private gateways to ISPs and allowing free use of 56-bit encryption technology.



Net travails

Amidst booming US Internet-related stocks and exponential increases in the number of surfers worldwide comes the news that this may not be all that good for humankind. According to a study presented at the annual meeting of American Psychological Association in Boston, compulsive Internet use is becoming a real psychological disorder. "Marriages are being disrupted, kids are getting into trouble, people are committing illegal acts and are spending too much money," David Greenfield, therapist and researcher who did the study was quoted as saying. According to the largest-ever study of Web surfers, almost 6 per cent of Internet users suffer from some form of addiction to it.

Presenting Samsung ML-5000A Laser Printer.

It's no ordinary printer. *It's a Sprinter.*

It gives you 8 Prints Per Minute and a First Print Out Time of just 13 seconds!

Features			HP 6L Gold
Engine	- ppm	8 ppm	6 ppm
	- Resolution	600 x 600 dpi	600 x 600 dpi
	- Duty Cycle	6 K/Month	Upto 6 K/Month
Controller	- Processor	33 Mhz. Motorola	24 Mhz. Motorola
	- Memory (Expandable)	4 MB (32 MB)	1 MB (9 MB)
	- FPOT	15 secs.	18 secs.
	- Fonts	Intelligent - 35	Intelligent - 26
	- Emulation	PCL 6e	Enhanced PCL 5
Toner	- Life at 5% coverage	6000	2500
Paper Handling		150 Sheet Multi. Purp.	100 Sheet Multi. Purp.
Estimated Street Price		Rs. 18,600/-	Rs. 19,750/-*

*Source - competitive ads

Thanks to a 33 MHz High Performance RISC Processor combining with a 4 MB memory capacity, no ordinary laser printer can beat the speed of a Samsung ML-5000A. And that too without compromising on print quality. You get outstanding impressions at 600x600 dpi, enhanced further by the microfine toner. Make it your new choice.

The Y2K bug is not a computer problem : it's a business problem. It can affect any computer, communication network or device that runs on microchips, seriously disrupting their functions. It is not restricted to large organisations, government and heavily computerised countries. It is your problem, because your business is at stake. And unlike any other problem, it has an unchangeable deadline for action – December 31, 1999. So investing a little time on it could well be the wisest business decision you have ever made.

The bad news about Y2K: it can affect your business.

The good news: if you act now, it won't.

What is the Y2K bug ?

As a shortcut, programmers decided to use two digits to record the year in computers and microchips. For example, the year '1999' would be recorded as '99'. This practice continued until very recently. On January 1st, 2000, however, these computers and microchips will recognise '00' as the year '1900' and not '2000'. Faced with a situation they cannot comprehend, they will 'panic' – and either shut down or generate incorrect data, disrupting business in many ways.

Is it hard to fix ?

Not really. In computers, the problem exists at five levels – hardware, operating system, software programmes, data and data sharing. Check how dates are used at these levels in your business, and you will get an idea of the task. Fixing Y2K is really a management issue. Invest some time and senior management commitment in drawing up and implementing a checklist of processes.

' I'm convinced Y2K will affect my business. Send me the 'Y2K OK' infopack at once.' (Fill in capitals).

Name_____ Designation _____

Company Name _____

Address _____ City _____

PIN_____ Phone _____ E-Mail _____

1. Type of Industry _____ 2. Type of organisation (✓): ☐ PSU ☐ Government ☐ Self Employed ☐ Pvt Sector

3. Turnover of company_____ 4. No. of computers_____

Mail to : **Solutions Integrated Marketing Services, P.O. Box No. 4481, Kalkaji, New Delhi-110019.**

BI

Even if you don't own computers, you could be affected.

Think. Do you deal with trading partners or customers who depend on computers ? If their systems are not Y2K OK, your raw materials supply and payments could be affected. It is in your best interest to talk to them and ensure their compliance. Do you have embedded chips in your business processes? These programmable devices control a variety of equipment and can be difficult to detect, test and rectify. In this case, carefully prioritise (based on assessment of impact) and seek help from vendors or the services of a consultant.

What are the financial and legal implications?

The Y2K bug will affect all date-dependent processes including invoicing, payments, production planning, databases, accounting, budgeting, payroll systems and date-dependent production facilities or building infrastructure. The first direct impact will be on cashflow. That's not all. Your Y2K status has to be reported quarterly and in annual reports as per SEBI guidelines. A Y2K OK certification is crucial for investor confidence. If you lead a publicly- quoted company or rely heavily on exports, the implications are grave. Most countries have already stopped dealing with non-Y2K OK companies. Also, if your customers or employees suffer any losses due to lack of Y2K compliance you will be liable for legal action.

How do I find out if I have the Y2K bug?'

Test all levels of operations of your computers and microchip-based systems. While the basic hardware test can be done within half an hour, other levels will require expert supervision. Even if you have an IT manager, call an outside agency for an impartial view.

I think I have the Y2K bug. What do I do now?'

Follow these steps in partnership with your Y2K consultant :

- Make an inventory of all date-dependent systems.
- Assess impact on critical areas.
- Repair, retire, replace or retain as the case may be.
- Test and install to ensure systems are Y2K OK
- Undertake contingency planning: never assume that the bug has been completely eradicated. Keep data backups and make alternative plans for all core business functions.

  Check new purchases and insist on Y2K OK certificates from every supplier.

Good news at last – how becoming Y2K OK can benefit your business.

Think of your Y2K OK project as spring-cleaning. An opportunity to evaluate and overhaul your company's infotech systems (tax benefits are available for this). This will lead to a better networked and more efficient organisation. One that customers looking for the reassurance of dealing with companies that are Y2K OK would love to deal with. It is an invaluable opportunity to cement existing relationships and develop new ones.

'Where do I get help?'

CMC (supported by Deptt. of Electronics, Govt. of India) has set up helpdesks in all major cities. Call them at (040) 3000409 / 3001682, or fax at (040) 3001683 / 3000167. Of course, you can always reach out to the DoE website : www.y2k.gov.in, or e-mail them at : help@y2k.gov.in. If you wish to receive a free Y2K infopack, just fill out the coupon below. Make sure you have all the ammunition to tackle this enemy. And wish your business a happy new year

Y2K at a Glance

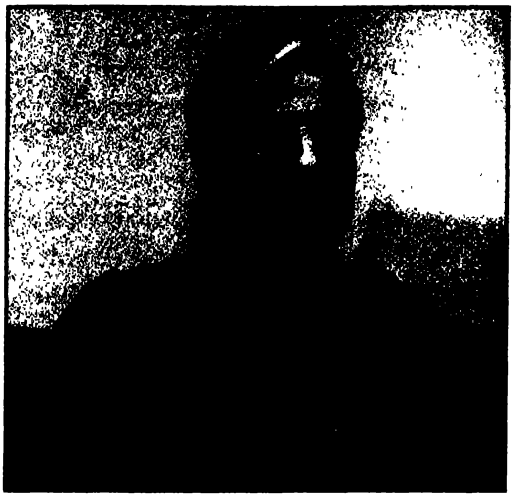
- The Y2K bug can cause serious business disruptions
- Even if you don't use computers or microchip-based systems, Y2K problems in your suppliers, customers or utilities can affect you
- The bug isn't hard to fix – all it takes is time and senior management commitment
- Failure to get Y2K OK can lead to loss of data, cash-flow problems, loss of investor confidence and legal action
- The tests for the bug are simple, but must be carried out at all levels of date-dependent computer and microchip-based operations
- Inventorise; Assess; Repair-Retire-Replace or Retain; Test and Install; and have a Contingency Plan
- You can use Y2K to revamp your business & build new business
- There are several reliable sources of help

G 2000

DEPARTMENT OF ELECTRONICS

LET'S MAKE INDIA Y2K OK.

Lintas Y2K.DS.BI



Mr Billionaire

We had at various times reported on Zee's moves. Not only has the scrip zoomed northwards, Subhash Chandra is planning a slew of new initiatives

The unknown billionaire has finally stood up to be counted. Subhash Chandra's gargantuan plans are not only taking shape, but are slowly fructifying into reality. His dream of turning broadcaster have also culminated with the launch of Zee Marathi on 15 August (reported by *BI* in its 12 July issue). In the same issue we reported that the Zee Telefilms scrip was headed northwards in the light of the proposed merger between Zee Telefilms and Zee Multimedia Worldwide Ltd (ZMWL). We had predicted that by July 2000, the Zee Telefilms scrip which was quoting at Rs1,550, would be touching Rs2,250. On 31 August, the share was perched at Rs3,250, down from an all-time high of Rs3,475.

ZMWL is going in for expansion of equity. With the swap ratio of the enterprise value having been fixed at 1.1:1 instead of the earlier recommended 1.33:1, the expanded equity is now Rs39.9 crore. Consequently, 200,24,200 equity shares of Rs10 each will be issued and allotted to the shareholders of ZMWL in exchange of their entire shareholding of the ZMWL.

We had stated that in July 2000, Zee promoter Subhash Chandra's net worth would be Rs7,741 crore, but with the new swap ratio, he already controls 76.2 per cent which in turn makes him worth Rs7,000 crore plus currently. What is significant is that the new shareholding pattern, post-acquisition has brought the FII shareholding pattern down to 13.7 per cent from the erstwhile 29 per cent (the maximum permissible limit being 30). This will see a fresh spurt on this counter as it has always been a darling of the foreign institutional investors.

LAKSHMI GOSWAMI

Chandra has launched a slew of new initiatives

More importantly, a share split is on the cards at Zee Telefilms counter (reported in *Listening Post*, 26 July) which will reduce the par value of the scrip from Rs10. It is believed that the Zee board is keen on fragmenting the scrip's par value to Rs2 which means that one share presently will be broken into five. Coupled with the FII charge, this will lead to increased liquidity as the cost of a market lot will become more affordable. With the acquisition, the shareholding pattern reveals that the public now has 5.3 per cent while FIs and OCBs own 3.6 per cent.

On the basis of all this *Business India*'s latest estimate for the merged entity's share price is Rs5,000 in the short term, so that each share at par value of Rs2 will be priced at Rs1,000. Subhash Chandra thus keeps the interest in his counter very much alive with increased availability of floating stock. And then who knows, where the buck will stop.

◆ SANDEEP BAMZAI

Back to square one

Business India *(15 July, 1996) had talked about how before Godrej divorced Procter & Gamble, the former sold the detergent brands Trilo, Ezee and Key to the latter. Now they are part of the Godrej stable*

They seem to have come full circle. The Rs918-crore Godrej Soaps has acquired the Ezee, Trilo and Key detergent brands from Cussons India Ltd. These were the same brands which the company had sold off to Procter & Gamble at a reported price of Rs40 crore. P&G, realising that it did not make much business sense, in turn sold these brands to Cussons International, makers of Imperial Leather products, about a year ago.

Now the brands are in the Godrej stable, though the cost of acquisition is not known. With the acquisition of Ezee, the country's largest-selling liquid detergent brand with annual sales of over Rs18 crore, Godrej Soaps claims to have secured more than 75 per cent of the country's Rs35-crore liquid detergent market. The company already held 15 per cent of the market with its Dip brand. Though Trilo and Key are relatively smaller brands, they are expected to help the company make an impact in the rural markets.

Godrej is working on strategies to develop these brands. The company has also acquired the rights to manufacture, sell and distribute the Imperial Leather soap and talc brand owned by the UK-based soaps and detergents major Cussons. However, Cussons India will hold the marketing rights to the brand.

◆ A CORRESPONDENT

How to win funds

Bilakhia has entered into a marriage of convenience

Yunus Bilakhia seems to have the best of both worlds. With several of the international players aligning or taking over agrochem businesses, to strengthen their base on domestic turf, Bilakhia has entered into a marriage of convenience. The Rs500-crore Bilakhia group with flagship Hindustan Inks under its banner, has shed part of its business in agrochemicals, with it going to Hoechst Schering AgrEvo. The multinational giant has picked up a 51 per cent stake in Mitsu Industries. Though the deal was supposed to have been sealed a couple of months back, it is believed that the money changed hands only recently. The management, it is said, is vested with the majority holders.

Bilakhia though will continue to hold the rest of the agro venture's equity. He has managed to get a handsome price of Rs350 crore, which could possibly be termed as the largest agrochem deal in India. And the promoters would still continue to reap the benefits arising out of the 49 per cent stake they hold.

The Rs275-crore Mitsu Industries was the fastest growing company in the group. It came into existence when one of the group's clients Sudarshan Chemicals was faced with an acute shortage of chemical chloral and Bilakhia seized the opportunity. Since then the company got into downstream pesticides chlorpyriphos and intermediates trichloroacetyl chloride and new generation pesticides cypermethrin and deltamethrin. Hoechst Schering used to source its bulk requirement of deltamethrin from Mitsu and formulate and brand the product under its name. This chemical is used in public health management and household pest controls.

CORRESPONDENT

In our earlier report (13 February 1995 issue), we had reported how the promoters of the Bilakhia group were going about identifying opportunities beyond national boundaries

One year wonder

Quadrant Communications is all set to end its first year with billings in excess of Rs55 crore. Last year (till 1 September 1998), the erstwhile Pratibha Advertising had billings of Rs38 crore. It may be recalled that Pratibha, the Kirloskar-owned ad agency, had last year tied up with Inter Public Group of the US to form the new entity, Quadrant. A year back the existing business of the erstwhile Pratibha Advertising Ltd had been carried over to Quadrant.

The Kirloskars have a 51 per cent stake in Quadrant with IPG holding the remaining 49 per cent. The company, which came into existence at the bottom-end of a recession cycle, has shown a 25 per cent growth in billings. The staff strength too has been boosted in the past year. "We have taken some existing staffers from Pratibha and a lot of new faces and we now have a whole fresh approach with a young team of account directors at our Mumbai, Chennai, Bangalore and Pune offices," says Gitanjali Kirloskar, president, Quadrant. Some of the new faces include J.S. Mani, who heads the Pune office, which is the headquarters of Quadrant; Debashish Das, who heads the Mumbai office; R. Badrinathan who heads the Chennai office, all of whom are ex-Mudra employees.

"We have launched new, innovative campaigns in the last one year, the most recent being the 'Bajaj Cricket Ka Guru' contest and the Sansui Scratch-in contest, during the recent Cricket World Cup," says Gitanjali. In the Bajaj contest, four new brands of Bajaj Auto, namely Legend, Bravo, Spirit and Caliber, were advertised in an unique way with questions popping out of ads at readers. "In this way we did not hardsell and at the same time the message went across," says Gitanjali.

Quadrant clients include Tetra Pak (India) Ltd, Racold and Karnataka Milk Federation. Quadrant is also looking at newer segments like private insurance, debit card concept, etc, which are expected to come to India soon. Gitanjali and her young team are brimming with ideas and are confident of achieving yet another year of 25 per cent growth.

• ROOP KARNANI

Q:uadrant

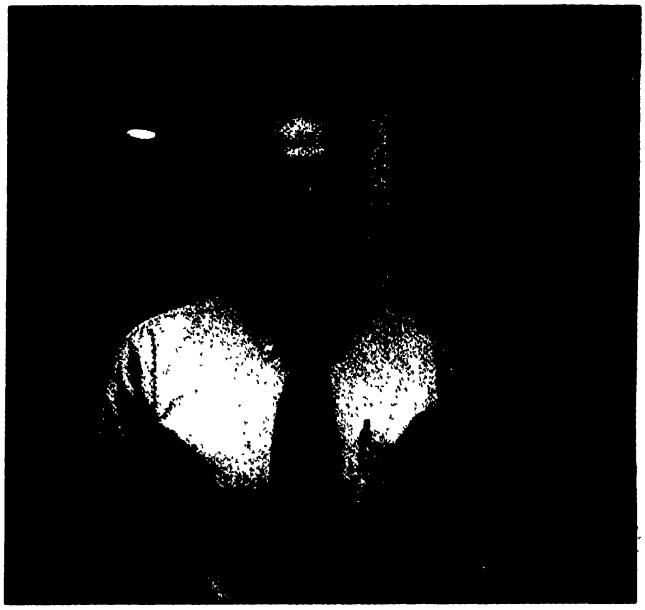
In our issue dated 22 March 1999, we had mentioned how after the tie-up with IPG, things were looking up at Quadrant Communications. Let's take a look at its progress on its first anniversary

He plans to make those drab walls come alive. Vinod Motwani, director of the Rs116-crore Sun Earth Ceramics Ltd (SECL), has acquired exclusive rights from Walt Disney Inc to reproduce Disney characters on ceramic wall tiles. So one can now have Mickey Mouse, Donald Duck, Goofy or the Little Mermaid adorning one's bedroom or living room walls. "Wall tiles have moved from being mere utility products to lifestyle products. Hence there is unlimited scope for creativity in designs. We have taken a lead in providing Indian consumers with a range of attractive designs for their walls," says Motwani. SECL, in the business of ceramic wall and floor tiles since 1995, claims to have a 10 per cent market share in floor tiles and a 15 per cent share in the wall tiles market. Motwani now wants to grab a fifth of the tile market in a couple of years.

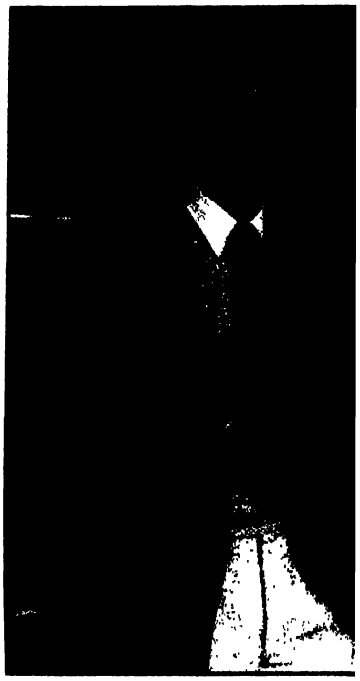
With the new Sonora Studioline range of wall tiles, he plans to "put permanent entertainment value into a home." Since this is the first time such a product is being introduced in the Indian market, Motwani shies away from hazarding a guess on the potential of this business segment. It remains to be seen whether Motwani's tiles will bring him some smiles. •

Last fortnight, BT and VSNL decided to extend their existing alliance to provide global communication services in India. Under the BT/VSNL alliance, Concert, a wholly-owned BT subsidiary, and a leading global communications services company, will introduce its high-speed switched data service — Concert frame relay service — in the country. Concert is a single global managed network on a Cisco platform, essentially for high-speed data communication, and is often used for LAN-based applications in dispersed locations. The service will use VSNL's network to connect to Concert's international network, allowing Indian companies to build private data networks linking as many as 1,300 cities in 110 countries. "Through the frame relay service we can help Indian businesses and MNCs to build international networks that add real value," says Arun Seth, managing director of BT Worldwide (India) Ltd. BT is also providing on-line service to SAP customers. It hopes to start offering e-services to its customers as well. •

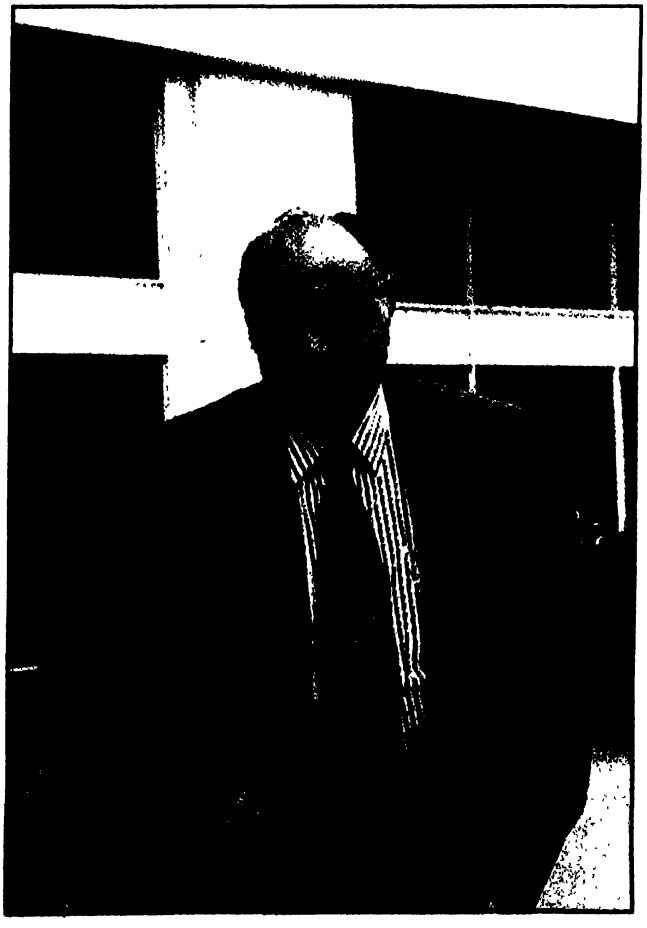
'Focus' is the key word for the $4.1-million CoreEl MicroSystems Inc, which is splitting its activities in the US and India into three core businesses. In Pune last fortnight to finalise these changes, NRI Chetan Sanghvi, an IIT graduate who set up the company in Fremont, California, three years ago, sees his Pune-based joint venture with Crompton Greaves playing a big role in the near future. "India can easily be a major player because of its strengths in software and innovation," says Sanghvi. CG-CoreEl Logic Systems Ltd and its US parent will focus solely on developing silicon and system-level intellectual property for networking and transmission 'system-on-a-chip' products. These products are multiple Core cells enabling the system to be put on one IC, in which CoreEl is a world leader. The new CG-CoreEl Programmable Solutions will concentate on providing system designs using programmable logic,



while distribution will be transferred to multinational semiconductor dealer Memec (Asia Pacific) Ltd. This is expected to enable the CoreEl group to concentrate on what it knows best: technology. "Research and development brought in nearly half our revenues in the last two quarters," Sanghvi says. •



Retail is definitely the business to be in these days. Last fortnight, Mumbai-based jewellery house Danabhai extended its presence in the retail marekt. The company opened Pallazzio, a multi-branded retailing venture at the country's first mall, Crossroads, in South Mumbai.



"Policies of liberalisation over the last few years have opened tremendous opportunities in terms of demand for new services," says Danabhai proprietor Ashok Minawala. Pallazzio is slated to be a lifestyle-oriented, rather than a jewellery-oriented, store. With the Indian consumer's increasing awareness of international trends, quality and brands, the store will house both Indian and international brands such as Tag Heuer, Gili, Gucci, Piaget and Dianet, to mention a few. Initially, plans are to open outlets in the metros; the idea being to reach a large number of consumers and host a larger number of brandnames. Apart from international brands, Pallazzio will also be a forum for young designers. It will house an exclusive gallery to launch art-related jewellery and will be a regular venue for exhibitions. In fact, the first exhibition planned is the De Beers Millennium collection. •

Education on the need to keep milk fresh and clean is the biggest task in marketing milking machines and other dairy equipment in India, finds **Hans G. Ekdahl**, CEO of Swedish milking automation pioneer Alfa Laval Agri. It has recently tied up Nestlé to help educate farmers on improving milk yields, and has programmes going with NDDB, Punjab's Milkfed, and milk cooperatives in Andhra Pradesh, Kerala, and other states. "As one of the world's biggest milk producers with an estimated value of $25 billion, this is a key country for us to be in," says Ekdahl. "We can bring in appropriate technology for the developing phase where India is today." AL Agri, which has a plant manufacturing coolers and milking machines at Karad in Maharashtra, sees the market here growing phenomenally, even if not as rapidly as projected when it set up the facility three years ago. The Indian subsidiary contributes only about Rs20 crore to the global revenues of $650 million but accounts for 125 of the parent's 4,200 employees in 15 plants and 55 marketing companies worldwide. "Our major investment here is in people," says Ekdahl.

Kanwal Rekhi, former chief technology officer of Novell Inc, the desktop networking pioneer, and now a well-known Silicon Valley venture capitalist and tireless venture evangelist, visited four Indian cities in August to spread the message of self-reliance. He addressed young entrepreneurs in Delhi, Hyderabad, Mumbai, and Bangalore before journeying to Amritsar to visit the Golden Temple. Rekhi's Silicon Valley venture association The Indus Entrepreneurs will open chapters in every city to promote the concept of IT professionals and enterprises organising themselves to assist new entrepreneurs get started with financial and strategic consulting support. Aside from his message about entrepreneurship Rekhi, an alumnus of IIT Bombay, also urged IIT alumni to spur efforts to raise funds for the institutes to free them from public dependence. He also hopes to advance the cause of the Civil Society movement, a global nonpolitical agency for social change.

It has been change at a blistering pace for **Probir Roy**, from Nuclear Power Corporation to star TV to Euro RSCG Interactive, where he is presently the chief operating officer. But the constant in this change is his abiding interest in information technology. He was busy setting up information systems at NPC and then star TV. Now he has to go beyond being a computer nerd and develop the business at Euro RSCG Interactive, a 100 per cent subsidiary of Euro RSCG AAdvertising, the largest advertising agency in Europe. The group is using the India centre as a global resource base for obvious reasons — availability of highly cost-effective local talent. Like every late entrant in the IT industry it is also on the lookout for possible takeovers, joint ventures, and so on. Probir is focusing not only on Internet design and consulting for Web-based solutions but also on that magical *mantra* of the 21st century — e-commerce. Besides being a resource group for Euro RSCG, the Indian operation has already done independent work for Mercedes-Benz, Davidoff Middle East, and Intel.

Canadian-born Michael Fromowitz, regional creative director for ad agency TBWA Asia Pacific, believes in "changing the rules". On a recent visit to India Fromowitz held several training sessions at the multinational's local subsidiary, TBWA Anthem. "What is missing is that too many people are looking at what is being done in the West or at award books to see the trends. You need to study what has happened before, but only so you can think out of the box," he says. Breaking away from the ordinary appears to be Fromowitz' *mantra*. When he started his own agency in the US after spending two decades in advertising, he decided to call it "Red Ball Tiger", of all things. Fromowitz reasons that the agency's links to Asia, where he had worked long years, influenced the christening. Within two years he shut shop and returned to Asia, which he has "grown to love". Based in Singapore, Fromowitz's task is to help make Anthem an agency that everyone would "want to work for". For starters, he is talking to his team on "creative advertising in a new environment".

Dubai-based Landmark Gulf Group recently opened its 30,000-sq ft destination store Lifestyle in Chennai. Having recently completed its 320,000-sq ft expansion in the Gulf, the group has been looking at markets elsewhere and has identified India, UK, and Spain as areas of potential growth. "We made a conscious attempt to go to Chennai first, as it is a good test market ground," says director (international operations) Vipin Sethi. The Indian company is called Lifestyle International Pvt Ltd. The group has already earmarked an investment of Rs100 crore over the next three years for the Indian market. In fact, according to Sethi, the group already has an added advantage to others that are entering the retail business. "We are already in the retail business and can pass on our economies of scale to customers." By the end of the year a 46,000-sq.ft. outlet should be up in Hyderabad.

Though Jean Marc Espalioux was in India last month only in his annual vacation period, his visit can hardly be taken lightly. The chairman and CEO of $17-billion Accor, the world's largest hotel network, spent long hours in Mumbai with senior members of the group's Asia-Pacific team. Accor currently has joint ventures with the Mahindra group for its "Mercure" brand of hotels and another with the Mumbai-based Radhakrishna group for its restaurant coupon brand called "Ticket Restaurant."

Now in its third year in India, Espalioux feels Accor has a team in place to go the full hog. From its existing four hotel properties in the country he is hopeful of growing to 10 within the next two years. "We are looking at our Sofitel brand for the big cities, Mercure for provincial towns, and Novotel for a few resorts. Accor will also look at existing hotels that need management expertise," he says. If the multinational's track record in Indonesia – where it set up 26 hotels in five years – is anything to go by, the country's hoteliers will need take Espalioux' visit seriously.

For some time now, we at Toyota have been saying "NO !" to current beliefs in India about cars, their quality, usage, performance and durability. Especially under the most trying Indian road conditions.
In the process we may have appeared a little highbrowed but it is only a manifestation of our strong beliefs.

We believe that a car should enrich the quality of life and are working towards building such cars in India.
Our goal is to ensure that our high quality cars surpass your expectations and make your life more comfortable.

Why Toyota ?

An all-new Toyota Premium MUV will make its debut in India in January, 2000
packed with "answers" to this and many other questions.
Why not wait for a little more while.

January, 2000
TOYOTA will provide its Answer

Won't you join us in creating cars that truly enrich the quality of your life?

Your New Experience of Motoring

TOYOTA

Essel in Rs350-crore real estate venture

The Subhash Chandra-promoted Essel group is setting up a Rs350-crore housing project in Gurgaon. The group has floated Suncity Pvt Ltd to manage the new venture. The group has acquired 130 acres of land from local farmers for an estimated Rs90 crore. The brain behind the mega project is Subhash Chandra's brother Lakshmi Goyal. Suncity plans to offer around 760 plots covering about 50 acres for sale, while another 10 acres of land will be earmarked for group housing projects. Another 20 acres will be used for setting up a shopping complex, a community centre, a school and a dispensary. Multiplexes will be also thrown in to meet the entertainment needs of the residents of what is being termed the "metropolis of the millennium".

Satyam plans private placement

Software services major Satyam Computer Services Ltd has approached financial institutions, including Unit Trust of India, Life Insurance Corporation of India and General Insurance Corporation of India, to place shares worth nearly Rs350 crore on a private placement basis. According to top level institutional sources, although the Hyderabad-based company has made the offer, the FIs are yet to decide whether to take it up or not. While the Satyam management is keen on offering the shares at a market-related price, the FIs are looking at a 10-15 per cent discount. Since the placement will be of cum-bonus shares, each Satyam share would be worth around Rs1,900 on a cum-bonus basis. The scrip is trading at an ex-bonus price of Rs942 and the company has announced a 1:1 bonus. However, the FIs are looking at a price band of Rs1,600-1,650, a share. The company is planning to use the funds raised to pay off loans and become debt-free before launching its American Depository Receipts issue slated for the first quarter of next year.

Sebi panel to finalise list

A committee on rolling settlements, set up by the Securities and Exchange Board of India, will finalise a list of 10 scrips which will usher in rolling setlements in the country by 22 September 1999. The committee finalised the criteria for selecting the scrips at a meeting held recently. It was decided that those scrips which meet the criteria of a minimum of 250 trades per day with a volume of Rs1 crore will be identified. In order to ensure that there is no market manipulation in these scrips, an average for nine months between January and 15 September 1999 will be considered. The 10 scrips will also have to meet the criteria decided at an earlier meeting. They must have reasonable liquidity and should be part of the list of scrips where demat trading has been made mandatory by Sebi. The committee also discussed the efficiency of clearing houses and the depository infrastructure, which are essential for the success of rolling settlement.

Shivaji Works to merge with Kirloskar Oil

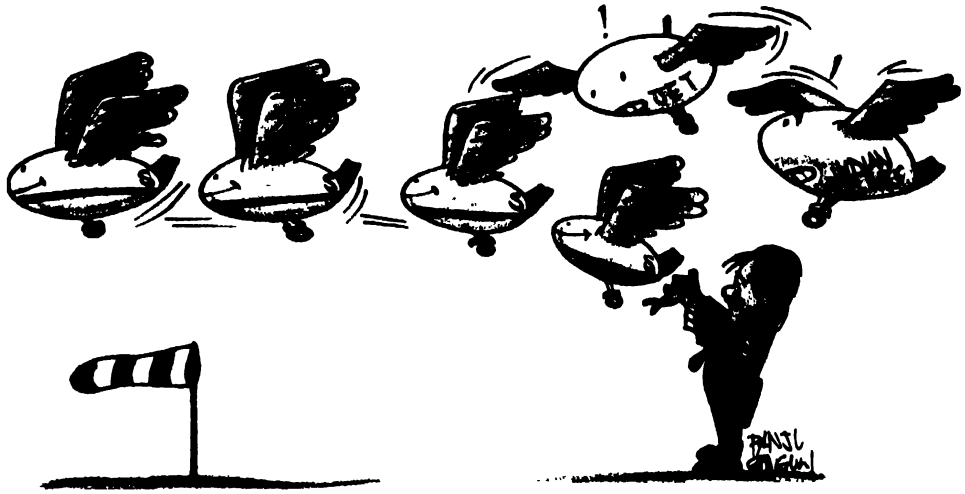
Kirloskar Oil Engines Ltd (KOEL) will dip into its reserves for the Rs85-crore bail-out of its ailing subsidiary, Shivaji Works Ltd (SWL). The scheme for amalgamation and rehabilitation was approved by KOEL shareholders at an extraordinary general meeting held in Pune recently. The scheme will now be submitted to the Board for Industrial and Financial Reconstruction (BIFR). Under the proposed scheme for rehabilitation and amalgamation, SWL will merge with KOEL. The share-swap ratio has been worked out at 25:1, ie, 25 shares of SWL for one share of KOEL. This will impact KOEL's equity to the extent of 15 lakh shares, valued at Rs19.9 crore. The Solapur-based SWL, set up as a 49 per cent subsidiary of KOEL, is a major supplier of castings to KOEL. It was declared a sick company in March 1998, with accumulated losses of Rs81.05 crore and Rs4.20 crore on account of cancellation of investments, making a total package of Rs85 crore.

Pepsi to invest Rs1,600 crore

The Rs2,500-crore Pepsico Holdings India Ltd plans to invest nearly Rs400 crore annually in the next four years in order to enhance its marketshare in the country. The company, which recently announced the launch and test marketing of its Aquafina brand of mineral water, also plans to set up seven new PET bottling plants by 2000. Pepsi currently has 40 bottling lines in the country, of which 24 are owned by franchisees. The soft drinks major has also set itself a target of adding 100,000 retail outlets each year to beef up its existing distribution network of 600,000 outlets. It has earmarked Rs90 crore annually to provide visicoolers to its outlets. While the company plans to increase its focus on the rural markets, from where much of the growth is expected, it will also renew its thrust on the exports front. Exports accounted for Rs400 crore of the company's revenues last year.

Dairy Farm to pick up stake in RPG venture

Dairy Farm International, a leading food and drug retailer in the Asia-Pacific, has entered into a joint venture



agreement with Spencer & Company Ltd, the retail arm of RPG Enterprises. Under the pact, Dairy Farm will operate Spencer & Company's Foodworld chain of supermarkets in the country. The international retailer, which runs 1,871 stores in nine countries with total sales of $6.6 billion, will invest $6 million to pick up a 49 per cent stake in Foodworld Supermarkets Ltd. Spencer will hold the remaining 51 per cent in the new company. The joint venture will acquire the 29 Foodworld supermarkets currrently being run by Spencer in Chennai, Bangalore and Hyderabad. The company plans to set up 50 outlets in Pune and other cities by June 2000.

L&T plans new subsidiaries

Larsen & Toubro (L&T) plans to set up two independent subsidiaries for power and infrastructure projects. Announcing this at the company's 54th annual general meeting, L&T chief executive officer and managing director A.M. Naik said the new subsidiaries were being set up with a view to leverage financial resources. However, he added, it was too early to say how L&T's existing power and infrastructure projects would be re-aligned with the new subsidiaries. The company also plans to increase cement capacities from 12 million tonnes to 12.6 million tonnes. L&T has roped in international consultants Boston Consulting Group (BCG) and William M. Mercer to help it in its plans to achieve a turnover of Rs25,000 crore by 2005. While BCG is reviewing L&T's business portfolio, Willaim M. Mercer will advise the company on realising the potential of its human resources.

More Sahara flights on major routes

Sahara Airlines plans to introduce more flights on the major trunk routes, thus intensifying competition in the sectors where Indian Airlines and Jet Airways are already engaged in a fierce fare war. Sahara is planning two daily flights on the Delhi-Bangalore, Delhi-Calcutta, Mumbai-Hyderabad and Mumbai-Chennai routes.

The airline will also add a fourth flight on the key Mumbai-Delhi sector by end-October. This is despite the already excess capacity on these routes. Sahara also plans to increase its fleet from five to seven in the next two months. Sahara's latest move is expected to trigger another round of fare cuts with the airline saying it is determined to match the lowest fare offered in any sector it operates.

Johnson cuts stake in H&R Johnson

The UK-based Johnson International has reduced its stake in H&R Johnson (India), a joint venture with the Rajan Raheja group, from 40 per cent to 22 per cent. The dilution in stake is on acount of the fact that the UK ceramics major stayed away from a Rs38-crore rights issue floated by H&R Johnson in 1998-99. Subsequently, the Indian partner subscribed to the entire rights issue. The Rajan Raheja group's holding in the Rs214-crore joint venture has now gone up from 60 per cent to 78 per cent. With sales of Rs220 crore, H&R Johnson's 'Johnson' brand enjoys a 23 per cent marketshare in the over-Rs1,000-crore domestic ceramic tiles industry.

Torrent group cos approach BIFR

Torrent Gujarat Biotech and Torrent Cables of the Gujarat-based Torrent group have sought to be declared sick by the Board for Industrial and Financial Reconstruction. While the board has declared Torrent Cables a sick company, it has reserved its orders on Torrent Gujarat Biotech. For the year ending March 1999, Torrent Cables, which manufactures power transmission cables, reported accumulated losses worth Rs23.70 crore, which wiped out the company's net worth of Rs22.44 crore. The board has asked Bank of Baroda, the operating agency, to submit a techno-economic viability report, which will decide if the company can be made viable again. Torrent Gujarat Biotech, which manufactures Penicilin-G, has accumulated losses of Rs108.84 crore and a paid-up capital of Rs44.84 crore.

Jindal Strips to set up overseas arm

With the lull in the domestic steel market, Jindal Strips Ltd (JSL) is now looking at exploring the overseas market. The stainless steel major is planning a wholly-owned subsidiary abroad to develop export markets for its products. Though the company is yet to decide where it will set up the 100 per cent subsidiary, the countries being considered are Dubai, Singapore and the UK, among others. JSL is currently working out the costs for setting up the unit. In 1998-99, the company exported products worth $6.5 million. In the current financial, the company plans to increase exports in a big way. It has already enhanced its stainless steel melting capacity from 1 lakh tpa to 2.5 lakh tpa, and now plans to hike its cold-rolling capacity from 30,000 tpa to 90,000 tpa.

Compaq's dual-focus strategy

Compaq India will adopt a dual-focus strategy to claim the top slot in the high-volume and high-value business in the country. On the high-volume front, which includes PCs, notebooks and low-end

servers, the company has decided to formulate an aggressive pricing strategy as well as manufacture commercial PCs in the domestic market. On the high-value front, Compaq will set up call centres in major markets across the country, besides providing customer solutions in specific vertical industries. The company is also considering more tie-ups with independent software developers to offer complete solutions to customers.

Escotel deep in the red

Escotel Mobile Communication Ltd has run up accumulated losses of nearly Rs303 crore. In the 1998-99 financial year, the company had reported losses of Rs187.83 crore on a total income of Rs73.78 crore, while in 1997-98 the losses stood at Rs115 crore on income of Rs44.16 crore. Losses posted in the last two finacial years, thus, add up to a staggering Rs302.98 crore. A joint venture between Escorts and First Pacific of Hong Kong, Escotel provides cellular services in Haryana, Western Uttar Pradesh and Kerala, and has a total customer base of 70,000. While Escorts holds 51 per cent in the joint venture, the Hong Kong-based firm holds 49 per cent.

Crisil downgrades Arvind Mills

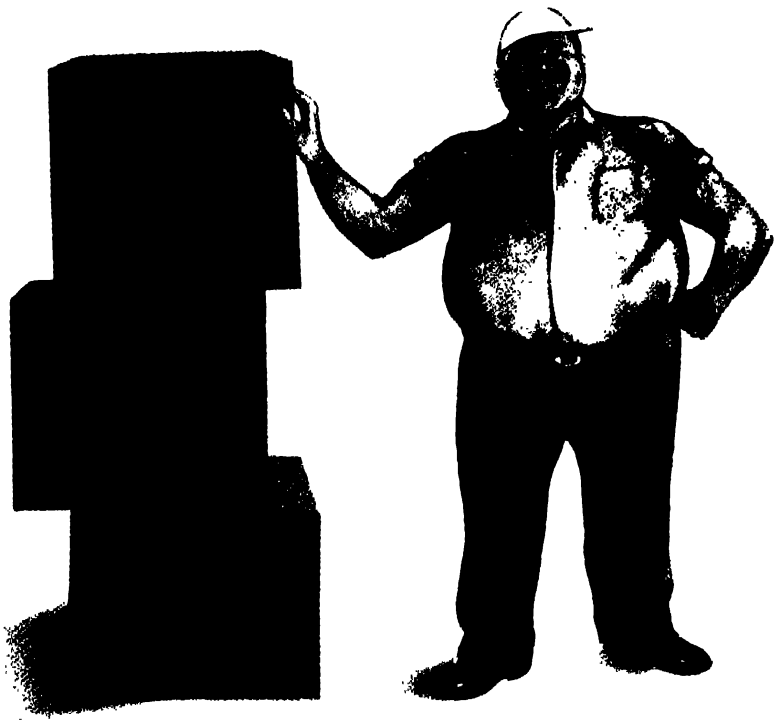
Crisil has downgraded the rating assigned to Arvind Mills' debentures from BBB+ to C, indicating substantial risk. The nine-notch downgrade follows the delay in the company's payments to banks and financial institutions. Arvind Mills' two outstanding non-convertible debenture issues have now come down from investment grade to below-investment grade. According to Crisil, the company had suffered substantial time and cost overruns in its expansion and diversification projects at a time when the denim industry itself was witnessing a downtrend. The credit rating agency said the downgrade reflected the "vitiation in capital structure and the resultant liquidity pressures resulting in a delay in debt obligations to institutions and banks". Arvind Mills, the country's largest manufacturer of denim, ended the first quarter of the current financial with a Rs48.16-crore loss on sales of Rs250 crore.

HDFC cuts rates

Effective from 1 September, 1999, the Housing Development Finance Corporation has cut interest rates by one percentage point in its Rs5–10-lakh loan slab. The interest charged on this slab has been reduced to 13.5 per cent from the earlier 14.5 per cent. Loans over Rs10 lakh will attract an interest of 14.5 per cent. This is the second time in 1999 that the housing finance major has effected a cut in interest rates. In the latest rate cut, HDFC has merged two loan slabs – Rs2–5 lakh and Rs5–10 lakh – to create the new slab, which will attract the 13.5 per cent interest charged earlier on the Rs2–5-lakh slab.

Petronet-DCM Shriram pact

Petronet LNG has signed a memorandum of understanding (MoU) with the Rs700-crore DCM Shriram Consolidated. Under the pact, Petronet will supply 0.75 million standard cubic metres of LNG per day to DCM Shriram's 400,000-tonne urea plant at Kota. The Kota plant is currently based on naphtha. The move is in line with Petronet's increasing focus on fertiliser companies as potential users of its regasified LNG. Petronet has also signed similar MoUs with other fertiliser companies such as Kribhco, Chambal Fertilisers, Indo-Gulf Corp and FACT. Recently, the company signed a 25-year deal with the Qatar-based RasGas for the purchase of 7.5 million tonnes per annum of LNG from the latter.



GAIL to invest in LNG project

The Gas Authority of India Ltd (GAIL) will invest Rs283.33 crore for a 33.33 per cent stake in the Rs2,530-crore LNG project promoted by the Tatas and French firm Totalfina. Currently, the Tata Electric Companies (TEC) and Total hold 50 per cent each in the project which will come up at Trombay. Once the public sector giant picks up its stake, the three companies will hold 33.33 per cent each in the project. Called India Natural Gas Company Ltd, the project has a total equity base of Rs850 crore. The six million tonne per annum project will be set up in two phases of three million tonnes each.

ITC acquires 51 per cent in Rollatainers

The ITC group is acquiring a 51 per cent stake in paper packaging company Rollatainers Ltd. Rollatainers is one of the largest paper packaging companies in the country. ITC is acquiring the stake through a subsidiary Russel Credit. The Bhargava family, promoters of Rollatainers, will dilute its stake in the company from 40 per cent to 20 per cent. Institutional and public shareholding will go down from 60 per cent to 29 per cent. Rollatainers will make a preferential allotment of 70 lakh shares to ITC at around Rs35 per share. ITC's acquisition of a majority holding in the company marks its entry into the paper packaging industry in a big way. ITC has identified paper as one of its core businesses and plans to become a major player in the paper industry.•

A division of

When it's too big to courier,

XPS it

In this age of 'Just In Time' operations, express delivery plays a vital role. Appreciating this fact, XPS offers its door-to-door express cargo service across 500 destinations. Maintaining efficiency is our fleet of over 200 containerised vehicles, with more on standby en route, 162 branches nationwide and a computerised data monitoring service that keeps you well informed about the movement of your cargo.

XPS' Collect-On-Delivery (COD) facility allows you to recover your payment much faster. Because XPS collects it on your behalf, routing it back to you, thus saving you the time lost in negotiating documents through the bank. And our Proof-Of-Delivery (POD) facility is an added reassurance.

As for delivering within 24/48 hours in select cities, XPS has an Air Cargo service in a class of its own. XPS being a division of Transport Corporation of India Ltd. (TCI), you also enjoy instant access to India's largest multi-modal transport network of 800 company owned offices serving over 3000 destinations.

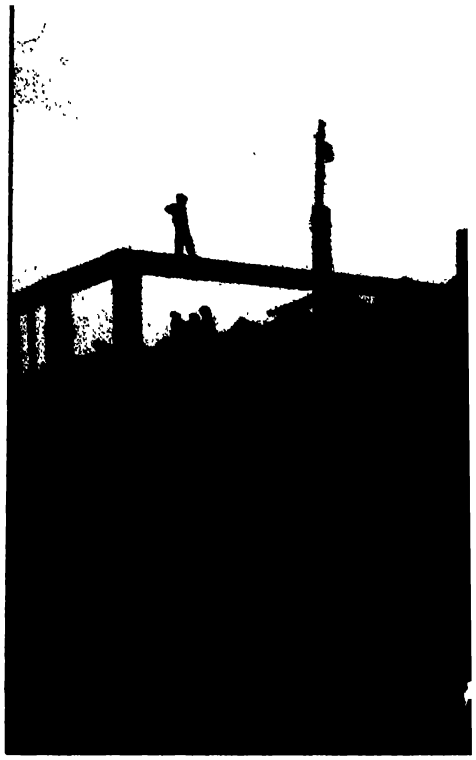
Craning for help

The lack of institutional financing and poor mechanisation perpetuate primitive practices in the construction industry

Infrastructure development is the buzzword these days. And there is no doubt huge amounts of investment will flow into the sector in the coming years. But is the Indian construction industry geared up to meet the challenge? There are a million small and big construction companies in India, about 20,000 of them in the organised sector. Only a handful have access to institutional finance as yet. Most of them are run by local contractors who are ruthless men with strong local affiliations, political clout, and access to an untapped untaxed reservoir of money. Politicians and criminals have flocked to the business in the last two decades.

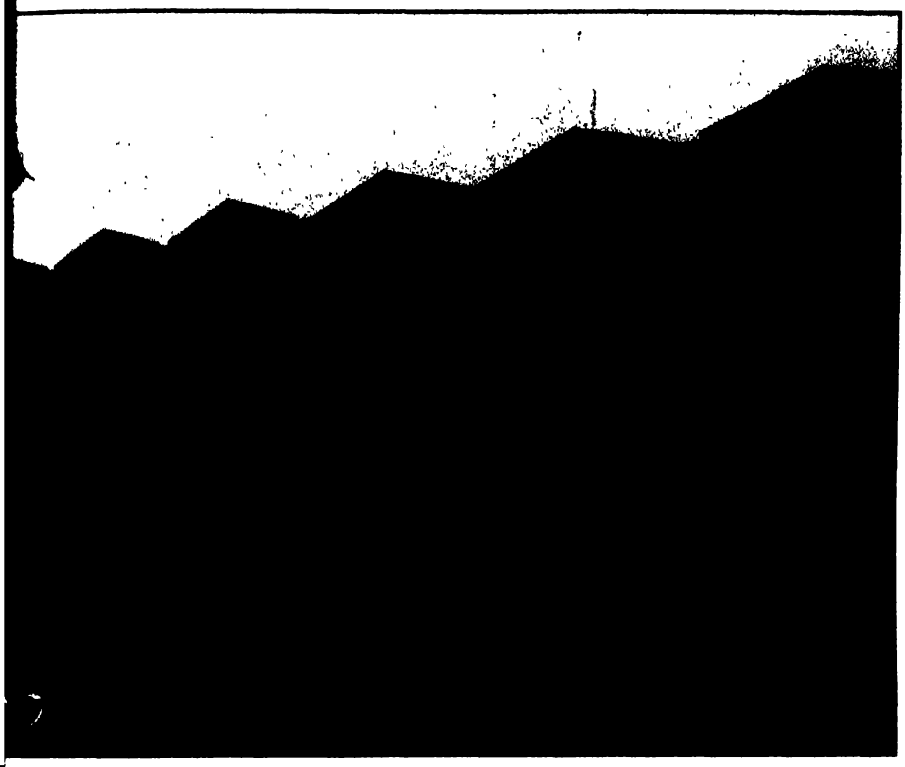


The Reserve Bank of India has no lending norms specifically for the construction industry. As a result, most finance comes from the grey market. There are some exceptions like IL&FS, HDFC, and IDBI. But these are mere drops in the bucket. Private leasing companies have also entered the industry. Some like Srei International now lend money to the construction industry, largely for equipment purchase. Managing director Hemant Kanoria says that, over the years, he has developed his own strong credit assessment criteria. "The idea is that there should be no non-performing leases. So the repayment terms tend to take that factor into account and are very stiff in some cases," he admits. But he says he has over 2,400 clients whom he has lent to in the last 10 years and his NPLs are under 3 per cent. "The biggest contractors now want to buy equipment which costs Rs5 crore apiece. But that sort of relationship only builds up over the years," he says. His smallest clients lease equipment worth a few lakhs.

For the smaller contractor who needs finance in the lakhs and thousands, the *mahajan* market is the only source. These *sahukars* charge up to 30 per cent a year. Others make do with the mobilisation advance given by the client, although this is mostly inadequate. There are no factoring services available for construction-related bills and contracts. Construction industry contracts are handed out to the lowest bidder and his stock of equipment and labour are never assessed. The contractor then puts together the labour from the *sardars* and gets the equipment on hire from other contractors. He mostly subcontracts specific items on the work order to others.

A senior executive at international construction consultancy Flour Daniel points out that he is amazed at the complete undermanning by the main contractor and the large and unwieldy hierarchy of small, technically deficient jobwork contractors on Indian construction sites. Payments are similarly unwieldy. Industry body Construction Industry Development Council (CIDC) estimates that less than 10 per cent of the work order is executed by the main contractor and the rest is farmed out to smaller jobworkers. The main contractor keeps a 10 per cent security deposit with the client in case of non-performance. He receives a 10 per cent mobilisation advance when his upfront costs are up to 30 per cent. His payment comes erratically and in stages. As a result, the entire hierarchy of workers are also paid similarly.

According to industry experts, Indian construction industry equipment is about 35 per cent more expensive than that imported by foreign companies operating in India. This is because of the higher taxes and duties on such equipment and also the higher cost of borrowing. The lease market has also not developed sufficiently and a lot of equipment is damaged while carting it from site to site.



This has pushed costs against mechanisation. A case study of the Thoubal Hydroelectric project in Manipur shows that while it costs Rs45/m^3 when excavation is done mechanically, it costs Rs34 when done manually. However, 32 machines would complete the work in three years, while it would take 1,000 workers four years.

There is strong political resistance to mechanisatio

Kanoria says there is a proposal for a national construction equipment bank being mooted by the bigger companies in the country including his own. He says it would need Rs200 crore to start off and would be able to buy many bigger pieces of equipment, which are needed for the large infrastructure projects. He says that while government help would be needed, the bank would be attractive to construction equipment manufacturers, construction companies, and financial service companies like his own. He believes that if the bank can take off it will catalyse the modernisation of the construction industry. India currently consumes about Rs4,200 crore worth of construction equipment annually.

On paper funds are available. CIDC secretary general P.R. Swarup points out that the National Highways Authority of India has a kitty of over Rs3,000 crore which it has invested in government paper. Its investment in highways is a mere Rs300 crore a year. He also asks about the fate of $2.4 billion collected under the Resurgent India Bond scheme which was to finance infrastructure projects.

in big government projects, which are seen as massive sources of local employment

The result of all this has been that the government and industry have discouraged efficient choices in selection of technologies. Big government projects are seen as massive sources of local employment in the construction stages and there is strong political resistance to mechanisation. "Out-of-date piling rigs have made piling costs so low that better mechanical means are being driven out of the market," says Pesi Dadina, managing director of Calcutta-based KND Technologies. He points out that technologically superior premix batch concrete is more expensive than the bad quality site-mixed concrete simply because the former attracts higher taxes and duties. According to B. Muthuraman, a senior executive with Tata Steel, one of the biggest drivers for political decisions on new projects, like that the company had proposed in Gopalpur, is the number of workers to be employed in the construction phase and the number of unskilled jobs available.

The Flour Daniel executive quoted earlier says that Indian contract procedures work to the advantage of unskilled contractors since no engineering expertise is required of them. He says that the client works out the details and then asks him to bid on specific packages. "Contractors are essentially people who can find holes in the contract and later bill for extra work," he says. The unwieldy system means that people with no technical knowledge but the ability to navigate the legalese and finance the initial stages of work actually get the work. The skilled people are either employees of such a contractor or small contractors to whom the contract is offloaded.

Credit rating agency ICRA has been trying to work out a system to grade contractors, projects, consultants, and clients. In spite of the obvious attractiveness of the idea, there has been no government and institutional support for such efforts.

Till this collective paralysis is removed, India's massive infrastructure buildup will remain a dream. There will no doubt be some efforts carried on by large multinational firms in the country and sporadic efforts by the larger Indian companies, but the contractor raj will never end.

• SUDIPT DUTTA

LNG SUPPLY

Mere gas?

The recent sales purchase agreement between Qatar's Ras Laffan Liquefied Natural Gas Co (RasGas) and Petronet LNG Ltd, a consortium of Indian oil companies, is likely to face a stumbling block over the issue of the nature of the contract.

The agreement is for the supply of 7.5 million tonnes (Mt) per year of LNG to two terminals being set up in India — 5 Mt to Dahej in Gujarat and 2.5 Mt to Kochi in Kerala. The agreement was signed in London on 31 July by Suresh Mathur, chairman and managing director of Petronet LNG Ltd, and Youssef Hussain Kamal, Qatar's minister of finance, economy, and commerce, who is also chairman of RasGas.

However, according to reports from New Delhi, the Indian Ministry of Petroleum and Natural Gas has rejected Petronet LNG's proposal to set up a joint venture with RasGas for the shipment of LNG from Qatar to India. The Indian government would like the imports of LNG to be contracted on an FOB (free on board) basis and not on a CIF (cost, insurance, and freight) basis as was proposed by Petronet LNG. A CIF contract would have allowed the joint venture to include in the rates the charges for shipping LNG from RasGas's facilities in Qatar to Indian shores. An FOB contract, on the other hand, will permit only the rates prevailing at Qatar at the time of shipment to be charged.

Petronet LNG claims that the signing of the sales purchase agreement was a "historic occasion" since it entails supply of LNG from the world's largest single source of natural gas. Qatar is home to the world's largest gas fields, and its current reserves are estimated to last for over 300 years. The sales purchase agreement grants exclusivity to Petronet LNG to supply LNG to Gujarat and Kerala for a period of 25 years.

Petronet LNG's deputy GM (human resources) N.K. Badri Narayanan said in a news release that the company had, for the first time ever, bid for global offers for the purchase of LNG.

It received 17 offers, from which seven major global LNG players were shortlisted. The company claims that it followed a "most transparent and competitive process" in identifying RasGas as the most preferred supplier.

Petronet LNG was conceived to provide an extensive and comprehensive infrastructure for LNG in India, encompassing all related operations, from sourcing and purchase to imports, regasification, and distribution. It was started by a consortium of four Indian oil companies — Oil and Natural Gas Corporation, Indian Oil Corporation, Bharat Petroleum Corporation Ltd, and Gas Authority of India Ltd.

Petronet LNG has already acquired 49.3 hectares of land at Dahej for its receiving and regasification terminal there. For the Kochi terminal, 50 hectares of land has been allotted by the Cochin Port Trust. The company claims that techno-economic feasibility studies have clearly established the viability of both these projects. According to Badri Narayanan the financial closure of the project is expected to be completed by March 2000, so as to commence receipt of LNG by the middle of 2003.

However, if the Indian government insists on the FOB nature of the import contract, Petronet LNG and RasGas will have to try another tack.

• K.G. KUMAR

SANJAY BORADE

Singh and Tandan, the men behind MZIndia

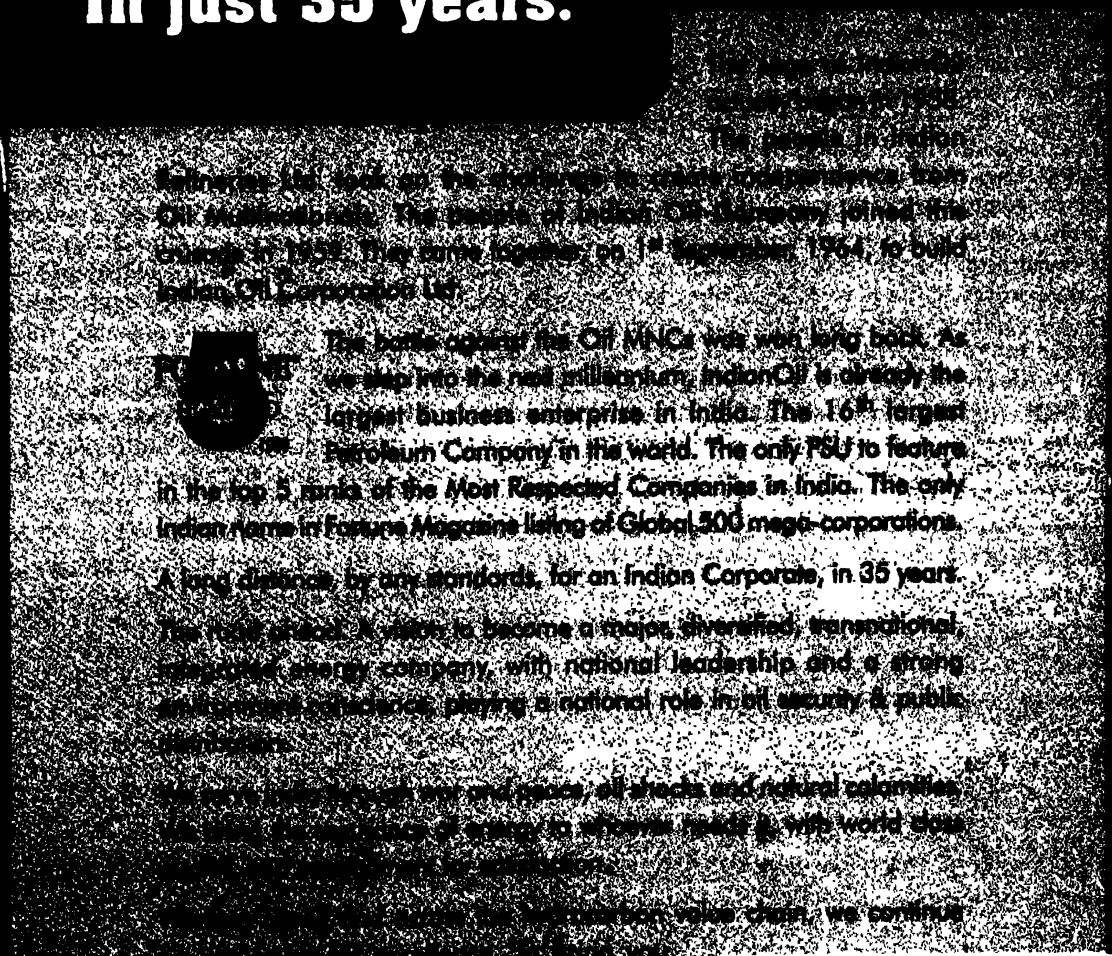
HARDWARE SOLUTIONS

Indian zones

Two Indians in America, actually out of Africa, got a bright idea in 1984 — one connected with IT naturally (aren't they all?), but not to develop software. Instead, the company would build systems to enable IT managers to be able to painlessly source all the materials necessary to create IT solutions. Naming their company Multiple Zones International Inc USA (MZI USA), Sadrudin J. Kabani and Feroze H. Lalji eventually launched four colourful magazines packed with information about computers and peripherals. The magazines are distributed free, with costs borne by information oriented advertising. Non-paid content is minimal. Unlike other catalogue-based publications, the four Multiple Zone products focus on separate areas of information — *The PC Zone* on IBM compatibles and their associated hardware and software, *The Mac Zone* on Apple Macintoshes, *The Learning Zone* on education and training, and Zone.com on the Internet. It has a strong Asian influence, with its magazines and solutions available throughout South and Southeast Asia.

Ten years later in India, Manpreet Singh was making waves in HCL, having grown from selling PCs and peripherals to launching Frontline Solutions, a successful line of business aimed at the home and small business market, marketing HCL's and its business partners' products. Today Frontline has been absorbed into HCL, since Manpreet quit in 1996 to launch Multiple Zones India Pvt Ltd at the end of 1996.

MZIndia is different from its US-based parent's earlier launches in that it is a joint venture in India, its Indian portion owned by Manpreet, who started it, and Gokul Tandan, who came in to support its operations financially a year back. Tandan was himself once a part of the hcl group, having launched Network, the typewriter company, a couple of decades back. MZIndia began with an initial capital of just Rs12,000, and has grown very successfully since then. "We thought that we could exploit the fast-growing home and small business market in India, but found soon that for us the real market lay in the traditional corporate world. Purchase and systems managers find a serious problem in sourcing most system parts, which covers a far wider range than just boxes and printers."



The company has crossed the Rs20-crore mark some time back, according to Tandan, because it allows its clients access to a complete supply chain solution through a combination of direct sales (the magazine, called *The PC Zone* Business). Thus Indian managers can now buy anything from routers to connectors direct from MZIndia, choosing from any brand that has a relationship. Needless to say, virtually all reputed brands can in fact be found inside the magazine, which is now issued regularly every two months.

Having proved the success of its initial concept, the company now plans to expand its offerings with a strong skew onto the Net. Registered customers will be able to not only order but also track the status of their orders using this service. The company, which has thus far financed its working capital largely from within, will shortly be making an offering to private investors/venture capital funds. All three partners will dilute their holdings proportionately, to reassure the new investors of continuity.

PROFESSIONAL SECURITY

Challenging prospects

HARMON SINGH

IISSM president R.K Sinha (R) says private security is among the fastest growing industries

Security and loss prevention constitute one of the fastest growing and changing industries worldwide and encompass a variety of products and services for industrial applications and the safeguarding of event venues, persons, and property against hazards arising out of human negligence, natural calamities, and criminal intent. The growing complexity of industrial societies in the 1980s and 1990s has transformed a fairly straightforward, human-resource-based profession into a business built on competence in strategic intelligence and research, engineering and industrial automation, information technologies, law, media relations, and the management of all of these.

The challenges of industrial security in the coming millennium were set out and discussed at a recent international conference of security professionals in Penang, Malaysia, organised by the International Institute of Security and Safety Management (IISSM) headquartered in New Delhi. Its members include professionals from the US, Israel, Turkey, Indonesia, Malaysia, Mauritius, Singapore, and Hong Kong, besides India.

The need for closer co-operation and inter-networking between private security agencies across a "borderless world" was the theme of the keynote address by Dato' Ismail bin Hamzah, deputy secretary-general of the Malaysian ministry of home affairs. "The security and safety industry is an important sector to help nation-building, not any less important than other primary sectors," he said. "The bottomline is the realisation of a safe place to live, work, invest, and do business. Trade and industry cannot survive, much less thrive, when violence and crime reign."

The bewildering pace of technological development has created vast opportunity for criminal abuse — it's no secret that antisocial forces all over the globe are always a step ahead of the law-enforcers. In such a scenario the traditional reactive "security" approach must give way to proactive "deterrence". Lauri Kingsbury, a former Detroit police officer and author of two textbooks for police personnel, spoke of the need for a precise definition of deterrence and clear articulation of the means to achieve it. The reason, she said, is that differences in understanding of the terms of a security contract between security provider and client have led to a number of legal conflicts in the US.

Building security systems have come a long way from the very first electromechanical devices to the modern age of microprocessors and biometrics. Kerran Campbell, MD of CCD Consulting Engineers Australia, a multidisciplinary consulting practice that specialises in security engineering, described the challenges of integrated security management. In any modern security programme, he said, management is the most important factor, more than planning/design and even technology. That wasn't the case in the 1980s, when technology developed so rapidly that management had to be modified to fit systems instead of the reverse. Those were the days when security was simply layered onto existing building automation systems and was not treated as a critical individual requirement.

Crisis management is another area of developing expertise in the West. Preventing, responding to, and recovering from terrorist confrontation were the subject of US anti-terrorism expert Stanley Grogan's address. "In terrorism 'they' choose the time, the place, and the method," he said. In dealing with a terrorist attack, he added, an incident command system is vital. "What such a system does is to avoid chaos through an effective form of people management." The effectiveness of such a system was demonstrated in the operation following the Oklahoma bombing. Equally important is the need for skilful management of the media, which can be used at such times to project reassurance and confidence in the authorities' control over the situation.

R.N. Dash, senior executive director of Security and Intelligence Services India, provided insights into the unforeseen hazards of technology, the invasion of privacy through remote sensing and remote control, the catastrophic proportions of cybercrime, and the avenues for abuse of scientific research.

Malaysia has had its share of problems with public order. Dato' Abdul Hamid bin Mustapha, former chief police officer of Penang, described the success of his "package policing" initiative in the state, at one time a stronghold of the Chinese triads and other murderous criminal gangs. His approach was to get the people actively involved in policing their own localities, which engendered a more responsible attitude to their security requirements and lower dependence on an overstretched police force.

The big small parties

Minor coalition partners, with their regional strongholds, will be more important than ever before in the national governments to come

Naidu may script the success story of the BJP in Andhra Pradesh

Despite the so-called polarisation of Indian politics towards the Congress and the BJP, the reality in the different states is that regional parties that talk of issues both local and national in tune with the regional aspirations and requirements have entrenched themselves firmly into the system. Even in the national perspective, no national party can ignore them on their turf and, therefore, alliances have become a natural phenomenon with both the Congress and the BJP opting for different partners who can tilt the balance.

Business India has prepared a brief of the major political alliances in different states where regional parties wield considerable influence and what it means in terms of the expected voting pattern for the constitution of 13th Lok Sabha:

Andhra Pradesh: The state is going for assembly elections along with the Lok Sabha. The Telugu Desam Party (TDP), under the leadership of chief minister N. Chandrababu Naidu, has forged an alliance with the BJP as its minor partner to take on the Congress, its main rival. In the last elections, the TDP, which had entered into a tie-up with the Left, won 12 out of 35 seats it contested with 31.97 per cent of the total votes polled. (The state has 42 Lok Sabha seats).

The BJP, fighting alone, bagged four of the 38 seats contested with 18.30 per cent votes. The Congress, the main opposition, captured 22 of the 42 seats it contested with 38.46 per cent votes. This election, the TDP has put up its candidates in 34 parliamentary constituencies, leaving eight for the BJP. Going by various opinion polls, the parliamentary elections will see a neck-and-neck fight with the BJP-TDP alliance and the Congress expected to garner around 42 per cent of the votes, each claiming almost an equal number of seats. In the assembly elections, the TDP is going to the polls under Naidu for the first time. In the absence of the NTR charisma factor, the Congress appears to have an edge at the moment. But the development work undertaken by Naidu in the state during his three-year stint as chief minister is expected to give a boost to TDP's image in the final run-up.

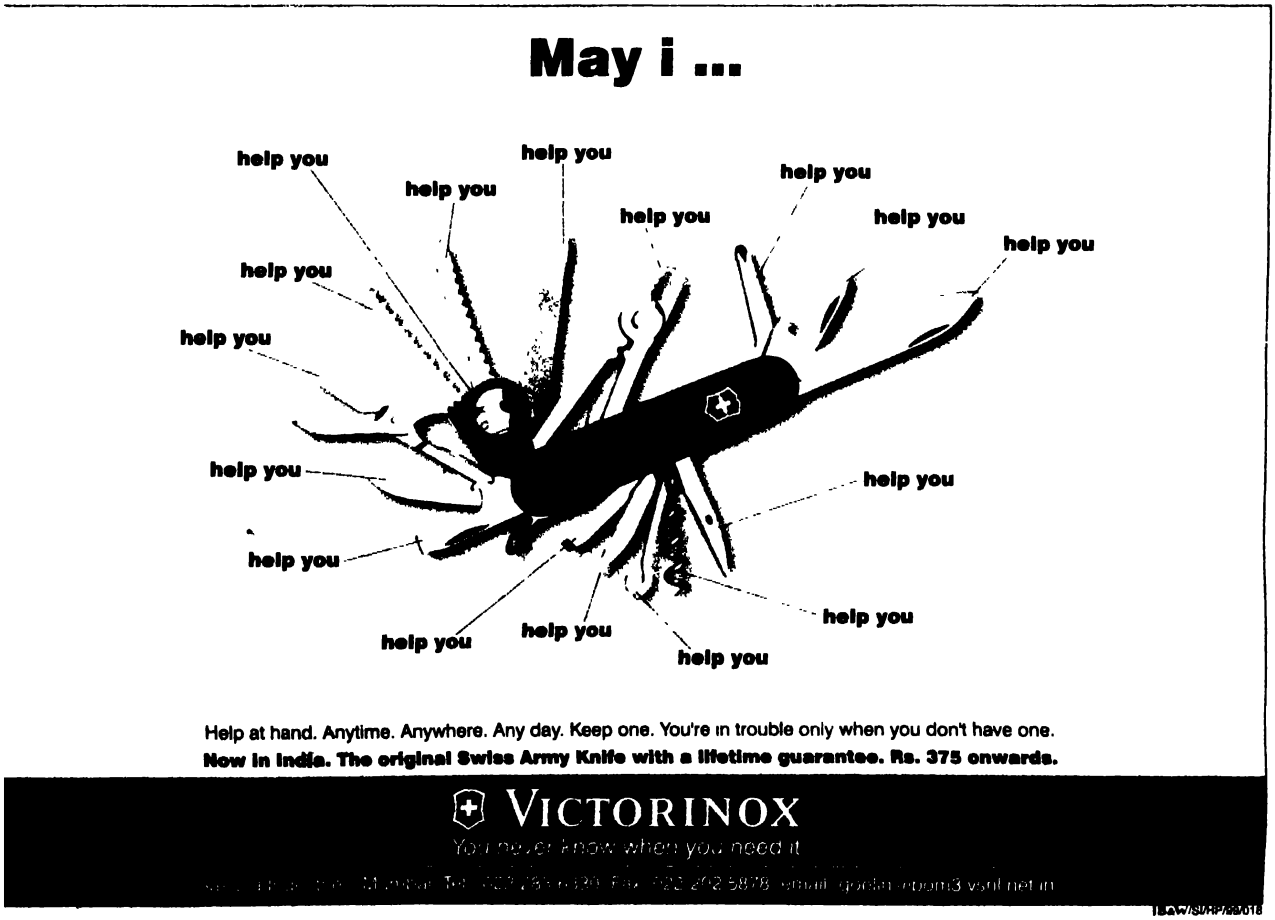
Gujarat: The main contestants here are the BJP and the Congress after the merger of Vaghela's RJP with the Congress. In the last elections, the BJP won 19 seats with 48.28 per cent of the total votes polled, while the Congress could manage only seven seats with 36.49 per cent of votes. According to various opinion polls, the situation is going to remain the same.

Haryana: The scenario is completely different from the last elections with the BJP switching over its alliance from Bansi Lal's HVP to Chautala's INLD and the BSP opting for HVP in place of INLD. The Congress has decided to go it alone. The last year has been very eventful in the state with Chautala replacing Bansi Lal as the chief minister. In the last elections, BJP, HVP and BSP bagged one seat each, while INLD and Congress cornered four and three seats, respectively. The incumbency factor seems to be almost absent this time.

As far as the share of votes is concerned, the Congress got 26.02 per cent, BJP 18.89 per cent, BSP 7.68 per cent, HVP 11.60 per cent and INLD

26.88 per cent. The new political equation clearly shows a tilt towards the BJP-INLD alliance with both fighting on five seats each.

Bihar: The last elections saw a triangular contest with the Congress as a minor partner of Laloo Prasad Yadav's Rashtriya Janata Dal (RJD), the BJP allying with the Samata Party (SP) and the Janata Dal (JD) in alliance with the Left. This time, however, there will be a direct contest between the RJD-Congress alliance and the BJP-Janata Dal (United) alliance. JD(U) was formed after the merger of SP with JD. In the last elections, out of the 54 seats in the state, the Congress got five of the 21 seats it contested with 7.27 per cent votes, RJD got 17 of 48 seats contested with 23.21 per cent votes, BJP got 20 of the 32 seats contested with 24.03 per cent, and SP got 10 of 21 with 15.74 per cent of the votes polled. JD's share was 8.72 per cent votes, while that of the Left was 3.80 per cent.



The state is geographically divided into south (Jharkhand/Vananchal) and north. While the 14 seats in the

south are poised for a direct fight between the Congress and the BJP, the 40 seats in the north are being fought amongst alliances. Opinion polls expect the BJP to sweep the southern part with its stand on statehood for Jharkhand. In the north also, riding on an anti-incumbency wave, the BJP-JD(U) combine is expected to fare better than last time, increasing its tally at the cost of both Congress and RJD. The Left parties may eat into the votes of the Congress-RJD alliance, thus helping the saffron brigade indirectly.

Karnataka: The state has seen a lot of pre-election realignment of forces. Unlike the triangular contest witnessed during the last elections between the Congress, the JD and the BJP-Lok Shakti (LS) alliance, this time the Dal has split with the faction led by chief minister J.H. Patel merging with LS to form JD(U). The leftover JD, led by former PM Deve Gowda, is a spent force. The contest, thus, seems to be more or less polarised between the Congress and the BJP alliance. The high-profile Bellary seat, where BJP's Sushma Swaraj is taking on Congress president Sonia Gandhi, is one of the 19 seats from where BJP is contesting. Nine seats have been left for JD(U).

In the last elections, the BJP won 13 of the 18 seats it contested with 26.95 per cent of votes, while the Congress

May i ...
help you
help you
help you

got nine of the 28 contested with 36.22 per cent. LS got three seats with 10.11 per cent votes, while the JD also won three seats with 21.69 per cent votes. This time, opinion polls say, JD votes will be divided between the Congress and the BJP with Deve Gowda influencing the voting pattern only in his own constituency. The Congress and the BJP will be engaged in a photo finish scenario. The two forces are also set for a keen battle in the assembly elections to be held simultaneously with the Lok Sabha polls.

Maharashtra: When other states are seen to be bi-polarising towards the Congress and the BJP, Maharashtra is going the other way with the Sharad-Pawar led Nationalist Congress Party (NCP) breaking away from the Congress to make the fight triangular. Last time, Pawar was instrumental in taking on the Shiv Sena (SS)-BJP alliance having consolidated anti-saffron votes by roping in smaller parties like SP and RPI to ally with the Congress.

In the last general elections, the Congress got 33 of the 41 seats it contested, leaving eight for its smaller allies. The BJP and SS got only four and six seats respectively, the remaining four going to RPI. While the Congress got 43.64 per cent of the votes polled, the BJP and SS got 22.49 and 19.66 per cent, respectively. However, this time, Pawar and his alliance with the SP and one faction of the RPI seem to be formidable enough to topple the Congress apple cart by eating into its votes.

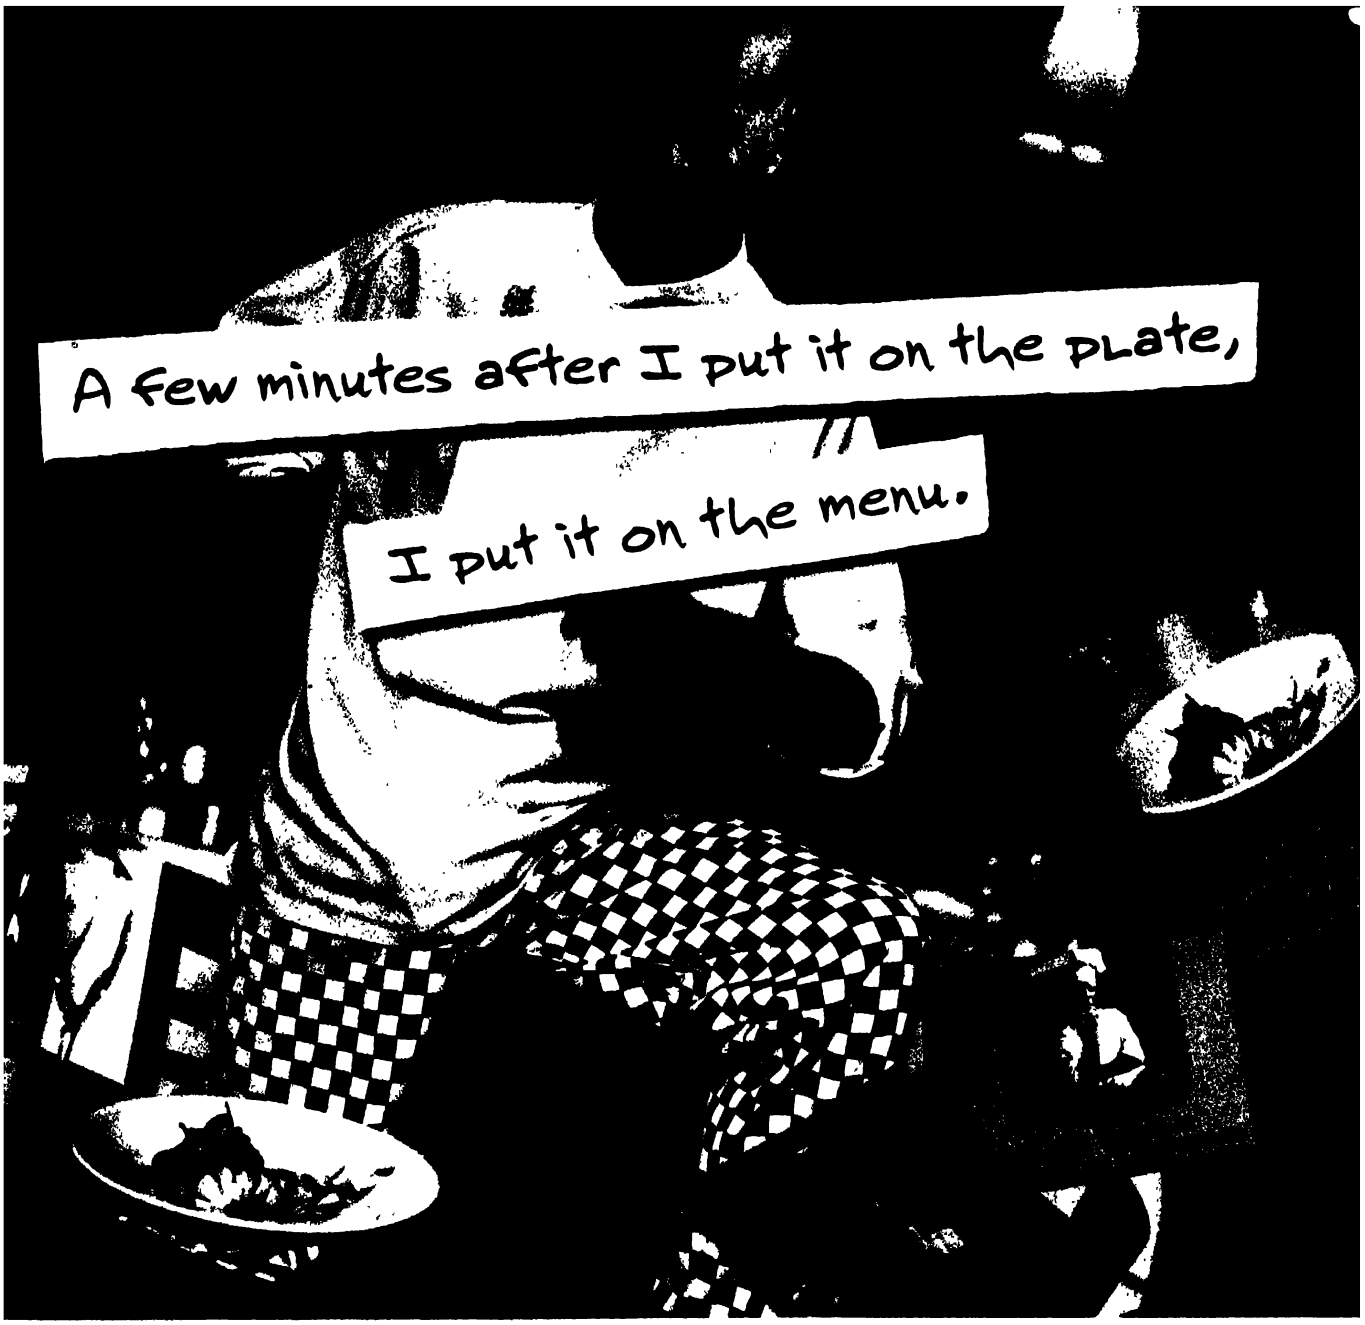
Fast-changing equations in the state have put opinion pollsters in a cautious state. Most of the opinion polls, however, predict significant gains for the BJP-SS combine, thereby putting it ahead of Pawar with the Congress relegated to the third position with its presence felt mostly in and around Mumbai. In the assembly elections to be held simultaneously, the SS-BJP combine appears to be at a little disadvantage compared to Pawar. A hung assembly is predicted with NCP as the single largest party.

Tamil Nadu: This is one state that has seen high political drama both at the state and the national level. First, the ever unpredictable AIADMK supremo

Jayalalitha snapped her party's ties with its earlier partner BJP, thus toppling the Vajpayee government at the Centre. Then she went on to strike an alliance with the Congress, giving the boot to Janata Party leader Subramaniam Swamy. The formidable DMK-TMC alliance has also broken up with M. Karunanidhi opting to go with BJP along with MDMK, PMK and TRC. G.K. Moopanar is going it alone, staying equidistant from both the Congress and the BJP in a hope to revive the Third Front.

Opinion polls have painted different pictures (all opinion polls for Tamil Nadu during the last elections went awfully wrong) with the last poll percentages carrying no significance on account of a complete shift in the political alignments.

A look at the last results show 4.78 per cent votes for Congress with no seats, 6.86 per cent for BJP getting three seats out of the five contested, AIADMK 25.89 per cent for 18 (22), DMK 20.08 per cent for five (17) and TMC cornering 20.19 per cent for three seats out of the 20 contested. However, this time, the battle lines have been drawn between the AIADMK-Congress and DMK-BJP-MDMK-PMK-TRC alliances, perhaps making it an evenly-balanced fight, provided Jayalalitha does not let the Congress down.



Orissa: The political alliances in the state remain more or less similar to last time. But the Congress-ruled state saw a change of head with tribal leader Giridhar Gomang taking over as chief minister from Janaki Ballabh Patnaik. This has completely transformed the political equation in the state. Even in the last elections, the Congress managed to get only five of the 21 seats with 41.04 per cent of votes, while the BJP cornered 21.19 per cent of the votes. Opinion polls predict a complete drubbing of the Congress by the BJP-Biju Janata Dal alliance. There is also a strong anti-incumbency factor in the state.

Punjab: This is one state where the Congress appears to be on the top, with BJP ally Akali Dal having split right down the middle. The breakaway Tohra faction of the Akali Dal has decided to go with the BSP, another formidable force in Punjab, thereby making the contest triangular in favour of the Congress. In the last elections, the Congress had drawn a blank with 25.85 per cent of votes, while the Akali Dal and the BJP won three and eight seats. According to opinion polls, an anti-incumbency wave and a split in the Akali votes will put the Congress in a stronger position both in terms of seats as well as an increase in its share of votes. In fact, the Akali-BJP is seen conceding more than half of the seats it won last time.

West Bengal: In the last elections, Mamata Banerjee broke away from the Congress to form the Trinamool Congress (TC) and allied with the BJP to fight both the Left and the Congress. The Congress bagged one seat with 15.20 per cent of votes, the Left got 33 seats with 46.83 per cent, the BJP got one seat with 10.20 per cent and the TC got seven seats cornering 21.58 per cent of votes. This time, the Congress has completely withered away, thereby strengthening the TC vote bank a bit further.

Opinion polls predict a slight gain for TC-BJP alliance at the cost of the Congress. As a result, the Left may have to concede around five seats to the TC-BJP alliance, making them a strong opposition that will replace the Congress.

Come September!

The second tranche of Bank of England's gold auction on 21 September is likely to impact global gold prices, but the domestic market may remain largely unaffected

SANJAY BORADE

Machado sees a 5 per cent increase in gold demand this year

Gold investors, traders and analysts are waiting expectantly for 21 September when the Bank of England auctions the second tranche of 25 tonnes of the yellow metal. The first auction on 6 July sent shock waves in the gold community across the globe, with the prices tumbling. But as Ramesh Ganesan, head-trade and commodity finance, India, ABN AMRO, says, "The daily price movement of gold is not dictated by the physical demand alone. The futures/options market in New York — Comex — too has a significant bearing on the price. For instance, after hitting a 20-year low last week ($252.20 per troy ounce), the price has steadied to $254 on 31 August. The reason is that gigantic US funds play the market, buying and selling, seeking arbitrage opportunities."

It was on 7 May this year that the UK Treasury decided to hawk 415 tonnes out of its 715-tonne reserve, sending everyone into a tizzy. The immediate action plan was to sell 125 tonnes at public auctions by March 2000. The time-frame being 25 tonnes each in July, September, November, January and March. The reaction was nothing short of 'code blue' to say the least. Between the announcement and the first auction, the price crashed by $26 per troy ounce. On the auction day, the price was $261.2, but subsequently it dropped to the 252/253 levels. The ramifications were felt in the Indian market as well (see chart). Since then, however, the market has stabilised as the knee jerk reaction has been discounted.

While half year demand for gold in India is down by 10 per cent (414.4 tonnes), year on year, World Gold Council's financial institutions manager Derrick Machado reckons that this is not a true indicator for the first quarter of 1998 saw a phenomenal surge in offtake due to the gold liberalisation policy announcement in October 1997. Probably due to this, last year saw record levels being touched — imports were pegged at 614 tonnes while demand reached dizzying heights of 815 tonnes.

Machado remains bullish. "I expect a 5 per cent improvement in demand this year. The second quarter has seen strong demand (218.4 tonnes, 6 per cent higher than 1998) as the price is elastic and I think larger volumes should be purchased with the advent of the festival season." The only hitch would be the fact that with the monsoon being a trifle indifferent this year, agricultural incomes which have helped ramp up demand lately will be on the poorer side. Consumption patterns reveal that 70 per cent is purchased in semi-urban and rural areas while only 30 per cent of the offtake is in urban belts. Moreover, 45-50 per cent of the total offtake is in southern India.

Global price movements have not had a major influence on demand locally. This is because the fall in the dollar price of gold was partly offset by a small rise in the Indian premium over international prices following the increase in import duties earlier in 1999. The custom levy was jacked up from Rs250 per 10 gms to Rs400 in order to restrict the extraordinarily high level of gold imports. Machado says that 25 tonnes is not large enough to impact global markets for long, "after all the daily paper turnover in the London Bullion Exchange is 1,000 tonnes."

ABN AMRO, which is one of the nominated banks for the import of bullion as part of the gold liberalisation scheme, monitors gold trends on a daily basis. Ganesan says, "The Bank of England auction coupled with the overhanging International Monetary Fund statement that it too would be

The difference between official imports and overall demand is met by other imports and recycled scrap gold

selling 110 tonnes of its gold reserves resulted in a depressed market. But since then sanity has prevailed. The US Congress and the Federal Reserve have ensured that the IMF does not entertain such ideas and central bankers the world over with close to 30,000 tonnes of gold reserves have realised that any such sale would be foolhardy as it would lead to a precipitous fall in the price of gold. This has meant the return of stability, but with the impending auction on 21 September, the trend remains bearish."

It is looking increasingly unlikely that the US Congress will authorise the casting of the US vote at the IMF (17 per cent veto is with the US) in favour of gold sales, which would effectively veto the proposal because of the Fund's weighted voting structure. In fact, both the Clinton administration and the IMF have indicated that they are now examining ways of using the IMF's gold for debt relief without actually selling in the market.

Globally, investors in the yellow metal have lost money in the immediate past. Consider this! From a high of $430 per troy ounce a decade ago, gold prices are down to $254 levels. Meanwhile in India, gold prices have bucked the downward trend. Ganesan claims that the societal affinity for gold remains the locomotive and consumption patterns reveal that gold gives good value in India. He says, "Maybe it is not the right time to buy gold presently, but at every dip, gold presents a good opportunity. The figure of $250 is the major resistance level which if breached on 21 September will determine the next course of action. However, the exchange rate — dollar vis-a-vis rupee — will be the key determining factor for the gold price in India." But the psyche of a gold buyer in India is that he buys irrespective of the state of the market, for if it is falling an opportunity is preceived and if it is rising, he wants to get into the escalator.

Which means that the yellow metal

UMESH GOSWAMI

Ganesan believes societal affinity for gold will not diminish

as a long term investment option retains its sheen and lustre. Ganesan maintains that the situation will remain bearish in the medium term, till the demand and supply equation stabilises. Pertinently the cost of production of gold is in the vicinity of $207 per troy ounce and as the international price of gold slips down to make its tryst with that level, the entire concept of mining gold will become unviable and as such the worst case scenario is that mines could shut down. But this is highly unlikely, for as Machado says, "There can be no perceptible shift in the supply-demand situation for a gap of 800-900 tonnes persists. Global demand is approximately 3,300 tonnes while the gold mined is 2,400 tonnes. The gap is substantial, so there should be no alarms of over supply."

Machado remains optimistic about the future, guided as he is by the basic Indian premise that gold is an 'asset of last resort'. Says he, "Two years back, we went through a curve, in India everybody wants to catch the bottom or when the curve turns. The same situation has arisen once again. With the wedding and festival season on the anvil, I expect a surge to come through which will cover the deficit adequately." Helping this is a refurbished gold import policy which allows four official windows — NRIs can bring in 10 kg of gold every six months by paying customs duty of Rs400 per 10 gms in foreign currency, holders of special import licences under the Exim Policy are entitled to import, exporters in Export Processing Zones are entitled to import gold free of custom duty and effective 16 October, 1997, nine commercial banks and three government trading houses are permitted to import gold.

All this has supposedly resulted in numerous benefits:

- premiums over international price have declined from 17 to 8 per cent
- parallel imports have slowed down from 106 tonnes in 1996 to 92 tonnes in 1997
- *hawala* premiums on the dollar have reduced from 10 to 5 per cent

Unfortunately this entire game plan could be bushwhacked by the Bank of England auction programme which can cast a very long shadow over the market every two months, providing speculators with a recurring focus for positioning on the downside. If the present formula is followed in letter and spirit, then this programme can last 33 months and the gold market can stay depressed through this period. So, come 21 September, the pressure on the international price will once again get intense. Whether it will impact the domestic market adversely is a matter of conjecture.

What appeared to be merely a canny business opportunity at first glance has developed into an enterprise of breathtaking scope and dimension

ning knowledge

Visionary Rajendra S. Pawar, backed by a team of dedicated disciples and the continuing support of infotech entrepreneur Shiv Nadar, has acted enterprisingly with NIIT Ltd, the first purely human-asset-based company ever to be included in the august BSE Sensitive Index.

Today NIIT is definitely moving out of the kiddies' league. It has expanded out of its training niche into education, and turned its in-house software production into a global business. More importantly, all this has been done with a continuous and stern eye on operating profits, yet the company has not skimped on research and development. Even more remarkably, it has found the spare cash to invest in basic research, something few of its counterparts in Indian industry have ever done, and certainly none in the field of information technology have done so to any substantial extent.

Now NIIT is poised to establish itself in a far wider sphere, unleashing its internally accrued $100-million war chest on a series of acquisitions abroad during the next few months. This will consolidate its leadership position as the first commercial enterprise that has exhaustively researched and applied technology to the business of imparting knowledge.

"Moving up the value chain is everyone's *mantra* these days," says Rajendra (Raji) S. Pawar, vice-chairman and founder of NIIT Ltd, the company he started with seed capital from then boss Shiv Nadar way back in 1981. "For NIIT, moving up the value chain has been a way of life ever since we started."

Pawar and Vijay K. Thadani (now president and chief executive officer), employees No 1 and No 2 respectively of what has grown today into a diversified Rs648-crore company (as per last year's closing, September 1998), started operations in Nariman Point, Bombay (now Mumbai) in February 1982, at the company's first training centre. By April that year they had signed up 99 students for the very first computer courses conducted in India by a vendor-independent private agency.

Reliving those tense times, Thadani remembers NIIT's very first customer. "We announced an unconditional offer that signees could complete their course whenever they wanted. Our first customer was a shippie [merchant seaman] who had to take off even before the course began and never came back. We managed to trace him to Chandigarh once, but could not contact him. Wherever he is today, he is still welcome to complete our course!"

It is precisely that credibility and willingness to stand behind the company's commitments that has taken them far beyond the simple concept of a company running computer training courses to an enterprise that is seeking to understand and implement the concept of knowledge across the gamut of information-technology-led human activity.

Clearly, from the sheer business point of view, it has been a successful gambit. The company's revenues have already grown 35 per cent on an annualised basis this year, with the turnover for the first nine months already at Rs633 crore. Net profits have crossed 44 per cent to just under Rs89.5 crore for the first nine months, giving an indication of substantially more addition to reserves, which already stand at Rs260 crore. The equity base of the company expanded by 50 per cent this year to Rs38.65 crore following a bonus issue, so dividends could probably hold fairly steady without affecting capital accretion in the reserves account. Just about half the revenue comes from overseas, taking NIIT to the position of 4th largest IT company in the country.

From the point of view of professional management, the reduction in interest costs is one of the most crucial factors. The figure, an astonishingly low Rs2.1 crore for the first nine months, has actually reduced, while sales (revenue from operations) grew by 13 per cent to cross Rs150 crore. While revenues will show a seasonal increase during the last quarter as borne out by the impact of the third quarter on annual sales (year on year for the past year), overall the usage of money is clearly being handled very well.

Credibility has been a key issue for the company right from its fledgling days. In the beginning it had to contend with the fact that the only private courses were tutorials run by college teachers in their spare time, some of which had grown into fairly noticeable, but not necessarily respectable, enterprises.

Today, with universities reaching out to accept collaboration with the private sector in order to ensure professional-quality computer education on campus, the emphasis must lie on leadership in effective knowledge transfer. "Knowledge is the issue," Pawar points out. "It is the only thing that a person can give away without loss, only gain for both the giver and the given."

"To understand where we are reaching, you must stop looking only at the computer courses where we started, and where we still play a critical role. Our efforts to build quality into our teaching skills have led us far beyond value-chain concepts to cutting-edge research into cognitive systems on the one hand, and into pure e-commerce technology and deployment skills on the other. This enables us to create and constantly improve learning technologies that can be deployed anywhere, using multimedia, and then to actually deploy them, through our initiatives on the Net and on the ground, through our offices in 17 countries across the world," explains Pawar.

Nadar (l) has consistently supported the niit team led by Thadani

The cognitive approach

According to the *Oxford Dictionary*, cognitive ('kognitiv/*adj*) means of or relating to the action or process of acquiring knowledge, by reasoning or by intuition or through the senses.

"In the very early days," recalls managing director P. Rajendran, "we started developing standardised teaching modules using commercial authoring tools. However, when these were applied in the field, different course conductors would add variants, drawing on their personal understanding or ability to explain the content."

SANJAY BORADE

For Rajendran, curricular evolution is the key

Very quickly, matters would get out of hand, with courseware rapidly losing its reproducibility in different centres. The problem was clearly that intuition was being allowed to overtake reason in the process of transferring information. Instead of improving methods of helping students to acquire knowledge, the process was getting unmeasurable and therefore unreliable.

Former banker K.K. Bhardwaj, who today heads the STRIDE (strategic initiatives in deployment of education) group at Synergy, NIIT's spanking new research and development facility at IIT Delhi (which also happens to be the *alma mater* of at least three top NIIT directors – Pawar, Thadani, and Rajendran – as also R&D chief Sugata Mitra and Bhardwaj himself), saw the weaknesses of the commercially available authoring tools. He pioneered the initiatives that led to the development of in-house authoring tools. Today these are used to create startlingly better ways of helping students solve real-life problems rather than merely discovering the complexities of new knowledge.

In the case of Microsoft's WindowsNT, the five-day systems management course has been reduced to just four days, dropping to 80 per cent in terms of time. But time to train is not the most critical improvement, although it does reduce the total cost to client organisations. Computer Associates, the US-based $4.7 software agglomerate, has an enterprise management software Unicenter TNG, which is used to track the real-time status of the enterprise's computer systems, down to the actual software and hardware installed on individual desktops.

This can be remotely installed and configured, with diagnostics that allow a centrally located system manager to administer the entire system, even when it is made up of completely different vendor products, such as personal computer hardware and software, Unix boxes, mainframes, network components, and so on. Properly used, large enterprises can save crores in staffing costs and time to recover from stoppages. Competitive software systems include Tivoli from IBM.

However, system managers need to

be able to very quickly take decisions based on the information thrown up by the Unicenter TNG console. When NIIT explored the CA training system, it found that the courseware could be redesigned effectively, not only reducing the time and cost of training but also improving the ability of system managers, the trainees, to take good decisions quickly. This is because the courseware creates a real-life environment for implementing a Unicenter TNG solution.

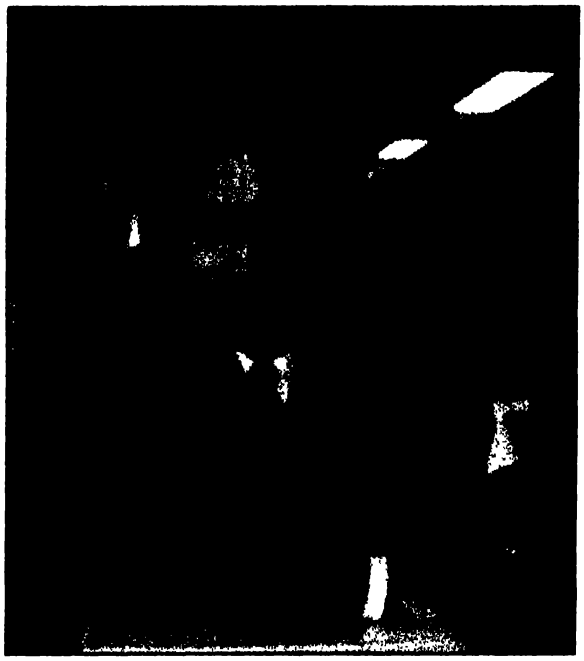
Using the internally engineered model-centred learning architecture (MCLA), NIIT stores the content as objects, builds a standardised layer of middleware (format- and platform-independent) templates, and can therefore instantly generate or update output designed for any medium, be it print, multimedia, or the Web. The beauty of this methodology is that knowledge experts can control the process, instead of depending on arms-length software specialists.

Treating the content as objects means that the databases can be updated whenever need arises, and the courseware that draws on that content will automatically and necessarily reflect the very latest version. With the middle layer, which is platform- and format-independent, containing the templates, designing and implementing forms to suit local tastes can be done entirely without affecting the quality of the content itself. Finally, with the middle layer incorporating the necessary hooks to drive any form of output, it ceases to matter whether the system is needed in print, multimedia, or the Internet, since it will contain the correct content allied with a well-designed form factor.

"We regularly conduct customer satisfaction surveys, both for users and for their system supervisors to determine that we are imparting the problem-solving ethos effectively," Bhardwaj points out. A very long time back, NIIT found that average students were being sent into industry without an essential ingredient of their makeover — the ability to take effective decisions on their own, rather than wait for orders. This has triggered a constant search for ways and means

VIVAN

Bhardwaj pioneered the initiatives that led to the development of in-house authoring tools



to encourage students to take charge of their knowledge accrual process.

P. Rajendran recalls the evolution of curricula at NIIT from 1982, when the first course was designed, to 1986, when instructional design was consciously incorporated. The process of improving content transfer continued, so that in 1989 the integrated higher education curriculum was introduced. This was followed by a seminal change in concept in 1992, branded as Future Focus, where non-computer classrooms were deliberately added in order to expose students to emerging computing concepts over and above the technologies being studied. For the first time, courseware also included guaranteed exposure to industry through an internship. The industry collaboration programme, administered by S.N. Uma, has expanded NIIT's own relationships in industry to the point where 1,200 companies (300 are software exporters) accept NIIT students during their internships. Specialists in every branch nurture these relationships.

In 1995 the curriculum again expanded towards the global market. The global net program was designed to encourage students to prepare to work in any environment, strengthening their self-confidence to take responsibility. This year the curriculum has undergone another revamp. The Web-centric curriculum comprises four semesters – Web programming, object-orientation, visual code development, and Web application development – of 28 weeks each. Professional certifications for the successful students include Java, Microsoft Visual Basic, Microsoft professional architecture solution design, and (for those who have cleared all the Microsoft certifications), the umbrella Microsoft-certified solution developer (MCSD). The complete GNIIT programme also includes a year in professional practice. These programmes have been standardised and stabilised effectively across the globe and through the use of different media, including the Internet, mainly because of the company's proprietary MCLA. This multiplies the productivity of the set of best practices developed within the company as it is being deployed outside.

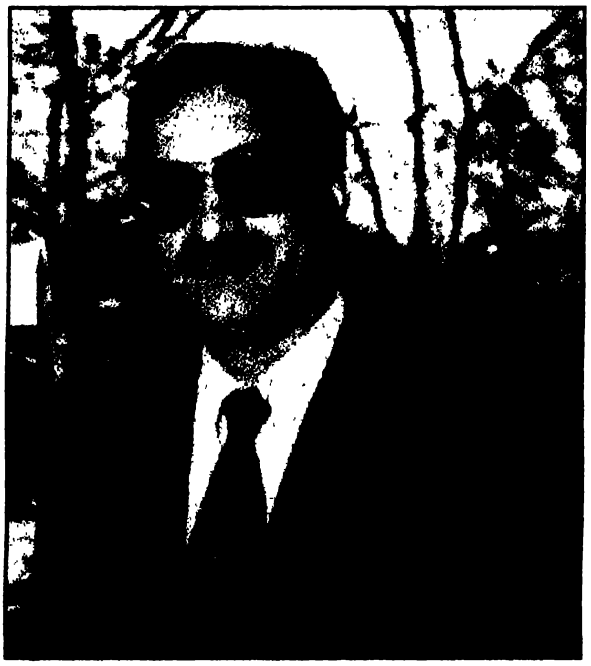
Hardly soft

For a company like NIIT, its investment in R&D and software development is an integral part of its ability to grow in its apparent sphere of education. In fact, a glance at the last four years shows that software has gradually grown its share of total revenues, to over 40 per cent now. The company has become the world's largest vendor of multimedia titles, introducing over 100 new titles every year.

VIVAN

NIIT's software has evolved with the changes in the industry in general, says Thakur

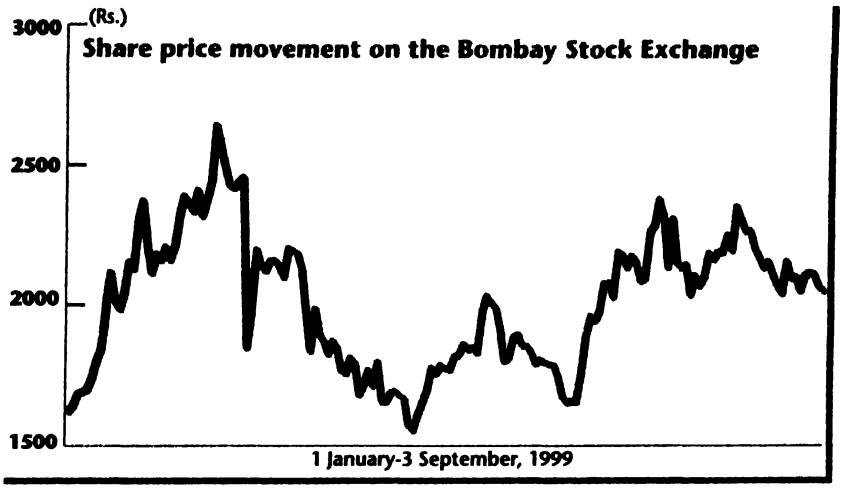
It plans to introduce a stunning range of software solutions aimed at the Web developer's market. The first product, EasyPay, was developed as part of a contract for CheckFree, one of the world's largest electronic bill presentment companies, and commercially launched at the end of June at the Biller's '99 Conference at San Diego in the US.



"Our evolution in software design has grown with the changes taking place in the software industry in general," feels Arvind Thakur, director and president of the software business group. "In the 1970s, the emphasis was on automating the back office. With the introduction of distributed computing in the 1980s, software moved towards automation of the front office. Products in this area are at a fairly mature level today, but an entirely new paradigm in the world of computing is the introduction and development of the World Wide Web, both as a medium and as a delivery mechanism. E-commerce is our response to this phenomenon."

Thakur, who set up NIIT's software business in Chennai (Madras at the time) in the 1980s and has seen the company's growth in software services mushroom to nearly equal its education business, now lives in Delhi. Pawar explains that at some point it was necessary for the top team to be together in the same place, which is why Thadani also moved to Delhi from Mumbai. Today the company has grown to a point where geography is no longer a bound. Gopal Chakravarti, heading the European business group, lives in London. Thadani, who also leads the finance function and who is focusing on the company's next foray, growth through acquisition, has just moved to the company's US headquarters at Atlanta, Georgia.

"For us the solutions business has migrated vertically in 12 years, up from the plain vanilla software business," senior vice-president Shrikant Inamdar, head of software development, comments. "This has contributed to our physical presence in 21 countries, which can expand to 26 easily, with business developed in 31 countries today." NIIT has changed its focus over the years, from services (projects and manpower support) to solutions and products. The target for both is the burgeoning e-commerce market, not just for third parties but for NIIT itself.



"The critical quality factors in software development are defect levels and cycle times," explains Thakur. The company, which achieved the SEI-CMM Level 3 (the Software Engineering Institute, part of Carnegie Mellon University in the US, has developed a Capability Maturity Model for software code development) in 1994, moved up to Level 4 in 1997, and has its sights set on attaining the highest Level 5 by December this year. Every NIIT-ian carries a signed certificate of intent from vice-chairman Pawar in their filofaxes to this effect. SEI-CMM-5 takes care of the company's ability to reduce defect levels, which are eliminated in the process of development itself, hence do not load the company with incremental costs of checking and fixing bad code.

While software defect level reduction is important, it is achieved by improving development processes. Cycle time reduction is more interesting really for the future, because NIIT has made great strides in this area by creating software tools that actually make it possible to write good software much faster and more accurately. "I have never seen anything like the concepts that NIIT has actualised," avows Inamdar, who moved just six months back from Motorola. He was responsible for setting up that company's software centre in Bangalore, which follows Motorola's 6-Sigma quality procedure, and spent a lot of time and effort benchmarking software development systems around the world. Pawar persuaded him to return to India after he moved to Australia last year. "NIIT has perfected the capture of knowledge from historical data, using this to generate optimal code to develop entirely new

Inamdar: "Never seen anything like it!"

The market view

Five years back nobody would have imagined that NIIT would be a part of the Sensex, the country's stockmarket barometer. But a year back this is precisely what happened. Here is a company operating in an industry whose growth prospects, according to the pundits, are immense. This, coupled with the fact that NIIT is a growing company, has helped its share price move up exponentially. At the start of 1997 the stock was changing hands at Rs263 on the Bombay Stock Exchange. By August the same year it had touched Rs500, then doubled in April 1998, and in the current year again doubled at around mid-January. In other words, the share's value has doubled thrice in less than three years and is currently traded at Rs2,055 after bonus. Of late the stock appears to be showing signs of weariness. At present the price–earnings multiple based on annualised earnings of fiscal 1998–99 is around 66. Is it overpriced?

Rasesh Maniar, chief dealer at NSE broking house Mukesh Babu Securities, says: "NIIT still has the potential to appreciate by another 30 per cent within six months to a year depending on market conditions." This means that NIIT should settle around Rs2,700. Some brokers are even more bullish — they believe it should range between Rs3,000 and Rs3,500 before the end of this calendar year. NIIT's valuation is similar to that of Satyam, well above the likes of Tata Infotech, Aptech, and Pentafour Software but well below the reigning king of IT stocks, Infosys.

Maniar disapproves of such comparison. He says, "NIIT cannot be compared with Aptech, Infosys, Satyam, or Pentafour." The reason is that this company is not a pure training company any longer but is clearly positioned in software products and services. Its global presence provides a strong network for marketing. This in itself is a clear differentiator from other Indian quoted companies.

Be that as it may, NIIT now has to bring out results which should catapult it in the league of Infosys or else it will always be called the poor man's Infosys. The latter, even after a one-to-one bonus, is traded at around Rs5,500, while NIIT's price is less than half that. And, mind you, after a bonus with a ratio (one share for every two shares) that by no means can be considered liberal.

♦ KRISHNA KUMAR C N

applications. I can personally vouch that the code generated by the NIIT solution is extremely optimal."

NIIT has developed some nine-odd tools which Inamdar is planning to commercialise, but this may not happen till the applications product launch takes place. Aside from NIIT EasyPay, the bill presentation solution, which also has a server solution called NIIT EasyPay Server, products ready for release include electronic storefront EasyMart, e-commerce development framework EasyCommerce, interactive voice response system EasyVoice, and electronic service delivery solution EasyService. The brand finalisation exercise will be legally complete shortly.

The development tools, which are likely to create a stir in the software industry when they are made commercially available, include the software engineering tool set (SETS) and a test case generator (TECGEN), which automatically simulates an environment for testing the code. There is Promon, a project monitor (which can be deployed both as client/server and Web-centric models), RRS, a remote review system that allows both peer and expert review of projects, NetCare, a Web-based tool that enables customers to stay in touch with project execution teams, and VSCE, a virtual software construction exchange, using which software teams can work together across geographical and temporal boundaries. Other tools include TTS, a time-tracking solution, RMS for resource management, and SPD, a process database.

SETS, TECGEN, and similar tools allow customers and project partners to work together remotely from start to finish of the project. This should result in a considerable improvement in the quality of projects being executed in the software industry if the company does decide to make them commercially available. The other set of tools manages product development, forming the conceptual framework within which the model-centred learning architecture has grown. But the company intends to continue setting itself goals for business growth through process improvements in the development business.

"We have set realistic but hard targets for ourselves," says Inamdar, "which include building six centres of excellence employing near to a 1,000 developers each, ensuring 30 per cent code reuse and achieving project cycle times not exceeding three months."

Core competence

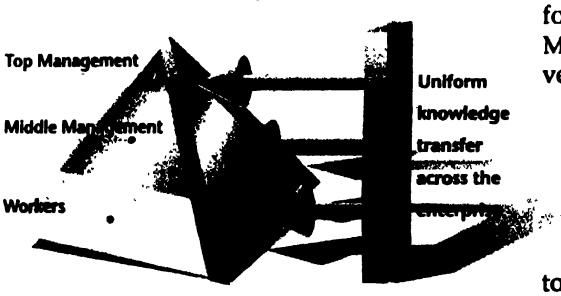
"We are learning to make the transformation from data to information and finally to knowledge happen," says professor J.R. Isaac, former head of IT at IIT Bombay, who is today an advisor to NIIT at Synergy. His job has been to chart the essence of cognition, helping NIIT to understand the learning process so that the data transfer at the core of a session can be contextually

Isaac says NIIT's focus is on making information skills available vertically across enterprises

received as information and processed into knowledge with the minimum of disruption and loss. This efficiency gain, deployed across diverse topics, will achieve enormous effectiveness, which could lead to exponential gain for NIIT. Importantly, this efficiency will transcend the present focus on computer-oriented subjects, the process that began when NIIT started NIS, its sales and marketing training group, now spun off as a separate venture.

"In responding to the change inherent in the shift from the industrial age to the age of information, our focus is on making information skills available vertically across the enterprise, to top management, middle management, and workers, unlike the old paradigm where only top management held the keys to information," says Isaac. While efficiency in helping people to understand data as information is relatively well-known and is in fact the basis of traditional education models, the final conversion to knowledge is not, and this has placed NIIT in a premier position among software companies worldwide. NIIT undertakes basic research in education, with scientific papers published in fora as far apart as the Institute of Electrical and Electronic Engineers (IEEE) and Educational Technology Research and Development (ETR&D).

According to R&D chief Sugata Mitra, who spearheaded the shift in focus from applied technology to basic research, "The successful use of the Internet ensures that cognitive systems will happen. Therefore, in order to continue to lead, it is essential that we know what these things actually are."



One such effort was a self-learning FAQ (frequently asked questions) compiler that searches for answers to queries by itself from the Website database. It began to be populated with a few responses created by Mitra himself. Inevitably, his fellow researchers, who had access to the trial version, commented that the engine displayed Mitra's 'character'. He then allowed others to create responses, and notes that since some time has passed, the engine now has a personality of its own. It has, in effect, become a self-actualising cognitive system.

Another approach tried by Mitra was the 'Hole in the Wall' experiment. This was carried out at NIIT's Kalkaji (in Delhi) headquarters, which abuts a low-income area. A hole was made in the brick compound wall, and a computer with a touch screen was installed there, connected with a leased line to the Internet. No effort was made to instruct the children of the area how to use the computer, but a camera monitored their response.

After some time several children became adept at surfing the Net, finding sites that displayed information in Hindi that were meaningful to more of their fellows. The adepts taught others, and soon a large number of children were using the Net, all without any help from NIIT-ians. NIIT researchers monitoring the activity found that the children taught themselves to use many of the computer's features, such as cut and paste, to pick up information from Websites and create documents and art.

Mitra concludes that traditional approaches to teaching computer skills will not be the only method of getting India's vast numbers to use the Internet, and in fact cannot be. With a total user base of around 900,000 students after nearly 18 years of existence, a number that probably represents close to half of corporate India's skills transfer (most observers agree that NIIT and Aptech, the two largest companies in the computer education business, have the lion's share of the industry), obviously less than 0.2 per cent of the country has yet been exposed formally to computers. That leaves an absolutely massive task ahead for India, yet one that may be tackled far more effectively if Mitra's research has positive results.

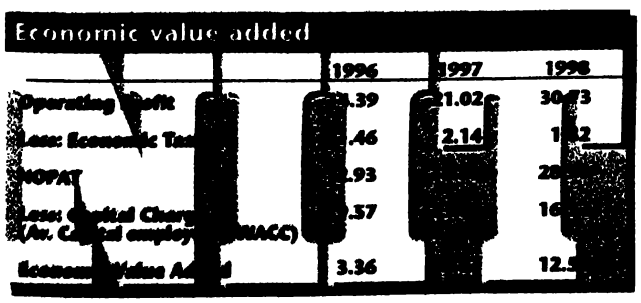
To get such innovation out of the company's staffers Pawar, Thadani, and Rajendran have evolved several interesting approaches. These add both motivation and reward in return for fresh thinking. One of these is the Managing Director's Quality Club, a very exclusive province of top-quality performers. Selected for their ability to 'stand for quality', they undertake an additional responsibility for a year to work closely with Pawar. Membership of MDQC is today the most significant recognition

in the company Two initiatives spurred by this forum were quality improvement projects and a special programme, "I in Quality", aimed at developing the concept of personal quality.

The company's first ISO 9000 certification came about through the initiative of MDQC member Ashish Basu. Today Basu heads the spun-off company Institute for Quality Ltd (IQL), which consults on quality process improvement.

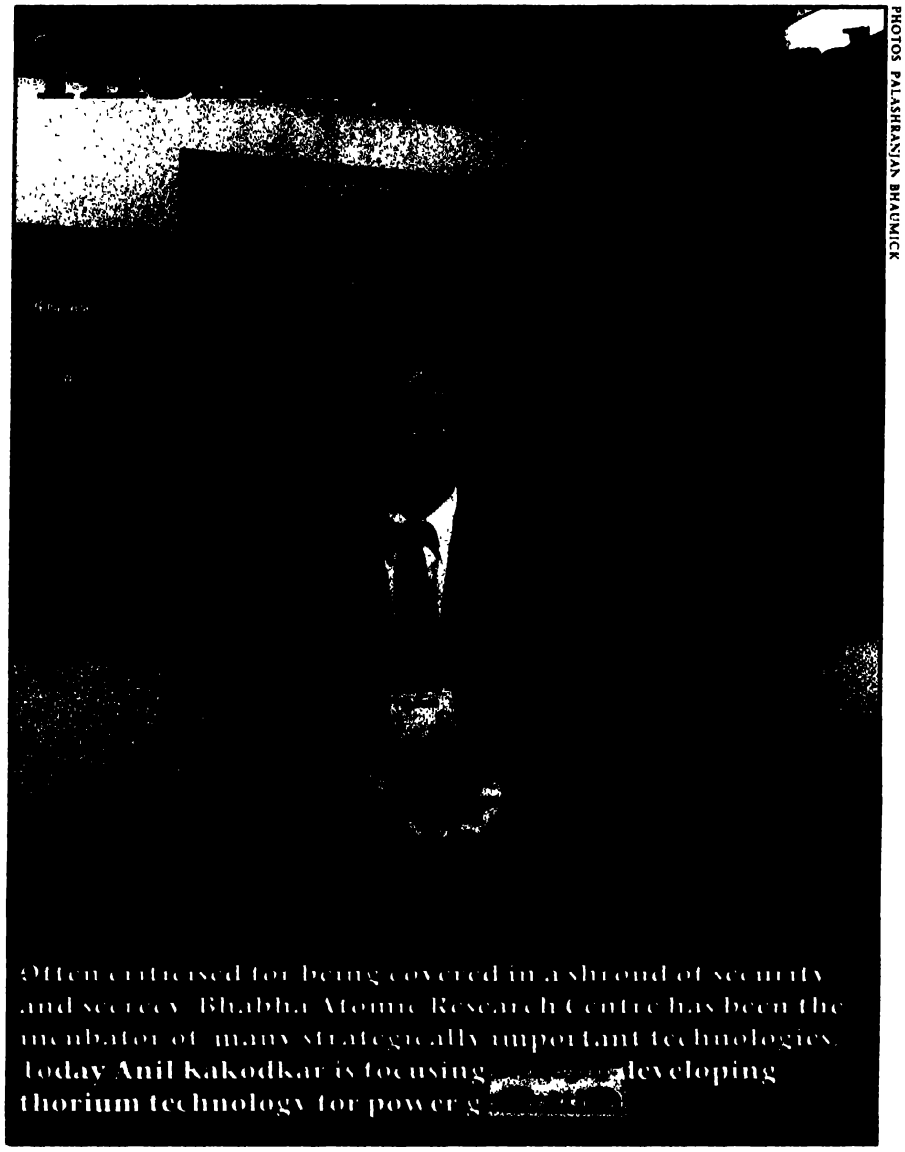
Another major "spinnovation" was the concept of amalgamating speed with innovation. This was spearheaded by The President's Club (PC), begun in 1994. For instance, one of the major changes that has come about as a result of PC activities is NetVarsity (www.niit-netvarsity.com), a Web-oriented distance learning pro-gramme. In fact, the present thrust on e-commerce, exemplified by the ENIIT program (www.eniit.com), also came out of this movement. Incidentally, one way of awarding recognition to PC members is to allow club alumni the right to sport the suffix *-ji* to their names.

Such innovative approaches are not the exclusive preserve of NIIT's Kalkaji (a Delhi suburb) headquarters. Mitra has been running a completely anarchic open-house session, the Cognitive Engineering Forum, every second Saturday since 1997. Researchers can shoot the breeze over a long, unstructured morning session that features an exotic lunch paid for by Mitra himself. Ideation that catches attention can result in projects taking off. The Centre for Research into Cognitive Systems at Synergy, in IITD, is one of the ideas that Pawar heard about and immediately endorsed.



Another project that has taken off rapidly is the company's decision to implement an enterprise resource planning system, R/3 from SAP, which is scheduled to go completely live across the organisation a year from now. This initiative follows the conceptual focus discovered by Pawar's team in the EVA concept pioneered by Stern, Stewart, a US-based financial consultancy. The economic value added of any activity is defined as the net operating profit after tax, which is the operating profit generated after allowing for expenses (taxes adjusted for the savings on interest costs) less the capital charge, calculated as the capital employed multiplied by a value defined as the weighted average cost of capital (WACC). NIIT uses it today to measure output of all processes, including individual merit.

VIVAN



Mitra spearheaded the shift in focus from applied technology to basic research

As the table of the last three year's figures shows, ever since EVA has been used to motivate and focus employees on the real cost of doing business, the company has improved its effective bottomline nearly four times. The WACC has fallen to 19 per cent from its original level of 21. It is this attention to results that finally defines the team that Pawar has built in the past 18 years. Although the company started life as a computer skills training enterprise, it has evolved beyond that to posing a strong possibility of emerging a software superpower with a stable of products and services that add value for customers in almost every sphere and activity. They are built around a rock-solid core of basic research into the very nature of knowledge acquisition, which is then made a part of every product offering, be it education or commerce.

Throughout its exemplary growth NIIT has spawned successful offshoots. However, when it moves into the next phase of growth through acquisition and merger, slated to begin by the end of this year, it will be faced by yet another fresh challenge — that of managing significant and rapid culture dissemination. While there is little in the background to indicate any fundamental difficulties in the ability to face this challenge, the fact remains that the company has not yet had to learn this skill. Whether it will succeed, and move on to generate exponential and continuous growth through the next decade of its existence will depend on the thus-far-proven skills of Pawar and his team-mates to continue to innovate and deliver.

• VICKRAM CRISHNA

PHOTOS PALASHRANJAN BHAUMICK

Often criticised for being covered in a shroud of security and secrecy Bhabha Atomic Research Centre has been the incubator of many strategically important technologies. Today Anil Kakodkar is focusing [illegible] developing thorium technology for power g[illegible]

When you are finally able to get through the security shielded gates of BARC – understandable after Pokhran-II – and enter its labs ensconced in verdant surroundings in Trombay, you are likely to hear only two words — Thorium and mum. Ask director Anil Kakodkar or any senior scientist about the future of BARC and they will say, "Thorium". But if you want to know anything about Pokhran-II, thermonuclear bombs, nuclear submarines, and so on, be warned — mum's the word.

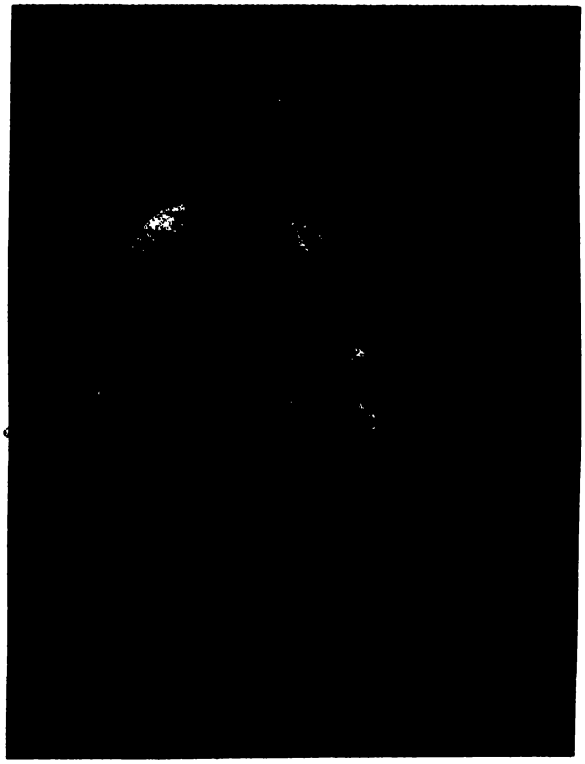
A band of highly motivated scientists and engineers went about building Apsara, the first nuclear reactor in Asia, more than 45 years ago at the Atomic Energy Establishment, Trombay. Today they have converted that marshland into a veritable storehouse of science and technology. "As far as scientific and engineering expertise goes, I think we have a goldmine here," says Anil Kakodkar. A 56-year-old nuclear engineer, Kakodkar threw away several offers from the private sector after his graduation from VJTI, and joined the atomic energy establishment against the wishes of his friends and relatives, but he has not looked back since then.

"Every day here, is a challenge for an engineer or a scientist. We have vastly grown since those early days and today have over 4,500 scientists and engineers on this campus and about 10,000 technicians and support staff. Naturally the informality that existed then is difficult to maintain, but as for scientific dissent, we thrive on it. In fact, if we had all the division heads here for this discussion on BARC we may not have a very peaceful session!" he says.

Is the money spent on BARC commensurate with its output? One observer who preferred to remain anonymous said: "Half of India's R&D budget has gone into atomic energy. Is that justified?" This is a question often asked both by the lay public and in scientific circles, though it has been muted after the five nuclear explosions in Pokhran in May 1998. For most people BARC has always meant the bomb, but why are scientific circles envious of BARC? The answer, naturally, is money. When research funding in India has been meagre the fight for a share of the pie becomes intense.

Indian universities are starved of research funds. Even leading universities do not have any. Many top-ranking universities have cut down the number of research journals they used to subscribe to for want of money. As for modernising labs and other infrastructure, the less said the better. Increasingly, they are being asked to raise funds from non-governmental sources, primarily industry and alumni. Even the blue-eyed boys of higher education and research in the IITs found it traumatic when they were told that government funds were no longer available.

However, the IITs have been lucky. Criticised for their flight to North America, it is these very alumni that are coming to their aid. The IITs are increasingly tapping them for funds and are having some success. Kanwal Rekhi, a successful entrepreneur in the Silicon Valley, is in fact confident that nearly $500 million can be raised from IIT alumni worldwide if the idea is marketed properly. University Department of Chemical Technology at Mumbai has pioneered non-governmental fundraising through industrial consultancy and donations from alumni. Of course, it helps when UDCT's alumni practically run India's chemical industry. But one swallow does not a summer make.



The 44 national laboratories of CSIR which form the largest chain of publicly-funded R&D labs in the world have an annual budget only twice that

of BARC! However, CSIR saw the writing on the wall in the late 1980s and, in the past five years, under R.A. Mashelkar's leadership, has implemented a vigorous programme of innovation and technology marketing worldwide. This is making a positive impact on R&D in India in terms of a trend, though the large numbers have yet to come. In such a situation, would you grudge a scientist outside atomic energy and space a little bit of heartburn?

So what has been the outcome of R&D at BARC? Strategically it is clear that the single most important contribution to India's nuclearisation programme has come from BARC. Its founders were way ahead of their times and invested in a small way in many technologies that have proved strategically indispensable. For example, reprocessing spent fuel from power reactors and some research reactors leads to recovery of fissile material like plutonium, which can be used to either build fission bombs or fuel other power reactors. It is obviously a dual-use technology.

Research into reprocessing started way back in 1963–64, much before any fuel needed reprocessing. In fact, India is one of the very few countries today which has this complex chemical technology. This work has two aspects. One, obviously, was Pokhran-I in 1974. But it also led to reprocessing at an industrial level, so that today reprocessing plants at Trombay, Tarapur, and Kalpakkam are operating with BARC technology. The simultaneous work on fast breeder reactors with French help has led to important cumulative experience in this technology so that a new Indira Gandhi Centre for Atomic Research has been built at Kalpakkam near Chennai to develop this further towards building a 500 MW-prototype fast breeder reactor. Such a reactor will produce more fissile material than it consumes, roughly in a ration of 1:1.2, and hence the name 'breeder'.

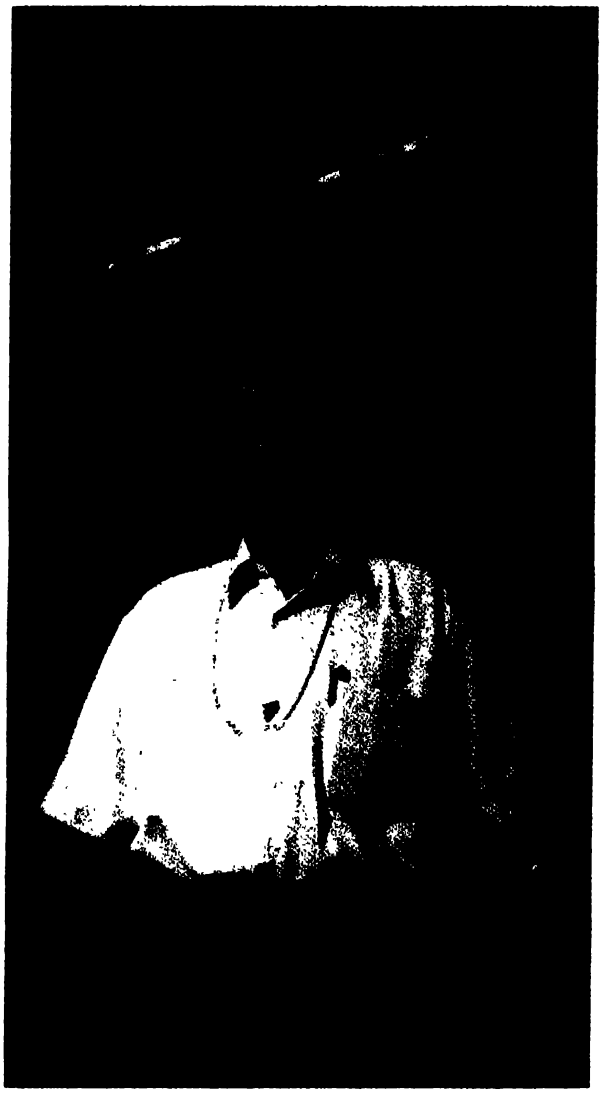
Similarly, the unit in BARC which assembled instruments for controls at Apsara and later CIRUS (Canada–India Research Reactor) was spun off as Electronic Corporation of India (ECIL), which produces control instrumentation not only for all the reactors but also for several defence projects. The work done on heavy water production using a new hydrogen sulphide process has been industrialised under the Heavy Water Board, which runs several plants that produce heavy water for the power reactors.

According to Anand BARC has given birth to many industries which did not even exist.

A small group at BARC known as the Atomic Fuel Division took on the challenge of fabricating fuel for the Apsara, CIRUS, and Tarapur plants despite the fact that the original equipment suppliers from the UK, Canada, and the US were ready to supply it themselves. This work led to the large industrial Nuclear Fuel Complex at Hyderabad that fabricates all the fuel elements required for the power reactors. The isotope division, which used research reactors like CIRUS and, later, Dhruva to produce over a hundred radioactive isotopes for medical and other applications, has spun off another industrial unit, BRIT (Board for Radiation and Isotope Technology). Today over 150 hospitals practice nuclear medicine and about 500 laboratories use radio-immuno-assay techniques. Nearly a million patients a year in India are investigated using radio isotope techniques developed at BARC, with isotopes made industrially by BARC. Moreover, 350 commercial organisations have sprung up to service the need for isotope radiography used in non-destructive testing of industrial plants.

The nuclear power plants themselves require a lot of R&D work for operation and maintenance. Some of it involves advanced reverse engineering in adverse circumstance when you do not even possess the drawings of spares, as in the case of Tarapur Atomic Power Plant, in other cases it involves innovative work to keep the power running. For example, Kakodkar is proud of the work done to get the reactors at Chennai on line when they were about to be shut down for good because of a moderator manifold collapse in the heart of the reactor. Similarly, when the coolant channels in the two Rajasthan reactors had to be replaced, BARC developed the expertise and the robotics required — a highly complex engineering challenge. Till then only Canada had the technology, but the BARC-NPC technology was much cheaper and accomplished the task in less time and well within the radiation exposure limits.

"If you want to discuss the commercial or industrial applications of R&D carried out at BARC then these are some major ones. Our mandate has been to develop the technology of applying nuclear energy for power and other



Revenue (salaries, Consumables)	220	290	330	340 *(estimate)*

Unlocking thorium secrets

India would be a leader in nuclear technology if it develops the thorium cycle for power. Thorium has several advantages over uranium.

- Worldwide thorium deposits are three times more than that of uranium. In India's case it is nearly seven times.
- Thorium is a more fertile material than natural uranium, i.e. there will be a larger percentage of thorium 232 converted to fissile uranium 233 than uranium 238 converted to plutonium 239 in the existing pressurised heavy water reactors.
- Thorium is a better conductor of heat and that makes the fuel bundles last longer in the reactor without significant deterioration.
- Long-lived radioactive by-products (actinides) which create waste disposal problems are produced in much less quantity in the thorium fuel cycle than with uranium.

BARC today is concentrating on all elements of a thorium fuel cycle, from fuel fabrication to reprocessing and extraction of uranium 233 while avoiding the complications posed by the highly radioactive U232, and then disposing of the waste produced during the thorium cycle. For experimental purposes thorium is already being loaded into existing power reactors. This has not only helped in power-flattening in the core of the reactor but also provided some quantity of U233. Exposing thorium to neutrons in the Dhruva research reactor has also generated small quantities of U233. A new research reactor Kamini has been built using U233 and thorium.

Sinha and his team are busy setting up critical facilities for advanced heavy water reactors

The whole three-stage nuclear programme might take considerable time for both technological and financial reasons. For example, according to the original plan, 10,000 MW was supposed to be produced by 2000. However, after the Nuclear Power Corporation placed orders with equipment suppliers for advanced procurement and so on, funding was withdrawn by the Central government. That left both NPC and Indian industry involved in hi-tech nuclear fabrication high and dry.

Business India is witness to the fact that two 500MW reactors, which will now be erected in Tarapur around 2004, were already fabricated and lying ready in 1993 at BHEL, Walchandnagar, and L&T! Thus the biggest brakes on India's nuclear power programme have been the planners in Delhi rather than the Department of Atomic Energy.

In such a situation Kakodkar and his team at BARC have come up with an innovative intermediate solution called the advanced heavy water reactor (AHWR).. This technology is highly competitive compared to the existing technologies in several ways:

- Instead of heavy water, ordinary water is used as a coolant.
- The complexity of steam generation is greatly reduced, thereby reducing delivery time.
- Natural convection used in safety systems reduces the capital costs considerably.
- It is thermally more efficient due to the use of moderator heat in preheating feed water.
- Coolant channels can be constructed on an assembly line, thereby reducing construction cost and time.
- It is safer than existing reactor technologies.

The additional advantage of AHWRS will be the use of a large amount of thorium in the fuel. However, since nobody in the world yet possesses thorium technology, BARC's efforts today will start having positive economic effect in 2020. Considering that the technologies being used industrially today for power production were actually worked on 30 years back, that is really investing in the future.

•SK

purposes. It is clear that BARC has been the mother institution for the entire nuclear industry in India," says Kakodkar. "The monies earned through transferring some of the spinoff technologies like the enzyme-based process to manufacture invert sugar, used heavily in biscuits and the confectionery industry, or particle size analysers are used in the pharmaceutical industry, etc, are incidental. Unlike CSIR laboratories, which were set up to develop processes and technologies for existing industry and earn money through royalties and licensing, were set up to give birth to many industries which did not even exist," says A.K. Anand, director of the Reactor Projects Group, who is in charge of technology transfer and international relations.

"For example, the expertise in

Are taxes eating up your FD earnings?

Time you switched to Birla Income Plus.

Of course, you could use an annual investment plan to reduce a portion of your returns as tax. This figure could be as high as 33% if you are an individual and 38.5% if you are a corporate. So if you manage an average return of 10% on your bank FD, your actual earnings could be as little as 6%.

Let's assume you invest in Birla Income Plus (BIP) instead. BIP dividends are tax-free for investors (but the mutual fund pays a tax of 11%). That's a clear advantage of well over 20%.

Dividends for 1998-99 were 12% per annum.

That's not all. BIP also gives you 100% exemption from Capital Gains Tax (u/s 54EA and 54EB). And since it's a debt fund, investing in high quality bonds and debentures, you can rest assured that your money's safe.

Apart from tax benefits, returns and safety, BIP also offers a high level of liquidity. There is no lock-in period, so you can get your money back whenever you want.

BIP is brought to you by Birla Mutual Fund, the country's largest private sector fund. For more details, please call us at the numbers below.

Visit our website at www.birlamutual.com or email us at bmfmail@birlamutual.com

Radiation with a heart

The word 'radiation' conjures up images of the deformed bodies after Hiroshima. However, radiation can be life-saving as well. Besides the well-known gamma irradiation of tumours using Cobalt-60 units that are supplied all over India by BARC, the centre's scientists have also come to the rescue of cardiac surgeons. One of the techniques used to save cardiovascular patients suffering from choked arteries is angioplasty.

Increasingly isotope technology is being used in medicine, agriculture and industry, says Rao

Simply put, the surgeon sends a tiny balloon into a choked artery and inflates it at the right place. The additional internal pressure thus expands the blood vessel, facilitating the flow. To make sure that the arterial walls do not collapse, surgeons insert tiny metallic coils called stents within the blood vessel. However, these stents can cause tiny injuries to the walls and when these injuries heal the scar tissue can choke up the vessel again.

BARC scientists led by S.M. Rao and his team at the isotope division came up with a solution for this fatal problem. They coated these stents with tiny amounts of radioactive phosphorus so that wounds caused by stents are cauterised in a short time, preventing scar formation and saving the patient's life. Already 30–40 such implants have been carried out by surgeons on Mumbai with a very good success rate. Currently multicentric trials of this technique are being carried out and, if successful, will give patients undergoing angioplasty a new lease of life.

robotics developed at BARC under M.S. Ramkumar's leadership is of a very high standard. We had to develop it to build an online fuelling machine for the power reactors and then a coolant channel inspection system for the same. Just then Indian Oil Corporation, which owns over 6,000 km of overland cross-country pipelines, tapped this expertise. Thus came into being the Instrumented Pipeline Inspections Gauge (IPIG), which will soon be tested on the Patna–Barauni pipeline. Since IOC pays over a Rs1 lakh per kilometre for such an inspection to foreign companies who hold proprietary technologies, the development of IPIG is very welcome," says Kakodkar. "Similarly, several groups started working on parallel processing in the early 1990s in India when the Cray YMP computer was denied to us and even the purchase of the Cray XMP by the meteorological department had several humiliating conditions attached. Our supercomputer group produced Anupam, which has reached 1.3 gigaflop speed and is the only Indian supercomputer that is successfully running the weather modelling programme," he adds.

Being such a hi-tech centre, isn't BARC concerned about intellectual property rights (IPR)? "We are slowly becoming aware of IPR in the case of non-nuclear technologies and are preparing to protect some of our innovations. As far as strategic technologies are concerned the issue does not arise. If somebody is ready to licence these technologies for a fee there is no problem. We can then say there is a free market for technology. But if such technologies are brought under sanctions and embargoes, where is the issue of patents?" asks Kakodkar, warming up to the subject of IPR.

"In the 1950s and 1960s, when there was hardly any high-technology infrastructure in the country. But now that there are the IITs, the CSIR labs, etc, is it necessary to do everything under one roof and that too such diverse things as biotechnology, lasers, and parallel processing?" ask some critics. Kakodkar says things are changing. He believes in networking and that is why there is an increasing emphasis on partnering with universities, the IITs, and the CSIR labs. At the same time he claims that only four engineers worked on Anupam and that, some of the biotechnology was a by-product of work being done with nuclear applications in mind. "We have a simple guideline to approve projects — they have to be relevant or excellent. That gives a general focus to the work. The specific focus, of course, is thorium, while work on isotope technology will continue," he says.

What is thorium technology and what is its relevance to India? "India has a limited supply of uranium (estimated reserves are only 78,000 tonnes) as against 518,000 tonnes of thorium. Therefore, to achieve long-term energy security, it is imperative to develop technology for largescale electricity generation using thorium," says R.K. Sinha, head of the reactor engineering group (*see box*).

While the reactor engineering group is busy setting up critical facilities for advanced heavy water reactors that will use large amounts of thorium as fuel, K. Balu and his group at the nuclear recycle group are already studying reprocessing and waste treatment for thorium. Balu's group is credited with having developed the vitrification technology that will immobilise highly radioactive nuclear waste in a glasslike structure so that the waste will not leach out. This glass will be further covered by two stainless steel jackets and then lowered into a thick concrete vault built into basaltic rock. The site is chosen so that there is very little seismicity in the area and no fissures that carry groundwater. "The technology is there, though it will be used several decades later," says Balu.

Thus the whole cycle of making fuel bundles, designing reactors that will burn thorium, reprocessing the spent fuel, and disposing of waste are being worked on today with thorium as the centre. "Just as the technology that we are now using in power reactors was developed about 30 years ago, we need to start developing technologies that will be used 30 years hence," says Kakodkar.

Pokhran fallout

"A major management technique that Kakodkar is associated with at BARC is the formation of multi-disciplinary task forces," says A.P. Jayaraman, a senior scientist who now heads the public awareness division. "We have at least 20 major task forces operating today," says Kakodkar. "The composition is purely need-based and not hierarchical. These groups also work in a very transparent way — nobody can hide behind technical jargon to explain why he did not fulfil his task"

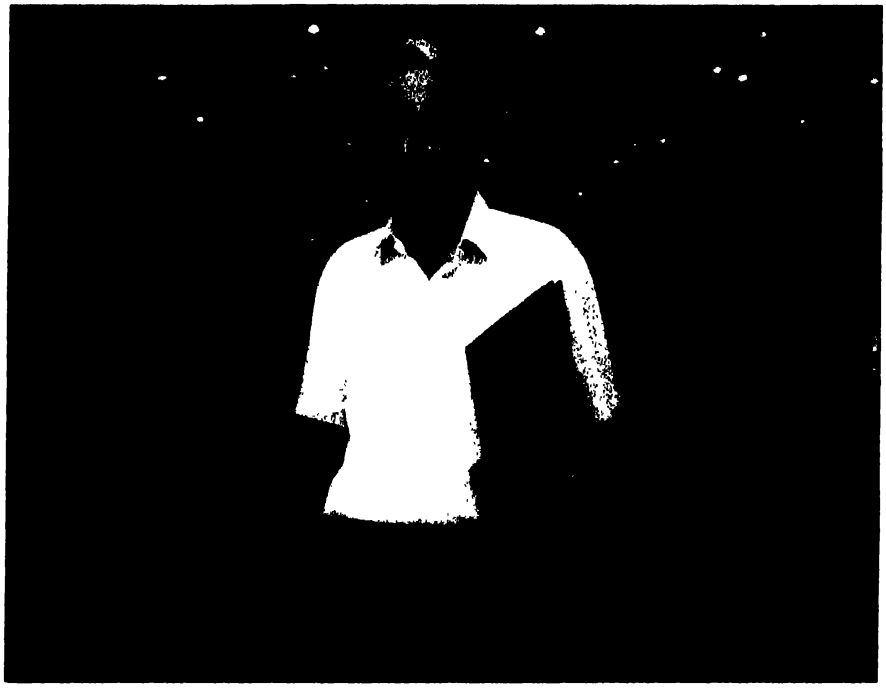
Like all hi-tech organisations in the country, BARC is losing up to 30 per cent of its young scientists working in computers and electronics within five years of their joining. But Kakodkar points out that this is happening in the IT industry itself. Pokhran-II, of course, has helped attract young people to BARC. Recently, when he went to deliver the convocation address at IIT Madras, the generally self-effacing Kakodkar was faced with hordes of IIT graduates asking for his autograph. "For the first time in my life," he says.

Did Pokhran-II create butterflies in his belly? "Surprisingly, no. In fact the only time I remember spending a sleepless night was when, as a young engineer at BARC 30 years ago, I went ahead with designing and putting together a high-pressure, high-temperature loop beg, borrow, or steal. The day before it was to be tested I could not sleep as I had not listened to the traditional wisdom of some of my senior colleagues and had done what I thought was right. But the next day it worked." Kakodkar still carries the courage of his convictions, but has grown wise enough to carry his junior and senior colleagues with him. At BARC undoubtedly there is a spring in everybody's step. Pokhran has contributed to it in no small measure, and Kakodkar's leadership no less.

• SHIVANAND KANAVI

"We are ahead by decades in nuclear waste disposal technology," says Balu

Nuclear *medu wada*



Hardly any body outside of BARC or its nuclear agriculture division and a few agriculture universities might know that 95 per cent of *urad dal* (black gram) grown in Maharashtra is a BARC product. *Urad*, a pulse whose flour is the main ingredient of *medu wada*, a popular south Indian snack, is produced with varieties developed by genetically altering conventional breeds through irradiation. The variety TAU-1 has led to an increase of yield per hectare by 29 per cent.

Similarly, a popular mustard variety grown in Assam is another BARC product. The widely exported large-sized groundnut is another BARC product Trombay Groundnut (TG-1). Today more and more varieties of groundnuts, soyabeans, *moong dal*, and *tur dal*, are produced with higher yields, pest-resistance, and other desirable qualities.

Plant breeders and farmers depend on the genetic variability available in nature for cross-breeding and developing new breeds. The former is the result of spontaneous mutations. However mutations can be induced artificially to enhance variability manifold. One of the most efficient methods of changing plant genes (mutagenesis) is exposing the seeds to neutrons or gamma radiation. The irradiated seeds are deeply studied to understand the effect brought about by irradiation and it has been found that best results are obtained when these modified seeds are further used in cross-breeding. BARC has been working in this field since the early 1970s and the result is a little-known but significant contribution to increased food production.

Marketers now target Bharat

India and Bharat are increasingly becoming one as far as marketers are concerned. But whether rural India is really the far-flung villages or C-class towns and their surrounding areas remains a matter of conjecture.

SANJAY BORADE

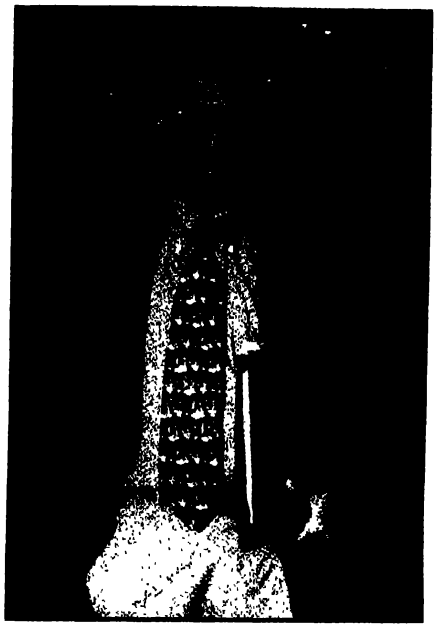
Estimates of the size of the rural market have had to based on the census, says Natarajan

Take the four P's of marketing – price, place, promotion, and product. Bung them into a cocktail shaker along with two new P's – positioning and packaging, throw in a touch of D&R (distribution and reach), and you have a quick-fix punch to knock you off your plimsolls. While there is no proven template for rural marketing, the new "shaken, not stirred" formula is the springboard being used by urban-centric marketers who are increasingly looking at the interior. India is giving way to Bharat! Zeroing in on the mass of humanity which resides in rural India is now the marketer's new *mantra*.

However, what constitutes the rural heartland is a subject of much animated ambiguity. The ORG population breakdown clearly indicates that there are three different classifications in the rural belt: Class I – with population over 5,000, Class II – with population between 1,000 and 5,000, and Class III – with population below 1,000. Marketers appear to be zeroing in on Class I.

How are they going about it? Of the 3.3 million retail outlets in the country only 1.2 million are urban; the majority service rural settlements. More importantly, wholesalers and semi-wholesalers are a further vital conduit in the supply chain to reach the secondary, tertiary, and end user point. As such we are talking mass market here. A mass market which has to be constantly probed, developed, and encouraged with the help of support systems which are novel, unique, and radically unlike what is used in urban agglomerates. Rural warfare is a different kettle of fish, to say the least!

There are new entrants to the consumer club which are stoking the fires: after the very rich (six million people) and the consuming class (150 million), a new market segment is offering huge potential — the climbers (275 million) and the aspirants (275 million). This is the new India being targeted in the infrared sights. Add the destitutes (210 million) and you have a whopping 760 million people in rural India. What's interesting here is that, in terms of households, the consuming class, which numbered 29 million in 1994–95, is expected to surge to 91 million by 2006, while the climbers are expected to shoot up from 48 million households to 74 million around the same time and aspirants and destitutes will drastically reduce from 48 million and 35 million to 15 million and 13 million households respectively. There are 6.31 lakh villages in India, a non-homogeneous market characterised by distance, disparity, diversity, and dispersal. Add 47,000 *haats* and 25,000 villages and you have what the 1991 census estimates as 629 million people inhabiting in rural India while 217 million are shown staying in urban pockets. Average daily sales at larger *haats* are Rs2.25 lakh, while the *melas* generate annual sales amounting to Rs3,500 crore.



I. Natarajan, chief economist at the National Council of Applied Economic Research (NCAER), says: "One has to follow the census in this regard — everybody residing in non-urban areas is rural. The marketer has tremendous opportunity available because I firmly maintain that saturation levels are still to be reached both in urban and definitely rural households. I think we have not even touched 25 per cent of the total rural households, which are in the region of 170 million. Distribution bottlenecks seem to be affecting further penetration."

From surveys Natarajan has found that pressure cookers, shampoo, and toilet soap are the fastest moving items. As in any marketing strategy, fulfilling the aspirational needs of the consumer remains the edifice. But the rural consumer is different from his urban counterpart. Natarajan claims that innovation is vital as the rural consumer needs functional items. But Neville Gomes, managing director of Multimedia Aquarius and veteran of

many a rural campaign (Amul, GIC, and Glaxo, among others) holds a different view. He argues that close to 30 per cent of a number of products like razors, tea, and detergent cakes today are headed for the rural markets.

What has triggered this great rural rush? Gomes reckons that the subsistence economy has morphed into a consumption economy. This is the single biggest transformation. The rural consumer wants a piece of the action. Natarajan adds that no-frills functional products are what sell in the interiors. Sachet marketing, for instance, is a big hit. Velvette shampoo in sachets spawned a new marketing tactic and Hindustan Lever then ran riot with its Clinic Plus, Sunsilk, and Lux brands. D. Shivakumar, general marketing manager (personal products) of HLL, says: "All four P's apply in the hinterland, but price is the single most important determining factor. But the marketer's job is to find the right proposition, product, or solution for the rural customer. There are enough examples of product and packaging innovation that have resulted in instant successes (Brooke Bond A1, Wheel, Kissan, Annapurna, Lipton Tiger) in the rural market. The rural consumer's quantity of consumption is less as his share of wallet for these items is clearly delineated. Food and agricultural inputs dominate; whatever is left is used to fulfil aspirational needs."

In his view D&R, as also change in promotional strategy, are perhaps vital ingredients. Says Shivakumar, "Then there is the whole issue of PR, where the sarpanch, schoolteacher,

SANJAY BORADE

Gomes sees a shift from a subsistence economy to a consumption economy

and village doctor play an important part in communicating the product's worthiness to the end user. For instance, we at HLL regard the primary health centres as one of the focal points for spreading awareness about our products. But we are fortunate in that we go armed with a wide array of products, unlike some of the other companies." That's perhaps HLL's greatest advantage as it attacks rural India in a big way through Project Bharat, targeting close to 22 million households. From personal care to oral care to branded commodities, the product portfolio offers the consumer a shopping experience.

Gomes says the point of contact is a key driver in pushing products and the village *khadi gramodyog* outlet is another sensible window for approaching the consumer. "But habits are deep-rooted and it is difficult to make people change them. Detergent cakes work well in rural areas, not powder (but research shows otherwise). For that matter, hair oil is preferred in bottles and not sachets in the south. Distribution is another aspect that matters, for it is more often than not uncontrolled. I remember discovering once that the differential in excise was reponsible for Amul butter moving rapidly from Delhi to even southern India on account of this anomaly."

Natarajan maintains that no two socio-economic surveys reveal the same thing. His candid assertion leaves a high margin of error as inference is more important than straight answers. At the same time, he says, "the monthly income household surveys never give you micro-level data. One can only get consistent answers, not the true answer." Maybe that is why the fabled myth of a 250-million-strong middle class was perpetrated on the Western mind. When the Westerner landed, he discovered to his chagrin that it was a gigantic myth. That is perhaps why NCAER is being more careful in giving the rural market a shape and size. Does rural India then incorporate very small C-class towns?

Natarajan says, "The rural market size is growing because of penetration, population, and income growth. With an increase in consumption per user, demand is being ramped up. For instance, toilet soaps have seen a 59 per cent increase in consumption in volume terms due to the income multiplier effect while the toothpowder segment is growing because of population growth. Soap and toothpowder are basic necessities, so their penetration is higher."

What then is the answer? How does the marketer find El Dorado? By locating and targeting homogeneous groups of customers like high-income traders and cultivators. The urban consumer may be an impulse buyer, but the rural consumer is more discerning because of income limitations. The 'share of wallet' that HLL's Shivakumar was referring to is a real-

ANURAGI BABA

The Ramayan *Video on Wheels was an extremely cost-effective medium for advertisers*

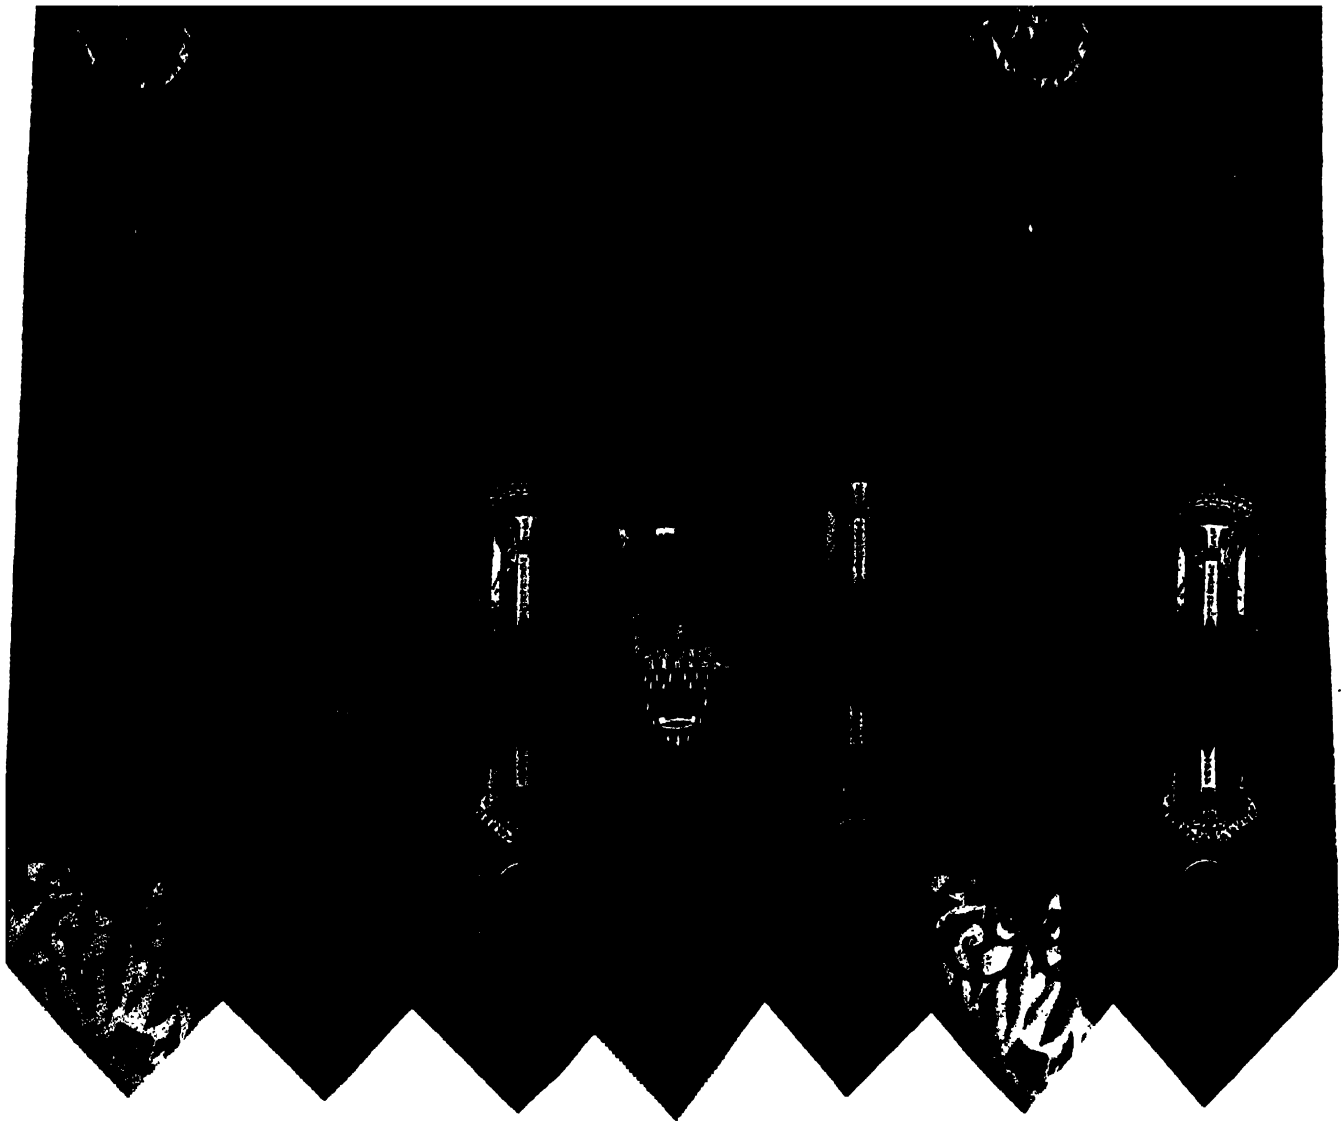
ity and the single most significant determinant in rural India. Prioritising of goods is paramount.

Concurrently, 10 good monsoons have obviously had an impact on demand, but rural incomes come with another catch, that of seasonality. Around harvest time, the rural consumer's share and spend of wallet for such products increases. But there is a pecking order that he follows — the first priority remains agricultural inputs, followed by consumer expendables, and rounded off by durables.

But with one in every eight human beings in the world living in rural India, which makes it roughly 12.2 per cent of the globe's population, marketers are obviously delighted at a spanking new audience. Shivakumar says, "The rural consuming class is growing at about 3–4 per cent per annum, which roughly translates into 1.2 million new consumers yearly. For the next 20 years this market is going to remain a reality. The pace of change in rural India is frenetic."

Take a gander at these statistics:

- Frost-free refrigerators are selling better in rural India.
- Dena Bank's Kisaan credit card has seen an overwhelming response with 11,000 subscriptions in three months.
- 400 minutes of average cellular airtime usage in rural areas as against a monthly average of 120 in Mumbai and 180 in Delhi.
- Disposition to branded consumer goods is increasing.
- Penetration of toothpaste is better than toothpowder.
- Nuclear family culture has arrived in rural India.
- Two in five toilet soap users regularly use more than one brand of soap
- More than 50 per cent use branded skin creams.
- Nine out of 10 households use branded washing powders (bar and detergent).



Uday Kamath, senior product manager for Geoffrey Manners & Company, which has a serious presence in the heartland, is clear about one thing. "We prefer to look at small towns with populations ranging from 50,000 to 80,000 (like Bijnor in UP) and their surrounding areas," he says. Geoffrey Manners hawks Anacin tablets, a Rs25-crore brand, in these areas with the famous catchline *Sardard bandh, kaam shuru.* Anacin does remarkably well in the north, Maharashtra, and Tamil Nadu. "Last year we sold 37 crore tablets in rural India out of a total of 62 crore. What we are seeing is a drop year-on-year. I think the rural market is overestimated, for the question that begs an answer is what really is 'rural'? While we have been spending heavily, close to 15 per cent of the Anacin turnover as adspend, we are not getting the returns because we have never been able to monitor the end result of our rural marketing campaigns."

What is the methodology used? Geoffrey Manners, for instance, painted 150,000 sq.ft. of walls in Uttar Pradesh last year. It also used tin posters and glow signs at bus stops. In the past it has used video on wheels to communicate its message. But HLL's Shivakumar is more focused. "One has to transfer knowledge in the local idiom to enable it to make its tryst with their mind space. We use information booths at *haats* and *melas*. But I would say the best tentpoles are the STD booths, which invariably turn into hubs of activity." Visuals, symbols, the spoken word, pictures, and music play an integral part. Rural propaganda using opinion leaders and mobile vans add value to rural campaigns. Project Bharat proved to be the perfect weapon in this regard — HLL used the strategy of sampling and simultaneously selling a range of personal products like Fair & Lovely, Clinic, and Pepsodent to deepen the market by using the twin tactic of penetration through education.

Which essentially means that non-conventional media is a better bet. Promoting GIC's Suraksha policy, Neville Gomes sent vans and mobikes into the hinterland to the taluka levels to bring forth the power of multiple-duty media publicity. But let Shivaku-

Kamath believes the size of the rural market has been overestimated

mar take up the narrative. "Positioning of the brand remains very important and this has to be communicated through visuals because the rural consumer has a strong visual sense. Pricing remains the bedrock, so formulations and technology needs to be adapted to local conditions. Finally, development of technology to evolve different product forms holds sway — it could be liquids, powders, or tablets. Nirma, for example, taught HLL the value of cheaper yellow powder and so Wheel was born."

Mobile vans remain a key strategic tool to spread the message. But there are other rural communication stratagems too. JK Jain's Video on Wheels was popular, with *Ramayan* being screened in small towns and villages, but it did not gain acceptance from advertisers. So Prem Sagar, one of the promoters of *Ramayan*, approached Amitabh Bachchan Corporation Ltd to set up the Divya Yatra concept, which was fine-tuned subsequently when ex-ABCL executives Harish Kini, Manoj Jain, and Kapil Raina set up Sanskruti Entertainment. Over a 45-day period Ramanand Sagar's megamythological was screened at the Maha Kumbh Mela (which comes along once every 12 years) in January last year. It was phenomenal success covering Haridwar and Rishikesh. It is estimated that 65 lakh people watched *Ramayan*, a captive audience which does not budge, spellbound and transfixed as it is by the images on the big screen (12'×9'). And advertisers came in droves. Colgate Palmolive, Godrej Soaps, Coca-Cola, Geoffrey Manners, and Amrutanjan pumped in close to Rs40 lakh. Kini says, "The penetration of television in the interiors is still low and this experience is not only monotypical, but cost-effective. While mobile vans pull in the men, this brings in the womenfolk in very large numbers. We have tied up with Ramanand Sagar Software for the commercial video rights for public viewing and in the future we expect to go to Pushkar, Ayodhya, the Dasera and Deepawali *melas* in UP, and the Ambaji *mela* in Gujarat."

Basic facts

Purchase per visitor	

Source: MART

The fundamental bulwarks of advertising were all available — opportunity to see, coverage of cost per thousand, lack of advertising clutter, and above all, an audience which just cannot move, cramped as it is for space. Sanskruti now intends taking mobile cinema to 150 villages in UP this October. Colgate and Geoffrey Manners have already evinced interest in this project, which is likely to include films by Sunil Shetty, Amitabh Bachchan, and Govinda. Ergo: innovation not just in product format but also in marketing tactics is essential to attain critical mass.

There seems to be no escaping the burgeoning rural market. Redefining value is another facet, for a rural consumer should not be viewed as an urbanite without money. He has a distinct identity, he looks for the best value. For him unit price and pack size both are vital differentials. High volume purchases are made at the *haats*, there is documentary evidence to support that argument. So,

Purchase of consumable products

Source: NCAER

marketers have to constantly and consistently change the theorem of retailing. Sampling has proved to be one answer and this has led to the upward movement on the pyramid — from loose commodities to home preparations to basic products and propositions to added-value products. Literacy remains the number one impediment, just as availability of the products across the length and breadth of the land is another barrier. All weather roads and electricity will help make the bridge too far a reality. And then Bharat will be at the beck and call of the marketers.

A chemistry of growth

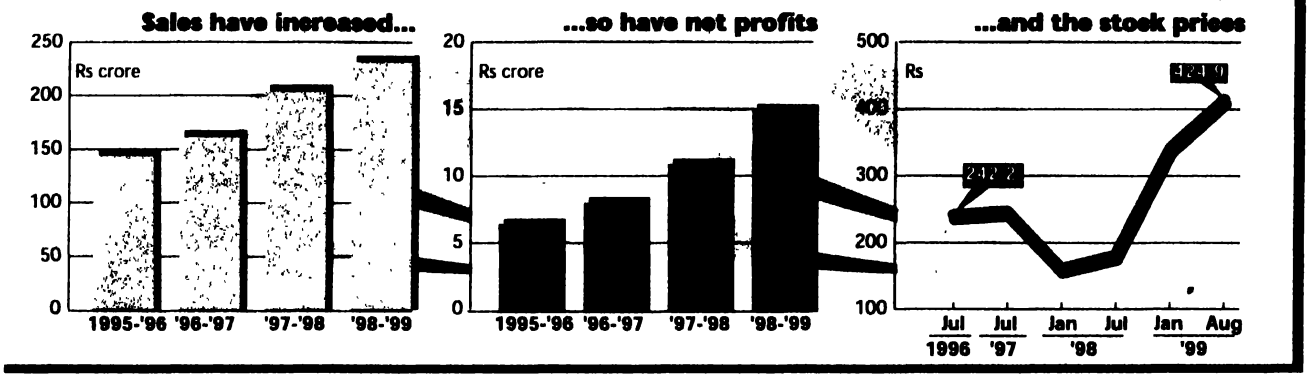
As the rest of industry wallows in woe, Clariant India is rising rapidly. Most of its growth has come from providing complete solutions to its customers

One company that has been quite oblivious to the sluggish Indian economy is Clariant (India) Ltd (CIL), the Indian subsidiary of the Swiss chemical manufacturer. Over the last three years CIL has registered a compounded annual growth rate of 18 per cent. Turnover for the year to March 1999 was 15 per cent higher at Rs235.2 crore (Rs204.7 crore the previous year) and net profits up 37 per cent at Rs15.2 crore (Rs11.1 crore).

UMESH GOSWAMI

Rastogi says CIL is a total solutions provider

The growth is impressive considering that Clariant India is a division of Sandoz spun off following the Swiss pharma major's divestment of its chemical business worldwide in 1995. Consequently, the dyes, chemicals, and pigments division of the erstwhile Sandoz India became CIL. Further changes occurred in July 1997, when Hoechst's speciality chemicals business was integrated into Clariant AG to form the world's number one speciality chemicals company. This global merger created two Clariant subsidiaries in India – CIL and Colour-Chem – and both have had to rationalise their businesses, except in textile auxiliaries and leather chemicals, where there is an overlap and a common marketing strategy has been adopted. As of 1 January 1999, CIL transferred its pigments and additives business to Colour-Chem in exchange for the latter's masterbatches (chemicals used for colouring plastics and polymers) division.



Today, four years after its demerger, CIL has hit a high. The company has five business units — textile dyes, textile chemicals, leather finishing chemicals, paper, and masterbatches. Textile chemicals contribute 27 per cent to the company's sales. CIL claims a share of 6 per cent of this market, which has chalked up a compounded annual growth rate of 16 per cent over the last five years and is largely dominated by the unorganised sector. In the textile dyes business, the company outperformed the industry, which registered a low growth rate of 2 per cent. This business contributes 14 per cent to sales. The leather dyes business contributes 24 per cent. The main competition is from companies such as Ciba Speciality, BASF, and Dystar, which are increasing their focus on India. "Most of the growth the company has experienced in its various businesses is because of new products," says Bhavesh Parekh, assistant vice-president at Mumbai-based Dil Vikas Finance Ltd.

Post-demerger it was the company, rather than its customers and other business partners, that was more concerned about its performance. There were huge functional and managerial gaps that had to be addressed quickly. "The main issue was that, if Clariant India had to succeed, we couldn't have a share of the market unless we first put own house in order," says managing director Prakash Rastogi. Most of the changes necessary were psychological — mainly old conditioning and expectations that needed to be forgotten.

The company's main task was to help its employees forget their past association with a multidivisional company and carve out a new identity. The previous multinational culture that prevailed kept a clear-cut demarcation between management and workforce. For instance, there were separate canteens, different dress codes, different transports, etc, which created huge gaps between the management and the workers. It had to break down these communication barriers and increase transparency levels as well as make people learn about the rearrangement. The main vehicle for changing the organisational mindset towards developing a customer-driven organisation has been the companywide CLAP programme — Clariant Participation to Improve Profitability through Performance of People.

The major thrust area has been the company's customer-focused strategy at market development. In any

Impressive growth

company, the customer is always considered to be the domain of marketing. In the speciality chemicals business, organisational success lies not only in products and its technology, but also in the benefits that are experienced by the customer from the entire supply chain. So the idea was to become a total solutions provider. CIL developed and launched marketing innovations to increase customer satisfaction and organisational performance. This was done for each business unit.

One of the company's initiatives was customer-partnering, whereby development projects were undertaken at the customers' premises to improve the process and profitability. To monitor these projects the company introduced the concept of a customer documentation file, which contains all relevant, up-to-date information regarding the customers' existing businesses as well as developing opportunities. Constant interaction was provided by the company to its customers with its technical experts. Today CIL markets its products to over 2,500 customers through over 50 technical specialists and 100 distributors nationwide. In fact, says Parekh, "what has helped the company perform better in an overall sluggish economy is the fact that it has been providing consultancy services to its customers, thereby allowing it to have better margins over its competitors."

Product innovation has been a key input for sales growth. This means creating a new formulation or developing a new physical form or a new concentration for a required process. Over the last four years, contribution of new products (or products less than five years old) to sales has increased from 12 per cent in 1995 to 16 per cent in 1998. However, for the year to March 1999, product innovations contributed 30 per cent to sales.

Another focus area was working capital management. Apart from controlling costs across the board, one initiative that had a significant impact on the company's working capital needs was engineering stores inventory, which in September 1995 stood at Rs1 crore. After carrying out an inventory analysis, stocks were classified as slow-moving or non-moving and, over a period of three years, focused efforts at effectively managing the latter led to tangible results. In 1998, engineering stores inventory was down to Rs26 lakh.

Through all the changes, the strength of the company's workforce has remained the same — 400. Increased transparency and people involvement has had tangible results in labour management. Sales per employee increased by 55 per cent to Rs59 lakh in 1998–99 (Rs38 lakh in 1995–96).

One of CIL's biggest successes has been its integration into Clariant's global operations. Clariant India is one of the three global sourcing centres for Clariant AG (the other two being Japan and China) and the sole source for select dyes and intermediates. At present Clariant AG sources 20 per cent of its requirements from Asia, and is planning to increase this to 40 per cent over the next five years as it downsizes its dyes capacity at home to escape high costs. And CIL is expected to be a major beneficiary. Hence exports will continue to play a vital role in the company's performance.

Building credibility in the eyes of the parent company is recognised as a key factor in gaining access to new technology and the export markets. There has been a growing emphasis on exports — at Rs76.3 crore, they contributed 32 per cent to the company's 1999 turnover. But with tighter margins from export markets, CIL will have to work out a balance between domestic sales and exports. Within the country Rastogi expects paper chemicals and dyes to be areas of growth in the next couple of years. Masterbatches, where Clariant is the global leader, has been identified as a growth area, although it contributes only 1 per cent to turnover. "The company is looking at topline growth from acquisitions in this business and has also identified a few probable candidates," says Parekh. Besides, it plans to enter new business like antimicrobial finishes, flame retardants, and fluorochemicals. It also hopes to market the parent company's UV filter for fabrics.

However, sceptics question CIL's ability to maintain its impressive growth rate. The company obviously thinks it can. Sample CIL's first quarter performance for the current fiscal: sales increased by nearly 10 per cent to Rs56.12 crore over the corresponding period the previous year and net profits were 15 per cent higher at Rs3.6 crore. Clariant stock, quoted at Rs182 levels a year ago, is today traded at Rs424. The stockmarket obviously doesn't agree with the sceptics.

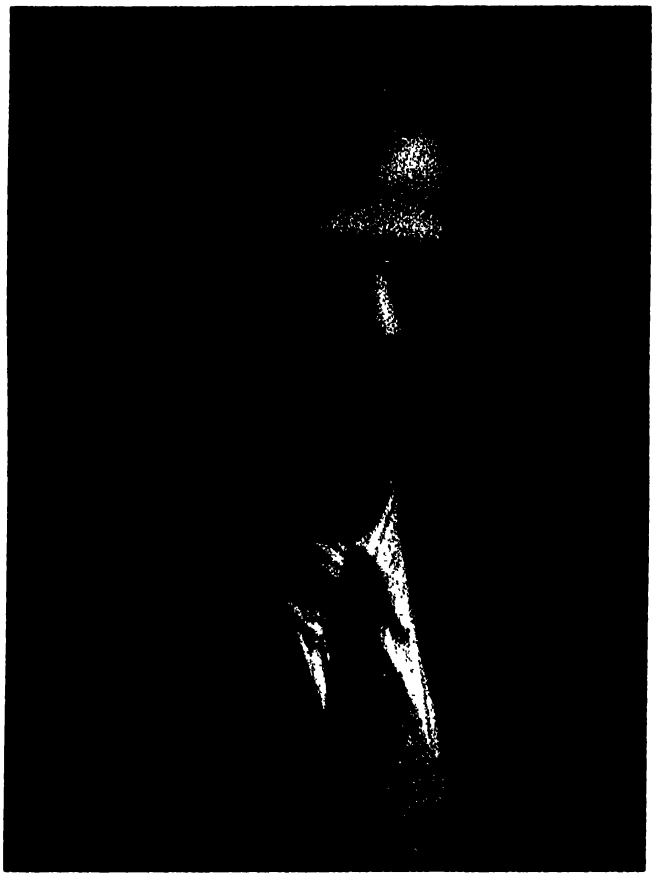
› BHAKTI CHUGANEE

Tecumseh's turnaround tale

The acquisition route to growth which the compressor manufacturer took two years back has paid off

When the $2-billion American compressor maker Tecumseh Products Company (TPC) took over the Shriram Industrial Engineering plant (Hyderabad) in 1997, quality at the latter was poor and rejections high. Today, the plant is the proud recipient of the ISO 9001 certificate and is the only Indian air-conditioning plant to have received ISO 14001 certification. The other compressor plant — Whirlpool's at Ballabgarh (Haryana) — TPC took over simultaneously, will be India's first non-CFC refrigerator compressor plant when it goes on stream this year-end. Today, Tecumseh is the largest producer of compressors in the country. The soft-spoken managing director of Tecumseh India, K.S. Madhavan, who has been heading the turnaround drive, says with characteristic understatement: "These have been exciting times for us."

The Indian compressor market has been largely MNC dominated. This can be explained by the fact that compressor manufacture involves a substantial level of 'precision engineering' and is technology intensive. There is ample proof of the technology edge at Tecumseh, which is spending Rs250 crore in technology infusion and capacity expansion. Madhavan points out that a major breakthrough was achieved by their R&D wing at Hyderabad. Designs of the new compressor were to be originally imported from Brazil. However, the Hyderabad technical team came up with an upgraded model which reduced costs by Rs500 per compressor.



Technology also came into full play at Ballabgarh. The refrigerator compressor plant was acquired from Whirlpool at a cost of Rs65 crore. Since, an additional Rs135 crore has been spent on state-of-the-art machinery and processes to manufacture 1.5 million R134a compatible compressors (R134a is hydrofluorocarbon and CFC-free). According to Madhavan, the plant, built as per international standards, is the first of its kind in the country. It has a reverse osmosis plant; the latest in painting and machining lines, and the consumables used are compatible with the eco-friendly refrigerant. Trial production has already begun and the plant will manufacture 1,000 compressors per day by October. This will be stepped up to 5,000 per day by January 2000. Presently, Whirlpool is picking up the entire production.

However, the economics of all capacity expansions have to be thought out carefully. In other words, look before you leap. Says Madhavan, "We are not in a hurry to go into Phase II of production where the capacity will be doubled to three million." The first reason is that the new plant will take two years to break even, due to the high capital outlay. Depreciation alone would claim Rs20 crore in the first year, and working capital requirements would be Rs35 crore. The company has also factored in a notional interest outflow of Rs5 crore.

Another reason for the hesitation in going in for Phase II is that some of the growing domestic demand is being met by imported compressors like Matsushita and Samsung. Says R.K. Mehta, vice-president, marketing: "Worldwide recession and the Southeast Asian crisis have led to imported compressor prices being slashed drastically. The gradual decrease in import duty, the last one from 38 per cent to 25 per cent, has also helped the imported brands."

Besides avoiding expensive expansions, costs are being well managed elsewhere too. Tecumseh has successfully implemented a variable earning scheme for its employees. The principle of cash outflow versus cash inflow was used. Every year, the company estimated a budgeted increase. If the value addition was more than the budgeted increase, the employees were given cash incentives. In some cases, this worked out to as high as 60 per cent of their salaries. If the value addition was less, a notional amount was deducted from the employees' earnings.

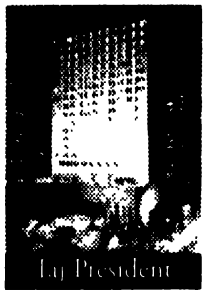
This scheme had a positive impact, most notable on quality. Says Madhavan, "Workers were themselves keen to form quality control circles. Last year they identified 300 weak areas and volunteered to head groups to rectify these problem spots." Besides, employees were made part of the change in every sphere. They interacted with the customers and were encouraged to give commitments to customers, information on rejects was compiled in a data bank by the workers. Some of them were given self-certification badges to certify the quality themselves. This shifted the responsibility and onus of quality on the employees and brought about a sea change in the culture of relationships. Simultaneously, whenever necessary, employees were exposed to their parent company practices.

Technology made the turnaround possible, says Madhavan

These practices have led to dramatic reduction in rejections and costs. According to V. Raghavendra Rao, general manager-quality and technical services, in three years customer rejections have reduced by 40 per cent, rejection cost per compressor has reduced from Rs99 in 1996 to Rs18 in January-May 1999. Also, consumables cost and material cost have been brought down by Rs300 per compressor in the same period and power consumption halved from 56 KWH (1996) to 29 KWH (Jan-May 1999). This quality improvement was also matched by sales growth, thanks to a buoyant market till May 1999, says Mehta.

Hence, the involving of employees and workers in the decision making processes is to continue. A new workers' agreement is under way where the union and workers discuss what the company profile should be in three years. Says Madhavan, "While evolving company needs, the employee needs will naturally evolve." Improving quality and processes with new initiatives in human resource management was also implemented at the SEIL plant, to great effect. The plant, which for the year ending December 1997 made a net profit of Rs4 crore, last year posted a net profit of Rs10.5 crore on a turnover of Rs110 crore. The plant has an installed production capacity of 500 compressors per day. These include air-conditioning compressors in the range of 0.75 tonnes to 5 tonnes and compressors for deep freezers, bottle and water coolers. Tecumseh is now planning to double capacity and diversify product range to include, for example, manufacture of pumps.

When TPC went in for the Indian acquisitions it had an eye on the export markets too. Forty per cent of turnover is expected to come from exports by 2005. According to the CEO of TPC, Todd Herrick, the India move will strengthen their Asian presence. This plan has now begun unfolding. Exports to Saarc countries have begun on a trial basis. "There is no compressor manufacturer in this region. Our advantages are we share the same climate, infrastructure and erratic power conditions," points out Mehta.



However, everything is not hunky-dory. The Kargil effect has led to a sudden slump in demand. The demand for compressors had so far come mainly from the government and the public sector units. However, these orders have been drying up of late. For compressor makers, the silver lining on the horizon is the boom in the FMCG sector. For growth, the compressor industry is also looking towards the gradual liberalisation of core sectors like power, mining and construction.

Tecumseh's sales, for the year ending December 1999, are targeted at around Rs175 crore. But a bugbear is the high tax, octroi and other levies, which constitute as much as 42 per cent of production cost, says Madhavan. "The Indian industry unfortunately has to bear the cost of governance, resulting in an uneven playing field." TPC's strategy for growth has therefore been to keep costs low without compromising on quality. The company expects to become a Rs500-crore company in three years. Madhavan explains why this is possible. "We have made the right investments in men and machines. These should help us face any future challenges."

Gallup-ing into India

The organisation founded by famed pollster George Gallup is making its presence felt in the Indian workplace

SORAB MEHTA

Sharma and Paul see striking similarities across workplaces worldwide

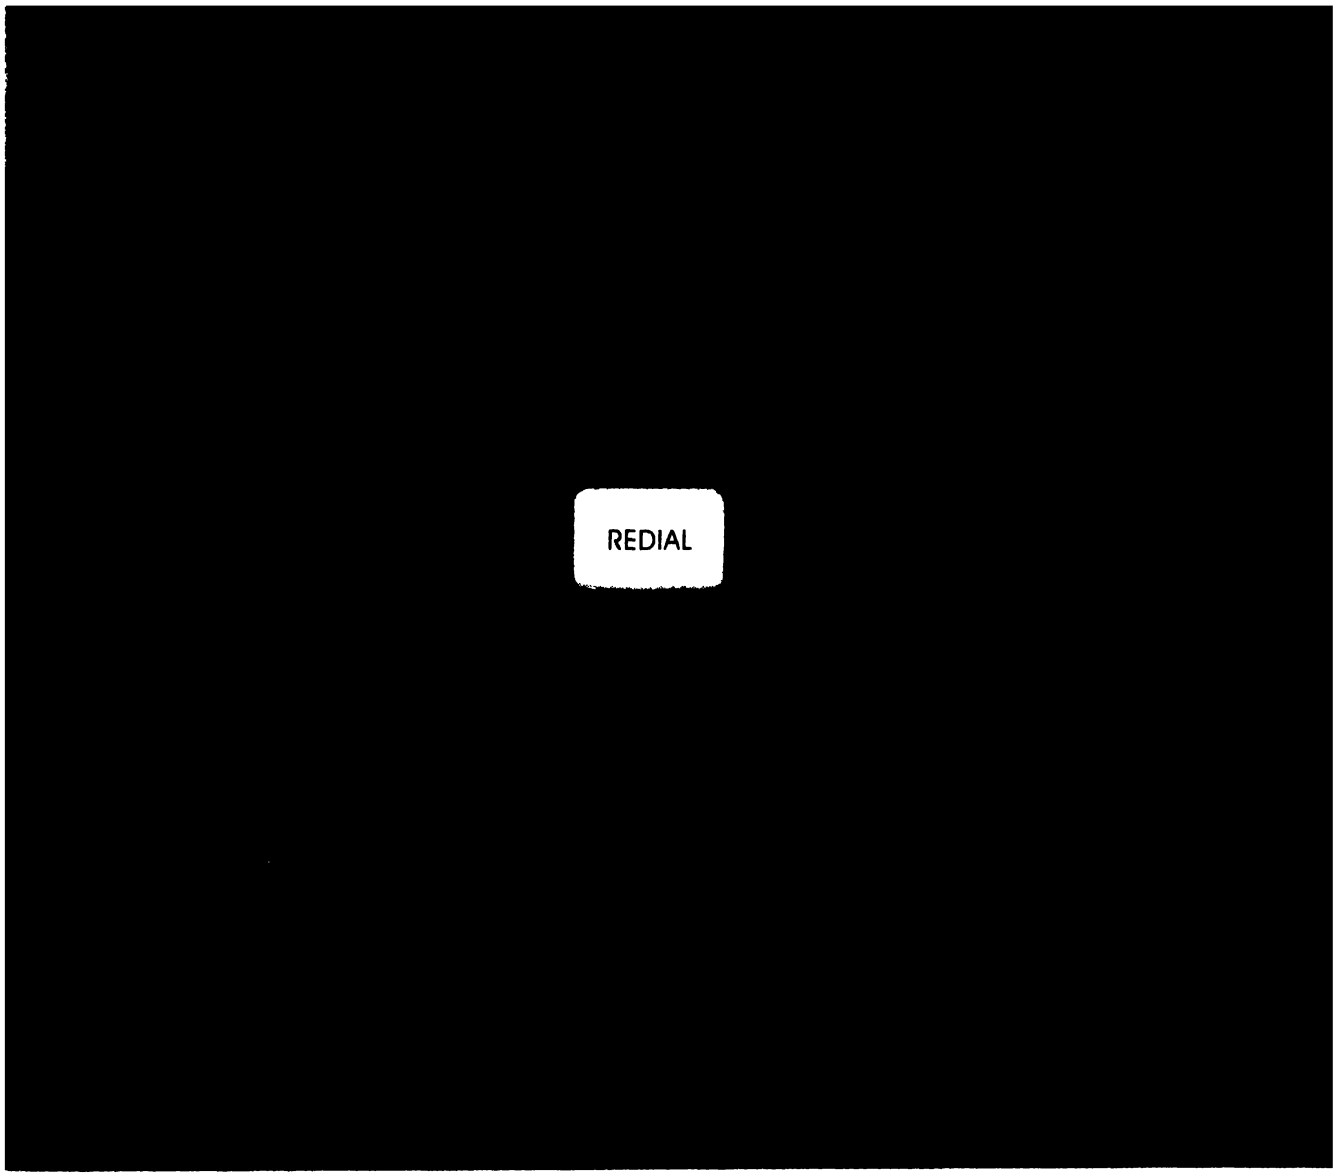
Much water has flowed under the bridge since Mathew Paul and C.K. Sharma co-founded Marketing and Business Associates (MBA) in 1975. The Bangalore start-up has grown into Gallup MBA India, a full-fledged part of the Gallup Organization with an increasingly important presence in the new area of 'workplace audit'. Today, with offices in Calcutta, Chennai, Mumbai, and New Delhi, it makes the methodologies used by Gallup worldwide available here.

In its first 15 years MBA developed a hundred-odd clients in advertising, computers, consumer products and durables, drugs, media, and packaging; but it came into the limelight only when it published a pathbreaking food and beverages database in 1992. It also tied up with Gallup Organization of the US to set up Gallup QSA (quality of service audit) India for commercial market research. Three years later MBA merged with Gallup QSA to form Gallup MBA India, in which the Gallup Organization now holds the majority 70 per cent stake.

Though the Indian arm doesn't work in the area of political polls which George Gallup pioneered, it does offer recognised measurement and analysis of attitudes, opinions, and behaviour, especially for its corporate clients to assess their ability to satisfy their own customers and employees. Sharma, who became managing director in 1977, and fellow director Paul are, however, cagey about divulging any details, even the identity of the companies for which they have conducted research.

Abhay Nalawade, MD and CEO of Rs500-crore Thermax Ltd, is not so reticent. Gallup found Thermax to be very well respected externally, while employees are proud to belong to it. "But they pointed out a couple of areas for improvement," he says. "Externally, we need to be oriented more towards service than capital goods, and to almost guarantee our time commitments. Internally, our people want the company to do more to bring out the best in them — many felt that their skills and competencies were not being fully utilised."

At Tata Honeywell, deputy GM K. Amuthan, who heads corporate quality & systems (CQ&S), says, "The Gallup workplace audit was an eye-opener. It was surprising that an employee's salary has very little impact on the overall satisfaction index — which gives a measure you can monitor over a period." A major advantage of the exercise was the scientific validation of what the Rs200-crore company had itself felt and followed earlier. "This gives us more confidence when moving ahead," Amuthan adds.



Companies have always tried to gauge customer satisfaction, but ensuring they have what Gallup calls 'engaged employees' is a new trend. "The workplace has suddenly become very important even in the US," says Jim Clifton, president and CEO of the Gallup Organization, who was in Mumbai in June to address a 'workplace summit' for company executives.

"We have interviewed 25,000 employees in 75 companies in India," Sharma says. "And we've found striking and thought-provoking similarities across the world." The 12 questions (Q12) shortlisted by Gallup after going through millions of hours of interviews conducted worldwide are equally relevant in India to help people be heard in a systematic way, adds Paul.

The Gallup name has obviously been a great help in MBA's growth. "Concepts tend to be universal despite the changes in culture and flavour," Paul explains. "So what works elsewhere has relevance here." He admits that competition exists, in the form of IMRB and ORG-Marg in customer-employee satisfaction surveys, and ORG-Marg, AC Nielsen, and MODE in brand research. In employee polls Eicher is also a player — as are a large number of academicians working on their own. But Gallup MBA is the first choice in satisfaction surveys as well as brand research, he claims.

And though India accounts for only about 1.5 per cent of Gallup's $200-million global operations, it is specially valued because it is well poised for the talent war expected in the first decade of the new millennium. And with its large client base and FMCG knowledge, which can be applied to engineering and service companies, Gallup MBA India seems set to lengthen its stride.

Carpetmaker to the world

Brintons Ltd has set up its first manufacturing facility in Asia at Pune

Perhaps the first multinational brand of carpets to be manufactured in India is Brintons of the UK. The parent company, Brintons Ltd, headquartered at Kidderminster in Worcestershire, has set up a wholly-owned subsidiary called Brintons Carpets Asia Pvt Ltd, based in Pune. For the past 14 months the company has been busy erecting a large factory on a 25-acre plot at Pirangut, on the outskirts of Pune. This will be an export-oriented unit — 75 per cent of its production will be exported and the rest sold in the domestic market.

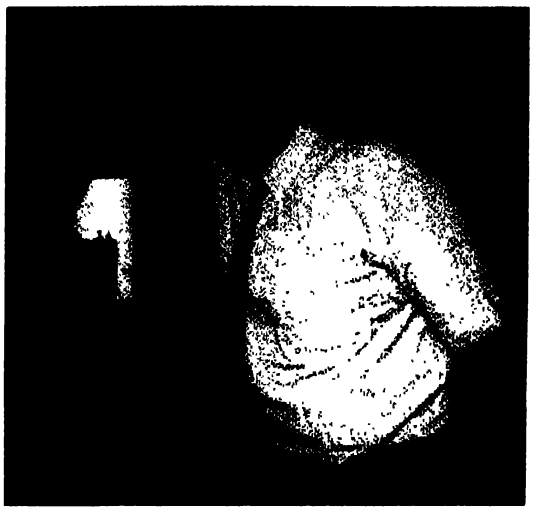
John Pilling, group manufacturing director of Brintons Ltd, UK, says: "We already have five manufacturing plants worldwide — in the UK, Australia, New Zealand, Portugal, and the US. The Pune plant will be our first in Asia and sixth in the world. Since the past four years we have been planning to set up a manufacturing base in the Far East and we had shortlisted China, India, and Malaysia during our initial survey in 1996." Finally, in October 1996, Brintons decided to come to India for three main reasons — it is a democracy, English is widely spoken and understood, and, lastly, it has historical links with Britain. Adds Pilling, "We perceived China as a higher risk country compared to India and therefore we finally chose this country."In 1997, Brintons hired A.F. Fergusson to search for a suitable location in India, and after extensive market research shortlisted Pune, Goa, and Chennai. The consultant zeroed in on Ranjangaon, 40 km from Pune, but learnt that it was an industrial zone where no chemical factories were allowed and, as Brintons wanted to set up a dyeing plant for the wool to be used in its carpets, this location had to be dropped. That's when it came across Suranjan (Sam) Chatterjee, who had just quit Hindustan Lever to set up his own consultancy. Says Pilling, "Then onwards things moved fast and Sam found this 25-acre plot at Pirangut. He did the negotiations, got us clearances, and we bought the land in February 1998."

Chatterjee has since been co-opted as director on the board of Brintons Carpets Asia Pvt Ltd. With director and GM Mark Johnson, he has been responsible for getting the factory up and running in a record 14 months. Says Johnson, "Construction began in April 1998 and by April 1999 all 12 weaving looms and a lot of ancillary machinery had arrived and had been installed by our engineers. We began trial production in June and for the past two months we have been producing consistently high-quality world class carpets on two of our looms."

PHOTOS: INDERJIT GUJRAL

Brintons considered India the least-risk country, says Pilling

According to Johnson, all 12 looms will become operational in about a year from now and it will take one more year to reach full efficiency and full capacity, at which point the plant will produce 700,000 square metres of carpets, translating into a turnover of Rs75–80 crore. Brintons' target for the current year is Rs20 crore, projected to grow progressively to Rs80 crore by the third year of operation. "We are investing Rs50 crore in this facility. Only the dyeing plant remains to be completed. So, till February next we will use dyed wool imported from the UK for our carpets. We are about to start executing an order for 6,000 m^2 of carpeting for some restaurants in China. After completing this, we have orders from Hotel Leela Kempinski, Bangalore, Cunard Cruise Lines, and Le Meridien Hotel, Dubai, which have to be executed in the next three months," says Johnson.



Brintons Ltd does worldwide sales of around £112 million (Rs700 crore) and has a 20 per cent marketshare in the five-star hotel segment. "We are the world's largest producer of Axminster carpets," says Pilling. Axminster technology allows many more colours and intricate designs to be woven into the carpets than the Wilton process, another major manufacturing technology for machine-woven carpets.

Brintons Ltd supplies carpets to all major five-star hotel chains worldwide. Hilton and Marriott are two of its largest customers, besides cruise companies like Cunard Cruise Lines and Disney Cruise Lines. In India the Taj, Oberoi, and Leela hotels have been customers even before it set up shop here. Brintons Carpets can also be found in the White House, Buckingham Palace, the Kremlin, Sydney's Opera House, and other prestigious places. The new Hong Kong International Airport is fully carpeted by Brintons. "It was the largest single order bagged by any carpet manufacturer in the world. The order, for 160,000 m^2, was supplied by our UK plant," says Johnson.

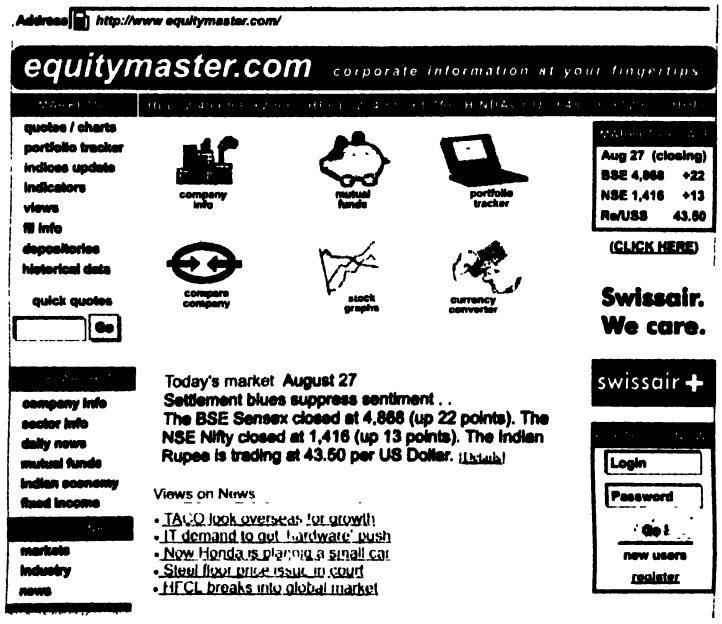
The production of the Indian plant will go to markets in China, the Middle East, the UK, and the US, and the retail market in Australia (despite the fact that Brintons already has a manufacturing plant down under). "The Australian plant caters for large contract orders but there is a huge retail market for carpets used in hotel bedrooms, departmental stores, etc, and this market is very competitive," explains Pilling. In the Australian retail market tufted carpets are most popular. Tufting is the most popular method of making machine-made carpets, because it is faster and

cheaper to produce, but tufted carpets are of lower quality. However, because of the low manufacturing costs in India, Brintons hopes to be price-competitive and replace the tufted carpets in Australia by its superior quality Axminster carpets, thus opening up a whole new market segment for its products.

The Axminster looms installed at Pune are of Brintons' own design and manufacture and are an earlier generation compared to their latest looms. However, they were completely upgraded last year in the UK and 13 Indian engineers recruited for the Indian operations were sent to the UK for a year to participate in the refurbishment programme. They were also trained to operate and maintain these looms and were widely exposed to Brintons' world-class management culture, which focuses on teamwork and continuous improvement in all its activities. They have now returned and are training the workers on these machines. At the moment Brintons Carpets Asia Ltd has recruited 28 workers, which will go up to 155 at full capacity. "We have found our first lot of workmen very productive, very hard-working, and learning faster than we anticipated," says Johnson.

Brintons' order book is already brimming, says Johnson

Brintons carpets are wool-rich (80 per cent with 20 per cent nylon), which makes them highly durable. This wool-rich yarn is woven into a jute backing and then latexed to finish the process. The plant at Pune has a huge latex machine and 12 large looms, besides other ancillary machines. "We have a built-up area of $3^1/_2$ acres in which all the equipment is housed. At the side of this machine shop a state-of-the-art dyeing plant is coming up," says Chatterjee. An effluent treatment plant will treat the discharge and recycle the water and recirculate it for use in the dyeing plant. In the next phase of expansion, two years from now, Brintons Carpets Asia is planning to set up a yarn spinning mill in the same location in Pirangut, where bales of wool will be spun into yarn.



The Brintons group is looking at India with a long-term prospective and this latest venture is its most modern fully-integrated manufacturing facility outside the UK. The company is also set to become a major player in the machine-woven carpet market in India.

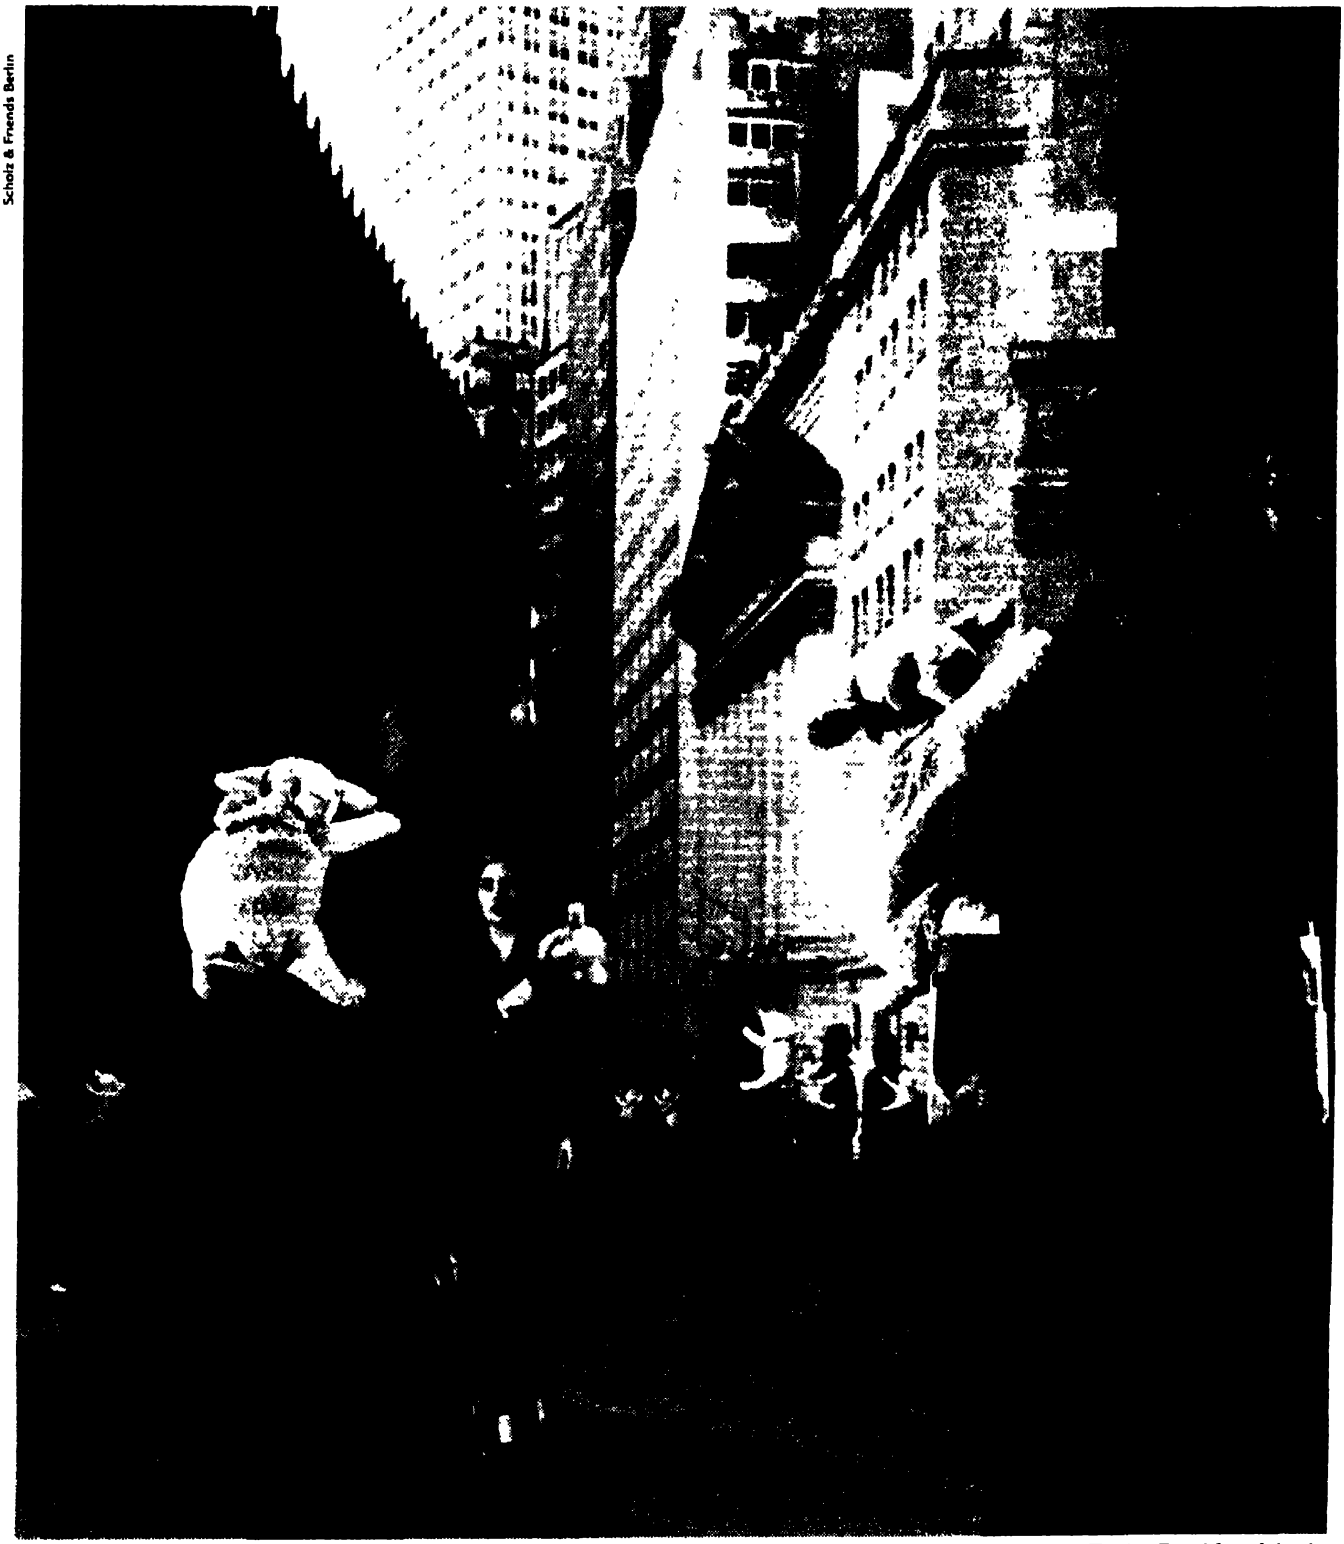
Taking the high road

Honda's decision to set up a wholly-owned subsidiary is a reminder of its growing ambitions

With Honda announcing the setting up of a wholly-owned subsidiary called Honda Motorcycle and Scooter India Pvt Ltd, the question haunting its collaborators (read Hero Honda) and competitors alike is that: is Honda serious about reentering just the scooter market or is it a backdoor entry into the more lucrative motorcycle segment of its own subsidiary, Hero Honda, which has seen unparalleled success in the motorcycle segment consistently over the last decade.

The Kinetic Group only 10 months ago was the junior partner of a joint venture with Honda, namely Kinetic Honda, manufacturing scooters in India. Says Sulajja Firodia Motwani, joint managing director: "If Honda was serious about its scooter business in India and wanted to grow in the market by introducing new models, then why did they not do so during the last 12 years that it was present in India, through its JV with us? After all, it had a majority stake and full management control. Yes, it's true that Honda has said that it will start by manufacturing a 4-stroke scooter first through the new company. But what one fails to understand is that why should Honda reenter a business by setting up a greenfield project at a whopping investment of over Rs200 crore, when it has barely 10 months ago exited that market, unless it has a larger gameplan of manufacturing motorcycles too."

True enough, a statement released from Tokyo by Honda states: "Production of a 4-stroke scooter will begin in the latter half of 2001, at a new plant to be built near Delhi". But the statement adds that production of 4-stroke motorcycles is also planned in the future. "Honda, which aims to increase its presence in the two-wheeler market," continues the statement, "has reached an agreement with the Hero Group for keeping their strategic relationship and strengthening their model line-up with a focus on motorcycles. By establishing their wholly-owned subsidiary, Honda hopes for a synergistic effort in co-operation with Hero Honda." Quite an ambiguous public posturing this by the Japanese automobile major.



Sulajja Firodia is launching Kinetic's four-stroke KX4 by November

Sources close to the Firodias reveal that recently the Munjals of the Hero Group were summoned to Japan by Honda, who made it clear to them that they wanted to buy out the 51 per cent stake of the Munjals in Hero Honda. Apparently, the Munjals had agreed to the suggestion but insisted on selling their stake at market price, by which time the scrip had shot up to an all-time high of Rs1,400 per share. Honda, however, found their price too high and decided to float their own wholly-owned subsidiary.

The Firodias, on the other hand, say that this development is not surprising at all, because at the time Honda was negotiating with the Firodias to sell their stake in Kinetic Honda, such a possibility was extensively discussed between the two erstwhile partners. But what ostensibly seems to be a move by Honda to reenter the scooter market is being seen as a bigger plan to enter the entire two-wheeler market, which is gradually shifting towards motorcycles from what was predominantly a scooter market 10 years ago. Says Sulajja, "Several facts indicate this. For example, for the first time in the history of two-wheelers in India, motorcycle sales outstripped scooter sales last year. The year-on-year growth of motorcycles for the last three years has been more than double that of scooters. Even a traditional scooter manufacturer like Bajaj Auto has aggressively entered the motorcycle market. Other scooter manufacturers like ourselves and LML are working overtime to enter the motorcycle market, having seen rapid growth in this segment. And lastly, the domestic scooter demand is projected to grow at a CAGR of 7 per cent during the next three years, while the motorcycle market is expected to grow at a CAGR of 20 per cent during this period."

Despite this, there could be speculation that Honda will enter the market with a geared scooter to compete with the "mass" market of Bajaj Auto, which eluded Kinetic Honda, due to its styling and price. But that doesn't seem to be a wise choice for two reasons: First, because the geared scooter market is in fact declining. Since April 1999 the market for geared scooters has shrunk with both Bajaj Auto and LML losing marketshare to Kinetic and TVS. Bajaj Auto's marketshare, for example, has

We make markets. Worldwide.

Messe Frankfurt

declined from 49 per cent to 42 per cent, while Kinetic has gained marketshare from 9 to 13 per cent.

Secondly, Bajaj Auto is well-entrenched in this "mass" market making the entry of a new player difficult and expensive. That leaves the premium scooter segment for Honda, but the numbers in this market would be too small for a large player like Honda. "Therefore", says Sulajja, "all logic points to the fact that Honda will essentially enter the motorcycle segment. It is only a question of how soon they do it? Moreover, Honda enjoys a high brand equity as a motorcycle manufacturer rather than a scooter manufacturer. This has been demonstrated in India too. And once the two-wheeler manufacturing facility is set up in India, it can be easily used to make scooters or motorcycles interchangeably. Once the plant is set up and the distribution network in place, it makes sense for Honda to capture the entire motorcycle market at an opportune time."

The Kinetic tie-up will help Hyosung launch its GF150 in India

Industry sources also point out that within one week of Honda's announcement on 6 August to set up its own subsidiary, Hero Honda's stock price has fallen from a high of Rs1,400 to around Rs1,200. Even the stockmarkets are sensing the imminent entry of Honda into the motorcycle segment, point out sources close to the Firodias. "On the other hand," says Sulajja, "the share price of Kinetic Motor Company Ltd (erstwhile Kinetic Honda), which touched an all time low of Rs32 last year, after Honda's exit, has been inching up in tune with its rising sales and is now around Rs52. The price of the Kinetic Engineering scrip during the last week has also flared up from Rs80 to Rs140 after we announced our intention to enter the motorcycle segment with the launch of three new mobikes in a technical tie-up with Hyosungs Motor Ltd of Korea."

Meanwhile, Kinetic Motor Company Ltd's (KMCL) sales have shown a definite uptrend in the last four months and that too in a declining scooter market. KMCL, which sold 8,000 scooters in the month of April, last month sold approximately 11,000 scooters according to AIAM (Association of Indian Automobile Manufacturers) figures. In the current month, KMCL is targeting sales of over 12,000 scooters and if it achieves that, it could be the best month ever in the history of KMCL. By the end of the current fiscal year it is targeting sales of over 15,000 scooters a month. Even if it maintains its sales at the current level, it would still sell a record 125,000 scooters in the current year.

Besides, in August, KMCL has launched a new model called 'Kinetic Style', which is a 74 cc scooter aggressively priced at just Rs25,000, pitted against the TVS scooty. It has features like a separate oil pump, which considerably enhances engine life and gives a trouble-free engine performance, as has been proven in its other scooter models originally designed by Honda. It also has double the storage space that any other scooter provides, with enough space for a helmet under its seat plus a glove compartment. The styling of this scooter has been done by UEN, a Taiwanese design house. KMCL expects to sell an additional 25,000 numbers of Style in the current year.

Meanwhile, the other major company in the Kinetic group, namely Kinetic Engineering Ltd (KEL), last month announced its entry into the motorcycle segment when it unveiled three new mobike models, two of which will be manufactured in technical tie-up with Hyosung Motors of Korea. These bikes have engines of 100 cc, 125 cc and 150 cc capacity. "With this we will be able to offer the widest range of two-wheelers right from 50 cc engines to 150 cc ones," says Arun Firodia, chairman and MD of KEL.

e-business tools

IBM

Linux is here today. Linux will be everywhere tomorrow.

netfinity does linux Linux, the most robust operating system ever built, is taking the wired world by storm. And Netfinity, the most robust servers ever built, now support Linux. It's not a coincidence.

You'll find us at IBM. Tel. Bangalore 5269050 • Calcutta 2822126 • Chennai 8213081 • Mumbai 8200454 • New Delhi 3356536. E-mail: direct@in.ibm.com or visit us at: www.pc.ibm.com/in

According to Firodia, during a visit to Daewoo and Hyundai, who are Kinetic's partners in other businesses, he saw Hyosung's GF 150 cc bikes on the Korean roads and was impressed by their stunning looks and smooth ride. As it happened, Kinetic was looking for a foreign tie-up and top-of-the-line models of motorcycles which it could manufacture in India. He directly approached Hyosung Motors, a part of $2.2 billion Hyosung Corporation. Hyosung Motors, which exports its motorcycles to 60 countries, is the largest motorcycle manufacturer in Korea and market leader not only in Korea but also in markets like Vietnam, Germany, besides exporting to the US, France, Spain, Brazil, etc.

Kinetic's scooter sales have shown an uptrend in the last four months

The foreign connection

Says Eun Woo Park, chief of International Business Development, of Hyosung Motors: "Hyosung was also looking out for a partner to gain entry into India, the second largest two-wheeler market after China, where we already have a manufacturing facility. We found that Kinetic had an extensive distribution network and good manufacturing facilities and shared our keen desire to grow its motorcycle business in India. So, we have decided to launch two of our best selling models GF 125 and GF 150 along with Kinetic in India." These bikes will have several features seen for the first time in India, like a push-button start, a four-valve, 4-stroke engine, which gives better combustion, smoother ride and higher thermal efficiency, disc brakes, cast alloy wheels, transient power fuel control (TPFC) for an initial surge of power and unmatched pick-up. These two models will be upmarket and are priced at $1,300 (Rs58,000) in the international market.

However, the Firodias are tightlipped about their pricing in the domestic market. They will have a fuel-efficiency of 50 kmpl and dual cradle box chassis, which can carry more loads even on rough rural roads. These two models will hit the market six months from now, sometime in March 2000. However, before that, by November 1999 Kinetic will launch its indigenously developed KX4, 100 cc 4-stroke bike, which will have a fuel-efficiency of 87 kmpl under test conditions. It will have a 7.6 bhp engine designed by WJL of Taiwan and its engine will employ the new ram induction technology, which is similar to turbo-changing and gives an initial power surge for good pick-up. "It is more powerful than Splendor or Caliber and we aim to achieve a fuel-efficiency of 65-70 kmpl in actual city driving conditions. It will be priced competitively against Splendor and Caliber, which are between Rs40,000 and Rs45,000 and will have contemporary styling," says Sulajja. She also reveals that bikes will be aggressively marketed by offering exchange schemes for old bikes and attractive finance schemes.

KEL expects to sell 40,000 bikes of all the three new models put together in the first full year, which will take the group's turnover from Rs800 crore last year to past the Rs1,000-crore mark. So, by the time Honda enters the market, two years later, Kinetic will be all set to establish its own mark in the Indian two-wheeler market.

Not just brick and mortar

MCCL, the 30-month-old fledgling of the Mahindra family, has its sights trained high

It is building castles even as the real estate industry lies in ruins. The Chennai-based Mahindra Construction Company Ltd (MCCL) has grown from Rs5 crore in 1996-97 to Rs25 crore in 1998-99. Recession in real estate has been a dampener, or else MCCL's sales may well have reached Rs70 crore, says CEO K.V. Nair.

"From simple buildings, we moved on to industrial construction and are now foraying into the infrastructure sector," he says. "Our projected turnover over the next five years is over Rs500 crore, second only to L&T's Chennai-based ECC construction Group." To realise this, a growth rate of at least four times the industry average is necessary, explains Nair. He points out that five of the last seven projects clinched by his company have been in the industry segment.

UMESH GOSWAMI

Nanda and Nair are positioning MCCL for primacy in construction

While Nair concedes that MCCL's sharp growth is mainly due to its being a new entrant, he emphasises that it has bagged major projects. The company has, however, been fortunate to be part of the steadily expanding parent group — Mahindra and Mahindra Ltd (M&M). Group contracts include the Rs26-crore Mahindra United World College campus at Malushri taluka near Pune, the tractor assembly plant at Nagpur, assembly shop at the Kandivli plant in Mumbai, and the three premium residential towers worth Rs70 crore in Mumbai. MCCL also gains from its Chennai-based sister company of Mahindra Holidays and Resorts, the timeshare and hospitality venture that markets itself as Club Mahindra. MCCL has secured the contracts for the two upcoming resorts: the Rs22-crore 154-unit complex at Munnar in Kerala and the Rs45-crore two-phase project for the 275-unit resort in Goa.

The company is part of M&M's Infrastructure Development Sector (IDS) and executes turnkey and contracting projects. IDS president Arun K. Nanda reveals that MCCL has developed associations with domestic and overseas construction establishments for joint venture tie-ups in industrial and infrastructure projects. "We are not a brick and mortar company," he points out. "We wish to add value to whichever site we take up." The company has a strategic alliance with the US's Butler Manufacturing Company to develop pre-engineered building systems and has tie-ups with global heavyweights like Malaysia's Mudajaya Corporation and Indonesia's P.T. Total Bangun Persada, he adds.

Nair stresses that the in-house projects comprise no more than 40 per cent of the present business and will be reduced to less than 10 per cent in the next three years. A prestigious scheme MCCL has cornered includes the Rs425 crore engineering procurement and construction (EPC) contract for executing the Tirupur water supply project on a build, own, operate and transfer (BOOT) basis. The company forms part of the M&M-led consortium that includes L&T for this scheme.

Other infrastructure projects include erection of the Rs12.36-crore aerolinks at the extension of the Mumbai domestic air terminal 1-A along with a security hold area, and the Rs10-crore four-lane road over bridge (ROB) on NH7 at the level crossing at Karur near Trichy for the National Highways Authority of India.

A Howard Business School team engaged by MCCL, had, in its report submitted in May 1996, estimated demand for civil construction services in the industrial sector at Rs57,000 crore over the next six years. MCCL will aim for about 4 per cent marketshare and sales of Rs350 crore with the long-term gameplan to develop as an engineering procurement construction (EPC) contractor. Harvard regarded the industrial segment as the most attractive with favourable economics and a good base to practise important project management skills useful for a later entry into infrastructure projects.

MCCL is India's first ever construction company to be awarded the coveted ISO 9001 quality system certificate from the international accrediting agency of Det Norske Veritas, Rotterdam. It has also been certified by Walbridge Brown and Root International for conforming to ideal safety measures by achieving a zero accident record at the Mahindra Ford site at Maraimalainagar in Tamil Nadu. Nair says that MCCL, with a staff of 200 engineers, can only improve on account of the scrupulous balanced score card that it maintains as a highly advanced form of monthly evaluation.

• SAROSH BANA

Trial by fire

Jindal says his plant will be the lowest cost producer in the country

PAI ASHRANJAN BHAUMICK

The Jindals have finally got Corex technology to work for them. But will it help them steal a march over their peers?

You could call this a south side story. First Posco in South Korea, then Saldanha Steel in South Africa, and now Jindal Vijayanagar in south India. While most steel plants the world over use the proven blast furnace technology, these three companies have chosen a path the others have feared to tread: they have adopted the Corex technology.

Situated in the dry and dusty Bellary district in Karnataka, the Jindal Vijayanagar steel plant stands out in this largely semi-arid land. The first Corex module of the 1.6-million-tonne (MT) plant, which began humming early last month, has brought some cheer to the Jindals. A year ago the plant had encountered major technical snags and the future seemed gloomy. "But we've learnt from our mistakes," says joint managing director J.K. Tandon.

The problem that beset the plant was that when JVSL started trial runs in October last, the thermal balance went haywire. "Due to the northeast monsoons there was a chilling effect in the dome. But this was not because of the technology but largely because of peripheral problems. We discovered 236 small points and plugged them all," says Tandon. As the temperatures dropped, the hot metal solidified, creating one whole mass of iron. The company had to use blasting techniques to get the dome operational. Some of the parts could not be salvaged. Fortunately, the company could use other parts such as the refractories from the second module to get the first module up and running. "The major loss was of time. We were fortunate that the plant was insured. It was not so much a monetary loss but an opportunity loss," says chairman and managing director Sajjan Jindal.

According to Jindal, the plant has been operating "very smoothly" and has achieved about 70 tonnes per hour of hot metal production as against the rated capacity of 100 tonnes/hour. Some of the hot metal has been fed into the steelmaking facility and turned into hot-rolled coils. While the Corex module was shut for repairs the steel mill was fed with slabs sourced from outside.

Nevertheless, a comparative statement done among the three manufacturers (Posco, Saldanha, and JVSL) show the Jindal facility up in good light. The first fortnight when each of the plants were commissioned shows that the production levels and the melting rates have been on the rise and the temperature levels have been consistent. The percentage of silicon and sulphur content is posing a bit of a problem, which company officials justify "as a result of tinkering with

the raw material blending". (The brown cloud that emerges from the chimney is of concern to many, but Jindal says the problem will be solved once the desulpurisation unit is in place).

Among the new generation private sector steelmakers the Jindals are slightly better placed. "Ours is a 21st century plant," says Jindal. Once the operations of the first module stabilise there is hope that the financial institutions, which took a stern stance towards all steelmakers, may open the tap and release funds badly needed for the completion of the Rs5,500-crore project. In this case, though the FIs sanctioned about Rs800 crore, they closed the tap once there were doubts about the feasibility of the technology. To give them a live experience of the plant's functioning, Jindal flew in key officials of ICICI and IDBI in the company's private airplane (the 3,500-acre plot on which the plant is situated also accommodates township and an airstrip). Indications are that the FIs' response has been "positive". However, JVSL officials prefer to save their hurrahs until after the money is disbursed.

JVSL needs about Rs500 crore of the Rs800 crore sanctioned to get its second Corex module and pelletisation plant operational. Expected to be complete in nine months, the two facilities will cost about Rs250 crore. Besides, the second converter and phase II of the oxygen plant (under Jindal Praxair), the desulphurisation unit, and other investments in the continuous caster plant (part of the integrated steel plant) will take up another substantial chunk of the disbursements. Moreover, now that Tractebel wants out of the 50:50 power joint venture Jindal Tractebel Power Co, which is crucial for steelmaking, acquiring the Belgian company's holding would cost Jindal around $55–60 million, which is next to impossible. He is hoping to rope in another partner (PowerGen of the UK is being touted as a possibility) who will pick up 49 per cent, thus taking the Jindal holding to 51 per cent.

JVSL is also seeking deferred repayment of interest on a term loan which has arisen out of the delay in the project. "We want to bring down our debt–equity ratio from about 2.5:1 to 1.5:1. We hope to convert about Rs600 crore worth of loans into optionally fully convertible debentures with low coupons. We have a good future in steel and we have requested the FIs to give us a breather. The restructuring of the debt:equity will certainly help them get an upside when the plant is fully operational," says Jindal.

Once the plant becomes fully operational, JVSL will consume about 1.45 tonnes of iron ore and 600 m^3 of oxygen (from Jindal Praxair) to produce a tonne of hot metal. In addition to 1.6 Mt per year of steel, JVSL will generate about 0.5 Mt of slag (used in cement manufacture) and 0.1 Mt of fly ash. Jindal is talking to various cement manufacturers to get them to set up factories in the vicinity to make use of this by-product. "They (the prospective manufacturers) need only bring in the clinker and produce cement," he says. It is said that talks are being held with L&T, ACC, Mysore Cement, India Cement, and Rajshree Cement.

"We have tried to build a plant that does not look like a steel plant. Once the entire integrated steel plant is complete our cost-effective facilities will make us the lowest-cost producer," says Jindal. He is confident of breaking even in 2000–01 and certain to make money the following year. The company made a loss of Rs29 crore on a turnover of Rs538 crore in the year to March 1999. The first quarter of the current year the company it has already bled to the extent of Rs25 crore on a turnover of Rs185 crore. It remains to be seen whether Jindal can control the haemorrhaging in the new millennium.

The better alternative

The Corex technology is said to be economically and ecologically a better alternative to the conventional blast furnace route. It offers a minimum economical production capacity of less than 1.5 Mt per year at a low specific investment cost. Though the quality of the product is comparable to blast furnace output, the technology allows flexibility in terms of raw materials and production output.

All smelting reduction processes have one common advantage vis-à-vis the blast furnace, which is the possibility of the direct application of coal. Consequently, the cost-intensive and environmentally controversial coking process is done away with. Though there are several smelting reduction processes such as Hismelt, Dios, Romelt, and Ausmelt, Corex is the only technology that has reached the industrial application stage.

Just how does it work? First either pellets or lumpy ore are charged into a reduction shaft via a lock hopper system where they are reduced to about 93 per cent metallised direct-reduced iron (DRI) by a reducing gas moving in counterflow. The discharge screws carry the DRI from the reduction shaft to the melter-gasifier where the final reduction and melting take place in addition to all other metallurgical and slag reactions. Then the tapping of hot metal and slag is then carried out as in the conventional blast furnace route.

The non-metallurgical coal is directly charged into the melter-gasifier through a lock hopper system. The combustion with oxygen injected into the melter-gasifier generates highly efficient reduction gas. Due to the high temperatures (upwards of 1,000-C) prevailing in the dome of the melter-gasifier, the higher hydrocarbons released from the coal during devolatilisation are broken down into carbon monoxide and hydrogen, and other by-products like tar and phenol are destroyed.

The reduction gas exiting from the melter-gasifier mainly consists of carbon and hydrogen laden with coal fines, ash, and iron dust. The fines are removed from the gas stream in a hot gas cyclone and recycled. After leaving the hot gas cyclone, the reduction gas is then blown into the reduction shaft via a bustle, thus reducing the iron ores in counterflow. The top gas is cooled and cleaned in a scrubber, and can then be used for power generation, DRI production, or other heating purposes within the steel complex. •

SBT tries harder

The Kerala's premier bank network, SBT hopes to cash in on the newfound resurgence in the economy

The "Travancore" in the name of the State Bank of Travancore (SBT) lends it a certain historical flourish which has endeared it to the Malayalee's wallet — whether within Kerala or beyond the borders of the state. With its wide network of 664 branches (549 of which are within the state) and 13,234 employees, SBT is a household name in Kerala. Formerly the Travancore Bank Ltd, the bank was sponsored by the erstwhile Government of the State of Travancore, and enjoyed the support and patronage of the Maharajah of Travancore. Its early chief executives were all Europeans with names like Ludwik Arenson and R. F. Wishart.

But how is it faring in the contemporary, more liberalised and less protected environment? SBT has just reported a drop in its net profit from Rs63.30 crore in fiscal 1988 to Rs43.45 crore in fiscal 1999, which is a fall of more than 31 per cent. That is a far cry from last year's good showing of a rise of more than 57 per cent net profits over 1997.

Is Kerala's premier bank on a losing streak? Far from it, says Vepa Kamesan, SBT's managing director. The main reason for the relatively off-colour performance last year was RBI's one-and-a-half per cent cut in the Prime Lending Rate (PLR), he says. Also, the general economic slowdown and industrial recession last year meant that for SBT, like many other banks, credit offtake became extremely sluggish.

Another significant reason for the drop in profits, a reason that few of SBT's directors would wish to announce from the rooftops, was the new RBI stipulation regarding provision for depreciation on investments. Last year SBT could claim around Rs63 crore as investment depreciation benefit. This year, according to its auditors, an amount of Rs2.70 crore — the excess provision for depreciation on investments (net of tax and transfer to Statutory Reserves) — was transferred to the Investment Fluctuation Reserve instead of Capital Reserve. Another Rs29.04 crore, representing the amount outstanding in Capital Reserve attributable to the excess provision of depreciation in respect of investments till last year, was also transferred to the Investment Fluctuation Reserve. This new accounting practice blew a great hole in SBT's profit levels.

Also chewing into profits was the fact that banking in Kerala, with its large NRI population, automatically means a higher cost of resources, thanks to the high-cost non-resident non-repatriable (NRNR) component of deposits. By end March 1999, NRI deposits constituted 41 per cent of SBT's aggregate deposits. With most of the NRNR deposits set to be retired this year, SBT's bottom line should be looking healthier in 2000.

SBT's attempt to recover non-performing assets (NPAs) has had some impact, but the bank has a long way to go to achieve RBI's dream ratio of under 5 per cent for new NPAs to net advances. At present, SBT's ratio stands at 10.80 per cent. Kamesan says the bank will bring this down to 8 per cent this year. Some of the attempts seem to have paid off. Recoveries of loans previously written off climbed from Rs1.09 crore in 1997-98 to Rs3.19 crore in 1998-99.

After last year's economic gloom, things seem to be looking up now and already trends in the new fiscal year are appearing encouragingly amiable for SBT. According to Kamesan, the first four months of the year has already seen a credit deployment of nearly Rs250 crore, almost a third of the year's total advances target of Rs750 crore for 2000. "This is a steady stream building up, unlike last year when the corresponding period was very dry," says Kamesan.

The thrust this year will be on a more focused business plan, targeting the personal banking sector (last year individual housing loans dished out by SBT grew by Rs54 crore) as well as the small and medium business sector. SBT has also been buoyed by its exposure to infrastructure projects in Kerala like the Cochin International Airport, NTPC's thermal power plant at Kayamkulam and the diesel power plant at Nallalam built by the Kerala State Electricity Board.

To fuel growth in retail banking, Kamesan says that SBT will open a string of boutique banks in Chennai, Bangalore and Thiruvananthapuram. As a lesson to his own staff about the dangers of taking a paying customer for granted, Kamesan almost closed his own account with an SBT branch because the staff there chose to be overfinicky about closing hours and did not use their discretionary powers to offer better service.

Better service — that surely is the key to success. SBT's corporate mission statement makes "excellence in customer, shareholder and employee satisfaction" a key objective. It also aspires to make SBT "achieve all-India stature with the best parameters in profitability, efficiency, systems and technology". A tall order for a pre-Independence banking veteran? Not if SBT never forgets the person who matters the most — the customer.

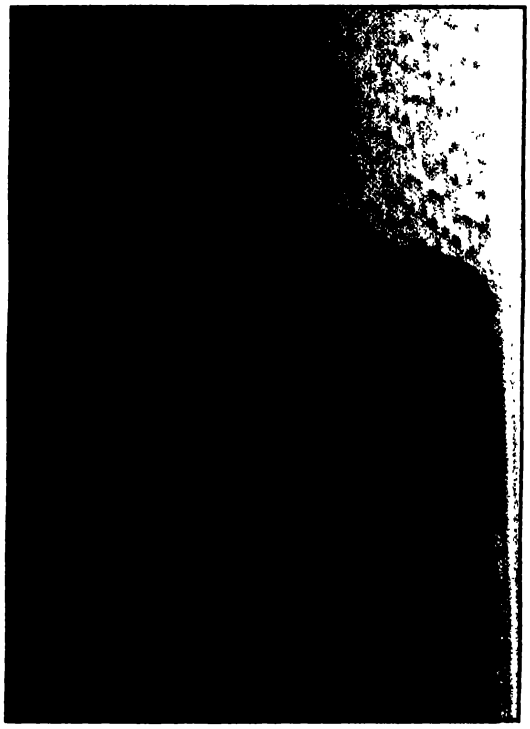
Strong at sixty



J&K Bank is using its good fundamentals to build a significant presence in other states

Its profile is as low as its net worth is high. Having made a mark in its home state, six-decades-old Jammu & Kashmir Bank is now spreading its wings, establishing centres in Mumbai, Delhi, Chennai, Bangalore, and Kerala. Not to be left out of the action in the money markets, the bank has shifted its treasury operations to the financial capital of the country. "We have a long history of profit-making decades and it's been more than three decades that we have consistently paid dividends. It's high time we speak out our achievements," says chairman M.Y. Khan.

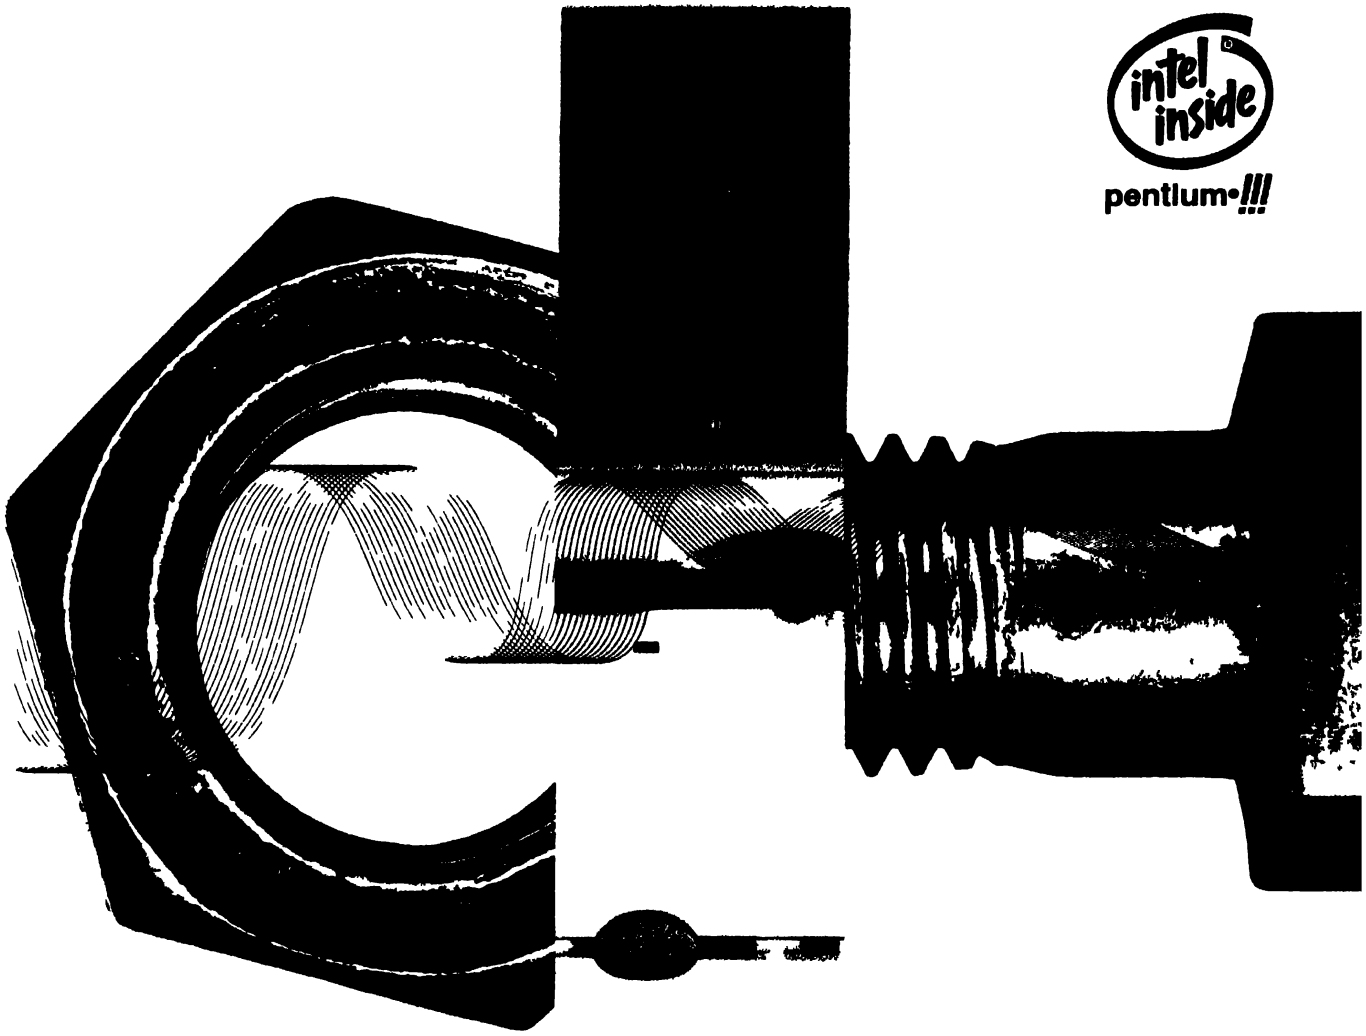
And investors had better sit up and listen. For though the bank enjoys good ratios, its stock, listed on the major bourses, just isn't attracting enough attention. Its maiden equity offering last year at a premium of Rs28 per share brought the state government's holding down from about 80 per cent to 53 per cent of the bank's Rs48-crore capital. Fifteen months on, the stock is quoted below the offer price. "We are ahead in most parameters and the fundamentals are strong. Yet this has not reflected in the stock price," says Khan.

J&K Bank has about 390 branches. It registered around Rs9,400 crore in turnover during 1998-99, and hopes to close the current year at around Rs12,000 crore. Mobilisation of deposits have leapfrogged a third to Rs6,444 crore and deployment grew 37 per cent from the previous year to Rs2,154 crore. This compares favourably with the all-India average deposit growth of about 18 per cent and the average advances growth of about 12 per cent. A noteworthy exercise has been the bank's attempt to prune its non-performing asset ratio over the past couple of years — from 4.57 per cent to 3.75 per cent. "We have maintained a downward trend on this front and we intend to bring it down to 2.5 per cent in a year or two. It's not an easy task to control NPAs for a bank that has been around for decades," says Khan.

At the same time the capital adequacy ratio is on the rise, from 20.48 per cent to 24.48 per cent. This is far above the RBI-stipulated minimum of 8 per cent increasing to 10 per cent by 2000-01 — "The highest in the industry," boasts Khan. No mean feat for a bank that has its base in the trouble-torn state. "Even during the days of militancy we were operational and provided succour to the local people. The past three years has seen the bank post tremendous growth," he says. The bank is indeed pretty strong in the state, with most of the non-plan funds routed through itself.

UMESH GOSWAMI

Khan is proud of J&K Bank's CAR, "the highest in the industry"



According to Khan, about 40 per cent of the bank's deposits are in the low-cost segment. It enjoys the "lowest" cost of funds at 7.6 per cent as against a prime lending rate of 12.5 per cent, giving it a fairly wide spread. Its administrative cost stands at 10.1 per cent (which Khan wants to clip to 8.5 per cent in the coming years) compared to an industry average of 17.7 per cent.

J&K Bank is among the highest taxpaying banks in northern India, and Khan wants to cut back on the tax outgo. "We are thinking of investing though mutual funds, which would fetch us tax breaks," he says. Though the bank conducts normal banking, "we are choosy in picking up clients." It finances large public sector undertakings and private corporates such as Reliance, Tata, and the Hindujas, to name a few.

Having ventured into retail banking, it has identified mutual funds and housing finance for future forays. According to Khan, the bank is also looking at asset creation in terms of acquiring apartments for staffers and purchasing commercial establishments in major cities. With a strong capital adequacy ratio, the bank is well placed to acquire other banks, but Khan isn't telling whether or which. To make the bank more contemporary, about 50 per cent of the business and 60 per cent of the branches are being computerised. Next year Khan expects to computerise 70 per cent of the branches and 80 per cent of the business. "This is to support a turnover of Rs15,000 crore by March 2001," he says.

Financially, J&K Bank is on a pretty strong wicket. On Rs694 crore earned by way of interest during the year to March 1999, its net profit was Rs85.45 crore. This translates into an earnings per share of about Rs18. The market price discounts the earnings less than two times. For the current year, Khan expects the bottomline to grow about 40 per cent, which would take the EPS above Rs25. At the current price of around Rs30, this stock looks like a steal. Besides, with reserves standing at a good eight times equity, a bonus issue in the coming year cannot be ruled out.

Taking a close look

Having got its act together, Deloitte Touche is making its moves carefully

It's ironical that global accounting firms which charge multi-million dollar fees to restructure their clients' businesses have often struggled to restructure their own. The Big Eight firms have been pruned down to the Big Five, a process of consolidation that's had its fair share of painful pangs. Indeed, they would have well been the Big Four if KPMG and Ernst & Young had not called off their alliance.

At the same time, as their clients increasingly seek new markets to invest in, they've had to expand geographically. And that's not been an easy passage especially when the market in question is a newly liberalised one like India. A highly fragmented accountancy profession coupled with a welter of archaic regulations, makes it a challenge. Deloitte Touche Tohmatsu (revenues: $11 billion), is amongst the last of the Big Five to get its Indian act together.

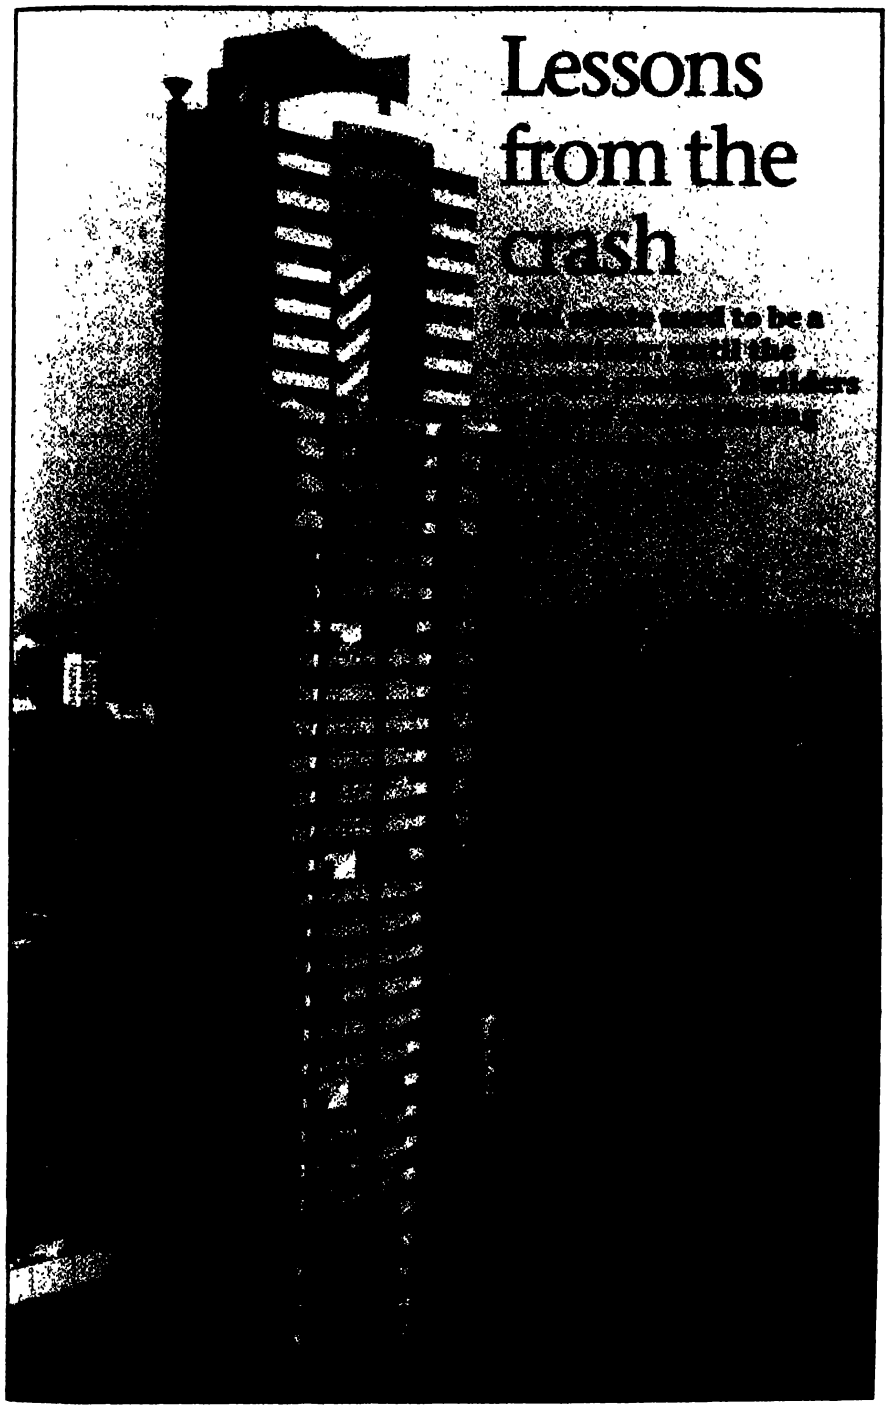
SANJAY BORADE

Archibald and Robert Campbell, Choksi and Gulmohamed (inset) have joined forces

"It's been a long process, longer than we'd imagined; but we're now ready for the next stage and that is to grow our practice rapidly. We see some big opportunities here," says Robert Campbell, Deloitte's regional managing partner for Asia Pacific. In an exercise that took eight years, four independent firms were brought together under a common banner, namely Deloitte Haskins & Sells. "We now have an integrated and cohesive presence in India," claims Campbell.

Why not operate under the same global name here as well? Simply put, they can't. The Institute of Chartered Accountants of India debars foreign firms from hanging their shingles. Fortuitously, Deloitte Haskins & Sells was registered as a partnership well before that restriction came into play. It was at the time represented in India by three firms — P.C. Hansotia & Co in Mumbai, Gupta Choudhry & Ghosh in Calcutta and Khanna Anand & Anand in Delhi.

Sometime in 1983, Touche Ross came looking for an Indian associate. "India was not hugely receptive to international business then, but it occupied a key position for us," recalls Archibald Campbell who was sent out on the India mission. It selected venerable Mumbai firm C.C. Choksi & Co to be a member of the Verein. A pioneer in tax practice, Choksi had a strong base of domestic clients that included the Mafatlal group amongst other Indian business houses.



In the south, Touche's associate was Fraser & Ross, a 100-year-old Chennai firm (the Ross name was coincidental). Following the global merger of Deloittes with Touche in 1989, the arduous process of bringing together these disparate entities began. Today with 37 partners and 930 employees, Deloitte in India has, as Campbell puts it, "decent geographical coverage." Moreover, it has appointed Farid Gulmohamed, a director in its London-based corporate finance division, to assist Dilip Choksi who is national director, corporate finance.

This division was kicked off last year and a team of twelve put in place. "We're trying to build out expertise in niche areas," says Gulmohamed. These would cover the gamut from helping Indian firms globalise to assisting new multiplex ventures. Choksi also sees a huge potential in risk management services in which Deloittes has cutting edge, proprietary software, especially amongst banks and oil companies.

Curiously, consulting is not an area they plan to plunge into. "This is a big boys game," explains Choksi. "We want to make sure that the market is adequate and that we are equipped in terms of human resources before we come in." Other consultants feel that Deloittes is being too cautious by far in its approach. "They are pretty late in the game and I still have to get a fix on whether they have a clear long term strategy," says the head of one consulting giant.

But the DTT men say that their sound domestic tax and audit practice is a good enough base to build on. The example of Ernst & Young which made a big-bang entry but petered off is a telling reminder of the perils of helter-skelter growth. There are rumours that Deloittes is looking to link up with new associates (one name doing the rounds is that of S.B. Billimoria & Co), but Campbell stresses that "We're not interested in mergers just to bulk up. A boutique-type practice is fine with us."

♦ NAAZNEEN KARMALI

Lessons from the crash

For Niranjan Hiranandanni, life's been a roller-coaster ride of late. Time was when running a real estate business in Mumbai's up-up-and-away market, was a no-brainer. Now, sighs the managing director of Mumbai-based Hiranandani Constructions Ltd, only the staunchest can survive. With the slump in real estate, builders like Hiranandani have faced a reality check like never before. The old rules of the game gave way to the new practically overnight.

From a market where 60 per cent of the deals were funded by advances from buyers, today builders have to raise 99 per cent of their fund requirements on their own steam — and then wait for buyers to trickle in. There was a market where any property that was good, bad or ugly was saleable; now here is a market where only quality sells. Quite a change from the heady boom period. The change has crept into their vocabulary. Listen to Hiranandani: "We've become more consumer-driven," he says. The company concentrated only on those projects that were selling, such as the projects in the suburbs of Mumbai — Powai, Thane, Dahisar — to mention a few.

Prices were reduced by 35 per cent and financial institutions such as HDFC and ICICI had to be tapped for working capital. Today, business in volume terms has increased by 50 per cent compared to three years ago. According to Hiranandani, "In the last two months we have seen good sales. For most builders, in value terms, business has increased by 32-35 per cent. Our firm has seen an increase of 30-40 per cent in actual sales."

Today, according to industry sources, real estate prices are back to the 1993-levels, or at least are not more than 30 per cent lower than they were during the real estate boom period, 1994-96. This is fuelled partly by those who had postponed purchasing flats but are now buying. According to Mofatraj Munot, vice-chairman, Kalpa-Taru Construction Overseas Pvt Ltd: "In the last four months we have been selling 8-10 flats a month, compared to the 2-3 flats we were selling a month previously." Mumbai-based Kalpa-Taru Construction ranks among the top five builders in the city. Construction and real estate being a very location-specific business, Kalpa-Taru's activities are concentrated around Mumbai and Pune.

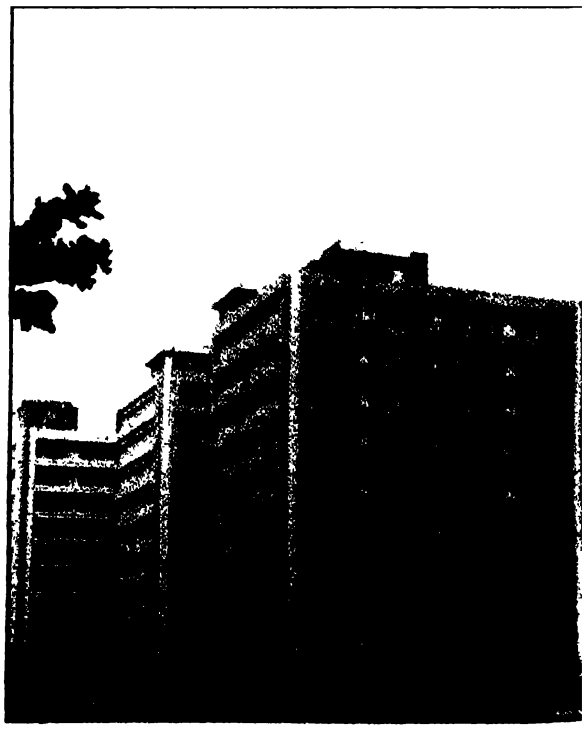
Though nationwide all the real estate markets were badly hit by the crash, Bangalore was the worst affected. Just when corporates had moved out of Mumbai (to get away from its exorbitant real estate prices) to Bangalore, the market crashed, leaving the Bangalore real estate market in limbo. When real estate prices in Mumbai were at a peak, corporates had moved out of Mumbai to other metros such as Hyderabad, Chennai as well as satellite cities like Pune, Nasik to mention a few. These markets are expected to register growth in the future. However, the Mumbai real estate market is one

where builders get the best return on capital as compared to other cities. "Mumbai will always be a good market. There will always be buyers here," says Munot.

The Mumbai real estate market is getting back on track with heavy transactions reported across the city in the last six months. Sample this: A 1,703 sq ft flat at Sumangal Apartments at Ridge Road in south Mumbai was sold at the rate of Rs23,547 sq ft. A 1,060 sq ft flat at Dariya Mahal at Napean Sea Road in south Mumbai was sold at the rate of Rs13,585 a sq ft. Another flat at Malabar Hill in south Mumbai of 1,580 sq ft was sold at the rate of Rs15,886 per sq ft. Transactions that have boosted the industry are also reported in the western suburbs of Mumbai. A 1,280 sq ft flat at Gulmohur Building at Pali Hill, Bandra, went for a total of Rs1.05 crore.

UMESH GOSWAMI

We've become more consumer-driven, says Hiranandani



Having gone through the crash, builders have become wiser. The industry is now in a consolidation mode. Providing services, such as helping buyers with legal matters relating to registering documents and paying the stamp duty, has become an important part of the business. This is in addition to other services which have always been provided to customers — if a customer wants to put marble flooring as against mosaic used by the builder, or if he wants his electrical wiring done in a particular way, these changes can be made at the construction stage itself and provided by builders.

What happened in the slump period of the last two years is that the buyer profile has changed. It is the individuals and corporates who are the buyers in today's market, and not the investor as was the case three years ago. The consumer has become discerning and is not buying anything that is put across to him. Also, buyers are now more aware of the reputation of a builder.

Secondly, working capital requirements have increased, making construction companies change their way of doing business. In this industry, working capital requirements were not very high as most of the work was funded by buyers, genuine or otherwise. For instance, the builder would take a 20 per cent deposit from the buyer and then start work on the foundation. When he reached the first floor he would take a further 10 per cent deposit from the investor and build a few more floors, and so on. As sales in value terms was high, this could be done, hence keeping the working capital requirements low. In today's scenario, with both the value and volume of sales comparatively less, and no investors in sight, working capital requirements have increased. So there is the need for better financial management, or the interest costs mount. (This is one of the main reasons why the fly-by-night operators have downed their shutters).

Most builders have undergone a financial restructuring. "Previously our construction work was funded by investments," says Hiranandani. "Now with no investors, we have to get our working capital from banks," he adds. Financial institutions such as HDFC, IL&FC and ICICI, to mention a few, have started providing project finance to builders. At least 20-30 per cent of the construction cost is funded by financial institutions. Terms and conditions, however, vary on a case-to-case basis — the project size, project liability, the builder's track record, the quality of the constructions, whether projects are finished on time or not, etc. At HDFC, escrow accounts have been set up in the last one year. "This way there is more transparency and we know where the funds are being utilised," says K.G Krishnamurthy, GM-technical services, HDFC Ltd.

The Mumbai-based Jogani Constructions has rejigged its building strategy. While the company hasn't

Today only quality sells, a marked change from the boom phas

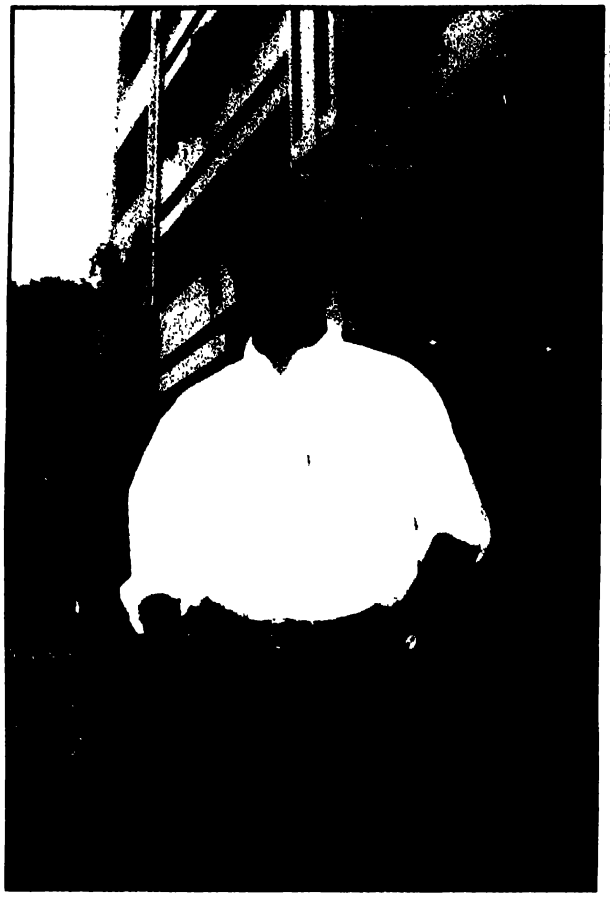
cut down on prices, it is trying to complete building projects on time. "Normally we would be lackadaisical. For instance, if a building would take a year to complete, we would stretch it to three years as we benefited from increasing prices," says Ramesh Jogani, director. Now the trend has reversed. The longer a building project takes to complete, it is the other costs, such as interest and contract costs, that increase. According to Jogani: "We completed our projects on time, managed to sell some of our flats, and whatever surplus money we made was used to settle our liabilities. Hence, we have managed to reduce our interest rate."

UMESH GOSWAMI

The Mumbai real estate market gives builders the best return on capital, says Mofatraj Munot

Mumbai-based real estate and construction company, Videocon Properties, a group company of Videocon International, is "going through a difficult phase, but we have been able to manage with internal accruals," says S.G. Kulkarni, managing director. "We can't sell off the business as such, so we are trying to dispose off the properties that we have. We are not planning on expanding in this business," he adds. The company has already pre-sold its three ongoing projects — two at Andheri and Kandivali, both western suburbs of Mumbai and one at Napean Sea Road in south Mumbai. "We just concentrated on these residential projects; we didn't embark on any commercial projects," says Kulkarni. At present, the company has a new project underway at Lower Parel in central Mumbai.

Direct marketing is being adopted by most companies. Web sites are also helping in brand awareness. Ever Shine Builders, Hiranandani Construction, K. Raheja, Kalpa-Taru, Tata Housing, to mention a few, have set up their own Web sites. These sites provide information regarding the construction companies and their various residential projects in different localities as well as various cities. If the customer is interested in any of the properties shown, they can e-mail the company from its Web site for more information.



Besides the company background, details of properties and e-mail facilities to the company, the K. Raheja site, to mention one, is a comprehensive site providing useful information. There is information regarding loans and their interest rates from housing finance institutions such as HDFC, ANZ Grindlays, LIC Housing Finance and Citibank. News clippings relating to the industry and job opportunities at its ongoing projects are also given. For NRIs who want to invest in immovable property in India, there is information regarding foreign exchange control regulations, repatriation of investments, and the acquisition, disposal and letting out of property in India.

The buyer is now more price-conscious. So facilities like the swimming pool and club house, which were added benefits in the boom period, are turning out to be negative factors today. "The more facilities a building project has, it means additional maintenance outgoings of close to Rs4,000 a month for the buyer. So the buyer prefers to opt for a simple building rather than one with these facilities," says Jogani. Videocon Properties' Kulkarni agrees. "If the amenities are not being utilised, they prove to become a white elephant for the cooperative societies," he says.

A mere handful of builders were lucky to have come out relatively unscathed from the real estate crash. And needless to say, the more conservative have survived the free-fall. According to Kalpa-Taru's Munot, "We deal mainly with retail and institution clients like Sebi, LIC, Bank of Baroda, to mention a few. With this kind of reputation, not many investors approached us. Further, the company has strict rules regarding sale and purchase of flats. For instance, to

purchase a flat in a Kalpa-Taru construction, the buyer has to go through the company, i.e. Kalpa-Taru, and not any outside broker. And the same applies if a flat in an under-construction Kalpa-Taru building is to be sold." In fact, according to him, the company had at least six ongoing projects when most builders were experiencing a slump in the market: a 2.5 lakh sq ft development at Lower Parel, a 1 lakh sq ft residential complex at Sion, a 55,000 sq ft commercial complex at Sion, a new building which is coming up at Thane, a new residential phase of 7 lakh sq ft which is under way at Malad. In addition, the company has a new project coming up at Pune.

K. Raheja Constructions, one of the top five construction companies in the city, has a similar story to tell. "We are more user-driven than investor-driven. So the impact of the crash hasn't been so bad for us," says Kishore Bhatija, vice-president, K. Raheja Constructions. The company concentrated on existing projects and did not take up any new ones. Also, the company has always offered its projects for sale after they have been completed. This policy has paid off.

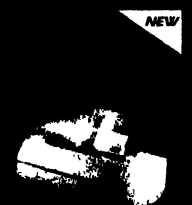
UMESH GOSWAMI

Interest costs can hit you if projects are not completed on time, says Jogani

A lot of construction work had started during the boom period. However, according to industry sources, at least 90 per cent of the projects weren't completed. With the realisation that there were no more investors, prices began to fall. But even this reduction wasn't good enough as the boom period had witnessed a 100 per cent increase in prices. "Today the market has hit such a rock bottom that nobody is getting the right price," says Ramesh Jogani, director, Jogani Constructions. In fact, Jogani is of the opinion that builders are now selling at prices below the construction cost. For instance, at a multi-storey building at Kandivali, a western suburb of Mumbai, the construction cost is a minimum of Rs1,800 per sq ft. And this is being sold at the rate of Rs1,500-1,700 per sq ft. At this rate, the property price is not taken into account, nor are the builder's interest or administrative costs. Hence, the builder is incurring a loss. He has no choice caught as he is in a Catch-22 situation. No one is willing to give him more for an unfinished product, and even if it is a finished product, they don't have the money to buy it.

Though the situation is a bit better now, margins are still tight. However, according to Hiranandani, what was witnessed during the boom period was a skewed market. While the prices were inflated on the one hand, it was government policies such as the Urban Land Ceiling Regulation Act (Ulcra), the Rent Act and poor foreclosure norms on the other that created the skewed market of licensing and controls.

Since Ram Jethmalani has taken over as Union urban development minister, he has done away with some parts of the Control Raj. He was instrumental in repealing Ulcra, the aim being to kick-start housing activities in the country. While this decision was taken at the Central level, Ulcra is yet to be repealed at the state level, since land is a state subject. Since the Act was repealed at the Centre in March this year, only two states — Gujarat and Tamil Nadu — have followed suit and repealed it. Other states, including Maharashtra, have yet to repeal the Act. Builders are unanimous that the Act should be repealed. This would bring real estate prices to a more realistic level.



The recent budget has attempted to give a boost to the housing sector. According to the budget, the increase to 40 per cent in the depreciation rate on new dwelling units purchased by the business sector for its employees is now sought to be extended to partnership firms and professional bodies as well. Banks have also been directed to channelise 3 per cent of the incremental deposits to housing finance as against the 1.5 per cent earlier. Another proposal was to increase the tax exemption limit on the interest paid on a loan for a self-occupied property from Rs30,000 to Rs75,000. This has been touted as Yashwant Sinha's biggest incentive to housing finance.

The idea is to encourage middle-class investors to buy houses and thus boost the demand for housing finance. To enable housing finance institutions to recover bad loans faster, the budget also proposed changes in the foreclosure laws in this sector by amending the National Housing Bank Act. All this taken together is expected to increase fund flows to the sector. These proposals have already brought about a sea-change in the industry. Most builders are optimistic of the future and are expecting sales to increase in a year's time. The worst, they say, is behind them.

What's on the menu?

Fast food restaurants' appetite for greater marketshare has been growing for some time now. Sample the price cuts on the menu

When Pizza India Ltd opened the first Domino's outlet in Delhi's Greater Kailash I in 1996 it was astounded by the response. Even though advertising had been restricted and the prices twice those of other pizzas, the outlet became so popular that Domino's delivery schedules went totally haywire. People even thronged to see how hand-tossed pizzas were made! The company had to quickly open another outlet in Greater Kailash II.

There are 15 Domino's outlets reaching out to 4.5 lakh households in the city now, and the company is happy with sales. "India is the fastest growing market for Domino's today. We are the largest international chain in India with 32 outlets. There is still scope for more outlets in Delhi," says Gita M.S. Agarwal, business manager, communications, Domino's India Ltd.

McDonald's, which also set up shop in 1996, has grown 30 per cent in volume terms over last year. The sales of its soft serve cone, priced at Rs7, are increasing ten-fold every month. "The market for fast food restaurants is about to take off," says Vikram Bakshi, managing director, McDonald's Delhi. According to studies conducted by McDonald's, the penetration of fast food restaurants is as high as 45-68 per cent with consumers spending 8 per cent of their annual incomes on eating out. Says Samir Kuckreja, technical advisor, Nirula's Corner House Limited: "It is generally accepted that the market is growing at a healthy rate of 20-25 per cent every year."

However, most of the MNCs are not going on an expansion spree. "We had much rather consolidate our base in one segment before we move on," says Bakshi. Hence, McDonald's will move on to Pune next year and then to Bangalore and Chennai. It is also planning more outlets for Delhi and Mumbai. Meanwhile, Domino's has opened outlets in Jaipur and Ahmedabad. And Tricon Restaurants International is planning to focus on Mumbai both for Pizza Hut and KFC, which Pankaj Batra, senior marketing manager, Tricon Restaurants International, admits is "a big gap" in their distribution chain.

However, in the metros, real estate is a bugbear. Batra says that this is one of the reasons why it has not been able to concentrate on Mumbai so far and has had to shut one of its five KFC outlets in New Friends Colony in Delhi. The other more significant hurdle had to do with adapting international dishes to Indian tastes. Says McDonald's Bakshi, "We had to change 75 per cent of the international product line in India because of the unstated ground rule 'no beef and pork products in India'." Besides, catering to the high percentage of vegetarian eaters too, was a challenge. Estimates show that 50 per cent of the people eating out are vegetarians. McDonald's, which started with only one vegetable burger and vegetable nuggets has now added chilli cheese burgers, *aloo tikki* burgers and vegetable sandwiches (at only some outlets). Domino's, too, has a lot more vegetarian toppings in India than in outlets abroad. "We had anticipated this so even though we began with only one vegetarian topping, now 50 per cent of our toppings are vegetarian," says Agarwal.

Pizza Hut too has opened a fully vegetarian outlet in Ahmedabad — the first for the product. Surveys showed that 95 per cent of Ahmedabadites were vegetarian, half of whom did not eat in restaurants which also served non-vegetarian food. Even Wimpy's, the oldest of the international chains, which started with three vegetarian burgers, now has eight. The company is also considering vegetarian outlets in Gujarat.

Industry even blames vegetarianism as the cause for KFC not gaining ground in India. Batra clarifies, "We knew about this beforehand. Research shows that one out of every four people knew that we served vegetarian food at KFC." However, they are now creating more awareness about the vegetarian component of their menu, says Batra. McDonald's too is taking care to tell its

customers that they have a separate kitchen for vegetarian food and also exclusive staff for its handling.

For these fast food chains, quality and sourcing of raw materials is very important. These restaurants consider everything from *gol gappas* to *chana bhaturas* as competition. So customers have to be convinced of the superior quality of their food. Says Bakshi, "In Delhi many branded restaurants like Nathus are competition and in Mumbai it is the *Udipi* restaurants." Besides, most of these fast food restaurants are competition for each other. The Indian fast food restaurant market is still in the initial stages of being segmented according to a restaurant's USP.

Domino's justifies its pricing because of its superior quality

What the price sensitive market is looking at right now is value for money and with most of these restaurants being in the same price bracket, competition is severe. Hence, the plethora of promotions: Pure vegetarian meals at discounted prices during the festival season and special offers during sports events like the World Cup and on Independence Day.

However, the real battle is still being fought over pricing. While McDonald's believes it is providing a good wholesome meal in a specially created environment, Domino's justifies its pricing because of its superior quality (olives are imported from Spain, pepperoni from Australia and herbs from America). Says Agarwal, "People have now got used to our quality, we don't hear them complaining about the price being high."

Nirula's, which pioneered the concept of fast food in Delhi in the 1970s, has a unique pricing formula. "If you take a McDonald's burger you pay extra for the fries. In Nirula's, we give you chips or mashed potatoes free," says Kuckreja. Though Kuckreja denies being affected by competition, it is evident that his company is feeling the heat. His company will now also manufacture and sell its own condiments and syrups. Also on the anvil are three-star hotels, to come up in Chandigarh, Ludhiana, Lucknow and Jaipur. "This is going to be our thrust area. Every hotel will also have our restaurants," says he

Pricing has also affected the UK-based "fine dining restaurant" Pizza PizzaExpress. According to project manager Vivek Suri, the company conducted a survey in Connaught Place (where it has its single outlet) and found that on an average executives in the area spent Rs75-100 on a meal in restaurants like Pizza Hut and Wimpy's. So Pizza PizzaExpress came up with special schemes: buy one pizza and a Coke and for another rupee get one more pizza of the same price, the upper limit being Rs150; prices of its zodiac meal were also lowered from Rs250 to Rs150. According to Suri, schemes like these have led to a 35-40 per cent increase in business and this single outlet now does business worth a lakh every day.

Even Vilas Pawar, chief executive, operations, for standalone restaurant TGI Friday's (which has a single outlet in Delhi) says that he needs 500 customers every day to be able to make money. "All TGI Friday's restaurants are spread over 5,000-7,000 sq. ft. The cost of setting up the equipment remains the same but we need more chairs (read customers) to make money," says Pawar. TGI Friday's introduced happy hours to counter competition from restaurants in five-star hotels. This led to brisk sales this year; and the company plans to open an outlet in Mumbai by next summer. All the fast food players are now hungering for greater marketshare. Will that be matched by customers' craving for what's on their plates?

Betting on brand-building

Ad agency-*wallahs* are breaking out on their own to offer focused communication services for brand-building

Differentiation is a magic word in ad agencies. Understanding what makes a brand unique and attractively presenting that singularity is the key to many powerful advertisements. But increasingly, ad professionals are swearing by differentiation not just to design brand campaigns, but for satisfying their entrepreneurial drives as well.

As large agencies become integrated and straddle each facet of communication from direct marketing to outdoor advertising, niche outfits are coming up rapidly which offer focused services like Carat India in media buying, and Dhar & Hoon as a creative hotshop.

Last month, five senior ad professionals including the likes of Kiran Khalap, till recently chief creative officer of Bates Clarion and Anand 'Andy' Halve, who coined the *"Sunday ho ya Monday, roz khao anday"* jingle, chucked up their jobs in established agencies to start 'Chlorophyll', a brand and communications consultancy. Chlorophyll's other associates are the creative duo of C. Gangadharan Menon and Nalesh Patil, formerly with Ogilvy & Mather and lately with PSL Universal McCann and Manjunath Hegde, who headed account planning at Clarion. Chlorophyll is backed by the Mumbai-based Adfactors, a leading public relations and financial communications agency founded by Madan Behl and Rajesh Chaturvedi in 1982.

Its services range from devising entry strategies for new brands to developing communications and managing its post-launch brand equity. Revamping existing brands is also part of its charter. Notes Khalap, "The unbundling of services in advertising matched with our personal ambitions."

Chlorophyll's founders may surely be the best-known ad pros to come together in recent times for a maiden venture, but they are not the first. Only a year ago, two other ad-*wallahs*, Jamshed Vakeel, formerly creative consultant at R.K Swamy BBDO, and several other top agencies and Priya Raj, client services director at R.K. Swamy till May 1998, formed 'Momentum' to offer "strategic advice and creative work" for brands. Noted marketing professional Jagdeep Kapoor's Samsika is a brand consultancy addressing other aspects like pricing, distribution and sales strategy as well.

PALASHRANJAN BHAUMICK

Behl and Khalap are the best-known ad pros to come together in recent times for a maiden venture

Like Momentum, Chlorophyll will also charge clients on a fee basis as opposed to the standard 15 per cent commission that ad agencies make on billings. Says Vakeel, "In the commission mechanism, what drives agencies is boosting billings and using media like TV spots and press ads. In this scenario, you don't look at the brand." According to him, sometimes below-the-line activities like direct mailers may be more critical for a brand, but agencies consider them as "nuisance value, focusing on billings-led media". But with clients smartening up, some agencies are understood to be quietly replacing commissions by fees in some businesses.

If its first year is any indication, then potential for niche outfits like Momentum is growing. Its client list includes Alliance Capital, Procter & Gamble, Citibank Treasury and *The Sunday Observer*. From just the two founders in August last, its team has expanded to 17.

Interestingly, in this high potential market, newly-founded Chlorophyll has decided its limits by opting not to expand beyond its existing five people. "We want to offer undiluted advertising advice. This is unlike the typical agency structure where as you progress, you spend most of your time managing people rather than looking after the brand. The principle we want to stress is that brand management is an individualised craftsmanship," explains Khalap.

So, if Chlorophyll gets more business than the five can handle, main promoter Madan Behl simply says the "model will be replicated". The big challenge perhaps will be ensuring that the five advertising minds stick together. Khalap is quick to highlight the no-designation, hierarchy-free structure at Chlorophyll. "There is a lot of commonality of views in the kind of product we are proud of. One of the major bulwarks is being aware that there will be differences of opinion. We have decided to have tremendous formality at the professional level and are putting the processes towards that," he stresses. Clearly, the ad business is attempting differentiation in more than just a few ways.

STRIDES TOWARDS COMPETITIVENESS

Speech by Shri Y.C. Deveshwar, Chairman, I.T.C. Limited at the Eighty-Eighth Annual General Meeting of the Company on 30th July, 1999

It gives me great pleasure to welcome you for the fourth successive year after being elected as Chairman of your Company. These last four years have been challenging ones both for the Indian economy and for the Indian industry. India has witnessed five governments during this short period. The country is getting ready for yet another general election. The substantial erosion in the value of the currencies in Russia, South East Asia and Latin America intensified price competition for Indian exports on the one hand, and made imports into India attractive on the other, thereby adversely impacting the financial performance of many Indian enterprises. Investment sentiment has been at a low ebb. The growth rate of the Indian economy came down from 7.8% in 1996-97 to 5.8% last year. This rate of growth is woefully inadequate. According to an estimate of the Confederation of Indian Industry, even if the Indian economy were to grow at 7% per annum consistently over thirty years, the resultant per capita income would barely match the levels obtaining in Thailand today. **It is therefore evident that India must target a much higher rate of growth. Such an ambitious growth agenda in a fast globalising environment can only be realised through an accelerated reform process that makes the Indian economy globally competitive and thereby attract commensurate investment.**

There is therefore a crying need for a consensus on an economic reform agenda. The unanimous adoption of the Union Budget seems to have helped revive sentiment and there are early signs of economic recovery. The economic resilience that is being demonstrated during an uncertain political phase is indicative of the potential of a much faster rate of growth once political stability is restored and a second generation of reforms takes concrete shape. **The globalising market and the prospects of a higher growth rate whilst presenting opportunities, pose formidable challenges.**

As I had stated in earlier years, **competitiveness continues to be a compelling agenda for the Indian industry.** The task of transitioning businesses from a relatively protected environment to the rigours of a globalised market requires upgradation of capabilities to international standards. This implies a major change in mindset, backed by substantial investments in modernisation, scaling up and skills upgradation. Such strategic investments would naturally entail gestation drags that would severely test managements for their staying power and commitment to their businesses. **Business portfolios will therefore need to be rationalised and restructured for focused attention so that the deployment of scarce resources is confined to those areas that best match organisational capability with market opportunity.** Those who fail to overcome these challenges would succumb to the severity of competitive pressures, while those who succeed would be handsomely rewarded. It is therefore **imperative to shed preoccupation with the mere maximisation of tactical financial results, and instead focus on building strategic capabilities. A wholesome balance will have to be struck between the short, medium and long terms.** In line with such reasoning, and with the objective of fashioning a sustainable growth path, I am pleased to state that considerable progress has been made by your Company over the last few years.

PROGRESS IN RESTRUCTURING

Investment Subsidiaries

Further to the status indicated in the Report and Accounts, **the statutory approvals for the merger of your Company's investment subsidiaries have since been received and consequently, Summit and Sage Investments stand merged with Russell Credit with effect from 1st February 1999.** Russell Credit's Balance Sheet size now stands at Rs. 671 crores.

Investments in Edible Oils

Shareholders are already aware that ITC had exited completely from the management of this business by transfer of control of ITC Agro-Tech to ConAgra. Your Company's investment subsidiary Russell Credit, holds a minority interest of 17% in ITC Agro-Tech currently valued in its books at Rs. 53 crores. The market value of this investment as at 22nd July 1999 was around Rs. 71 crores. Further, the Mantralayam facility which was licensed to ITC Agro-Tech and the Mantralayam land are held in your Company's books at Rs. 104 crores. On the basis of the agreements among ConAgra, ITC Agro-Tech and your Company, **ITC would be in a position to disengage from these investments only after October 2000 and redeem these assets on the basis of their market values obtaining then.** Concurrently, the use of the ITC prefix in the name of ITC Agro-Tech would stand withdrawn.

Investments in Financial Services

Following the merger of ITC Classic with ICICI, your Company was to cause the disposal of ITC Classic's investments in the home finance and stock broking businesses. The home finance company has since been sold for a consideration of Rs. 10 crores and an agreement is in place to liquidate ITC Classic's interest in the stock broking business, pending requisite regulatory approvals. Further, negotiations with the Zurich Financial Services group are at an advanced stage for the ITC group's exit from the asset management business of ITC Threadneedle.

As a result of the disengagement from the erstwhile ITC Classic group of companies, your Company's investment subsidiary Russell Credit now holds shares of ICICI

valued in its books at Rs. 5.7 crores. The market value of this investment as at 22nd July 1999 was about Rs. 10.5 crores. In addition, there is an exposure of Rs. 350 crores in the form of preference shares of ICICI, redeemable at par in the year 2018.

Additionally, in the course of such restructuring, your Company and its subsidiaries have had to deploy around Rs. 360 crores in Real Estate projects. **Although the real estate market is currently depressed, it is expected that your Company would be in a position to redeem these investments over time at a reasonable surplus.** Towards this end, your Company is engaged in creating an organisation and assembling the requisite management skills to chalk out development plans for subsequent execution. Opportunities for partnerships with reputed international players are also being explored to maximise returns from these assets.

Investments in Paperboards

As a result of the infusion of capital approved by you last year, **ITC Bhadrachalam Paperboards Limited has now become a subsidiary of your Company facilitating closer management attention in line with the strategy of focus.**

Investments in Speciality Papers

In respect of speciality papers, efforts towards striking a partnership with a suitable international player to reposition this business on a growth path are continuing. This is likely to take time on account of the depressed sentiment in the international markets resulting from the deep recession witnessed in the global paper and pulp industry. In the meantime, **vigorous efforts at improving quality and cost standards are continuing to make this business more attractive for potential partners.**

The aggregate tie up of funds in what may be termed as non performing assets as a result of restructuring towards disengagement from non core activities, and on account of the excise pre-deposit of Rs. 350 crores, **amounts to around Rs. 1,260 crores. The associated drag arising therefrom needs to be kept in mind while viewing the financial results of your Company, particularly in the year under review.**

REVIEW OF OPERATING AND FINANCIAL RESULTS

The last year was yet another year of satisfying performance for your Company despite difficult trading conditions. In spite of business sentiment continuing to be depressed in the face of weak domestic demand, extremely competitive export markets and lacklustre industrial growth, your Company continued to post creditable results. **While turnover grew by 11% to Rs. 7,579 crores, trading profits, at Rs. 1,092 crores, increased by an even more impressive 25% to cross the one thousand crore mark for the first time.** After absorbing the additional interest burden as stated earlier, net profits at Rs. 623 crores represented a growth of 18.5% over the previous year. I am sure that **these results, seen in the context of declining inflation, atop substantial growth in profits in preceding years, is a source of satisfaction for shareholders.**

The last few pages of the Report and Accounts provide at a glance, the progress that your Company has made in operating and financial results. **The reserves have more than tripled since 1995 at Rs. 1,988 crores. This enabled the debt equity ratio to be contained at a healthy 0.56:1 despite the substantial increase in the size of the Balance Sheet from Rs. 1,640 crores in 1995 to Rs. 3,486 crores in 1999.** This has been made possible by significant improvements in operating cash flows. The capital markets have handsomely acknowledged the performance of your Company, with the growth in market capitalisation of your Company having significantly outperformed that of the BSE Sensex.

Your Board is committed to the creation of long term shareholder value. Each of your Company's businesses is in a different phase of development requiring distinctive focus and investment for the successful transition from a position of dominance in the regulated market of yesteryear, to a position of leadership in the highly competitive markets of tomorrow. **It will therefore periodically review the portfolio of businesses for sustainable competitiveness and take necessary strategic initiatives, including striking strategic alliances and partnerships, and even exiting from a business if the competitiveness objective is not attained with sustainability in a reasonable time span.**

The strengthening Balance Sheet of your Company will provide the much needed staying power in building leadership positions in the capital intensive hotels and paperboards businesses, as also in supporting investments in modernising the tobacco, cigarette and packaging businesses.

STRATEGIC PROGRESS IN CORE BUSINESSES

Cigarettes and Leaf Tobacco

Your Company has invested nearly Rs. 500 crores during the last three years towards upgradation and modernisation of its manufacturing and product development facilities. The new plant outside Bangalore, when completed at an estimated outlay of Rs. 450 crores, would provide state-of-the-art facilities for the next millennium. The first module, at an investment of nearly Rs. 100 crores, has now been completed and commercial production is scheduled to commence shortly. Similarly, the modernisation project at the Saharanpur plant has been completed at a cost of approximately Rs. 80 crores. **As a result of these investments, the internationally preferred high value "Hinged Lid" form of packaging, which constituted 2.4% in 1995-96 now constitutes 22% of your Company's production. Concurrently, filter cigarettes now constitute 69% as opposed to 60% in 1995-96, thereby providing your Company the benefits of the high value addition.** Such investment in brands will continue, with outlay of over Rs. 700 crores envisaged over the next 5 years. **Continuous improvement in quality and cost standards has further strengthened your Company's market standing.**

The export of leaf tobaccos suffered a setback during the year under review as a result of a glut in the international tobacco markets. The adverse impact on the farmer was exacerbated by overproduction by the farmer above the limits mandated by the Tobacco Board. Your Company purchased quantities beyond its immediate requirements as a measure of assistance to the farming community, who are viewed by your Company as long term partners in business. The adversity on the tobacco export front is likely to continue in the foreseeable future. In order to enhance the competitiveness of Indian tobaccos your Company continues to enlarge and upgrade its development and extension services to the farmers. Initiatives are also on the anvil with regard to development of

Oriental type of tobaccos, the cultivation of which is highly employment intensive and which has a growing demand in the international markets. Concurrently, **to support export efforts, modernisation plans to upgrade green leaf tobacco processing facilities at an outlay of nearly Rs. 350 crores are in hand for implementation over the next five years.**

Hotels and Tourism

Your Company commenced the hotels business way back in 1975. For reasons of competing demands from newer businesses such as financial services and edible oils, fresh investments did not take place at the desired rate in the 80s and the early 90s. As a result, Welcomgroup could not expand its presence to several high potential locations, which would have considerably strengthened the chain. In an endeavour to offer a more complete and attractive chain product to upmarket international and domestic business travellers, an expansion plan involving investments of over Rs. 1,500 crores in the next five years is under implementation. The Rs. 450 crore five star deluxe hotel project at Mumbai is progressing satisfactorily and is slated for opening in October 2000. The civil works for the 100 bay expansion at Maurya Sheraton in Delhi is nearing completion and is planned for opening in March next year. Preparations to commence construction of a second hotel in Mumbai on your Company's land at Parel and a five star deluxe project at Calcutta are at an advanced stage. These projects are likely to be completed by the years 2001-02 and 2002-03 respectively. I am also happy to advise you of the induction of a second hotel into the Welcomgroup chain in Delhi, which is at an advanced stage of construction. **On completion of the expansion plans, nearly 1,500 deluxe rooms will have been added to the Welcomgroup chain over the next five years.**

These investments, apart from providing an attractive growth opportunity to your Company, would stimulate large direct and indirect employment besides supporting substantial foreign exchange earnings from international travellers. Your Company views these investments as a significant contribution to the development of infrastructure for trade and commerce in the country. Although this capital intensive business carries gestation drags in the short term, the long term potential for earnings and real estate appreciation is attractive. In the globalised world of tomorrow India can acquire a position of leadership in the employment intensive Services businesses. It is expected that after your Company acquires a critical size and scale of operations in the Indian market it can successfully venture overseas and acquire a global dimension.

Packaging and Paperboard

Significant progress is being registered in the packaging business of your Company. You would recall my statement last year, that any in-house buyer supplier relationship within the ITC group is governed by a policy framework that provides freedom to the buyer to access the most appropriate inputs from the market. The in-house supplier has to earn the custom through superior quality and cost. You will be happy to learn that **the packaging requirements of the cigarettes business, that were earlier being sourced from overseas in pursuit of international quality standards, have now reverted to your Company's packaging business, with considerable gains in efficiency and substantial savings in costs and foreign exchange outgo.** This achievement has also provided the packaging business the impetus to grow exports of value added packaging to overseas tobacco companies. **While pursuing organic growth, opportunities for acquisitions are also being explored.**

You are already aware that ITC Bhadrachalam Paperboards Limited, now a subsidiary of your Company, has been engaged in the stabilisation of the recently capitalised 120,000 tonne capacity plant involving an outlay of nearly Rs. 675 crores. Unfortunately this new investment had coincided with a deep supply demand adversity, both in the domestic and global markets, intensifying price competition, thereby leading to severe erosion in margins. **Focused product development efforts together with early signs of revival of the paper and pulp industry give the hope that the turnaround of this business can begin to take place in the not too distant future.**

Attainment of international competitiveness by Indian enterprises would largely depend upon the interplay of two mutually supportive ingredients. The first one relates to the vitality of the enterprise in reshaping its business portfolio to align more closely with its unique capabilities, inculcating dynamism in leadership, investing in technology and human skills to nurture core capabilities, and evolving appropriate governance processes to enhance the wealth generating capacity of the enterprise. **The second relates to the vitality of the economy as a supplier of globally competitive inputs and resources.** In this context, the social and physical infrastructure in our country needs urgent and quantum upgradation. Equally, the institutional and policy framework needs to be progressively reformed to create a climate in which efficient entrepreneurial activity is rewarded and resources made more productive.

Industry and government therefore need to work in close partnership to fashion a policy framework appropriate to each industry. I would like to place before you an area related to the tobacco industry that requires urgent attention.

REFORM OF THE REGULATORY FRAMEWORK FOR THE TOBACCO INDUSTRY

Expansion of the tax base

It needs to be highlighted that cigarettes constitute a mere 20% of tobacco consumption in India by weight, and that fewer than 15% of the 200 million tobacco users consume cigarettes. Yet these 15% contribute nearly 90% of the revenues to the Exchequer from the tobacco sector. This form of consumption, apart from constituting practically the entire tax base of the tobacco sector, also supports export of cigarette tobaccos which contribute nearly Rs. 1,000 crores in foreign exchange earnings annually. **Although tobacco consumers in India aspire to upgrade consumption to the cigarette format in line with international trends, the punitive taxation regime both at the Central and State levels has made it unaffordable to the majority of tobacco consumers, thereby keeping the tax base narrow and much below its natural potential.** This has also resulted in the sub-optimisation of rural incomes and foreign exchange earnings from this sector.

An initiative towards expanding the tax base was taken in 1994 by reducing the excise duty on the micro segment from Rs. 120 to Rs. 60 per 1000. Resultantly, the tax base was expanded, with the micro segment growing from a level of 600 million cigarettes per annum to nearly 23 billion cigarettes in 1997-98. Over time the micro segment has come to be taxed at much higher rates, both at

Central and State levels, which has now brought about a major decline in this segment. The year under review witnessed an erosion of about 13% in this segment. Although this segment carries lower margins and has thus not materially impacted the financial results of your Company, the adverse impact on the growth prospects of the tax base is undesirable.

The government needs to moderate the approach to this potentially high growth segment in line with the stability provided to the other segments in the last Budget. It is to be noted that the elasticity of revenues to the Exchequer would be visible over time and would require a patient adherence to the policy of moderation in taxes.

The menace of contraband cigarettes

High rates of taxation, particularly at the upper end, have spawned a flourishing trade in smuggled cigarettes. Recent conservative estimates indicate that **smuggling in cigarettes is causing an unaccounted outflow of foreign exchange upward of Rs. 500 crores and the related loss of revenue to the Exchequer** that would otherwise accrue on equivalent domestic manufacture This contraband trade is estimated to be **growing at an alarmingly high rate upwards of 20% per annum.**

The menace of contraband cigarettes is well recognised the world over. **Since tax is avoided in the exporting country and evaded in the consuming country, given the high tax regime, smuggling of cigarettes has become lucrative and appears to be highly organised.** The policy framework related to the tobacco industry needs to take into account the growing menace of smuggled cigarettes and the resultant tax export which is detrimental to the Indian economy.

There are a number of avenues that can facilitate the flow of contraband cigarettes into India. The legal framework related to the import of duty free cigarettes needs to be reviewed as these legal channels provide the opportunity to be used as a cover for supply to the contraband channel. The legal channels that carry such risk of misuse are: the duty free import under the Baggage Rules, duty free shops at international airports, the duty free imports by agents on behalf of embassies and naval ships, and duty free import of cigarettes for re-export. There are hardly any retail shops in the metropolitan cities of Mumbai, Calcutta, Chennai and Delhi where contraband cigarettes are not openly displayed and sold in large numbers.

The recent announcement towards liberalisation of trade among SAARC countries has exacerbated this menace and provided another channel of entry of contraband into the Indian market. **The promotion of international brands in India coupled with the absence of a harmonised tax regime among the SAARC countries, constitutes a very real threat of accelerated growth in contraband flow and consumption.**

As an illustration, the excise duties in Nepal on king size cigarettes are one third of that obtaining in India. The import of international brands of cigarettes is also permitted in Nepal at attractively low rates of customs duty. International cigarettes with Nepalese health warnings can be found in the Indian market in growing numbers. Thus opportunities have been created for illegal tax arbitrage, constituting a growing tax export and posing a serious threat to the domestic industry and the tax base of the Exchequer from the tobacco sector.

I would make a strong plea that the ramifications of this serious issue are examined by the various arms of the government in conjunction with the tobacco industry in India with the objective of refurbishing the policy framework. It is evident that a combination of moderation in taxes, harmonisation of the tax regime among SAARC countries, plugging of the loopholes related to tax free imports and the strengthening of the enforcement machinery would go a long way in minimising the injury caused by such illegal trade in cigarettes.

On an experimental basis, your Company would be willing to contribute to the cost of strengthening the enforcement measures. This experiment can begin in the metropolitan cities of the country, whereby the seized contraband cigarettes are destroyed thus creating disincentives for the retail trade. The industry forums, with your Company's support, are in the process of making comprehensive and detailed recommendations to the government in this regard and on other measures related to the tobacco industry

CONCLUSION

Your Company is a leading Indian enterprise. **It has the wherewithal to significantly enhance its contribution to the Indian economy.** Over time it can become a major player of international dimensions and create growing value for its shareholders. The ITC Group currently represents a pool of high calibre human resource comprising 2,400 managers, 13,700 employees and an asset base of Rs. 4,700 crores. **Although your Company ranks high in terms of market capitalisation among Indian companies, and its size of operations in India is significant, it is still a tiny enterprise when viewed in the international context.**

The challenge of attaining international dimensions is at once humbling, inspiring and exciting. In the ultimate analysis, the cutting edge in the realisation of such an aspiration would be provided by the dynamism of its human resource. **The secret of creating a winning corporation lies in the appreciation of the potential value of this human capital and in the ability of the distributed leadership within the company to nurture and mobilise such talent.** I would like to acknowledge the contribution made by your Company's employees at all levels and seek your cooperation, as always, in support of their endeavour.

Before I continue with the agenda for today's business, I would like to, with your permission, pay a sincere tribute to the valour of the armed forces of our country who fought so bravely to preserve the territorial integrity of our secular nation. I would now request you to join me in observing a brief silence in the memory of those who made the ultimate sacrifice for this cause

Ice dreams in blue

A US ice-cream manufacturer starts selling its high-quality, high-priced dairy desserts in India

As far as launches go, it was as low-key as it could get. After test marketing in Delhi for a year, the $500-million Wells' Dairy Inc of the US introduced a comprehensive range of Blue Bunny ice-creams in June this year without any media blitzkrieg or high-profile promotions. "The low-key launch was deliberate," says G.S. Malik, NRI owner of Sno Shack Frozen Foods, the sole marketing partner of Wells' Dairy Inc in India. "We wanted to make sure that we had our distribution in place before we became bold about our marketing," he adds.

According to Malik, the distribution network is now is place and, in the last two months, Blue Bunny ice-cream has also been launched in Ludhiana and Chandigarh. Next in line is a launch in Mumbai in the next two months, which will be followed by smaller towns in Maharashtra and then Bangalore. "We want to concentrate on one major city in a region first and then move to the smaller towns around that city for greater penetration," says Malik.

It took Sno Shack more than a year to introduce the entire Blue Bunny range primarily because of the time required to set up the distribution network. One main reason for this complex distribution chain is that all 50 Blue Bunny varieties (including novelties, family packs, fat-free sherbets, and flavours and yoghurts) are imported readymade from America. The ice-creams follow a long route both in America and India before they reach the retailer — they are trucked from Iowa to New York, from where they are shipped to Mumbai. In Mumbai they are offloaded at a cold store and then trucked to different parts of the country. All through this journey it is vital that a proper cold chain is maintained so that the ice-creams remain fresh.

Says Malik, "We were apprehensive about the cold chain in India, so we made absolutely sure that we got the right transporter." The company also ensured that all the trucks had two generators instead of one in case of any breakdowns on the way and even now the ice-creams are only offloaded at the cold store in Mumbai after 1 a.m. because the outside temperature is lowest then. Even at retail outlets, Sno Shack has provided special freezers and generators so that the erratic power supply can be dealt with effectively. Moreover, even Wells' Dairy wanted to be absolutely certain that the cold chain was up to the mark before it decided to get its ice-creams to India. International sales manager Dan Duran says, "Wells' Dairy is a family-owned operation and believes in maintaining set standards. We had to be absolutely sure about the standards of the cold chain before we started exporting to India."

Dan Duran, Gregory Stone, and H.S. Malik are here to get the Blue Bunny hoppin'

Add to this the fact that Wells' Dairy is not a very old company in the export business. Even though it has been making ice-creams since 1913, it started exports only eight years ago to countries like Mexico, Japan, and Malaysia. It is now planning to use the India operations to expand in the region and is also going to launch its ice-creams in Thailand soon.

However, despite the low-key launch, Malik and Wells' Dairy are extremely satisfied with the "very good response" that the ice-cream has got in Delhi, a market chosen for the launch not only because it is the largest ice-cream market in the country (24 per cent of a total of Rs500 crore), but also because customers here are very finicky about quality and pricing. Asia sales representative Gregory Stone says, "The hits from India on our Website has increased manifold since we introduced Blue Bunny in this market. People want to know when we are coming to their city and we are also getting a number of distribution inquiries."

Sno Shack, however, is being fussy about the retailers that it chooses. At the moment it has 34 company-set-up counters in Delhi and is hoping to increase this figure to 100 in the months to come. "Our strategy is somewhat different. Unlike other companies, we do not give any replacement of stocks. We believe that if a retailer keeps our stock it is because he is totally confident of selling all of it," says Malik.

What Malik is also clear about is that he does not want to outgrow the market. "We want people to walk an extra mile to get a Blue Bunny ice-cream," says Malik. So confident is the company about the quality of its product that it prefers to retail at multi-brand counters and isn't apologetic about its high pricing (ranging from Rs15 for an ice candy to Rs315 for a half-gallon yoghurt tub). "The Indian consumer is becoming very discerning. He does not mind spending extra for good quality," says Stone.

Ten flyovers and a city

Chennai takes the same flyover route as Mumbai

How are polls and flyovers connected? By votes, obviously. Come election time and states embark on high-profile schemes which can be completed quickly. Barely has the furore over Maharashtra's ambitious flyover scheme died down than the spotlight shifted to a similar adventure in Chennai.

The Chennai Corporation has given its nod for a 10-flyover scheme for the city. Behind this move is the city's mayor M.K. Stalin, who also happens to be son of Tamil Nadu chief minister and DMK leader M. Karunanidhi. When Stalin conceived of the project, he had more than just welfare of motorists at heart Heir apparent of the aging DMK chief, Stalin had to prove his mettle in Chennai before being given an opportunity to rule the state, if DMK won in the 2001 assembly elections.

This compulsion took Stalin overseas — to study civic systems in other countries. Subsequently followed his blueprint for the future, 'Singara Chennai' (beautiful Chennai). The highlight of the scheme is the Rs115-crore flyover project.

Stalin hit upon his dream project when he thought of traffic congestion in the city. And Chennai Corporation immediately chalked out a mega plan for building one big flyover and nine mini-flyovers in the heart of the city. In June 1998, consultants were hired following which the Corporation gave its nod. The main flyover — Perambur — is to cost Rs21 crore and the nine mini flyovers Rs94 crore. Hudco and the Tamil Nadu Urban Finance and Infrastructure Development Corporation (Tufidco) will provide the funds.

Not to be left behind in the funding spree is Chennai Corporation. In its 1999-2000 budget, it allotted Rs65 crore towards construction of bridges and flyovers. Did the Corporation go out of its way to make the project a success? Reveals R.S. Sridhar, chairman, standing committee (revenue and finance): "Last year, only Rs5 crore was allotted to the bridges department of the Corporation. It was interior roads which got the lion's share of Rs45 crore."

There is little that has been left to chance. Early this year, work began at a frenetic pace so that the project could be completed on schedule by August 2000, much before the 2001 assembly elections. Stalin reviews the project on a weekly basis. Also, two special officers have been asked to monitor the progress almost on a daily basis. The Corporation commissioner, P. Kolappan, also keeps a tab.

Expectedly, the project has come under flak from many quarters. Mini-flyovers cannot cope with burgeoning vehicles, says an expert. Also, once a flyover is laid, there is little one can do to modify it to meet future requirements, he adds. As 100 vehicles are added everyday to the city's 10-lakh vehicle force — mostly two-wheelers — traffic regulation might go haywire, the expert warns. He advocates longer term solutions like changes in road use patterns.

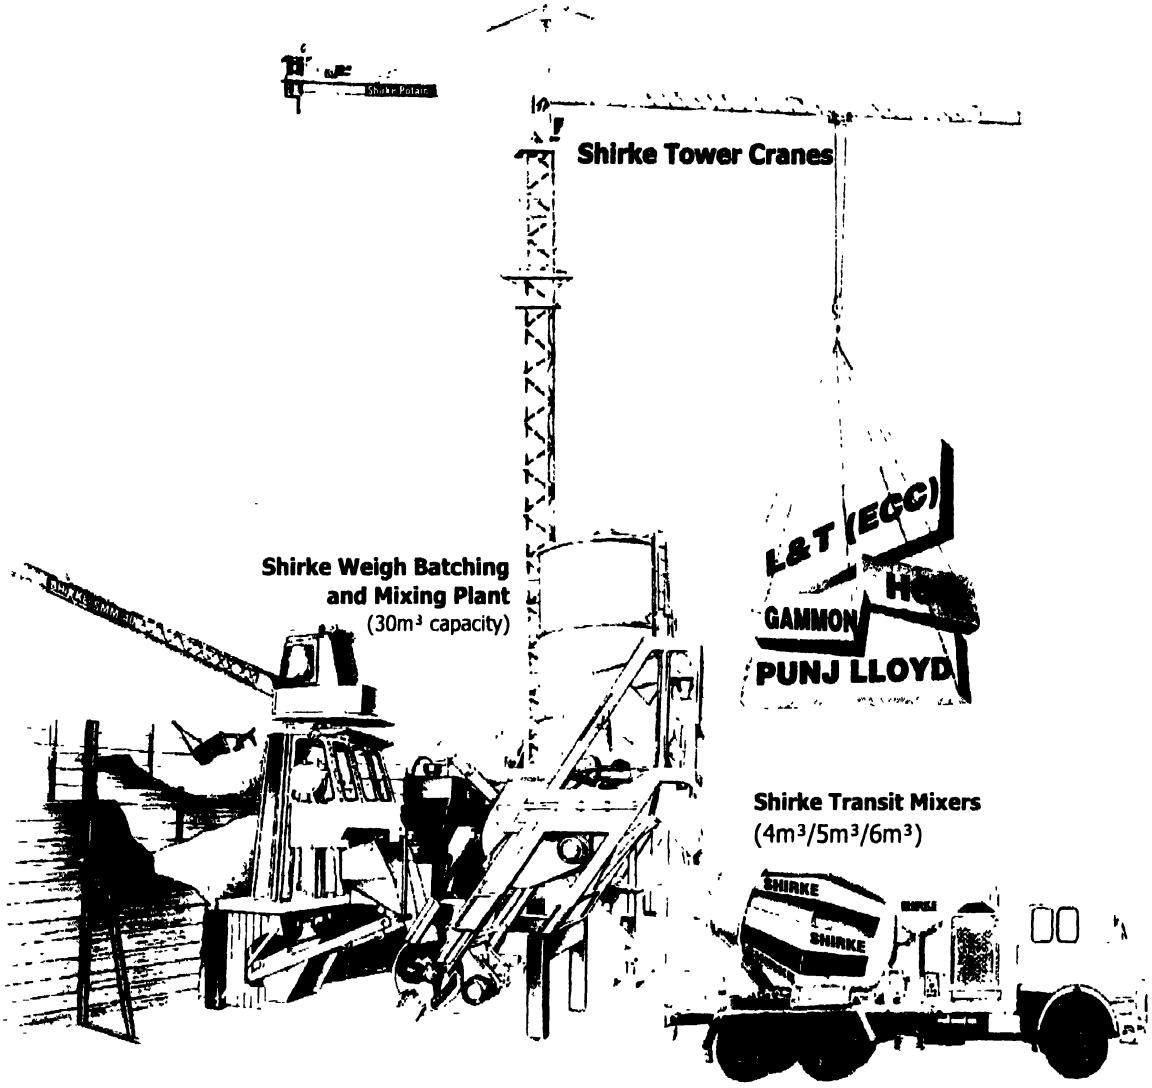
Urban planners say that the project could have been staggered over a longer time-frame to make it more manageable. In fact, the Chennai Metropolitan Development Authority (CMDA) was not taken into confidence when the idea was mooted. There is no mention of mini-flyovers in the Master Plan drafted by the CMDA. *Madras Musings*, a city magazine, too has been inundated with letters from angry citizens. There has hardly been any debate or interaction on the utility and viability of the project. Also, the Corporation did not give enough thought to better alternatives.

However, not everyone is opposed to the project. Political parties in the state have refrained from making it an issue. DMK baiters admit, albeit grudgingly, that the entire process — from raising tenders to granting contracts to reputed construction companies — was transparent and above board. Neither was there any murmuring about corruption. The coordination between the Corporation and the Chennai Metrowater organisation has also been appreciated. Wherever need arose, the latter relaid drinking water and sewerage lines to avoid digging up the land around the new flyovers. Be that as it may, the final vote of confidence for the project will be cast only much later — at the time of the 2001 polls.

MOHAN RAMAMOORTHY

A new cuppa

Duncan Industries' Terai tea project is finally flowering



When in 1989 Duncan Industries embarked on its ambitious Terai Land Project, few within the industry believed that it would be a success. A unique project which sought to grow tea in a non-traditional tea area — the drought-prone agricultural belt of West Dinajpur and Jalpaiguri in north Bengal bordering Bangladesh, it was an experiment which turned out for the best.

Tea is one of the more profitable industries in the country and one which enjoys huge domestic consumption in addition to export possibilities. It has always looked for growth. With constraints on land, especially in the hilly areas where it has traditionally been grown, there has been pressure on tea companies in the last decade, which witnessed several boom phases, to produce more. The shift in focus from flavour to cuppage and strength, two of the most important characteristics of tea in recent times, marked a change in tea-growing and led to unusual locations being tapped for cultivation.

When Duncan Industries conceived the idea of setting up gardens in unknown territory in the 1980s, it took a risk of sorts. Other industrial groups, one of them being the RPG group, which thought along similar lines, backed out. The disadvantages the terrain presented at that point of time were enormous. For one, land acquisition was a problem, as the land there was primarily agricultural land, though most of it lay fallow. Extremities of weather and poor drainage systems made cultivation difficult. Above all, the costs involved in setting up a tea estate from scratch and the long-term gestation of 7–10 years discouraged fresh investment.

Currently in its seventh year since planting, Duncan's Terai project has broken even and started making profits, and is set to recover its investment soon. The area under tea is around 700 acres spread over three gardens and the expected crop for the current financial year is 1.4 million kg, 40 per cent higher than the previous year. The optimal yield is 3,800 kg per hectare, which according to DIL managing director Bhaskar Banerjee "compares favourably with the optimal yields in Assam (the country's most profitable tea growing area) and is more than double the national average of 1,800 kg per hectare". Indeed some of the oldest areas planted in the early 1990s have already given yields of 4,000 kg per hectare.

At the forefront of construction technology...

Shirke Construction Equipment

BATCHING PLANTS

- Manufactured to **ELBA's** design and drawings
- Fully automatic with electronic or mechanical weighing system
- Computer compatible in case of electronic weighing
- **Compulsory counter flow mixer**
- Positive homogeneous mix
- One minute cycle time

TOWER CRANES

- Available in a wide range to suit various applications
- Mechanism and safety device imported from **POTAIN** of France
- Backed by **POTAIN's** superior technology
- Also exported back for use in the **international market**

TRANSIT MIXERS

- Built to international standard
- Critical items such as gear box, hydraulic power pack etc. are imported from **SAUER SUNDSTRAND, Europe**
- Can be easily mounted on available Indian chassis

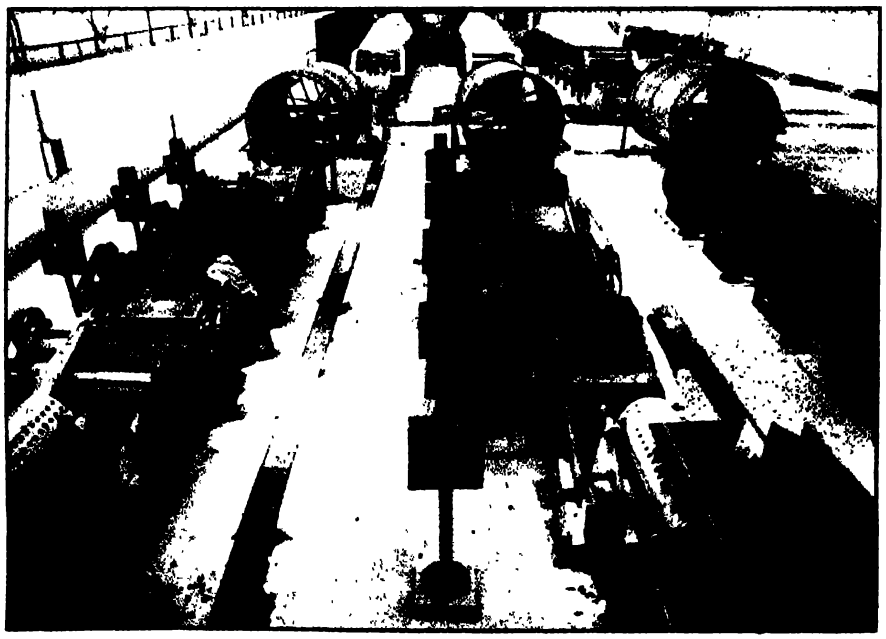
SHIRKE

72-76 Mundhwa Industrial Estate, Pune 411036. ☎(020) 670151; 670727; 670232. Fax :(020) 671612. Telex: 0145-7280 BGSP IN. GRAM : BUILDALL
BRANCHES : NEW DELHI ☎ 6462308, MUMBAI ☎2624574, BANGALORE ☎ 2277360/1, NAGPUR ☎ 533519, HYDERABAD ☎7841738

Mahesh Gurbaxani, vice-president of the tea division, is looking at higher crop figures for the future through additional planting and expansion. "Our focus is on maximum productivity and we have used the best clones. Over 90 per cent of the tea area has been planted with vigorous clonal plants which will ensure high yields and superior quality of end produce," he says. Expansion is an ongoing exercise, with DIL constantly scouting for more land. Another 60 acres are expected to be added to the Terai project this year.

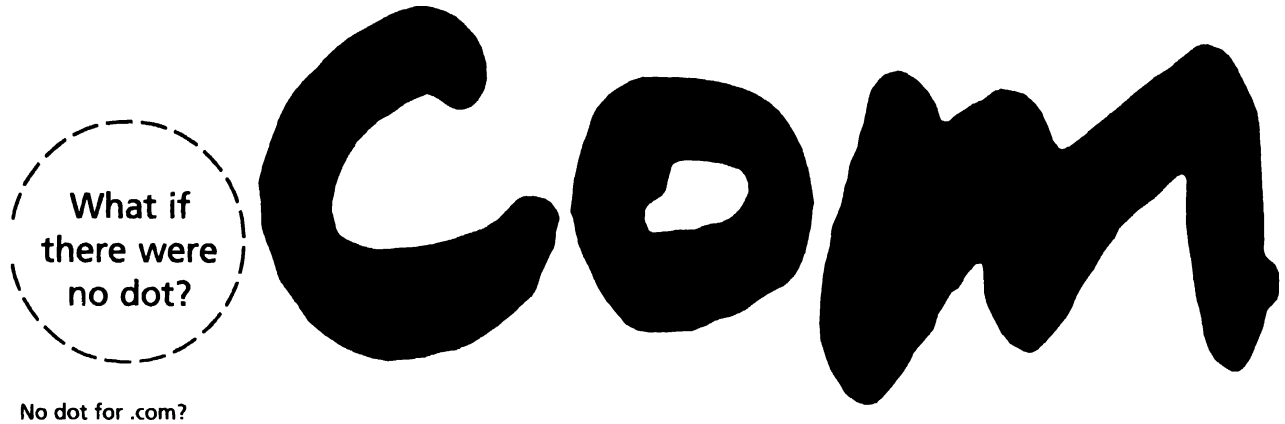
For DIL the obvious advantage is its existing presence in the neighbouring Dooars. The veteran tea-grower is a dominant presence along with Goodricke in the Dooars in North Bengal. The majority of Duncan's gardens are in the Dooars, which follows Assam as a major tea producing region. Almost all the tea produced here in the foothills of the eatern Himalayas goes into tea bags, a major growth segment in the industry.

The tea business accounts for a quarter of DIL's Rs1,000-crore turnover but close to half its Rs70-crore net profit. The Terai project is part of the company's strategic focus to increase packaged tea sales. With its 7 per cent share of this market (the average market share is under 2 per cent), it comes a distant third after Hindustan Lever and Tata Tea. Almost all of the Terai production goes into the company's packet teas. The gains, according to Gurbaxani, are to the extent the company saves by way of not having to buy from auctions. While no value assessment has yet been made of the Terai tea, since all of it is for captive use, realisations, says Gurbaxani, should be good as the quality of leaf is good.



Virtually the entire Terai production goes into Duncan's packet teas, says Gurbaxani

"It is purely DIL's dogged pursuit of the project that has made it work," says general manager (projects) Navin Huria. The factory at Golgach, one of the Terai gardens, is highly automated and is one of the most modern in the region. "One of our advantages is that the Terai gardens have none of the disadvantages that older and inherited gardens present. The Terai gardens have been carefully planned all through and are most modern," says Conrad Dennis, manager at Golgach. Dennis adds that DIL's Terai project has not only boosted the company's tea production but also developed the area as a whole. Following DIL's example, small tea producers have set up their units around the area and DIL augments its crop by buying leaf from them.



Local farmers form nearly 90 per cent of the Terai project's labour force. The agreement at the time of the acquisition of the land was that the locals would be absorbed into the company and taught skills. Interestingly, in a reversal of the traditional roles, the plucking is done entirely by the men.

Duncan has still to recover the entire Rs20 crore that it deployed in the project. That, according to company executives, should take another couple of years. "The first seven years are tough, after which profits are phenomenal," says Banerjee. The cost of production has not been worked out yet, but is estimated at around Rs35–40 per kg. Teas of similar quality offered at the autions fetch around Rs55–60 per kg, Profits notwithstanding, some of the drawbacks need to be ironed out. For one, as the plots are not contiguous (the land was acquired in parcels over a period of time), there is loss of leaf as well as logistical problems. Drainage is expensive because of the low-lying land. Bangladeshis, right across the border, often come in not just looking for work but to learn and plant tea bushes across the border. But the gains have largely outweighed the drawbacks. The teas look healthy and are normal CTC varieties. If yield levels are maintained, North Bengal could emerge as one of the largest tea growing areas in the world.

State-of-the-art tea plant at the Terai Land Project

MADHUMITA BOSE

No dot for .com?

It'd be like asking, what if there were no gas for the car? No bulb for the lamp?

Simply put, there'd be no Net. Which is where we come in.

At Sun, our systems and technologies power the Net.

Everything we make and do enables it. So businesses can leverage it. Cash in on it. Whether you're a Fortune 500 company distributing data throughout your global organization or a tiny start-up conducting e-commerce on the Web.

What's more, our Java™ technologies are extending the whole notion of the Net. Out to smart cards, cell phones and pagers. And soon out to wrist watches and thermostats too.

There's a lot going on behind that little dot.

We think you'd miss it if it weren't there.

We're the dot in .com.

ENTERPRISE NEXUS 7056

Glad you asked.

Because while ".com" is behind just about every company name on the planet, not everyone knows who's behind ".com."

At Sun, we've been thinking about (and designing around) the very idea of the Net since 1982. A radical approach that not only gave us a head start -- it gave us our entire focus.

Everything we make and do is about the Net. And nothing but the Net.

From our Net-based servers (the Herculean engines behind the Net) to our Solaris™ software (the robust foundation for the Net) to our Java™ technologies (the universal link for the Net).

And soon, our newest technologies will push the Net out to every kind of hand-held gizmo and appliance imaginable. (As well as to a few that aren't yet.)

Wherever .com heads next, we'll be right behind the dot. Powering it along. Changing the way we work, live and play.

Stop back here and see us again soon.

We're the dot in .com.

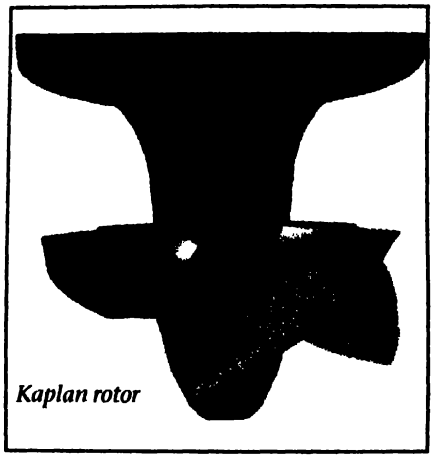
Of pumps and turbines

'une-based Kirloskar Brothers has used its expertise in pumps to seize the opportunity in small hydro projects

The Aliyar dam site where KBL is setting up a small hydro power project

arge hydroelectric or coal-based thermal power plants, typically of 500–1,000 MW capacity, have been the traditional means of power generation in India. But setting up a hydel or thermal plant raises a host of environmental and sociological issues, not least the submergence of flora and fauna, deforestation, displacement and rehabilitation of thousands of villagers, pollution, and daily rising operating costs (as the cost of fuel and its transportation goes up). As a result, increasing attention is being paid to non-conventional sources of energy and one of them is small hydro projects up to 10 MW).



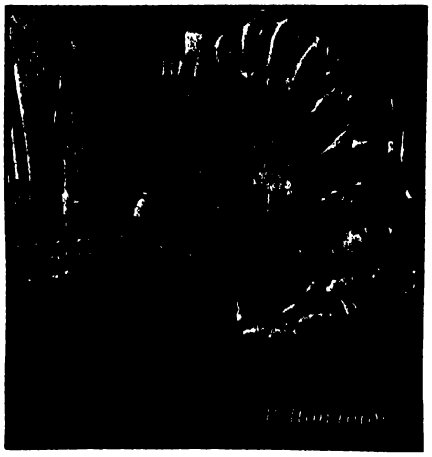
Two years ago Pune-based Kirloskar Brothers Ltd (KBL), India's largest manufacturer of centrifugal pumps, made its foray into turnkey erection of small hydro power projects. In September 1998 KBL signed an agreement with Ebara Corporation of Japan, the world's second largest manufacturer of pumps and turbines, to manufacture that company's range hydro turbines up to 10 MW capacfor a single unit.

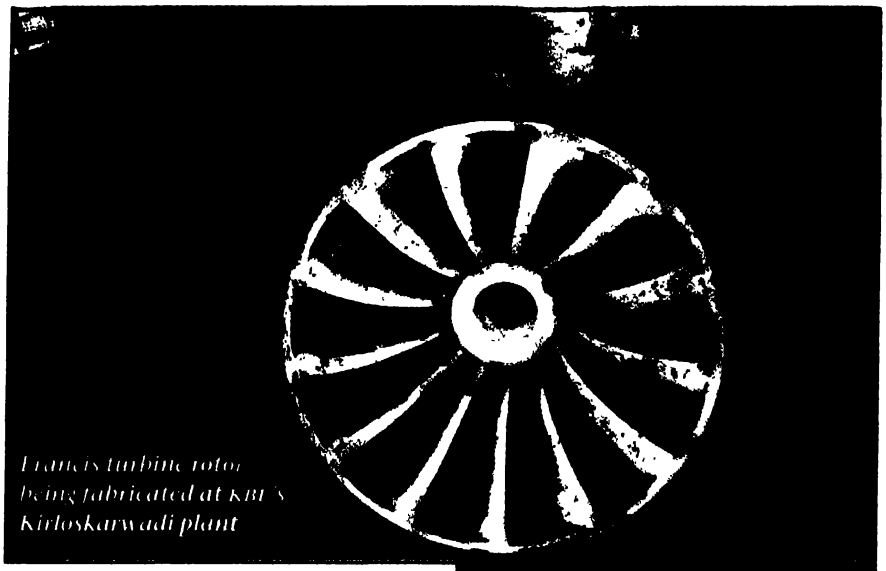
The estimated worldwide potential of small hydro projects exceeds 180,000 MW, of which the installed capacity is 41,000 MW. The estimated potential in India itself exceeds 10,000 MW, but the installed capacity here is less than 500 MW. The average cost of installing 1 MW of small hydro is Rs3–5 crore. "Even though the cost of the hydro turbine may be a fraction of the installation cost, we still have a market worth a few thousand crores. That's definitely big business and is one of the reasons why we've entered this business. We hope to tap this potential provided the state governments and state electricity boards (SEBs), who will be our major clients, take quick decisions," says Sanjay Kirloskar, chairman and MD of KBL.

According to KBL there are 2,687 prospective sites for small hydro projects in 26 states with an actual potential of 6,619 MW. "These are sites identified by the SEBs and the Ministry of Non-conventional Energy Sources (MNES). The real potential in all the states is easily far greater than 10,000 MW," says vice-president (corporate-strategic planning services) Aniruddh Kathavate.

Small hydro projects possess many advantages compared to large thermal or even hydel plants, not least their non-consumptive use of water for power generation, utilising only its gravitational potential. Thus the water discharged from the power station is clean, unpolluted, and therefore suitable for irrigation. Their biggest advantage is that they have the least impact on flora and fauna; they do not cause largescale deforestation, submergence, and problems of rehabilitation. Also, the initial cost of setting up a small hydro power station is low – Rs10–15 crore – and therefore affordable for many private companies and even SEBs. Further, the gestation period is minimal — 15–18 months compared to 20 years for large dams like the Sardar Sarovar Project. Because of the long gestation period of large projects, there are normally huge cost overruns and the cost of large hydel projects usually doubles or triples during this period, which is not the case for small hydro projects.

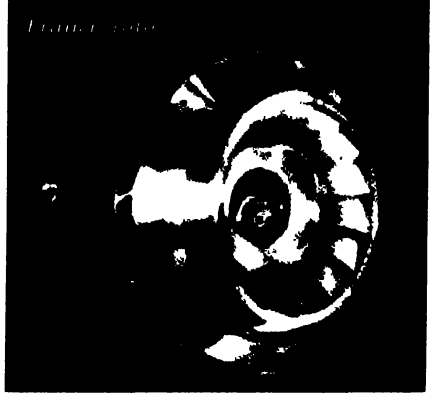
The operating costs are also low as the fuel is free and the energy produced more economical — 30 per cent lower than the cost of power produced by a thermal power plant, for example. What's more, small hydro plants also last longer — between 30 and 50 years. "For instance, the first small turbine generator of 137 kW set up in the Darjeeling hills in 1897 is still working," says Kathavate. The other advantages are that no CEA clearance is required for projects worth up to Rs250 crore and no environment clearance is required for projects up to Rs50 crore. Also,





Kaplan rotor

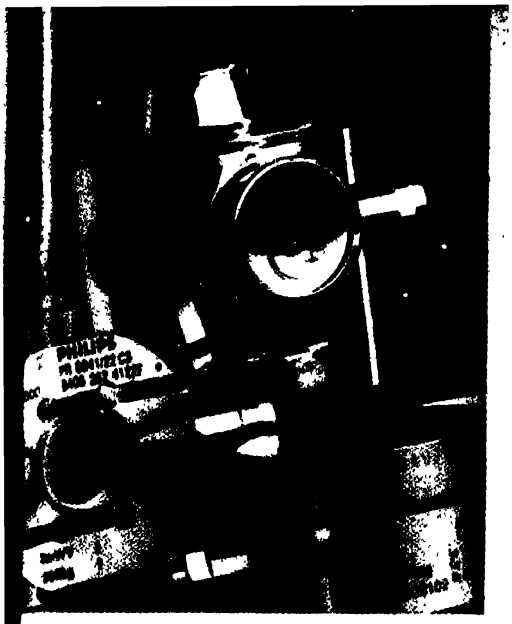
agencies like IREDA (Indian Renewable Energy Development Agency) and the World Bank provide soft loans and the government offers a number of financial incentives for such projects.



"These hydro turbines can be installed at the base of small or medium-sized dams that have been set up for irrigation but cannot be used for power generation because of the low head," says Kathavate. The 'head' is the difference between the water level at the top of a dam reservoir and the base of the dam from where water flows out into a canal for irrigation. It is a measure of the potential energy stored in the water which can be converted into power. While large hydro turbines require a head of 100 metres or more, small hydro turbines can operate in heads as low as 2 m. KBL manufactures three types of turbines — the Pelton turbine for high heads (30–1,000 m) and low flows, the Francis turbine for medium heads (10–500 m) and medium flows, and the Kaplan turbine for low heads (1–70 m) and high flows.

"India has one of the largest networks of irrigation canals in Asia and the flow of water in these canals is maintained by gravity. And if a canal is, say, 100 km long, there is a drop of about 200–500 m between its two ends. The canal is stepped even 1 km or so with a difference in water level of 2–3 m on either side of the gates, at each of which Kaplan turbines can be used to generate up to 3 MW of power, enough to supply the needs of 25 villages in the area," explains Kathavate. Similarly, small hydro projects can be set up along small streams, rivers, and dam toes.

Francis turbine rotor being fabricated at KBL's Kirloskarwadi plant



In the case of a Pelton turbine, typically used for heads of 100–150 metres, the water hits the turbine blades tangentially and the turbine rotates around a horizontal axis. In case of a Francis turbine, water enters the vanes radially or at an angle to the radius and comes out of the hollow centre of the turbine, thus causing the blades to rotate. The axis of rotation could be either horizontal or vertical. In case of a Kaplan turbine, the water flows along the axis of the turbine and passes over its blades, causing the turbine to rotate. Here too the axis of rotation could be either vertical or horizontal.

"The manufacturing technology for a Francis turbine and a centrifugal pump is very similar. Both have helical blades, the only difference being that a pump impeller may have four blades, while a turbine rotor has up to 15. As such, our manufacturing facilities at Kirloskarwadi are ideally suited for making turbines of upto 10 MW capacity for a single unit," says Kathavate. In the last two years KBL has bagged orders for three projects from Tamil Nadu Electricity Board (TNEB). Besides, it has orders for three more projects from private power producers, one each in Andhra Pradesh, Himachal Pradesh, and Karnataka. About five more orders are in the pipeline in different states. The TNEB projects are under execution at Aliyar (two horizontal Francis turbines of 1,250 kW each operating at a head of 30 metres), Mukurthy (2x350 kW horizontal Francis turbines, 21m), and Perunchani (2x650 kW horizontal Kaplan turbines, 15 m).

KBL has bagged orders worth Rs45 crore and, although it has tied up with Ebara of Japan, all the hydro turbines it has supplied are 100 per cent indigenous from day one. "We didn't need to import any parts as we have full capabilities to manufacture every component in-house because of our 80 years of experience in pump-manufacturing," says Kathavate. There are other manufacturers of hydro turbines in India, like Sulzer, Triveni, and Bovings Fouress, but the market is big enough for all the players to grow rapidly. Therefore, small hydro could become big business for all these companies in the years to come and provide environmentally safe sources of power to hundreds of villages and small towns all over the country.

• ROOP KARNAD

German Technology.. shining all the way.

Insist on Star & Meteor

Load cells from GLOBAL Weighing

STARS	METEORS
Long Life : Vacuumised inert gas filled and hermetically sealed using Electroplasma welding to IP68 class. Fully stainless steel.	Long life, hermetically sealed to IP67 class, in most cases.
Heavy duty : work well even at 200% of rated capacity. Breaking strength 500%. Special proprietory strain gauges achieve lightning protection. Withstand vibration up to 20 times gravitational acceleration, works through 0°C to 95°C.	Choice of construction material : Aluminium, alloy steel or stainless steel. Meeting other international standards.
Precalibrated and precisely matched accuracies upto 0.015%. Takes effort out of calibration.	For diverse applications like platforms, scale conversions, level monitoring, simple tank / hopper weighing.
Premium quality : Decades of R&D, extremely reliable German Technology.	Assured quality at affordable cost.

If you **plan to buy weighing systems** for your plant, **spare a thought for the loadcells** you need to use. This **could have significant impact on your bottomline.** Insist on GLOBAL Weighing loadcells. Our Stars and Meteors have an amazingly low cost of ownership.

If you are already using GLOBAL Weighing Systems (formerly Philips), our service specialists will be glad to assist you with maintenance, training, spares, upgradation or even to get the best out of your working system.

If you are **an organisation supplying weighing systems to your customers** as part of your activities, we can take care of all your worries.

Complete weighing solutions available

WiLL is not enough

CorDECT, an improvement over traditional wireless in local loop (WiLL), has overcome initial hic-cups and is establishing itself as a highly competitive low-cost telecom technology

Ashok Jhunjhunwala has greyed considerably in the last couple of years. An academic who wanted to develop affordable telecom solutions for India and other developing countries at a time when global telecom equipment vendors were charging marked-up prices for obsolete technology, he is slowly learning that to be commercially successful it is not enough to have good technology. One needs to lobby with the government, which at times has a strange duty structure that discourages indigenous innovation. DoT, which would prefer high cost "proven technology" to low cost home-grown innovations. Bankers who decide the viability of a telecom project and fund it based many a time on the big international names associated with it rather than the level of technology obsolescence or cost of equipment supplied by them. And last but not the least the new private telecom operators who are hungry for vendor financing rather than cost-effective solutions and so on.

Jhunjhunwala has realised that mere R&D is not enough; vendor financing too is crucial

It has been an uphill battle. "We at TeNet (The Telecommunications and Computer Networks Group), IIT Madras, were well intentioned R&D people who knew about fibre optics, signal processing, communication software and so on but now we have had to learn a few things about the business end. In fact it took us time to understand the role vendor financing is playing in Indian telecom sector," says Jhunjhunwala. "Vendor financing is the key reason basic telecom operators have gone for imported systems, even though the systems that have been brought in are more expensive and poor in data rate. We are now trying to convince IDFC, ICICI and others that if they do not back CorDECT then eventually the consumer and the country will lose. We are also talking to some international financing agencies. But this whole process is proving tougher than doing cutting edge R&D," adds the older but wiser professor.

What's CorDECT all about?

In India the cost per line in telecom has been around $900-1,000, which is not high by international standards but considering that by conservative estimates, there is about 15 per cent interest cost and another 15 per cent of operation, maintenance and obsolescence cost, a minimum annual revenue of $270 per subscriber is required for an operator to break even. Even this is not high by any international standard but considering the income levels in India the market for telecom is disproportionately small compared to a billion in population. Thus access to telecom has become a privilege rather than a routine affair. Once the waiting list of applicants for telephones is cleared, further significant growth in telephony will only come when technological development can bring down the cost per line to about $400.

The cost per line can come down by reducing costs in building the backbone, in building switches and lastly in the access technologies that link the subscriber to the switch. The cost of the backbone network was reduced substantially in the mid-1990s, by the use of optical fibre in trunk lines and microwave relays in more remote areas. The costs of switches too have been considerably reduced due to the efforts of Centre for the Development of Telematics (C-DOT) in the late 1980s and early 1990s. C-DOT's effort led to the development of a small rugged switch that can work in non-airconditioned environment in small towns and rural areas and a 40,000 line large switch for big cities.

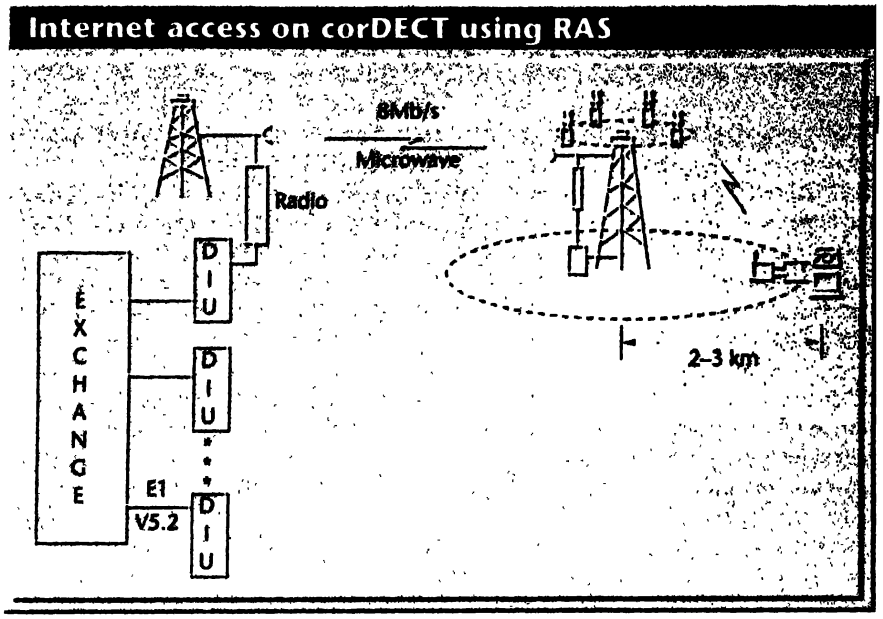
Internet access on corDECT using RAS

Courtesy IEE Communications

Today C-DOT has a large switch with SS7 signalling, capable of supporting ISDN, Intelligent Networks and a fairly high Busy Hour Call Rate. The switch is also programmed to support V5.2 interface. The significance of the V5.2 interface is that one can use the C-DOT main exchange and someone else's remote location units thereby allowing the operators considerable flexibility in buying equipment and hence reduced costs. Most international switch manufacturers, fearing loss of revenue, kept the signalling interface proprietary and did not adopt V5.2 despite the insistence of the European Telecom Standards Institute, and even an ultimatum given in 1997. Strangely, the Indian government did not insist on this standard being adopted till this year and though it was a condition in DoT's tendering process, the vendors always managed to get a waiver. On the other hand, China and Malyasia have always insisted on this standard for several years and did not allow any switch that could not be upgraded to this standard.

The emphasis in cost reduction has naturally shifted to access technologies. That is the technology that links the subscriber to the switch or the exchange. While WiLL provided the advantages of quick deployment the key to reducing the costs here is to choose the right technology. While microcellular solutions are suitable in dense urban areas, innovative deployment strategies based on line of sight links are needed in other cases. The TeNet group in IIT Madras led by Ashok Jhunjhunwala and consisting of Bhaskar Ramamurthi, Devendra Jalihal, Timothy Gonsalves, K. Giridhar, R. Arvind and Hema Murthy has been playing a key role in defining and developing access technologies that are cost effective, easily deployable, and Internet friendly. They have tied up with young companies like Midas Communication Technologies, Banyan Networks, Vembu Sytems etc, to manufacture the Application Specific Integrated Circuits required for the complex remote access switches, DECT interface units, Field Programmable Gate Arrays and other equipment that form part of CorDECT. TeNet has also roped in Analog Devices of the US. Analog Devices has also taken up marketing this technology internationally. Indian equipment manufacturers like Crompton Greaves, Himachal Futuristic, Shyam Telecom, ARM, ECIL and others now employ the CorDECT technology. According to Rajiv Malhotra, managing director of Shyam Telecom, they have already demonstrated the cost effectiveness and quality of CorDECT technology by implementing it for 3,000 lines in Madagascar, 1,000 lines in Kenya, 1,000 lines in Bhopal for DoT and another 1,000 lines for MTNL in Delhi. When *Business India* contacted him on the phone and asked him about voice quality on CorDECT he said, "You are talking on a line based on CorDECT technology; did you notice any difference from toll quality landline? If not, my case rests." Mahendra Nahata, chairman, Himachal Futuristic, too was enthusiastic about CorDECT. In fact, it is said that HFCL is on the verge of winning a $8 million contract for 20,000 line order in Botswana based on CorDECT.

CorDECT has an interesting architecture, especially for its fixed part. The fixed part consists of a DECT interface unit (DIU) acting as a 1,000-line wireless switching unit providing a V5.2 interface towards the Main Exchange, and weather-proof Compact Base Stations (CBS). These are connected to the DIU either on three pairs of copper wire carrying signal as well as power, or on fibre or radio using E1 links through a Base Station Distributor (BSD). The subscriber terminal is a wall set, with either a built-in antenna, or a roof-top antenna providing a line-of-sight link to a CBS. The wall set has an interface for a standard telephone (or fax machine, modem or payphone) and an additional RS232 interface for a computer, enabling Internet connection at 28.8-64 kbps. *No modem is required,* as all links between the wall set and DIU are digital.



All subsystems are built primarily using Digital Signal Processors (DSP), with the DIU having nearly a hundred DSPs. This soft solution, while cutting down development time and affording design flexibility, also ensures that the cost of the fixed part is no more than 15 per cent of the total per-line cost in a fully loaded CorDECT system. This allows deployment flexibility for both dense urban areas and sparse rural areas. According to Nahata, the cost of equipment is less than Rs15,000 (approximately $350). Thus CorDECT entrepreneurs have kept the promise they made, that is, to bring down the cost per line to $350-450. According to Nahata, this is 30-40 per cent cheaper than competing WiLL technologies. Moreover Jhunjhunwala claims that WiLL technologies being deployed in India are more like cellular phone technologies where toll quality voice and Internet connectivity are not built in. A foreign consultant who preferred to remain anonymous admitted the weaknesses in the current WiLL technologies but added "they were brought in for quick deployment and they are eventually going to be replaced by wireline access anyway". In that case, who will bear this additional cost and that too in a fund starved Indian telecom sector?

"Leaving aside claims of cost effectiveness for a moment, I think the TeNet initiative should be wholeheart-

edly supported by DoT and funding agencies. It is an endeavour worth pursuing. We faced similar scepticism when we went about designing the main switch in C-DOT. If the Indian telecom sector is getting state-of-the-art switches made in India today or is able to drive down prices of international switch vendors it is because of the C-DOT switch. So, CorDECT should definitely be supported for long-term reasons," says Bishnu Pradhan, former executive director of C-DOT and currently general manager of global satphone major, ICO-Global.

"If we do not make sure that inexpensive and fairly wide bandwidth Internet access is not built into our telecom system then we will be creating a real gulf between the Internet haves and the have-nots in this information age," argues Jhunjhunwala passionately. Unfortunately our telecom system is designed for voice and not Internet. That is because voice calls involve continuous signal flow and are supposed to last a few minutes but when you dial an ISP with a modem and connect the call lasts for hours though actual data transfer is bursty. Thus our telecom network can support only a limited number of Internet subscribers; after a critical number of Internet connections the whole system would clog up or even collapse. In telecom jargon, the Publicly Switched Telecom Network (PSTN) in India, as in many other parts of the world, has been designed to handle 0.1 Erlang (a measure of load on the system) traffic per subscriber. While this is largely sufficient for voice telephony, Internet access results in a load as high as 0.3 Erlang during the peak hour. CorDECT claims to solve this problem.

The second problem has to do with the analog modem connection between the subscriber and the ISP. The analog link, especially in India, is first not reliable, mainly due to the variable quality of the copper local loop. This is even more so when a subscriber is located in a small town, where the trunk could also be analog. The quality of the dial-up link varies, and while it does provide 28.8 kbps connectivity occasionally, it often provides only 9.6 kbps or 4.8 kbps. As most Internet users in India would

Courtesy IEEE Communications

bitterly complain, sometimes the modem link also drops, requiring redialling and a new connection.

The call charges are very high for Internet access: $0.70 per hour for a local call in the cities, and as much as $30 for subscribers in rural areas making a toll call to an ISP perhaps 250 km away. The charges paid to the ISP are extra. Further, for the ISP, the investment in telephone lines, modems and router ports increases rapidly and linearly with the number of customers served.

CorDECT's solution is based on remote access switch (RAS). The RAS is co-located with the local exchange and connected to it using standard E1 (2.048 Mbps digital link) interfaces. A subscriber desiring an Internet connection dials the RAS, and sets up a circuit-switched local call. The call uses only the local exchange part of the PSTN. These exchanges today have very little blocking and can therefore handle the much longer holding-times (and therefore, higher Erlang traffic) of an Internet call. The RAS multiplexes the bursty data from several subscribers, and routes the data to the ISP router, using one or more leased or dial-up 64 kbps channels. It is desirable that the RAS dynamically adjusts the number of channels to the ISP depending on the traffic volume.

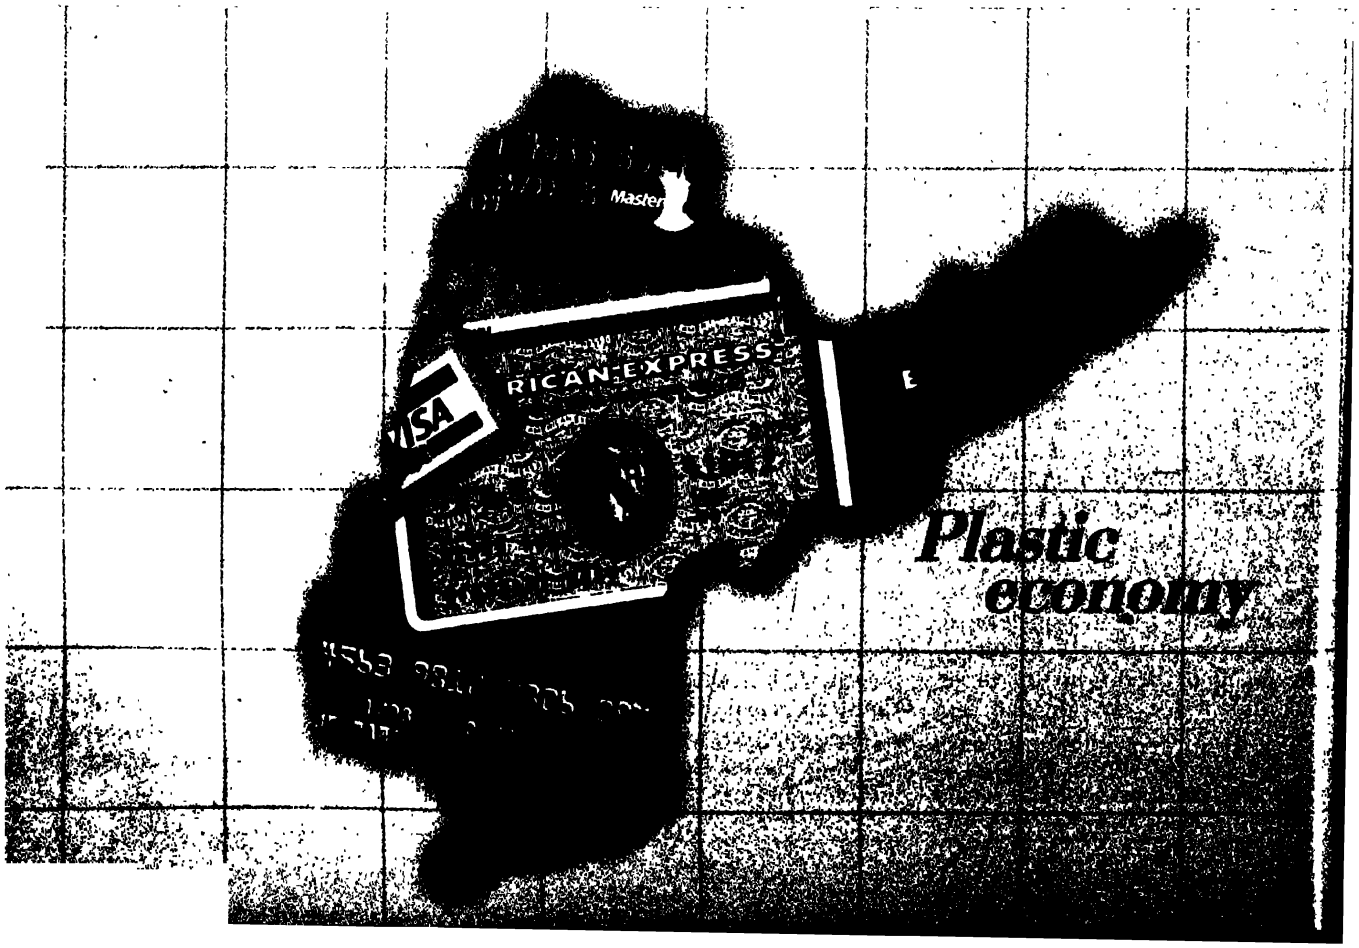
Let us assume that each Internet subscriber has a 56 kbps connection to the RAS with an average traffic as high as 10 per cent of 56 kbps. With 100 active subscribers, only about nine 64 kbps PSTN connections are required-RAS and ISP. The Erlang load on the PSTN due to the data calls is thus not more than the 0.1 Erlang value for which the network is designed.

Besides, the call charges can now be low, since only intra-exchange calls are being made by the subscriber. The small number of connections between the RAS and ISP utilise only digital trunks. They are very reliable and do not require modems. Assuming that up to 10 Internet connections use one 64 kbps slot, a single E1 link (consisting of thirty 64 kbps slots) to the ISP could handle 300 Internet calls.

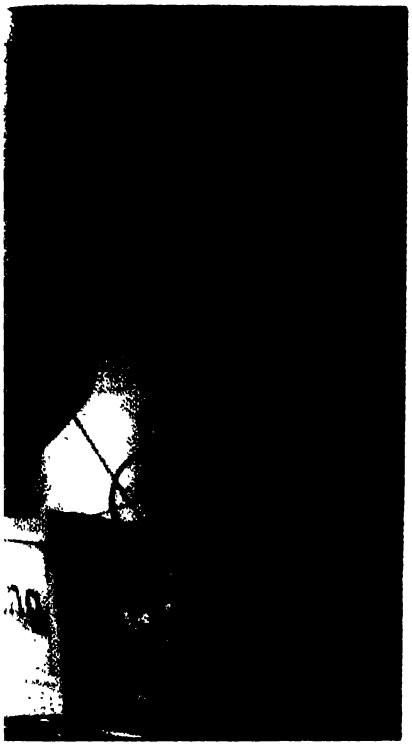
Now that the government has finally given some support to CorDECT through a more rational duty structure, by abolishing the zero duty status of imported WiLL systems and the systems is also being tried out and technically validated Jhunjhunwala's dedicated team is leaving the job of marketing and implementing the systems to the industry. They are now busy developing new technologies so that up to 144 kbps Internet connectivity along with simultaneous voice service can be provided on a pair of good old twisted copper wires. But that is another story for which Internet and telecom enthusiasts should watch this space.

Sourcing smartly

With innovations as the core competency, IT&T has emerged as a leader in sourcing information technology



In 1990, six people threw up their jobs and set out to form a venture which would provide anything and everything required in the infotech arena. Under the banner IT&T, the company's activity termed 'facilities management' has grown over the years to clock a turnover of Rs30 crore. The initial phase was quite testing for the team and three of them ran out of steam when the future looked bleak.



Perseverance pays. Once the three promoters were able to service reputed companies and deliver results, things automatically started looking up. The troika of Karan Puri, managing director, Hemant Kohli (CEO) and K. Ganesh (director), has not only proved the other three friends wrong by achieving results but also have recently roped in another partner – Rohit Chand – as executive chairman. The incumbent, who has 30 years of experience, has imparted a cutting edge to improvisations in facilities management and creating a niche of networking systems and systems integration. IT&T's latest venture, the IT&T Global services Ltd, is his first contribution to the company. The first client of the company is Siemens, which is setting up a power plant in Brazil.

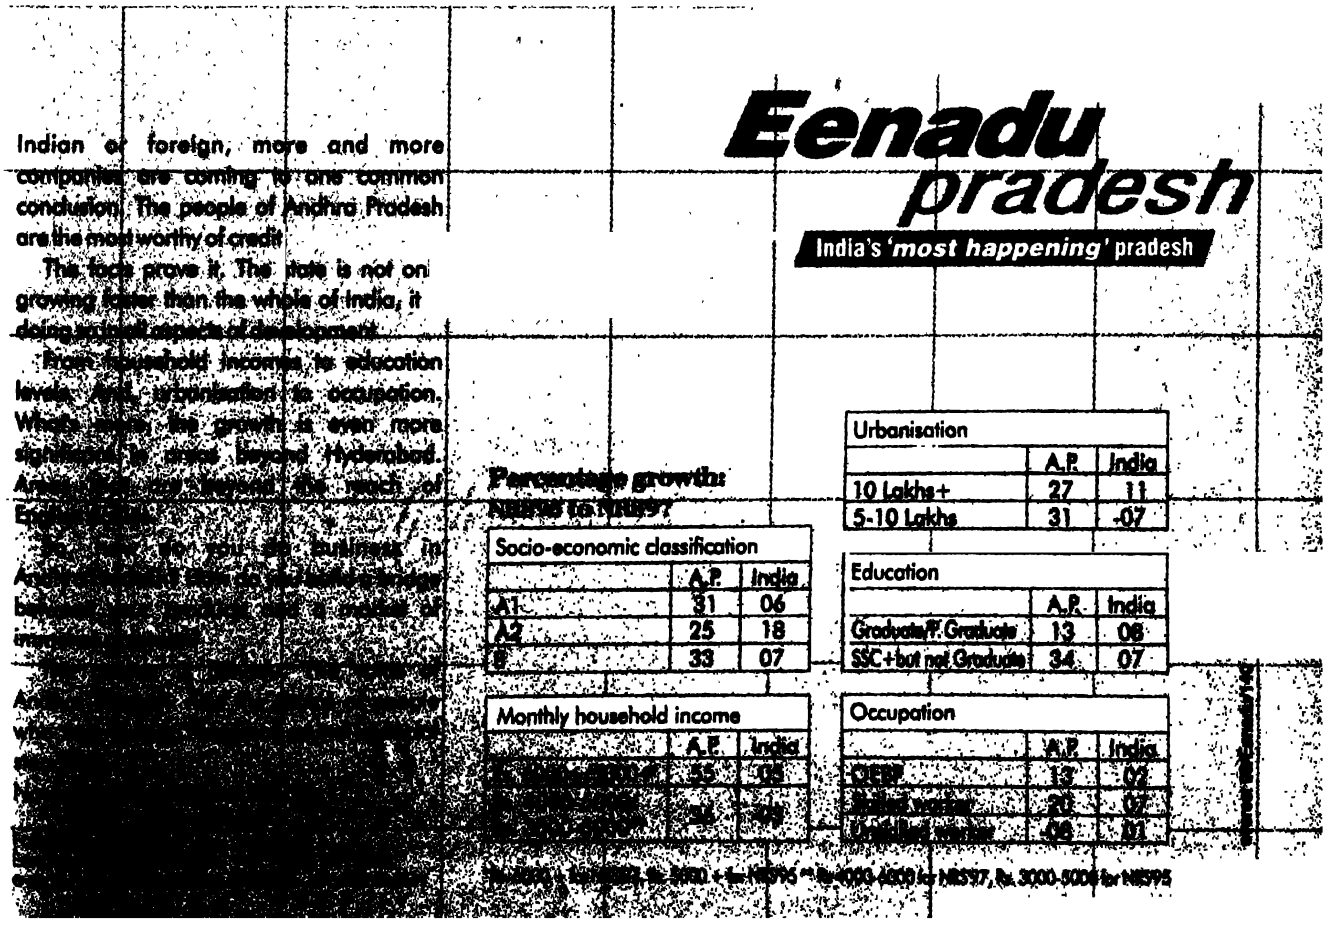
"The focus of the company from now on is going to be high margin business particularly smart sourcing and global services. This may reduce our turnover a bit but will increase our profits in addition to reducing a lot of unwanted workload," says Karan, elaborating how a paradigm shift in their approach to the same business would bear more fruit. "Despite competitors like IBM Global services, Wipro, Compaq OMS and Microland (which is planning to close down the facility management wing), IT&T has

Hemant Kohli (left) and Karan Puri are looking

VIVAN

siness

:onstantly thrived by offering some-
:hing new," says Ganesh.



What is smart sourcing? The smart sourcing business model deals with contractual acquisition services for customers' hardware, software and networking requirements to ensure highest possible quality at the optimal costing of IT infrastructure. "The idea is to provide single window supporting system for companies which can utilise the strength of procuring the best out of many vendors with each catering to their strength rather than going for the easy route of getting everything from a single point," says Kohli. In the first phase, the company is tapping mature buyers for whom infotech systems are crucial for day-to-day operation. Ranbaxy, Castrol, Dabur, Reckitt & Coleman, British Council are some of the big clients.

According to Karan, "Offering IT services and support, launch of three new service streams (facilities management, mail and messaging services and network management services), smart sourcing services, implementing solutions on these services and the launch of IT&T Global services are some of the highlights for IT&T this financial year. IT&T has targeted 1999-2000 as the year for its highest growth in both the domestic and foreign markets. Last fiscal,the largest portion of the company's sales came from the sales of Compaq and IBM workstations. IT&T has, since inception, positioned itself as a key distribution and systems integration company."

According to Karan, the whole idea of smart sourcing came from the clients themselves. Each company needs to remain focused on its strengths. But the strengths in this business alter so rapidly that by the time you become near perfect in that particular service, it becomes obsolete. Technology upgradation and regular R&D in service quality enhancement remains the buzzword in this segment.

Though IT&T has been performing well over the years despite the entry of formidable rivals, it is lasting the course that matters. Only then would IT&T be an Indian company that not only stood up to the foreign majors but set itself as an example to the next generation of software companies.

Bankers' choice

A Citicorp-promoted software start-up is fast scaling the value chain in its niche

As banks globally gear up to cope with the new mantras of their business – universal banking, seamless service, Internet banking, *et al* – a host of software companies are competing to provide them with solutions. Few have been as successful as Rs144-crore (including Rs3 crore other income and Rs50 crore profit after tax as of March 1999) Citicorp Information Technology Industries Ltd (CITIL).

Headquartered in Bangalore and with a marketing arm in the US, CITIL ranks as the world's third largest vendor of corporate banking systems. Two CITIL packages – Microbanker and Flexcube – figure in the top 10 sales league tables drawn up by International Banking Systems UK last April. It counts 200 financial institutions in 60 countries amongst its customers, half of whom are in the US and Europe and the other half in emerging markets.

CITIL is a subsidiary of Citicorp, which has a 49.49 per cent stake in its equity, the balance being held by around 2,000 employees of group companies. But Rajesh Hukku, director in charge (who fronts CITIL in North America), believes this seven-year-old start-up has a lot going for it beyond its parentage. "Many software companies begin with a certain momentum but have no long-term strategy to speak of," says Hukku, an engineer from BITS, Pilani, who moved from Citicorp Overseas Software Ltd (COSL) to start the company. "We didn't make that mistake."

In 1992 Citicorp decided that its software subsidiary, COSL, would operate as an in-house software shop; COSL's non-Citi business, then less than $1 million, would be hived off to a separate subsidiary (today Citibank worldwide contributes only 25 per cent to revenues). "Right from inception, we were clear that we were a *business*, not just a technology shop," stresses Hukku. "Techies don't understand a bank's operations as bankers do, and that is our edge: we really do have a keen sense of our clients' needs."

The strategy: focus vertically and solely on the financial sector, not as a cheap supplier but as a value added player; have an arm's length relationship with Citicorp which, with its $1 billion annual technology budget, would be "just another customer". To underscore CITIL's independent status, its management reported to Citi's regional business head rather than the technology arm.

SANJAY BORADE

Hukku is on the lookout for acquisitions

Year	Sales (Rs crore)
1996–97	54.5
1997–98	82.5
1998–99	144.5
1999–2000	215.0*

*Target

C.N. Ram, head of IT at HDFC Bank, says CITIL has been his bank's software vendor right from the start. "We needed a partner who understood what banking is all about. CITIL has a global vision but has its feet in India; that fit in perfectly with our business model," he explains. HDFC Bank, which has spent some Rs30 crore on IT, uses the Microbanker package for its wholesale banking and CITIL's Finware (now a part of the total Flexcube offering) for the retail end. Next month it will be launching an Internet banking service and initiated CITIL's business intelligence (data warehousing) solution.

Bernard Monney, who heads IT for Ghana's most prestigious bank, the Agricultural Development Bank, talks glowingly of the expertise exhibited by CITIL in implementing Microbanker the bank's first major IT solution. "We planned an allotment of 10 weeks per site, but the fourth site just went live this week," he says, "five months ahead of schedule."

CITIL has some domestic focus in mind – presently it derives only 5 per cent of its turnover from domestic sales, including new client Saraswat Bank – but does not want all its eggs in any regional basket. More to the point, it wants a bigger piece of the larger bank sector, growing away from its original customer base of smaller banks in emerging markets. Hukku admits that the perception that CITIL is a Citicorp-run company keeps some of the larger customers away.

To counter this, it will confine its attention to three main technology areas — Java, Internet banking, and business intelligence. It partners Sun for Java and Oracle for business intelligence. A new offering, Flexcube@, is scheduled for launch within the next three months.

In anticipation of more business, CITIL wants to ramp up capacity and is therefore on the lookout for acquisitions. These could be smaller companies with a niche business that is complementary. "Or companies that have a good customer list outside India that we may want to get into. For example, we aren't present in the European derivatives market," adds Hukku. Is a CITIL IPO on the horizon? Unfortunately not. "A public offering is not on the cards at present," confirms chief executive officer R. Ravisankar.

• NAAZNEEN KARMALI

Rs. 73/- per share;

Rs. 20/-* only on application

HIGHLIGHTS

- Over 6 lakhs shareholders
- Uninterrupted Dividend for 44 years
- Minimum dividend of 45% for each of the last 3 years
- Increase of dividend pay-out ratio from 22.5% to 31.5% in 5 years
- Compounded Asset Growth of 29% p.a. over last 10 years
- Compounded Growth of 29% p.a. in Profit After Tax over last 10 years
- AAA Rating for Long term Domestic Borrowings for maturity between 1 to 30 years

Public Issue of 3,77,00,000 equity shares of Rs. 10 each for cash at a premium of Rs. 63/- per share aggregating Rs. 275.21 crore with a right to retain oversubscription up to 10%.

RISK FACTORS

GENERAL RISK : Investment in equity and equity related securities involve a degree of risk and investors should not invest any funds in this issue unless they can afford to take the risk of losing their investment. Investors are advised to read the risk factors carefully before taking an investment decision in this offering. For taking an investment decision, investors must rely on their own examination of the Issuer and the Issue including the risks involved. The equity shares offered in the Issue have not been recommended or approved by the Securities and Exchange Board of India (SEBI) nor does SEBI guarantee the accuracy or adequacy of this document. Specific attention of the investors is invited to the statement of Risk Factors on Page No. (i), (ii) and (iii) of the Prospectus. **RISK FACTORS : INTERNAL FACTORS** • Credit risk arising from the risk of default by its borrowers, particularly by those affected by downturn in world commodity prices. • Interest Rate Volatility arising from duration mismatches between interest rate sensitive assets & liabilities. • As on 30/06/99, ICICI had Contingent liabilities of Rs. 5000 crore, commitments to a subsidiary company of Rs. 113 crore and outstanding forward contracts of Rs. 492 crore (Refer Note No. 5 and 8 on page 77 of the Prospectus). • As on 30/06/99, ICICI had disputed sales tax liabilities of Rs. 21 crore and disputed income tax liabilities of Rs 312 crore (Refer Note No 9 on page 77 of the Prospectus). • As on 30/6/99 top 5 industries constitute 44.8% of ICICI's loan portfolio and the trends in these industries may have a bearing on the finances of ICICI • Total Net Non-Performing assets, as on 30/06/99, are Rs 3,564 crore constituting 7.6% of ICICI's net loan assets. • Risk relating to Y2K failure of information technology services and products. • Uncertainity arising from entry into new business lines • Prudential ICICI-AMC, an affiliate of ICICI has incurred a loss of Rs. 7 crore during the year ended 31/03/99. • No monitoring agency has been appointed for the Issue **EXTERNAL FACTORS** • Competition for Business from existing and new entrants. • Competition for Resources from existing and new entrants **NOTES** • The investors are advised to refer to the para on "Basis for Issue Price" on page 57 before making an investment in this Issue. • Investors may note that in case of oversubscription allotment shall be on proportionate basis (refer to the para on "Basis of Allotment" on page no 65). • 24% of the Issue size has been reserved for NRIs/OCBs/FIIs applying on repatriation basis They can obtain the application forms from the registered office of the Company

Suppliers.com

Telco subsidiary TTIL has created an online system to smoothen its supply chain

Telco had to once phone an ancillary 66 times in one day in connection with a bottleneck in the supply of painted plastic parts for the Sumo. This was in January 1998 soon after the Sumo's launch. "Today, we get just five calls a week!" says Paresh Parekh, proprietor of Dolphin Industries which is Telco's only source for painting body sections like bumpers and spare-wheel covers for its Sumo, Safari and other vehicles. "Our non-value-added efforts – trips to get information like the 'goods inward' (GIN) receipt numbers, supply schedules and payment details – have come down drastically," agrees K.R. Ananthakrishnan, regional manager of Sundaram Clayton which supplies components worth Rs3 crore a month to Telco.

The magic wand that has been waved is the new value chain management (VCM) package, developed by the Rs51-crore Tata Technologies (India) Ltd (TTIL) and fine-tuned to suit Telco's needs. "Our delivery schedules change fast because of the dynamic market scenario," explains Telco manager Manish Gupta. "So, real-time communication and response become very important."

VCM, says Gupta, is a win-win solution for both the company and its suppliers. The value to the latter is evident from the fact that 350 of them have come online in less than three months, while it took as many years to get the same number to register for the earlier EDI (electronic data interchange) system. "EDI was only the information the company wanted to give, VCM is an open system. It's a real step in terms of partnership," he says.

The 'value chain', explains S.D. Pradhan, CEO of TTIL, is because it is providing services not only to the company but also to all its stakeholders. Claimed to be the first of its kind in India, the package took the two-year-old company Rs4 crore to develop. G.S. Singh, deputy general manager in charge of the VCM group, says TTIL is also adding features like supplier quality ratings, including details on how these are to be worked out. "Everything is transparent: this is a big advantage to the supplier," Singh adds.

The Telco VCM is currently concentrating on making life easier for suppliers, providing them with all the information they need, including purchase orders, schedules, replies to enquiries, payment status, material receipt status and stocks. Later, it will be extended to dealers, providing dispatch details and plans, and gathering dealer information like sales position and order booking. Customers, too, can then log on directly and find out about production and delivery schedules. And in the third phase, it will provide a knowledge base for payrolls and attendance records, or processes like how to weld two plates – even CAD/CAM drawings and solutions for smaller businesses.

Having installed the Telco system in May 1999, TTIL has now launched this package commercially and is setting up similar value chain solutions for a number of companies including Kinetic Engineering. Most customers – both those at the signing stage and prospects in the pipeline – are manufacturing companies. "Being a part of Telco, we have the advantage of knowing manufacturing processes," says Pradhan.

But the package will work equally well for other businesses, too. "It's a modular package, we just need to customise it to suit the specific needs of each company or business, not redevelop the system," Singh explains. TTIL is currently working on a customised solution for the New Delhi-based Om Auto group, a transport company with 40 offices all over the country, to keep track of its good movements, warehousing and othe activities. VCM is projected to bring i business worth Rs3 crore in the curren year, after which Pradhan predicts 'multiplier effect'.

Manufacturing knowledge is an advantage, says Pradhan

According to Deepak Shikarpu business development manager at TTI and chairman of the Pune chapter c the Computer Society of India, "An company which doesn't develop it own Net strategy in the next decade doomed!" Pradhan is more prosai "The major need is to collapse the cyc time," he says. "Business is no longer situation of the big eating the smal but the fast devouring the slow."

• SEKHAR SESHA

The author is chairman of Wipro Infotech Limited and Hexaware InfoSystems Limited

Life after Y2K

Why the Bug may prove a boon for Indian IT firms

Doomsday prophets have been screaming themselves hoarse, likening the Y2K problem to an Armageddon that will leave the world in chaos on 1 January 2000. Meanwhile, pessimistic pundits of the Indian computer industry are predicting doom of a different kind. Bereft of Y2K-related project inflows (which have been available for the taking the past couple of years), revenues of the Indian software industry will plummet, they predict.

So is it time to start pulling out your investments into IT stocks. Are software companies going to collapse under the weight of the Y2K professionals they recruited in droves? Are there professionals going to be clutching pink slips instead of pink gins this New Year's Eve?

To answer the above questions – and other ancillary ones linking the fortunes of the Indian software industry to Y2K – one has to delve much deeper into the matter.

For starters, a quick dissection of the Y2K opportunity would be in order. The time-bound urgency of the problem, the large numbers of professionals required to address it and the willingness of the developed countries to pay a price for solutions, all provided a perfect opportunity for India. And India responded magnificently to the challenge, reaping rich benefits. There's no doubt that Y2K has put India much more firmly on the world IT map over the past few years.

For 1998-99, the National Association of Software and Service Companies, estimates that approximately 20 per cent of software exports revenues accrued from Y2K-related projects — equivalent to $560 million. This considerable sum of money wouldn't have come India's way if it were not for Y2K.

But what happens now? What happens to the companies which put all their eggs in the Y2K basket ? What happens to the programmers whose skills are not relevant any longer? Can these professionals be re-trained in new skill areas or would they have to be retrenched?

Regardless of these problems, any Indian software firm which ventured into the Y2K arena is better off than those that didn't. Here's why:

• The Y2K projects created an opportunity to build relationships with new clients. Many of these companies might otherwise not have outsourced any software development at all. For many Indian software companies, the West's Y2K-phobia quickly provided a customer base in need of urgent solution. If these companies have delivered on time and provided value to their customers, they are well positioned to provide continued value by being continuously relevant to their customers.

•There is much scope for bagging maintenance projects for the now-compliant systems. Since the Indian companies are now familiar with the converted systems, maintenance is a logical fall-out, and this can be done at hardly 40 per cent of what it would have cost the client in the US. Application maintenance outsourcing contracts generally span three to five years. The strike rate of bagging these contracts from the Y2K clients should be at least 50-70 per cent.

• With the execution of the Y2K project, the client would probably be favourably inclined towards passing on more projects to the Indian developer. These could include migration and Web integration projects for the legacy systems made Y2K-compliant.

• Y2K has created several project managers with experience of working on large projects. These managers can now be put to good use in other projects of the company.

• Y2K projects have resulted in an impressive roster of reference clients for the Indian software industry. These references can be used to advantage for signing on other new clients.

• A couple of hundred million dollars of business will definitely accrue to the Indian software industry in the next two to three years. Hyderabad-based VisualSoft is successfully marketing Euro tools. Wipro Infotech, Infosys, IIS Infotech, Hexaware and several other companies have been doing Euro-related projects successfully. The Gartner Group has estimated that the Euro conversion spending will be about $100 billion, and India is set to capture a part of it.

• It is a well-known fact that several corporations worldwide have postponed most new development projects, concentrating entirely on achieving Y2K compliance. That done, a large number of pending projects will now come up for outsourcing. Simultaneously the e-commerce and e-business markets are now beginning to mature – there is huge potential here.

All in all, the millennium opportunity has helped the Indian IT industry lay a strong foundation. And the Indian industry is ready to build on it in the next millennium with lots of vigour and enthusiasm. ◆

MILTON PLASTICS

Casting a new mould

The company has drawn up a game plan to see that its products wend their way into many Indian kitchens

The past couple of years have been trying times for corporate India. Most captains of industry have shunned needless diversifications. And the buzzword today is to 'concentrate on core competency'. One such company is Milton Plastics. This Rs328.87-crore (18-month period to September 1998) company, which is into the manufacture of thermoware, once enjoyed a good brand recall value. Now it is making all-out effort to regain its past glory by pushing its existing products more aggressively and launching newer ones which would occupy the shelves of Indian kitchens. "We are trying to redefine our businesses and finances," says Chiranjiv Vaghani, CFO, Milton Plastics. Adds Madhup Vaghani, executive director and in charge of marketing: "We want to extend our newer product range to the customer who relates to our brands."

According to a company watcher, the management has realised that in today's environment a lot of emphasis is paid to brand value. "Instead of concentrating on building up its brand further, the management paid more attention to businesses such as leasing and hire purchase and trading in plastics. Now they seem to be paying more attention on brand building," says he.

Started in the early 1970s, Milton began with a small unit to churn out plastic items such as tumblers, mugs, boxes and PVC footwear. In the 1980s, the company ventured into the unexplored terrain of thermoware products and over the years launched these products with new generation insulating material such as polyurethane. Water bottles and jars, tiffin boxes and flasks and casseroles were rolled out. Today, the company commands a 45 per cent marketshare in this segment of business. But how has the company managed to hold its own in a segment which is largely dominated by the small scale sector? Quality, quality and quality. "We have used FDA approved food grade plastic material, which none of the small manufacturers do," says Chiranjiv.

Madhup Vaghani is trying to regain Milton's past glory

To reduce its dependence on thermoware, Milton conducted a survey to find out other business opportunities. It found out that it needed to offer "value-added synergetic products which were congruent to its flagship brand." The company introduced electrical kitchen appliances such as toasters, sandwich makers, hair driers and hand mixers under the brand name `Euroline'. This is yet to become a major contributor to the company's kitty.

Simultanesously, it has entere into the non-stick cookware segmer Though the market is crowde Madhup is confident of making mark with its quality. "The penetr tion level in metros and non-metros non-stick cookware is just 20-25 p cent. There is a lot of untapped pote tial," he says. His products wou consume less energy (because instant heat dispersement at tl bottom of the non-stick ware) ar have better surface coatings. The oth products Milton has up its sleeves a soft bags and collapsible water bottle "The idea is to make the produc more convenient to carry," sa Chiranjiv.

The company has als succeeded in creating wat purification systems wit in-house R&D. "We have n intention of entering int the water purification bus ness but we are giving acce sories to existing product We have created a cartridg with resin-based techno ogy which can be used i water bottles, jugs and jar and with three phases c filterations, one will ge 100 per cent bacteria-fre drinking water. Thes cartridges are replaceable, says Madhup.

Another segmen Milton is looking to tap i PET bottles, jars an containers. The containe segment is ruled by Tupper ware. The Vaghanis say tha the products would b cheaper than its competito by about 40 per cent Besides their product would be `microwaveable'. At tha price and product capability, thi segment could be a moneyspinner fo the company. "The idea is to give addi tional convenience products to th housewife in the kitchen," say Madhup.

As for the distribution of th Milton products, over the past coupl of years, the company has reached strength of about 180 distributors an over 20,000 retailers. The Vaghani are planning a major marketing pusi

ICICI's new issue

When a Sensex company comes out with a public issue it is certainly an event. The Sensex company which is out with a bowl is ICICI – a development financial institution (DFI). It is charging a premium of Rs63. At present the paper is exchanging hands at Rs80. Is the premium justified?

We looked at ICICI's performance during the last five years – 1994-95 till 1998-99. During this period revenue grew at a pace of 32.67 per cent to Rs7,323.20 crore. Profits rose from Rs413.93 crore to Rs1,000.84 crore, implying a growth of 24.70 per cent. However, earnings per share moved at a lesser pace of 10.99 per cent to Rs20.85 in 1998-99. The reason being substantial dilution in equity in 1996-97 and continuous decline in net interest margin with 1996-97 being an exception. Equity in 1996-97 increased by Rs174.23 crore to Rs475.53 crore mainly due to conversion of GDRs (Global Depository Receipts), greenshoe option of GDR issue, and merger of SCICI with ICICI. The two financial years following 1996-97 witnessed negligible increase in equity. As of March 1999, the same stood at Rs480.09 crore. However in the second quarter of 1999-2000, further dilution took place, as a result the equity capital now is Rs514.62 crore. Net interest margin in 1994-95 was 4.14 per cent which has slid to 2.56 per cent in 1998-99.

The increase in share capital and decline in margins should be seen in conjunction with the growth in assets. The latter grew at 31.70 per cent to Rs58,546.71 crore in 1998-99. Perhaps in a bid to increase assets, ICICI has expanded its equity, explored other sources of funds like preference capital and loans (rupee and foreign currency) all of which has put pressure on margins. Another reason proffered for this poor track record is that ICICI is stretching itself thin. In other words, the company is into too many areas like funding traditional manufacturing sectors, infrastructure, retail segment, securitisation. No doubt a section in the market views ICICI as a directionless financial institution and not as a development financial institution. Perhaps these tangibles and intangibles have lent ICICI a poor image.

Instrument	Equity shares of Rs10 at a premium of Rs63
Issue size	: Rs275.21 crore
Issue opens	: 9 September 1999
Issue closes	: 14 September 1999
Objective	: Strengthen capital adequacy and meet its normal fund requirements
Listing	: National Stock Exchange, Mumbai; Vadodara, Calcutta, New Delhi and Chennai Stock Exchanges
Post issue equity	: Rs552.32 crore

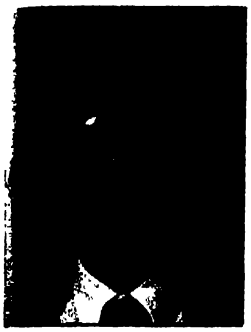
But what do the final arbiters, i.e., the bourses, say? Consider this: during fiscal 1998-99, State Bank of India (SBI) had assets of Rs2,22,509.02 crore and a profit of Rs1,027.80 crore. SBI today is being traded at Rs242 and the price to earning multiple (P/E) on 1998-99 earnings works out to 12.40. While ICICI's size is 26.31 per cent of SBI, its profits at Rs1,000.84 crore are almost similar. Yet ICICI's share is being discounted at 3.84 on 1998-99 earnings. This low discounting underscores ICICI's poor image. Taking all this into consideration, the premium ICICI is asking appears on the higher side. There is no gainsaying the fact that three of its principal domestic shareholders viz. LIC, GIC along with its subsidiaries and UTI, are buying shares (preferential allotment) amounting to Rs500 crore at the same premium. These companies (LIC, GIC & UTI) in market circles are perceived to be ICICI's "brothers and sisters". The post-issue stake of financial institutions will fall 2.34 percentage points to 31.88 per cent and that of the Indian public will go up from 17.67 per cent to 23.29 per cent.

Finally, the latest fashion statement in Indian corporate circles which ICICI is also mouthing. "We are adopting United States Generally Accepted Accounting Principles (US GAAP) and preparing to get listed in uncle Sam's country." Should not ICICI improve its discounting in the local bourses before moving on to the overseas turf? •

and educating the customers on product quality and life. Besides, Milton franchise shops are also being planned. The marketing push and the new product launches would require a lot of money. Though the Vaghanis are chary of talking about how much the exercise would cost, industry estimates range from Rs5 crore to Rs50 crore depending on whether the products would be launched in phases or at one go. Clearly, the company would have to look at privately placing equity/quasi-equity to fund the plans. For the stock, ruling at Rs25, does not seem to have a fancy among investors and the fundamentals of the company show that the funding cannot be shouldered by internal accruals.

On a turnover of Rs328.87 crore for the 18 months to September 1998, Milton netted a profit of Rs1.06 crore. (The company changed the accounting period because of a fire in one of its factory last year). For the nine-months to June 1999, the company raked in as turnover Rs132 crore with its net profit being Rs1.61 crore. The earning per share works out to Rs2. With the new products in the pipeline together with the marketing push and a brandname that "has a $50 million corporation tag", the discounting would be much better in the long term.

• ROY PINTO



Offended? Outraged? Appalled? The next time you come across an ad that offends your sensibilities, don't just let off steam. Send in a complaint to ASCI, the Advertising Standards Council of India. An organisation that believes advertising is a necessity, but misleading advertising is not. An organisation that promotes self-regulation, by processing over 150 complaints a year. So don't react, act.

Advertising Standards Council of India

Don't react. Act.

Address your request for a free copy of ASCI's Code for Self-regulation in Advertising, and/or send your complaint against an advertisement you consider objectionable, to: Secretary General, ASCI, 205 Bombay Market, Post Box 7939, Tardeo Road, Mumbai 400 034. Please enclose a copy of the press advertisement, name and date of publication, or the channel name, date and time of airing and a brief description of the TV commercial /radio spot, with your complaint. The options bubble

Employee stock options are not being properly accounted for. Otherwise many companies that went in for them would not be showing profits

Excerpts from the latest 1999 Bonus Edition of *Outstanding Investor Digest* where value investors of Sequoia Fund (headed by Buffetville investor Bill Ruane) had the following to state at their annual meeting on 16 April 1999: "While companies are permitted by current accounting guidelines to expense options directly through their income statement, to date none has volunteered to switch to this stricter reporting standard. And who can blame them? The widespread overstatement of earnings due to the non-recognition of option expense is equivalent to grade inflation in schools. Is it at all surprising that executives, now heavily incentivised by stock price appreciation due to their large options stakes, have not stormed the gates to join the class of the professor who uses tougher grading standards?

"The basic problem with Black-Scholes and other mathematical option-pricing models is that they assume the current market values accurately reflect intrinsic value — in essence, they assume the stockmarket is efficient.

"In determining the level of aggregate annual stock option grants and the size of individual employee awards, the vast majority of compensation committees, by using the Black–Scholes model accepts this flawed assumption. These committees abdicate their responsibility by relying on compensation consultants armed with seemingly scientific options valuation models and impressive peer group analyses.

"While one could debate some of the finer points of valuing the cost of options grants, any reasonable estimate suggests that the cost is much too large to be ignored. In fact, the conventional option valuation models have, over the past 15 years, been off by hundreds of country miles in the aggregate, and by light years in many individual cases.

"The fatal flaw of these models is their inability to differentiate between real diamonds and cubic zirconium — between undervalued and fully priced merchandise. In other words, these models do not even attempt to capture differences in capital appreciation potential.

"One method of option valuation that is both observable and quantifiable is to impute an expense based on a retrospective calculation of the actual value transferred — that is, the difference between the grant price at the time of issuance and today's stock price.

"We thus utilised this methodology to calculate the options-adjusted 1995 earnings of the 10 stocks which made the greatest contribution to the increase in the S&P 500 Index in 1998. We excluded Lucent and MCI worldcom, which didn't exist in their current form in 1995 and replaced them with numbers 11 and 12 on the list, Merck and Home Depot.

"Using this method, the option-adjusted earnings for this group of companies in 1995 would have been a staggering 65 per cent lower than what those companies reported at the end of 1995. In fact, this adjustment to earnings wipes out the reported earnings of four of the 10. Incredibly, in the cases of Microsoft and Cisco, the derived options expense was roughly 10 times reported earnings.

"Applying the retrospective valuation methodology to Microsoft's past and current employee base is quite an interesting exercise. At the current market price we estimate that the value of options granted since Microsoft went public in 1986 is many times the company's cumulative net income since its founding.

"From this case study, we would invite you to consider the following hypotheses: first, after adjusting for the ultimate value of stock options granted during its corporate life, Microsoft has never earned a penny for its non-employee owners. Indeed, when it comes to distributing profits, this global hi-tech powerhouse has operated more like an agrarian cooperative than like a publicly-owned corporation. Secondly, Bill Gates, the icon of late 20th century capitalism, could instead be history's most successful communist!

"However, if the P/E is high enough and the number of option grants is great enough, there is no salvation..."

Investors should apply the value-oriented thinking of Sequoia Fund to the doyen of India's software industry, Infosys. Let me state quite categorically that I have deep respect for Narayana Murthy and his team. On page 142 of the 1998–99 Infosys annual report is a table, a partial excerpt of which is replicated below. Look at the numbers highlighted and compute the compensation that Infosys has not

captured in the P&L account because of accounting convention — about Rs157 crore by a quick back-of-an-envelope calculation, or more than its entire profit before tax of Rs155 crore.

Sebi's accounting guidelines for stock options which came into force from 19 June 1999 and are based on US GAAP stock options accounting, are for the reasons discussed below to be faulted.

1. The use of the Black–Scholes formula, which completely understates the value of stock options granted and more so when reset provisions are allowed (section 7(1) of Sebi guidelines). The 1998–99 annual report of Infosys shows the *pro forma* effect of stock options with the Black–Scholes formula and the dilution in earnings is minimal as contrasted to the value actually arrived at in the computation above.

2 The accounting treatment laid out in Schedule 1(7) of the Sebi guidelines considers only the difference between the market price at the time of grant and the exercise price for the computation of the option value which looks to be wrong since the value of the option exercisable over a period is obviously higher if an assumption is made about higher growth than the cost of capital in the earnings power of the company. Sebi should note what Lord Keynes said about being roughly right rather than precisely wrong.

That the accounting method is nonsense can be seen from the following example. Suppose the current market price of a company is Rs100 and the exercise price of the stock option with a vesting period of five years is Rs80. Sebi recognises the value of the option as Rs20 (Rs100 – Rs80), to be expensed over five years. It ignores the time value of money. If the company is expected to grow at 30 per cent per annum over a five-year period and its cost of capital is 15 per cent, then assuming that the current market price represents the intrinsic worth of the company, the true value of the option is Rs144.82. What Sebi would have accountants record as Rs20 is actually worth Rs144.82 and the difference is huge.

Put simply, the true value of the option is the present value of the difference between intrinsic value of the company on the date of expiration and the exercise price. This can than be expensed over the vesting period. But since employee stock options (ESOS) are recurring costs which are to be expensed on a rolling basis, for a company that has just begun issuing options the *pro rata* compensation cost may not be representative of that to be expected in future years. However, eventually, this will make little difference.

	1999	
	Shares arising out of options	Weighted average exercise price
1994 Option plan:		
Outstanding at the Beginning of the year	518,600	
Granted	992,200	$1.18
Forfeited	(18,200)	$1.18
Exercised	(1,328,600)	
Outstanding at the end of the year	164,000	
Exercisable at the end of the year	—	
Weighted-average fair value of grants during the year at less than market		$36.85

Source. Infosys Technologies Ltd, annual report 1998–99, p142

Fingers will be pointed that this method is open to abuse because of the assumption made about the rate of growth and the discount rate. But in accounting, assumptions are made all the time. Nobody knows how long an asset is really going to last and therefore what the actual depreciation period should be. But that does not stop depreciation expenses from popping up on the P&L account.

So should an item of cost be ignored because it can't be measured? Obviously not. Accounting abounds with estimates and such estimates have to be made by prudent, rational, and independent experts. Sebi's accounting would have financial statements measurable and wrong rather than estimable and right.

In fact, there is one and only one scenario in which Sebi's accounting guidelines for ESOS make sense. In the hypothetical example illustrated above, the employee availing of the ESO should be made to buy the share on the market at Rs100, the company should subsidise the difference (Rs20) between Rs100 and the exercise price of Rs80. For the purchase the employee should be given a loan by the company at a rate of interest equivalent to the company's cost of capital. The shares purchased should be hypothecated to the company with additional security if necessary with the clear condition that, at the time of exercise, the loan will have to be repaid in full irrespective of the then prevailing market price of the company. The criticism that there is a lock-in is obviated by the fact that the shares are issued at a discount, a facility not available to outside shareholders.

But one wonders how many employees would welcome such an ESO. That is precisely the reason why Sebi's accounting treatment is wrong — it ignores the time value of money.

The reconciliation of options granted and exercised are given below by the company.

Pre-bonus grant	4,14,100
Add: bonus factor	4,14,100
Subtotal	8,28,200
Add: post-bonus grant	1,64,000
Total	992,200
Number of shares exercised	664,300
Add : bonus factor	664,300
Total	1,328,600

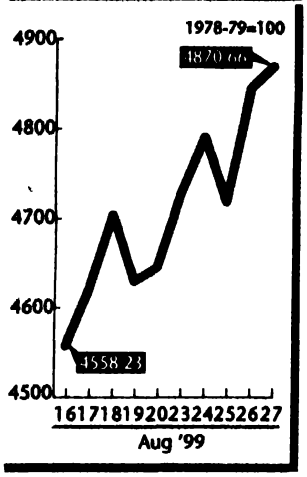
A – Numbers of options granted and exercised: 992,200
B – Weighted average fair value of grants during the year at less than market: $36.85
C – Exchange rate: Rs43/$
The working is as follows (A * B * C)

and it allows 'reset' clauses, significant items of value that are not captured in its accounting treatment. How would you like to travel across an ocean in turbulent weather when the captain and the crew members wear life jackets, and you as a passenger paying your fare in full are denied access to the same life jackets? As an outside shareholder in a company liberally handing out stock options, that is precisely your condition. And the beauty of the accounting treatment is that you would not even know when the ship had started to sink.

A few analysts have mentioned that the stockmarket has already discounted the stock option expenses and that skilled human assets add enormous value. The roaring US market is cited as an example. I think not. Ben Graham noted that it's Mr Market's pocket that an investor should be concerned with, not its wisdom. Undoubtedly, skilled manpower is a huge intangible, but its costs should be correctly expensed, just as advertising costs are expensed when brand value is created. Furthermore, a reader from Dresdner Bank has asked the following questions: "As an afterthought, how would Infosys and Microsoft treat ESOs if Microsoft gave employees options on Infosys stock and Infosys gave its employees options on Microsoft stock? A hazardous way to attempt employee motivation, but the companies will surely not "amortise expenses" any more?

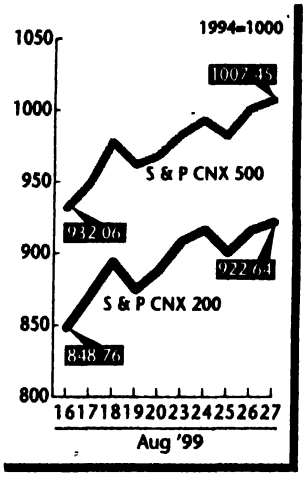
And this becomes vital because most investors react to accounting earnings per share (EPS) rather than economic EPS. Does that mean that Infosys in this case has no earnings power? No. It only means that its accounting EPS is not representative of what it has really earned. Were it to record options costs based on economic value, the compensation committee at Infosys would have presumably been a lot less generous in handing out stock options.

An investor should not be fooled into believing that "intrinsic" or "fair value" accounting for options calculates the real economic damage to the company's outside shareholders. If the company does not hedge, or otherwise immunise the stock options it issues, it is writing naked call options on its share price — the higher the share price, the greater the economic costs to the company and its outside shareholders. But the issue does not stop with hedging the risk. The cost of hedging and its accounting treatment is also important. In whichever method one chooses to employ to immunise stock options, i.e. purchase of equivalent call options in the market or delta hedging strategies, there is a cost which must be recognised.



What do I think will happen in the future?
a) Capital markets will ultimately see through the accounting distortions and adjust prices accordingly.
b) Accounting standards will change to reflect the economic reality of stock option values and compensation committees will then note the quantum of their generosity.

Investors must hope that scenario b) happens rather than scenario a).



In the book *Devil Take the Hindmost* by Edward Chancellor, the history of the South Sea bubble has been well recorded. The promoter of the South Sea company was Sir John Blunt. "Blunt's distribution of share options in the South Sea Company anticipates the behaviour of US companies in the 1990s which have distributed options like confetti at a wedding party. There are reasons to believe that the excessive distribution of stock options contributed significantly to the inflation of a speculative bubble: companies did not report the cost of options in their profit-and-loss accounts, they took on debt to repurchase shares for options schemes and used accounting tricks to smooth their earnings growth. At times, buybacks for share options have resembled a Ponzi scheme. For instance, Gateway 2000, a computer manufacturer, announced in June 1997 that it was repurchasing shares at $35 which it had issued 20 months earlier for $14.50. Executive stock options were particularly lavish at Sunbeam, a consumer appliances manufacturer, and Cendant, a marketing company, both of which fraudulently overstated their profits for 1997. Sir John Blunt was a man before his time. Were he to return today, he would be hailed as a champion of 'shareholder value'." •

Snapshot

The gilts market was subdued during the fortnight. This was due to weakness in the forex market and marginally tight conditions in the bond market. Liquidity eased during the period but only in the second week and refinance was repaid. Call eased to 8 per cent levels after staying close to 10 per cent levels for over a week. Reserve requirements were covered early. RBI announced the price auction of the 11.99 per cent 2009. The auction was fully subscribed at a higher cut-off yield. OMO purchases were once again high. The SBICAP-SYC moved lower marginally. Price gains were small as sellers emerged at most levels. INR weakened sharply on demand but RBI intervention put the brakes on the fall. The INR has since stabilised. The market is expected to be range-bound in the coming fortnight. Overall, the interest rate structure would be steady.

NOTES

1. Shortlisted schemes are those with common investment objectives and an NAV history of at least one year.
2. Scheme returns are adjusted for dividend, rights and bonus payouts.
3. Price-based returns are fairer indicators and consider "real" entry/ exit facilities. These are based on market-price (including entry and exit brokerage cost), and/or/resale/repurchase price offered by the funds.
4. Risk grades: I - Least downward risk (relative to other schemes), V - Most downward risk. Downward risk measures how often, and to what extent, NAV declines on a month-to-month basis.
   Grades are based on relative downward riskiness of scheme within its peer group.
5. Scheme Peer Group returns are median returns on all short-listed schemes.

COMMENTS

Overall the shortlisted balanced schemes have under-performed the benchmark, the composite benchmark of SNP CNX-500 & I-Sec Bond Total Return Index. The annual median return of these balanced schemes has appreciated by 24.90% versus 32.52% in the composite index. As the market indices have been touching all time highs, these shortlisted schemes with significant exposure in equities haven't witnessed significant appreciation Though most of the schemes have started taking fresh exposure in cylical's, this has been very limited as most of these schemes still hold a majority of scrips in infotech, pharma and FMCG sector,

The investment performance, however is not uniform across the schemes with top 6 schemes generating an annual return more than positive 70%, while the bottom 4 schemes appreciated by less than 8%.

In comparison with the last mutual fund ranking (as on July 9th, 1999) on balanced schemes, Tata Twin Option (Balance) from Tata MF have been aded to the top 10 rank while Canstar Sat of Canbank MF has dropped out of the list.

·irman justified the high price tag by saying that if he had not picked up Cerent, the competition would have. The two new companies will bring Cisco upto date with its rivals, Lucent Technologies and Nortel. Optical networking offers the quickest way of sending information over the wires, thereby contributing to the Internet's growth.

◆ Key units of Daewoo, South Korea's second largest conglomerate, may be taken over by domestic creditor banks under a 'workout' programme to speed restructuring. Daewoo continues to suffer a liquidity crisis that threatens to become a bankruptcy one, as the group's management seems to be making little progress in selling off assets to cut debts of $50 billion. Insolvency looms large over Daewoo's future despite agreements with creditors to roll-over $6 billion in short-term debt and provide $3.3 billion in fresh loans. Twelve of Daewoo's 25 units have applied for the workout programme, under which they are to receive new loans and debt payments are to be frozen for three months. A total of $7.7 billion of Daewoo's debt is owned by foreign creditors who may oppose the workout solution unless they are given a role in the restructuring programme.

◆ Fuji Bank, one of Japan's biggest banks, may have inadvertently insulted some of its key investors by e-mailing a computer virus to dozens of fund managers worldwide. Fuji Bank had e-mailed a memo as part of a public relations exercise which announced its plans for a merger with the Industrial Bank of Japan and Dai-Ichi Kangyo Bank which would create the world's largest banking group. The e-mail memo contained a computer virus that will make recipients' computers display a message telling the viewer that he or she is "a big stupid jerk!" from Fuji Bank on the 14th of every month. The bank denied suggestions that the virus may have been the work of employees opposed to restructuring. Fuji Bank had taken the rare step of sourcing some of the information technology procedures from outside instead of relying on its own staff. Normally excessively polite and courteous as a race, the Japanese have surely never faced a problem like this before.

◆ ICO Global Communications has filed for bankruptcy protection in the US, making it the second global satellite communications venture to come tumbling down. ICO Global's $3 billion venture has crashed only two weeks after Iridium, the $5-billion satellite telephone company succumbed to a similar fate. Both companies have sought protection under US bankruptcy code's chapter 11 which is aimed at giving

companies more time with their creditors. Bermuda-based ICO was, like Iridium, set up to create a satellite network capable of carrying mobile telephone calls from anywhere in the world. The company's troubles began two months ago when it failed to raise $500 million from shareholders.

◆ Luxury carmaker Rolls-Royce has signed a deal with US company, FastShip. The deal is to see the adaptation of its aircraft engines in powering a generation of fast ships capable of crossing the Atlantic at speeds of up to 40 knots, that is twice the speed of conventional container vessels. Rolls-Royce claims that the $1-billion deal will change transatlantic maritime trade forever. The year 2003 is to see the start of commercial services of the four high-speed container ships. The ships are to carry goods that companies would want to move across the Atlantic swiftly but were too expensive to fly. The ships are expected to carry components to US car factories in Europe. Rolls-Royce has announced half-year pre-tax profits up 18 per cent to £159 million on earnings up 6 per cent to £2.1 billion.

WORD COUNT

"It's not for me. I'm not going to be here very much longer. It is the residence of the prime minister of Malaysia, not of Dr Mahathir the Pharoah."

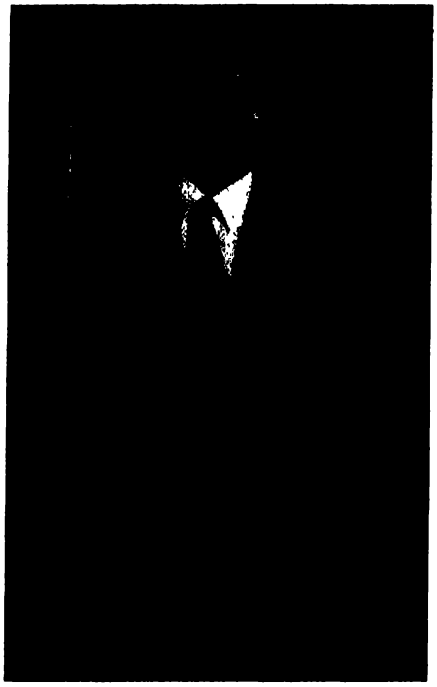
Malaysian prime minister, MAHATHIR MOHAMMED, whose vision critics attack as being fit for an Egyptian king, disowning the pinkish stone fantasy topped by a green onion dome that is to be the country's official new home for its PM, in NEWSWEEK.

"Maybe I'm crazy, but I don't consider this a crisis. I don't think our problems are in the fabric of our company. And I don't have my head in the sand."

The hands-on CEO of Walt Disney, MICHAEL EISNER, justifying his method of tackling his company's reduced earnings, defection by top executives and Disney's stock plunge, in FORTUNE.

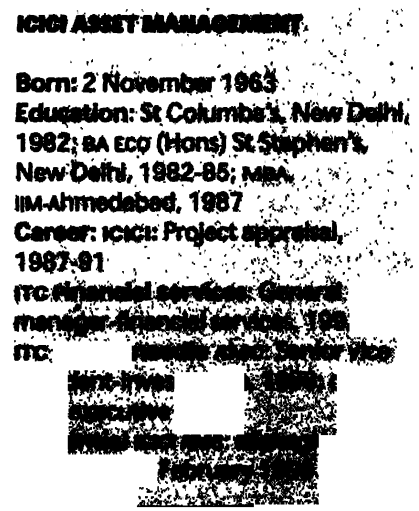
"We've been so lucky this year. We caught Abdullah Ocalan (the Kurdish rebel leader), and look what's happened now: our country has been cursed by the evil eye."

A Turkish official blaming the state of his country after the devastating earthquake and fire at Turkey's largest petroleum refinery on the evil eye, in THE ECONOMIST.



A go-getter

Ajay Srinivasan is the archetypal investment banker — dark suit, red tie, white shirt — but unlike some of his peers, he speaks in measured tones. But his body language is that of an aggressor, a busybody, somebody hungry for more. Maybe that is the reason why Srinivasan has taken the bullet train to Prudential ICICI. The 55:45 JV between Prudential plc and ICICI which started out with just Rs160 crore asset base has, in a short span of time, bridged the Rs2,000-crore chasm. From two products, there are now eight on offer for the investor. The organisation has 15 offices across the country.



Srinivasan met ICICI joint MD Lalita Gupte on a plane, they got talking and she sounded him out on what is his present assignment. Just like that! Srinivasan claims that he landed the job by pure chance and, "at ITC Threadneedle, I had felt there was tremendous potential in the mutual fund business which was not being tapped to the hilt. Prudential which runs out of Hong Kong understands the dynamics of doing business in Asia and this is a big plus."

In retrospect, Srinivasan reckons that when he left school, he was keen to pursue academics and even take a shot at the civil services. But as he says, "I didn't want a standard job — not pure marketing, nor pure finance, I was inclined more towards general management. I took the MBA exam by chance and found IIM-A a terrific experience on the learning curve." Soon after passing out from the management course, he chose the ICICI job because it gave him a vantage point to different industries. In the project appraisal division, Srinivasan was exposed to some 40-odd projects across the industrial spectrum — from steel to cement to consumer durables. He was also part of a key initiative at ICICI to hone India's export competitiveness. A World Bank sponsored study entailed a trip to Arthur D Little in Boston for a three-month course.

He says, "ICICI gave me all-round exposure and offered a genuine reality check of industry. Now it was time for

Ajay Srinivasan

me to transcend that role. Around this time, ITC was setting up a financial services division in Mumbai which incorporated insurance and asset management. Once again I thought that it would provide me with a window to asset management on which I was very keen." Which brings us to the oft-repeated criticism of ICICI as a very ponderous, maladroit and bureaucratic organisation. Not a lean and mean fighting machine. Srinivasan shrugs off the charge, "ICICI has always been ahead of its time. It has utilised its thought processes to evolv constantly over the years. And eve now it is taking several initiatives t stay ahead of the pack. I think this all gation is incorrect."

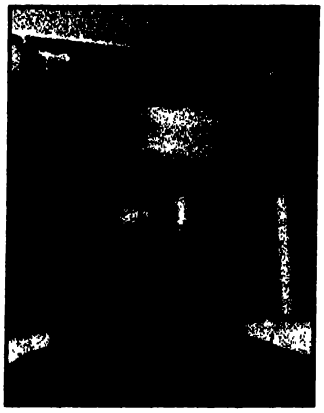
Srinivasan is a cricketer and a writ with a bent for the Net which he rec ons is going to change urban life in th country; all it requires is some ke policy thrusts. At ITC, which had see several abortive forays in finance wit Classic (subsequently taken over b ICICI) and later Peregrine to finall enter into wedlock with Threadnee dle, Srinivasan jumpstarted the ne ventures but always worked for IT Financial Services, till he moved to th new JV with Threadneedle as head c investments. With this he began hi innings in the world of capit markets. His exposure to industry a ICICI stood Srinivasan in good stea dovetailing it as he did with the IT experience, taking him to the nex level of competency. Both the IT Threadneedle Funds — Top 20 (equity) and High Interest — wer started during his tenure. In fact, thes are the only two funds ITC Threadnee dle has launched.

Srinivasan says, "As a fun manager, I was able to see a cross section of industries from a stockmar ket point of view. But once again, didn't want to remain a fund manage all my life. My contention was tha once you have dealt with equity, you know how to take calculated risks an are blessed with a sense of intuition which ultimately enables you t follow your own model. With thi behind me, I could now take the eleva tor to general management, some thing that I had always wanted to concentrate on."

While Srinivasan is no longer an active fund manager, he contributes to the JV's overall business strategy with his critical inputs, but prefers to hard focus on distribution and marketing imperatives, as also look at people issues using his leadership skills potently. And he has his own ideas on the metamorphosing of the Indian stockmarkets. Change is everywhere, but more so in the markets which are piercing the stratosphere these days. Says he, "We are clearly becoming an institutionally driven market. Mutual

nds have lately done an excellent job oviding innovative products. And a w of them at that! The savvy retail vestor bereft of investment outlets s begun to use this route. I am not ying that the adrenalised retail vestor has disappeared, no, he is very uch there and playing."

The shift towards mutual funds, cording to him, is real and here to y. While bank deposits are presently the vicinity of Rs700,000 crore, the utual fund industry has garnered 80,000 crore, beginning to wean ople away from the banks. With ofessional fund managers making cisions about the savings of the *hoi olloi*, it will no longer be a 'discreonary income thing.' Srinivasan ters the example of Chile where fund anagers are handling retirement onies in a big way. He reckons that e same thing will start happening in dia too when provident fund and ntractual savings will give way ewer avenues of savings.



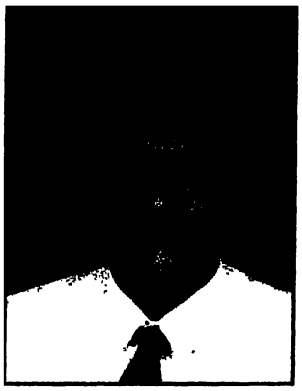
A gung ho Srinivasan avers that the F industry should grow by 25 per nt year on year. He gives Prudential-'s example whose growth has keted by 900 per cent in one year. t the moment, the primary task of utual fund managers is to accelerate e pace of conversion, by bringing additional methods of savings into e MF mode. He is bullish on equities cause the markets have become ature, efficient and transparent. Says e, "Inflation is down, corporate ctor is finally awakening, savings are creasing, interest rates are down — e climate is favourable for equities. litical instability has been s ounted, for all the political parties very much in unison in terms of nomic promises; look at their ifestos. This year could well be the her of all years as far as the Indian kmarkets are concerned."

inivasan, a keen sportsman, is much a team player and feels that helps him in his work. And when-he has the blues, he bounces ghts off his father Srinivasan Iyer, ormer managing director of Eter- Everest. But right now he is ming his favourite tune — *Money othing* by Dire Straits!

◆SANDEEP BAMZAI

FRONTRUNNERS

Pace-man



J.C. Giri almost has a passion for pace. The 28-year-old managing consultant (outdoor) for Ogilvy & Mather's "the media network" travels a week every month, works 12 hours a day, and watches Grand Prix racing on television for recreation. In the four years since he joined the agency's outdoor media planning and buying wing as a media assistant, Giri has been promoted five times. When he moved to head Mumbai from Chennai a little over two years ago, the agency's outdoor business from the city was all of Rs2 crore. It has since grown to Rs35 crore, contributing as much as 60 per cent of countrywide revenues.

Watching billboards in his college days first fired Giri's interest in outdoor advertising as a career. Fresh out of college in Chennai, he joined Selvel Vantage, the prominent hoarding supplier. "It was at Selvel that I learnt the tricks of the trade," he says. With increasing competition from rival agencies, this experience should surely help O&M consolidate its first-mover advantage. In addition to heading Mumbai, Giri is also implementing Oscar, the agency's Outdoor Site Classification and Audience Research model for nine cities. "We have to get more accountability for the sites," he explains.

◆ NAMRRATA DUTT

Inward-looker

Talk is cheap. It's the walk that is difficult," says 31-year-old Darshan Bijur, head of business development at KPMG. And it is this art of implementing what others believe only in talking about that Bijur considers his forte. At KPMG his job responsibilities include not only dealing with clients but also explaining "the fairly new" stream of business development to people working at KPMG. "Looking inwards is as important as looking outwards," says Bijur, who joined KPMG 1_ years ago to set up its business development division. Today he reports directly to the CEO and, among other things, looks after formulating and articulating strategies for the Indian chapter of KPMG, ensuring their implementation and creating fresh client bases for his company.

Bijur, of course, has enough experience in the field of business development to know what direction to take as he set up the business development wing at Ernst & Young before he joined KPMG. "At Ernst & Young my CEO agreed with me when I said that we had to change the way our clients perceived us. We needed to get our positioning right and present ourselves in a particular manner," says Bijur

Though Bijur finds business development a very challenging field ("it's not a part of the traditional management structure, so you are learning a new thing every day"), he still looks back at his first job with ANZ Grindlays Bank with maximum fondness because he met his wife to be there. "But then the bank had a policy that only one of us could work with them, so I left and joined Ernst & Young, ' he says. Now, of course, things have settled down in more ways than one. Bijur loves travelling and his job with KPMG gives him enough scope to be out of Delhi for at least 10 days every month. "I also manage two holidays when I go whitewater rafting in the Beas to get my batteries recharged," he says. But there's another reason for his satisfaction: "It feels good that I managed to break into a field where it is generally assumed only MBAs can do well," says he with a laugh.

◆ PUNAM THAKUR

Global managers

Hindustan Lever has established itself as a global supplier of top-notch managers to Unilever's worldwide system. Now it's the turn of Pepsico India Holdings. The soft drink company's head of planning, Samresh Parida, has been recently posted to Pepsico's worldwide headquarters in Purchase, New York. He will be working in the planning department as part of a team under vice-president Indra Nooyi who fronts Pepsico's M&A moves. Parida, who's been with Pepsi for seven years, will be replaced by Vinod Rao who comes on board from ICI.

Another multinational, Warner Lambert, is picking talent from India too. Rohinish Hooda, 33-year-old director-marketing for consumer health products at Parke Davis (a Warner Lambert subsidiary), has been appointed as country manager for Indonesia. Benadryl and Gelusil are two of Parke Davis' popular healthcare brands.

Restructuring spree

Kumar Mangalam Birla is slowly but surely restructuring the mighty empire left behind by his late father, Aditya Vikram Birla. *Business India* has been regularly reporting the organisational changes at the group in these columns. A few months ago, Grasim's textile business was bifurcated into the spinning and fabric divisions. Vikram Rao, till recently president of Arvind Mills' shirting business, is now Grasim's new group executive president-fabric and apparel business. S.B. Agarwal, a company old-timer, will head the spinning division. Grasim also has a new director in Mahesh Bagrodia, who also continues to be on the board of the Birla Management Corporation, the group's strategic thinktank. Initiatives are also on in the information technology (IT) front. L. Sunder Rajan has joined the Birla Management Corporation as vice-president-corporate IT. Sunder Rajan was earlier group head-IT at SHV Energy India, a subsidiary of the Netherlands-based SHV NB. Other roles are also becoming clearer. Saurabh Misra, who had joined the Birlas from ITC earlier this year, it is learnt, will be heading all of the group's cement businesses, which are being put together.

Taking flight

With the retirement age at Air-India back to 58 from 60, there has been a spate of movements in the senior echelons of the airline; particularly in its commercial department, a key division which includes such functions as marketing, travel agents and the like. P.L. Goregaonkar, deputy commercial director-coordination, has moved to New York as regional director for US and Canada. P.K. Sinha, commercial manager-marketing is now regional director for India. V.G. Kashyap, who was deputy regional director-India is officiating as deputy commercial director-marketing and D.H. Khusrokhan, who was commercial manager (traffic services), is also officiating as a deputy commercial director-marketing services.

Kashyap is one among the senior echelons of Air-India, who has been officiated

Moving up

Change remains the operative word at Colgate-Palmolive. Preparing for a gritty battle royale with rival Hindustan Lever, Sudarshan Joshi, senior brand manager-double protection and calciguard, has been promoted to regional manager-sales for Maharashtra for all toothpaste brands. His brief is to beef up brands. The latest ORG-Marg analyser report reveals that Colgate toothpaste brands have a 47 per cent share in the urban market and 58.25 per cent in the rural market, giving it a total marketshare of 51.1 per cent. Cibaca, a division of CP, meanwhile, has a 0.53 per cent of the urban market and 0.44 per cent share of the rural market.

Recently launched Colgate Super Shakti, considered one of the better formulations in recent times, is expected to enable CP to garner a larger marketshare. Against this, HLL commands a 39.25 marketshare in urban areas and a 32.29 share in rural areas. Take the battle to Levers is the *mantra*.

Shifting gear

Abhay Firodia's Bajaj Tempo has lately been in the midst of launching new products and aggressive marketing to complement its stable of light commercial vehicles like the Matador and the multi-utility Trax. R.N. Somai, an auto industry veteran, is to soon join the company as its new chief operating officer (vehicles). He was till recently the managing director at Premier Auto Electric, an auto spare parts marketing company owned by the Doshis of Premier Auto. Chairman Arvind Doshi, it is learnt, will now become managing director of this company as well. Somai will be based in Pune and will oversee the manufacturing, purchase and marketing of the above vehicles. Reportedly, Firodia is also looking to appoint a new chief for its tractors division.

There is also a change of guard at marketing for Park Avenue, the Raymond Mills brand. P.K. Sengupta, who was heading sales at Berger Paints, will now be the new general manager-sales and marketing, for Park Avenue.

TAPMI

Admissions 2000 - 2002

POST-GRADUATE DIPLOMA IN MANAGEMENT (PGDM)

POST-GRADUATE DIPLOMA IN MANAGEMENT – FAMILY BUSINESS (PGDM-FB)

TAPMI is one of the premier B-Schools in the country, reputed for its two year residential programme offering a Post-Graduate Diploma in Management (PGDM) recognised by AICTE and awarded equivalence with MBA by the Association of Indian Universities (AIU). Backed by highly qualified faculty and excellent infrastructure, PGDM offers a wide array of courses.

* Students can take specialized courses in Marketing, Finance, Human Resources, Entrepreneurship and Systems. TAPMI attracts students from all over the country with a range of academic backgrounds. Strong support is provided for securing placements through campus recruitment.
* From this year, TAPMI is also offering a PGDM with specific focus on Family Business (PGDM-FB).
* Candidates applying for PGDM-FB must be sponsored by their family business.

Eligibility:

A three year (10+2+3) university degree, recognised by the Association of Indian Universities as eligible for postgraduation, in any discipline with not less than 50% in the overall aggregate (45% for SC/ST). The same requirement applies to those with qualifications like ACA/ICWA/ACS. Candidates appearing for the final year degree examination in 2000 can also apply.

Weightage:

Due weightage will be given to candidates

* with work experience.
* sponsored by their organisations.

T. A. Pai Management Institute
Manipal – 576 119, Karnataka, India
Ph: (08252) 70162/73162/71358/73163
Fax: (08252)70699/70622
Grams: TAPMI, E-Mail: tapmi@mahe.ernet.in

However, such candidates have to go through the same selection process as others.

Admission Procedure

1. All candidates seeking admission to either programme should appear for the Common Admission Test (CAT) to be conducted by IIMs on December 12, 1999. The CAT Bulletin with application form has to be purchased from select branches of the State Bank of India.

Note: CAT is used for shortlisting candidates who apply for admission to TAPMI. IIMs have no role either in the selection process or in the conduct of the Programme.

2. Register at TAPMI by filling a separate application form.

* **TAPMI's application form and handbook of information will be sold at the same branches of State Bank of India where CAT forms are available.**
* Alternatively, candidates may receive the application form and handbook of information by registered post by sending a DD for Rs. 800/- (Rs. 500/- for SC/ST) drawn in favour of **T. A. Pai Management Institute**, payable at either **Manipal** or **Udupi**.

3. Candidates shortlisted on the basis of CAT ranks will be called for Group Discussion and Interview for final selection in Manipal during April/May 2000.

Last date for receiving completed Application Forms is December 8, 1999

Executive Education Programs

TAPMI has launched Executive Education Programs of various modules aimed at middle level executives, brand managers, owners of small and medium enterprises and CEOs. These programs, held regularly, vary in duration from 3-5 days. The Institute is recognised as faculty development centre for training faculty members in management institutes of South India. TAPMI also offers Company-specific programs which could be conducted at Company/ TAPMI premises.

TMI/899

An Opportunity to

Practise what you Teach

Instead of a class, a multi-business corporation. Not a blackboard but real-life. Where the students are professional managers. Not just ideas but ideas that lead to initiatives...

In short, an opportunity for academicians and HR consultants to actually do what they advise. For a 1-2 year period in Calcutta.

You'll get ample scope to contemporise our HR strategies and systems, and apply your specialist skills to a variety of operations. As a consultant to our think tank, you'll gain valuable experience from industry applications. Especially if your areas of expertise include Organisation Design, Competency Modelling, Job Evaluation, Performance Management, Remuneration & Rewards, Organisation Development, Career Management and building a Learning Organisation.

We expect you to be between 30 and 40 years. A livewire professor, research scholar or even a consultant in a reputed organisation/institute.

E-mail your resume rightaway to
advertiser1@contractadvertising.com
Our client will get back to you with a remuneration package and a bundle of benefits that will more than make up for the lien we're asking you to take from your current assignment.

We have all the material 'ready-made' for success.

Now all we need is a capable Business Head.

S. Kumars, one of the largest textile groups in India, has a diverse product mix of numerous brands which are market leaders in their own right. Considering the growing popularity of ready-to-wear garments, S. Kumars, with its inherent strengths, is all set to make an impact in this category. For our foray into the ready-to-wear segment, we are on the lookout for a dynamic and result-oriented professional to head this venture. The ideal candidate for the position would possess a management degree (MBA or equivalent) from a management institute of repute and must have relevant experience in the ready-to-wear industry. Additional experience in brand management, marketing or sales and distribution of FMCGs or textiles would be an added advantage. She/he should also be adept at evolving brands from the conceptualization stage to market leadership and should be versatile at designing & implementing marketing strategies. The incumbent should have spent at least 5 years as an independent profit centre head, responsible for operations, profit and growth She/he should also be an excellent team player, having relevant exposure to information technology The chosen candidate would be expected to select and develop a team of managers and executives to implement the project successfully. Responsibilities would also include developing the sourcing, distribution and logistics infrastructure for the new venture, and of course, strategic planning and adherence to business profitability and growth objectives A satisfying work environment and an attractive remuneration package awaits the deserving candidate

Mail/fax your Curriculum Vitae within 15 days to Mr Harsh Sharan, V.P. Corporate HRD, S.Kumars Synfabs Ltd , 'Avadh' Avadhesh Parisar, Shree Ram Mills Premises, G.K. Marg, Worli, Mumbai 400 018 Fax: (22) 4931685. e-mail: skumars@bom3.vsnl.net.in

TRITON/99/SK/088

YEARS FROM NOW, WHOM DO YOU SEE YOURSELF WORKING FOR ?

A bits 'n pieces software unit ?

Or a leader in software products ?

Since its inception, Kale Consultants has single-mindedly focused on creating software products for selected vertical markets. Kale is India's leading developer of software products for the airline, banking and healthcare industries. The company's products are in use at over 500 installations in leading banks around India and at 15 airline companies, spread across six continents.

Kale's focus on creating and nurturing brands, intellectual property and domain knowledge make it one of the few companies operating at the top end of the value chain.

Today, Kale has 350 innovators, 3 development centres at Pune, Mumbai and Chennai, 6 sales/ support offices in India and 3 international subsidiaries. It has posted a CAGR of 40% over the last 3 years, with exports rising by 72% during the period and by 114% in the last year alone.

With the globalisation of its product strategy and a rapid extension of the product portfolio alongwith a widening customer base, Kale Consultants is on the threshold of explosive growth.

General Manager - Projects

apidly expanding and the prime criteria of has become the company's ability to quickly, reliably and efficiently. With a new sq.ft Development unit at Pune which will a variety of projects in new and emerging technology, Kale is on the lookout for who can provide exceptional leadership Development unit.

ll be expected to meet and exceed customer tations, build a team capable of dinary results, contribute to strategy and world class practices.

ould be a B.E. or B.Tech/ MCA with 10 to 12 xperience in managing large IT projects in technologies and platforms including Server applications. You must have a track record of outstanding performance ferably be in your mid 30's.

l be reporting to the Chief Operating Officer l be based at Pune.

General Manager Iministration

e is upgrading its infrastructure on a ious basis, planning, procurement and ing implementation assumes a central ance. Efficient administrative services, lly those related to the day to day affairs of mpany - housekeeping, security, travel, on, canteen, messages - are the key to the running of the organisation. A person with ity to visualise and implement world-class s, and inculcate a spirit of service in the dministration team would be vital to this

you should have been in the armed forces, able to bring to your work, the ardor and required for uncompromising excellence.

l be reporting to the Chief Operating Officer be based at Pune.

nior Manager - HRD

a pivotal position as the company is going exhilarating growth and concomitant ational change. You will be responsible for of HR functions that include recruitment, g and career planning with the sibility of infusing dynamism for greater

s professional qualifications in HR and el administration from a premier institute bly IIM, XLRI or TISS. In addition, you hav had 5-8 years of experience, of which yea s should have been with a service at

l b reporting to Chief Advisor- HRD and as at Pune.

Senior Manager Corporate Communications

In its formative years, Kale had maintained a low profile, but over the years the company has built enormous credibility, respect and trust with its customers and has made a name for itself in its selected markets. With global ambitions, the company has now decided to aggressively focus on brand building.

You will be responsible for the entire gamut of corporate communication - PR, Investor Relations, Advertising, Events, Sales collateral, Newsletters, Website, etc. You employ corporate communication innovatively to make the job of the sales team easier.

You must be an MBA from a premier institute with specialisation in marketing. You should either have been a Brand Manager for a reputed organisation or an Account Manager with an agency for 7-10 years.

You will be reporting to the Marketing Director and will be based at Mumbai.

Senior Manager - Network and IT

The company has facilities for over 500 professionals spread over 3 development centers, 6 sales/support offices in India and 3 overseas offices. The infrastructure comprises of both local and wide area networks, application servers, internet servers etc., with a wide variety of technologies, databases and development tools. The company will continue to invest in creating an environment and facility that enables it to serve customers from across the world in a highly productive manner.

You will take responsibility for the entire network and technical infrastructure in the company. You will be required to develop a technology strategy, and then implement it. Ensuring proper administration and management of the technical environment would also be part of your job responsibilities.

You should be a B.E. or B.Tech with Microsoft and CISCO certifications. You should have 6-10 years experience in system and network administration with extensive involvement in the planning and management of a large, complex and mission critical IT set-up. Broad management vision and excellent leadership skills are prerequisites.

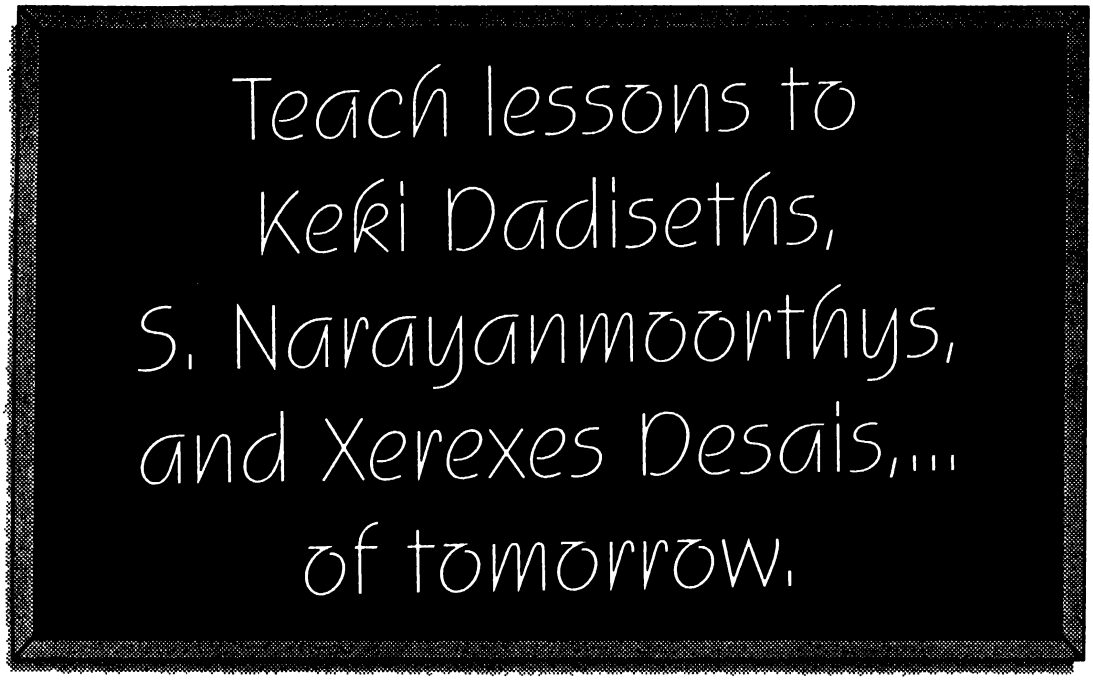
You will be reporting to the Chief Operating Officer and will be based at Mumbai/Pune.

Product Managers

Kale is one of the few software companies in India to have created and sold application products without restricting itself to just services. Today the company's products are among the top 3 in each of their segments with the primary area of focus being the airline and banking industries.

The company's aggressive thrust on growth would rest on the shoulders of the Product Managers for each of its main product lines. This position requires you to be in total command of positioning, pricing, promotion, and packaging with a focus on creating unique and powerful positions in global niches.

You must be an MBA from a premier institute - IIM, XLRI, Bajaj or FMS - preferably with an engineering background. You should have 3-5 years of experience, preferably a mix of sales and product management. Experience in Banking, Hospitality or Travel industries will be a big plus. Outstanding conceptual skills, sound analytical ability and enormous energy are essentials while an exposure to new technologies like the Internet will be a definite advantage.



You will be reporting to the Marketing Director and will be based at Mumbai/Pune.

All candidates should be independent, highly motivated and possess excellent communication skills. Prior exposure to an ISO 9001 environment will be a distinct advantage. Remuneration will be comparable with the best in the industry.

(Leading from heat to cool comfort)

Sales Manager

The ideal candidate should be a Mechanical Engineer Graduate, around 30 years of age, with 5-7 years of experience in the sale of engineering products both to OEM's and trade. Candidates with hands-on experience of Application Engineering will be preferred.

The incumbent will be responsible for maintaining close liaison with OEM's in the Western Region and also dealer sales for a specified territory. He would be reporting to Regional Manager - Western Region.

Placement and compensation will be commensurate with experience. Please apply within 7 days with all relevant details to DGM - HRD, **Tecumseh Products India Ltd.,** Balanagar Township, Hyderabad - 500 037. Fax (040) 3078945

XIM-B is looking for faculty

XIM-B since its inception in 1987, has strived to provide quality management education & its success is reflected by the respect it gets from students, peer institutes and the industry. The Institute pioneered in executive programmes in management, which has found wide acceptance among the working executives. The Institute activities are supported by IT infrastructure, modern research & teaching aids. The faculty members participate in teaching, executive training, research & consulting.

With an intend to augment its human resources, for meeting the growing academics requirements and providing a stimulating intellectual environment, the Institute is looking for persons who can take up teaching position in following areas : *Marketing, Accounting & Finance, Organisational Behavior, Information Systems, Human Resource Management, Operations Management, General Management & Economics.*

POSITIONS	SALARY SCALE	TOTAL EMOLUMENTS (Min Basic +DA)	QUALIFICATION & EXPERIENCE
Professor	Rs.18400-22400	Rs.24288	Ph.D with a very good academic record. A minimum of ten, eight and three years of experience in Teaching/Research/Industry for Full, Associate and Asst. Professors respectively.
Asso. Professor	Rs.16400-20900	Rs.21648	
Asst. Professor	Rs.12000-18300	Rs.15840	

- Adjunct Professor: Persons working in industry or acamedic Institutes may apply adjunct professror for a period of 3 months to 1 year.
- Person with strong academic credentials but without doctoral degree may be considered.
- Faculty enjoys on-campus accomodation and share of in-company and consulting inco me.

Send your CV in confidence to The Director within a month.

Xavier Institute Of Management, Bhubaneswar - 751013,

'ACKAGED TOURS

European experience

When travel companies like SOTC and Raj started their ad blitz this April, "Indian Food" was at the forefront of their marketing thrust. And no doubt, for predominantly vegetarian tourists, a large comfort zone in a tour package is the familiar food. But in doing this, two important dimensions of the package tour experience are not highlighted — the role of the tour director or guide in making it a seamless and painless experience and the chance to interact and be part of an international community. This is what the Cosmos and the Trafalgar Tours offer. Despite all the black humour aimed at the "12 capitals in 12 nights" tour options, seeing Europe or any country for that matter on a reconnaissance trip is the most efficient tourist decision you can make, considering the panorama of sights and the range of tourist experiences involved.

Take Venice, which alone attracts 12 million tourists annually. Or the sheer logistics of sightseeing in Paris, Rome, and the Vatican, which could be daunting without professional help like that of Trafalgar Tours. Despite being bushed at the end of the trek, the 52 tourists (from over eight countries) in the group acknowledged the managerial skills of the tour director William Jones and the driving skills of the coach driver, the inscrutable Dutchman Vena.

The experience started right from Victoria. The currency pack of the equivalent of $200 in six European currencies made the passage through each country easy. And the well-planned lunch/ rest/ little souvenir stops at the numerous auto grills in Europe. Jones took charge right at the beginning, from the Channel crossing

JAI SHANKAR

Cruises are a part of tour packages

Dos and Do nots

Whether you are a seasoned tourist or a rookie to the packaged tourist drill, there are some things you need to know that your travel agent rarely tells you to watch out for.

• Make sure that your travel agent informs you about all the costs involved; it may happen that, after you embark on the tour, many sightseeing trips become "optional", a euphemism for the most important spots you have to visit in that place. For example, the visit to the Notre Dame Cathedral and the Versailles Palace had to be paid for as part of "optional" sightseeing. It would have been silly if you did not get to see these on a tour of Paris. Thus, after the tour charge of $1,000 paid up in India through TT Travels, which handles the marketing/ticketing for Trafalgar Tours, one needs to pay at least $600 for the options. It was obvious that TT Travels personnel had no idea about how to market the package to the tourist; the Chennai office was quite indifferent to many basic needs like alternative travel dates (in case the first choice was not available). It's another matter that Trafalgar Tours is so well established that snafus by the Indian side are more than compensated for by the European reps.

• After you get tempted by the fabulous shopping that is spread out in places like Lucerne, Florence, Venice, Munich, and Heidelberg, even $1,000 per person as extra is not a surprise. So there, you're warned. Going armed with an international credit card is a sensible option.

• The Trafalgar Tourist is allowed one airline bag per person plus one piece of hand baggage. The good news is that, once you check your bag in at Victoria in London (the starting point of the tour), you don't have to heft the beast and risk a hernia. But you must remember that what goes into that bag requires the most careful planning and forethought to factor in your clothing needs for the tour, without laundry facilities and even ironing, as none of the European hotels on the trip allows you to use an iron.

Indian ladies would do well to stick to comfortable *salwar-kameez*; better still a comfortable pair of jeans/shorts and a number of cool cotton tops, especially if you are taking the tour in summer. Contrary to popular belief, the summer heat can wear you out. A 12-day trip of constant travel and sightseeing can be really killing if you don't have proper cool clothing and even more important, comfortable sneakers or open sandals.

• Every hotel gives you a reasonable breakfast, which you can tank up on, if you can gulp it down at the unearthly hour of 7 am and march. But if you have problems getting up – togged and tanked – at such wee hours, make sure you have help. And none of the hotels except in Paris had facilities to make your own coffee/tea.

• The tour director is very helpful, but it is wise to plan and carry any medication that you need on a regular basis.

• It also makes for big economy to carry enough camera supplies. Buying film at European tourist destinations can be really stupid at those prices. •

HARSH MAN RAI

Indian tourists can now get a feel of such European locales

in the P&O Stena (the channel ferry), on to Calais and through the vineyard country on to Paris. Arrival in Paris on Bastille Day could be a bane if it weren't for Jones, who changed sightseeing plans instantly as the Champs Elysee route was closed for regular vehicular traffic. Dining at Montamarte, Jones had the forethought to tell the waiter about the special needs of "the strict vegetarians".

As a recognised tour director, entry into each country and payment of the country toll was made painless. Even passports weren't checked. Was the enormous effort and payment for the visas a waste? Lake Lucerne and the ride up Mt Pilatus is even more memorable when you hear the Swiss cowbells ringing in the distance even as the enveloping clouds and mist cover the Alpine slopes. No one could have recounted the story of the Lion monument and its tribute to the 27 Swiss soldiers who laid down their lives to protect the last French monarch and his wife from the bloodthirsty wrath of the Revolutionaries the way Jones did. You stand in the magnificence of the Sistine Chapel and wonder at the genius of Michelangelo, and the agony and ecstasy he experienced painting this massive arched vaulted roof. And if the guide, Madame Eugenia, had not asked the group to watch the eyes of the crucified Christ which seem to follow you as you walk past, the sheer ingenuity of this masterpiece could have easily gone unnoticed.

According to the French and Italian laws, the tour director has to hand over charge to local tour guides. And Eugenia and her counterpart in Paris do an admirable job in shepherding their group through the numerous sightseeing trips, unravelling the wealth and intricacies of French and Italian art. And on the long drive to Venice, the route dotted with castles and monasteries like the Dominican one with 12 steps of the cross leading to the hilltop and the sulphur springs offers you a wondrous glimpse into the mastery of those ancients who had excelled in every building technology.

Jones points out the little church in which hangs a painting by St Luke of the Madonna, on the way from Florence to Venice. And tells you the story of the sarcophagus of St Anthony at Padua, the saint of lost things. And then we stop to admire the bronze statue of Juliet, Shakespeare's immortal heroine. "Don't miss Juliet's shiny parts on which countless gents have run loving hands. There is a Coliseum here built in the 12th century to hold 20,000 spectators. It still does today."

Shopping is not sidelined, either. The tour offers at least three major shopping stops, one of the oldest watch shops, Bucherer, in Lucerne, a variety of leather goods and designer labels in Florence, and Swarovski Haus at Innsbruck, apart from many options at St Mark's Square in Venice and short stops at Munich and Heidelberg. Even for the well-heeled Indian tourist, European price tags can bring home the harsh realities of the exchange rates. By the time the coach reaches Amsterdam, the last leg of the tour schedule before the Channel crossing, you realise that this European experience has only enriched you. And the unspoken vow: I must come back.

◆PADMA RAMNATH

FILMS

Hooked on to Hitchcock

Alfred Hitchcock
(1899-1980)

"If you create the fear, you've got to relieve it."

— Alfred Hitchcock

"He is probably the only director whose name can draw the general public into the theatre."

— Albert J. Lavaltey

Alfred Hitchcock is certainly the only film director whose name, figure, manner and general thematic concerns are well known to the public. Largely through his regular and always his walk-ons in his own movies, he has become familiar, in body and spirit to millions. His peculiar blend of comedy and melodrama has raised such expectations about his films that his name is frequently coupled with his stars on the marquees of theatres.

Hitchcock made murder into an art form. He revelled in the label of "master of suspense", but he was master of much more than that.

In a career spanning over 50 years (1925-1976), Hitchcock completed 53 feature films, 23 in the British period 30 in the American. Through his early British films we can trace the evolution of his professional image, the development of both the characteristic Hitchcock style as well as the Hitchcock thematic. His third film, *The Lodger* established him as a maker of thrillers

His most famous English films such

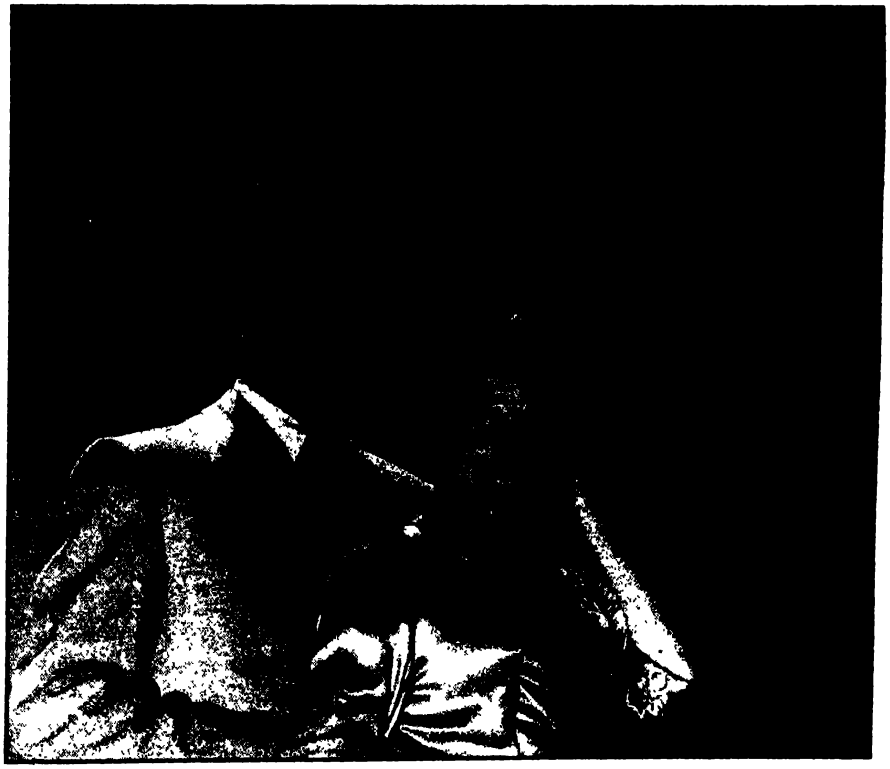
1921 The Princess of New York



as *The 39 Steps* (1935), *The Lady Vanishes* (1938) and *The Man Who Knew Too Much* (1934) were complex and effective spy thrillers.

Hitchcock succumbed to the lure of Hollywood in 1939, his first film there being the romantic thriller *Rebecca* (1940). In Hollywood, he immersed himself in the slickness of Hollywood film making and continued to draw from a seemingly inexhaustible cinematic bag of tricks.

Everyone remembers it. The murder of Janet Leigh in *Psycho* (1960). The birds' last terrifying attack in *The Birds* (1963). Scottie's nightmare in *Vertigo* (1958). The tennis match scene in *Strangers on a Train* (1951). These moments reveal Hitchcock's gift for the suspense setpiece, his mischievous relish in surprising his audience. These are images that affect us in a powerful way and yet cannot be easily explained or verbally analysed. They simply have a horrifying, unsettling impact. They stay with for years, clear, disturbing, the perfect visual trigger for our deepest notion. This is 'pure cinema'. And Alfred Hitchcock remains one of the greatest masters of pure cinema.

Hitchcock was a meticulous director who planned each shot in his films with great care and rarely deviated from his script and story board sketches once the camera began to roll.

The most ironic pattern in Hitchcock's art lies in its relation to commercial pressures. His temperament demanded commercial as well as creative success – the more popular his movies, the more powerful was his ability to manipulate an audience and reach out to the collective unconscious.

Farly Granger (left) and Ruth Roman in Hitchcock's Strangers on a Train

Astoundingly, Hitchcock never won an Oscar, though he did receive the Irving Thalberg Award in 1967, and a long-running mystery magazine bears his name. In 1979, he received the American Film Institute Life Achievement Award. The following year, the world of cinema lost one of its greatest names.

Laying it bare

THE NUDIST ON THE LATE SHIFT
And Other Tales of Silicon Valley

By Po Bronson
Secker & Warburg, 1999
pp248, £5.30

No-one witnessing the frenzy of Internet stocks can fail to wonder just what has driven the craze to such an incredible high. As author Po Bronson, a keen observer of the Valley (Silicon Valley, roughly 100 miles of populated desert stretching east from San Francisco) points out, certainly the topographics of the Valley itself do not give any indication of the level of excitement, hard work, and sheer madness that have shaken the world from this tiny place.

Software people tend to be somewhat crazy by "traditional" standards. Actually, this is equally true of hardware people, for the very simple reason that much of hardware design today is built out of sheer brainpower rather than soldering irons and breadboxes. This fact brings much of the charm to this highly personal account, encounters with people who have made it or hope to make it to the ranks of the super-rich.

Many of them, like Yahoo! cofounder David Filo, couldn't care less about the money itself. Filo became a Silicon Valley icon when he was photographed sleeping under his desk (the picture was published in the *San Jose Mercury News* under the caption "Sleepless in Silicon Valley"). The picture is helpfully printed in the first pages of the book, and shows a figure huddled in a blanket under a computer desk piled untidily with papers – this is the guy that provided the first comprehensive search engine for files accessible from the Internet! When the author met him some years later, he asked him if he still slept under the desk at times, to which Filo mutely pointed at his workplace — the piles had now extended under the desk, and there was no place left. The point is, when the picture was taken, Filo was worth half a billion dollars; by the time the author met him, his wealth had doubled.

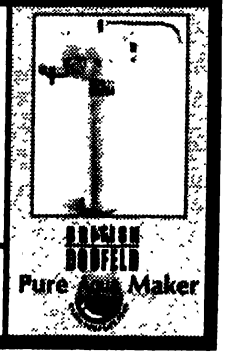
There are many other, equally brilliant, programmers and entrepreneurs who have found their niche in the Valley. One of them is India's favourite, Sabeer Bhatia, who gets a chapter titled (what else?) *The Entrepreneur*. The author has actually divided the book to give each of the defining characters of the Valley a place, thus, *The Newcomers*, *The IPO*, *The Entrepreneur*, *The Programmer*, *The Salespeople*, *The Futurist*, *The Dropout*, and to close it out, *"Is the Revolution Over?"*

"Mindshare: As opposed to market share. When a salesman says, 'I'm building mindshare,' what he means is he hasn't sold a thing"

George Gilder, whose name has become synonymous with information technology and the future of telecommunications, is laid bare in a curious, somewhat ambivalent way. He comes out rather strangely, more self-promoting than guru-like, which may be a comment on the ability and propensity of the media business to build personalities rather than value-added content. Danny Hillis, who is working with Disney (oddly enough) to define the future of technology, is using a multicameral approach, building a clock that will tell the time accurately for the next 10,000 years. The sheer audacity of this project, beating any human endeavour of the past 10,000 years, is a testament to the brash optimism that has built the Valley.

As the contents list indicates, Bronson captures a telling picture of the "other people" who make the Internet business what it is today, the salespeople and the investment bankers, and the technologists themselves, who make their (sometimes incredibly wealthy) living from the businesses that others are losing their sleep over. Who else but a programmer could exercise his (or her) individuality to the extent of the eponymous Nudist, who used to strip after 10 o'clock at night, when most other workers had left the building. The nudist works in a film animation and SFX laboratory, and was among the most skilled workers, hence could get away with just about anything. Even so, when he accidentally came out nude one evening a couple of hours earlier than scheduled, he nearly precipitated a major labour action, with film workers claiming they'd been harassed.

This book is a must-read for anyone who wants to see the wealth creation that the Internet has spawned shifting to India, whose people have already brought a new definition in the Valley to the abbreviation IC (it used to mean integrated circuit, but now means Indians and Chinese, who dominate the major knowledge worker segment of the industry). Understanding the huge money shifts that this industry spells, which have already forced a change in management emphasis from corporate-centric to customer-centric. In the last couple of months it has witnessed the mushrooming growth of wealth among the software emperors in India (Azim Premji and Subhash Chandra), leading and taking off past the traditional brick-and-mortar kings (Tata and Birla, even Ambani).



Ignore this phenomenon if you will, but first enjoy the book's accurate descriptions and clear expositions of this bewildering new world, and then decide whether it is an opportunity or a flash in the pan, like so many gold rushes have been in the past.

Charting the Shoals of Entropy

THE DANCE OF CHANGE
The Challenges of Sustaining Momentum in Learning Organisations

By Peter Senge *et al*
Nicholas Brealey Publishing
pp596, £15

How does one begin to describe a printed book that not only focuses on the exciting world of change management, but uses the commonly accepted yet brand new context of the Web to do so? Peter Senge, professor at MIT and chief coordinator of the seminal works that precede this volume, *The Fifth Discipline* and *The Fifth Discipline Fieldbook*, manages not only to do this, but actually carries it off with panache.

The book is cleverly planned to allow the reader maximum access to any chapter of interest with ease. Within the chapters, a powerful use of icons guides the eye to the import of the material contained therein, including such concepts as *leaders* (three different types of reference materials), *tool kits, exercises* (also classified as personal, group and so on), *resources,* and the like. There are also *systems diagrams*, which are simple flow diagrams that indicate clearly how system processes described in the book work. Margin notes aid the text by drawing one's attention and focusing the mind.

The content is compiled from the actual work of a large number of researchers and workers who have interacted with Senge and with each other in their professional and academic careers. Thus there is no single author, although a strong effort is visible to avoid a multiplicity of styles. In reading the book, one's purpose is best served by reading the first chapter, to understand how the book is constructed. Thereafter different readers, depending on whether or not they are actual practitioners of change management, may find it practical to browse through the book to subjects of practical interest, a process aided immensely by extensive "links" in terms of pointers with chapter and page number references.

The descriptions of transformation processes is explained by several of the authors in a very personal manner, which helps absorb some challenging concepts better. For instance, Philip McArthur, Robert Putnam, and Diana McLain Smith describe the evolution of change management at their study group, which eventually, over a period of several years, evolved into a full-fledged management practice.

They met at the Harvard Graduate School of Education at Chris Argyris's course, and found that they, together with some other students, could work together in a study group. These three continued to work together, turning the group into a practice. Most people who counsel others (which is really what management development is: only, counselling as it is applied in the organisational paradigm) find their own deeply ingrained habits and prejudices tend to interfere with their ability to be effective. Chris Argyris, on a visit to the practice, got right to the core and helped free them from their own traps: simply to accept oneself and move on from there. The most elegant solutions often appear simple when viewed from outside.

The greatest challenge for a learning organisation is to accept the fact that it is in the process of change, and to grow fundamentally from that acceptance. In real life, what usually happens is that 'fire-fighting' tends to sideline development activity. Success also tends to blur sight of the hard work that remains, which then gets pushed off the priority list. Facilitators who consult with such organisations find it necessary to work much harder to keep their clients focused. This book clearly exposes these situations, explaining, with exercises, how to achieve constant improvement through the process of change. The final objective is to internalise change itself, thus assuring freedom from inflexibility.

As a result, almost any person involved with managing an enterprise, be it in a primary, secondary, or tertiary management role, will find the book a delight, since it is so clearly and well laid out. The writing style too is uniformly of a high order, helping the ordinary reader to understand complex subjects and concepts.

◆ VICKRAM CRISHNA

Understanding Indian business

INDIAN BUSINESS CULTURE

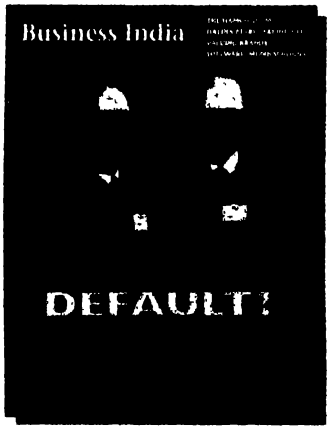
By Rajiv Desai
Viva Books, 1999
pp170. Rs195

Rajiv Desai did extensive research on various multinational companies that operate in India for this insider's guide. He covers the perceptions of Indians as a whole and how the bureaucracy interferes in every aspect of business, an aspect that could well damage not just the reputation but also the business prospects of any company. This book is a must read for potential foreign investors and businesspersons interested in investing in India or planning some business ventures. In addition, it could provide enough interesting material for people who are naturallv curious about the manner in which businesses are (or can be) run in India.

However, having said that, you do feel that the author has not dealt with certain vital issues adequately. For instance, there is nothing about the stockmarkets, accounting patterns, legislative procedures, environmental clearances, labour, and Indian taxation laws. Any investor who plans to invest in any alien country would appreciate knowing the judicial system and how much time might take for legal redress in normal circumstances.

Specifically, certain important details have been missed out. It is also difficult to understand why the author has omitted export/import policies. He covers extensively the budget proposals that get submitted every year, but there is no mention of the changes affecting imports/imports that can be anticipated and the levies that accompany the proposals. Rupee convertibility is another crucial point that is left out. He discusses the electronic media regulations in detail, but makes no mention of the Times FM controversy and the eventual withdrawal of the channel. A fairly good explanation of the open skies policy in the aviation sector feels incomplete without an examination of the long delays faced by the Tata–Singapore Airlines proposal and the final withdrawal by the Tatas.

The current issues and problems that beset the Indian economy and business have been discussed succinctly. Infrastructure development is still mainly in the hands of the state. Since the political class has developed a vested interest, it has used the public sector as a vote-building mechanism. This has resulted in excess staff and underutilisation of capacity in the public sector. Moreover, this sector still offers preferential recruitment that has caused the control of departments/companies to fall into wrong hands and contributed to the depletion of funds from the exchequer. There is little provision for upgrading/reengineering.



Population has been a major worry for the nation. However, statistics does show a decline and it is expected that a drastic drop will be evident from the year 2025. This in turn has affected the higher education system. There are very few good higher education institutes in India and getting admission has always been highly competitive. The major flaw in the system is the annual examination system and that has not been explained in the book at all.

Our policymakers have never advocated vocational education. A meagre budget allocation for higher education is the major cause for non-development of this sector. The other reason could be the subsidies on even higher education at the professional level. Also, nothing about the private institutes that offer vocational programmes that have been accepted by placement agencies and industries.

Overall, the book serves the purpose of informing the interested reader about the basics of the Indian system. Despite its obvious shortcomings, this work is still good value.

Mentor finds his métier

UMESH GOSWAMI

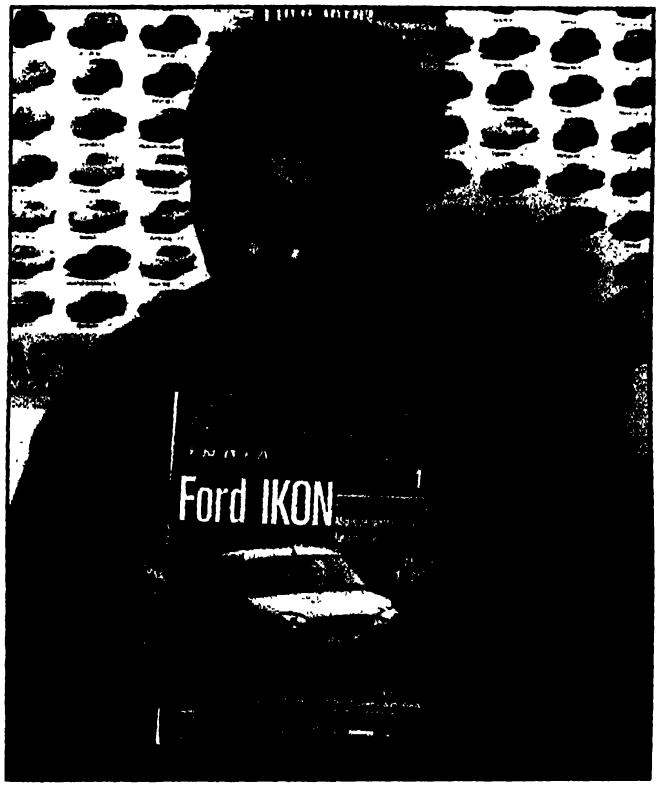
Twenty-two years is a long time in a profession. For Bhaskar Pant, president, Turner International India, it is now time to leave the media world. In fact, Pant is the man who has made *CNN* and *INT/Cartoon Network* household names in South Asia. But that's it for Pant. Having tasted the Indian environment after liberal economic winds, Pant felt it was time to start something on his own. "I've left the media world but not the communications world," says Pant. He has set up a management development firm, New Millennium, in Delhi. New Millennium will basically concentrate on imparting soft skills like business etiquette, communication, etc, to clients. "In an increasingly globalised and competitive business world, companies in India are finding a need to break out of the old, conventional ways and respond to the changes," he says. Pant has tied-up with Hong Kong-based Management Development of Asia-Pacific to bring a wider Asian perspective to the company. "I've always been a mentor to my employees, so I'm taking this as mentoring," he says. •

Hung up on Bollywood

Last fortnight Bangalore-based businessman Abhishek Poddar held two simultaneous exhibitions at Sakshi Art Gallery in central Mumbai — one on old Hindi film posters which were a part of his collection and another on *kanthas*. What took him by surprise was that it was the former that caught the media's attention. Posters of films such as *Uran Khatola, Sahib, Bibi aur Ghulam, Baiju Bawra, Mr & Mrs 55*, formed part of the exhibition. "The *kantha* work is some 100-odd years old, but I guess it is Bollywood that holds the mass appeal," he says. Sample Bollywood's impact: from what was supposed to be purely an exhibition of 40 ▸

Web *yatra*

The Web site for the Mahatma (mahatma.org.in), created by the Mahatma Gandhi Foundation led by Gandhiji's great-grandson, software engineer Tushar Gandhi, was dedicated to the nation on 3 September. Gandhian Ushaben Mehta was the chief guest and industrialist S.P. Godrej the guest of honour on the occasion. The Web site, hosted by Videsh Sanchar Nigam Ltd, is the largest and most comprehensive collection of Gandhiji's legacy in the



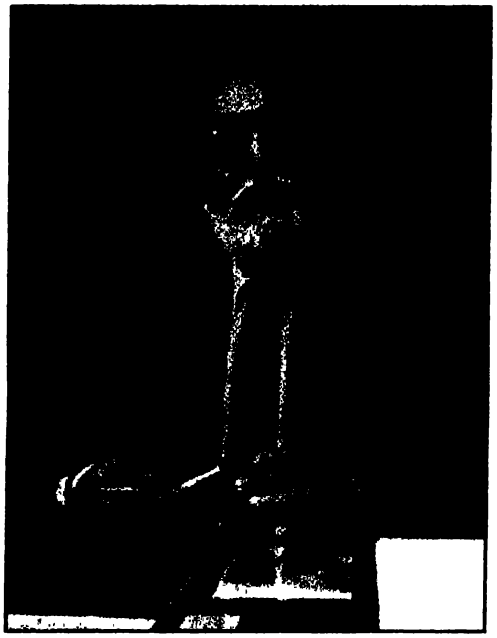
SANJAY BORADE

posters, 10-15 have been sold to collectors, movie buffs and the like. What started off as an excuse to get two evenings out from boarding school, has grown into quite a collection — of art, posters, sculptors, black & white photographs and, hold your breath, lizards made of metal. Besides collections, Poddar has another facet to his life. He helps run the family business of tea and explosives. ◆

rm of books, audio and deotapes, pictures and rtoons. It also hosts a discus-on group which chats on a verse range of topics. The undation intends to create veral special events for the ternet community in India d abroad aimed at reac-ainting them with the ahatma's teachings. A core up consisting of nakasabathy Pandyan, jay Mukhi, Harish Mehta d Dewang Mehta assisted e Foundation on this ject. ◆

New car (mag) on the block

Last fortnight a new auto magazine, *Autocar India*, hit the stands. Take a close look and you may be familiar with most of the names on the masthead. The magazine is spearheaded by publisher and editor Hormazd Sorabjee (previously editor of *Auto India*). After a good innings at *Auto India* and learning the ropes of the publishing business, "it was time to do something on my own," says Sorabjee. He has set up his own publishing company, Sorabjee Automotive Communications Pvt Ltd. As far as auto magazines go, competition is rife. While *Auto India* is number one (ABC certified), *Autocar* is counting on being number one in terms of the quality of information and its strength at vehicle evaluation. Sorabjee is going further than publishing. "I'm looking at providing and receiving information on a global network," he says. The London-based *Financial Times* has commissioned him to do a report on the Indian auto industry. Plans notwithstanding, one thing is for sure — *Autocar* will ruffle some feathers, if they haven't already! ◆



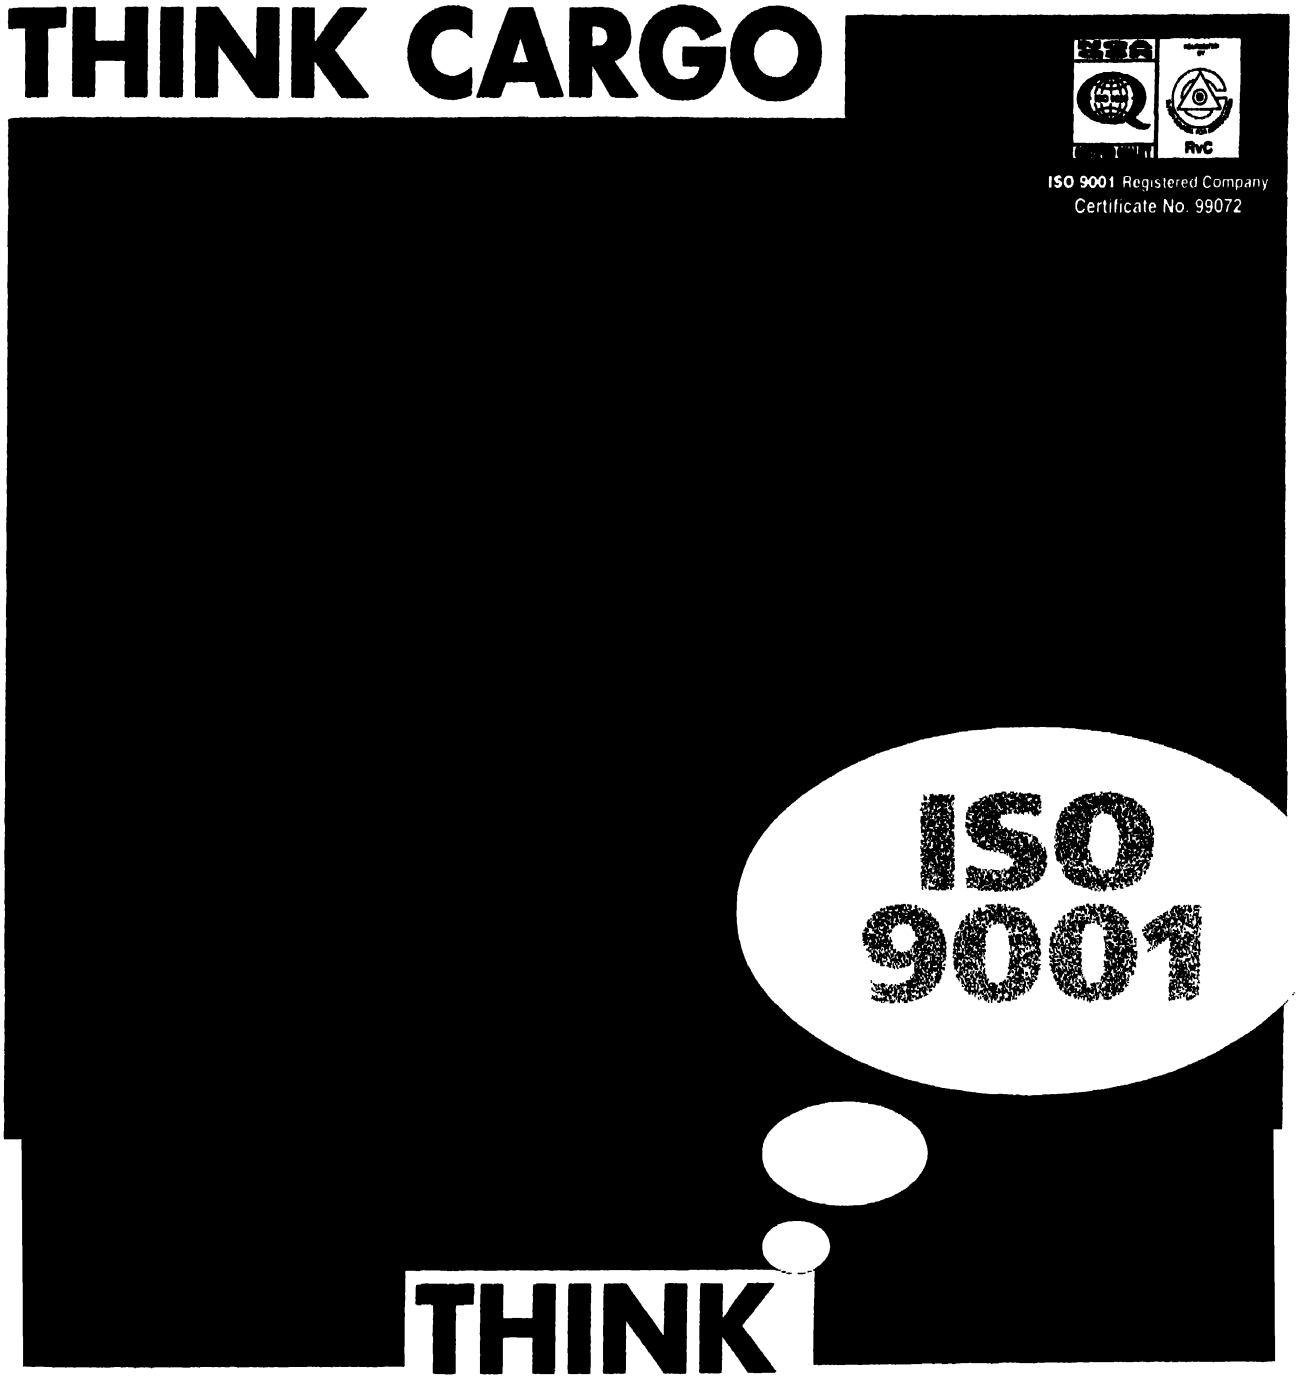
PAL ARSHANIAN BHATNAGAR

The much talked about India Talkies, a theme restaurant on the lines of Planet Hollywood, has finally made some headway. The promoters have finally found the most important thing for their restaurant — a place. The first outlet will be opened at the Phoenix Mills in central Mumbai early next year. India Talkies is co-promoted by Wizcraft Entertainment Agency, GS entertainment, Bharat Shah, Smita Thackerey and Swati Prashant Thanawala. Film stars **Salman Khan, Sanjay Dutt, Govinda, Karishma Kapoor and Mahima** are also involved in the project. "The restaurant will add a new dimension to entertainment," says Salman Khan. Besides serving Indian cuisine and cinema, plans are to host promotional activities like *mahurats* as well. This is serving cinema on a platter. ◆

"Regional parties are better"

As the elections get murkier every passing day with various political parties harping on personal attacks rather than issues that really need to be addressed, the job of the election commission is getting tougher. Not to be outdone, chief election commissioner **Manohar Singh Gill** has taken it upon himself to try and cleanse the system. Talking to **Manoj Narula** of *Business India*, he elaborates how during the last nine years the commission has become so effective and what role it envisages for itself in the coming years

Q. How do you see your role in the coming elections especially when there is so much animosity in the air?
A. Ever since the electoral process began, I have been personally disappointed at the tenor of the campaign with all political parties indulging in personal attacks and unethical practices. It has to be understood by all responsible people that to uphold the essence of democracy there has to be a check somewhere. Unfortunately, I do not find anyone completely innocent. Yet, I would say that perhaps the smaller regional parties are better than the various national parties, particularly the top two, in terms of restraint. As a former agriculture secretary, I know that we are struggling at 200 million tonnes of production and, with the pace of population growth, it may just not be sufficient. We are lucky to have good monsoons in the last decade and there seems to be no plan for an adverse situation. These are the issues every Indian would want to be seriously debated so as to what is in store for India in terms of long term economic well being.



Q. What are the basic tenets of the model code of conduct?
A. It is a mutual agreement between all parties that came into effect in 1967. The basic fundamental issue is that either at the state or national level one party going into elections holds the state power, which it should not use for electoral gains. The commission tries to broadly enforce policies that could create a level playing field. Over the last nine years, this code has become fairly effective. I have met 42 recognised national and state parties and discussed the various aspects of the code with them. It is not an easy task as we invite lot of criticism while playing the role of an impartial umpire or administrator.

Q. How will you ensure that everything goes right this time especially when there are voices from certain quarters that you are too harsh at times?
A. If one looks at the scale of operations we are involved in, it is not difficult to understand what happens when more than 100 crore people are involved. Telephones, fax, complaint petitions and what not makes life hell. Everybody wants instant action as in most cases the complaint automatically becomes redundant after 15 days. We have complete machinery across the country with three observers in every constituency as well as state level staff working throughout. I myself start working from 7:30 in the morning as the entire commission works in a military operation mode.

Q. What have you done to enhance the quality of elections through technology upgradation?
A. Well, I have introduced electronic voting machines (EVMs) successfully in the last elections on an experimental basis using the machines that were rotting in the stores for the last ten years. Let me tell you, these are simple battery-run EVMs prepared by our public sector plants in Hyderabad and Bangalore. Our election expenditure is to the tune of Rs700 crore. These machines will further reduce the cost and time as it needs no papers, no boxes and big counting stations. EVMs are also linked with our Website as we have computerised the entire electoral rolls. The parentage of the voter and ID card numbers is recorded to avoid bogus voting. Also counting becomes easy and fast.

Q. How do you monitor the direct as well as the indirect cost of elections in addition to regulating candidates and political parties not overstepping their limit?
A. As you know, in the last elections we spent Rs650 crore which is expected to touch the Rs700-crore mark this time despite 46 constituencies going to polls on EVMs. The entire expenditure is regulated at different levels right from constituency to the head office. In every constituency, out of three observers, one is a financial guy from either the Income Tax department or the ministry of finance or commerce who looks at the constituency level spending of candidates. Then we have senior officers at regional and state level working in tandem with the central office. Most of the powers have been delegated at various levels. Proper training is imparted for one month before deputing an officer for this job and he goes by the rule book supplied to each one of them.

Business India

Telecom is a sector in great ferment all over the world. Technology is changing very fast, leading one to believe that something akin to Moore's law in semiconductors is operating in telecom as well. Deregulation of telecom in advanced economies like the US, the UK and now Germany, has led to drastic fall in tariffs and better service; be it in fixed or mobile telephony or data communication and Internet services, despite the fact that even prior to deregulation, they already had an infinitely better telecom infrastructure than India. It is in this light that observers are looking at changes occurring in the Indian telecom sector and particularly, MTNL.

Set up as a basic service provider in the prime metro areas of Delhi and Mumbai, MTNL has rapidly moved ahead of its parent body, the DoT, in terms of growth in lines and revenues. Digitisation of the switches, introduction of Intelligent Networks, move towards better customer services all show that MTNL is on the right track. There is no doubt that change has been driven by the relative autonomy given to MTNL, by corporatising it. More recently the element of competition, has also given MTNL a wake up call. However the woes of private operators in their battle against DoT and their difficulties in raising resources before achieving financial closure of the projects due to uncertainties in telecom policy, have benefited MTNL by providing it with some breathing time.

But staff quality continues to be a matter of great concern for consumers, there being innumerable complaints about errant and corrupt linesman. The management should be given a free hand to deal with the inefficient and corrupt while being free to raise the remuneration of the better ones. Of course fibre optics in high density areas like the commercial districts and wire less in local loop in residential areas will reduce the need for intervention of line staff. On the mobile telephony front as well, while predatory pricing should not be allowed by any player, a genuinely cost effective technology along with reduced handset costs will lead to an expansion of the mobile market rather than a zero sum game. There is no reason why mobile telephony should not become a mass communication medium in metros as is the case in Scandinavia, Hong Kong, Singapore and European capitals. MTNL can provide leadership in the same.

The management also needs to make and be free to make commercial decisions like discounts to bulk consumers, tying up with specialists in marketing its data and Internet services, quick adoption of cost effective modern technologies, etc, on the run. If MTNL has to wait for DoT approval for all such operational decisions then it will never realise its full potential.

For one the divestment has to take place further and reach the level of 26 per cent there by facilitating the entry of a completely professional management for MTNL without interference from DoT. Also one seriously needs to examine whether two MTNL's are not better than one each focusing on service provision in a particular area like Delhi or Mumbai as two cities 1,000 km apart make no sense as a service area.

After all we Indians are a talkative lot, provided the service quality is good, tariffs are reasonable and telephone on demand becomes a reality, telecom is a real growth story and MTNL will continue to be a part of it.

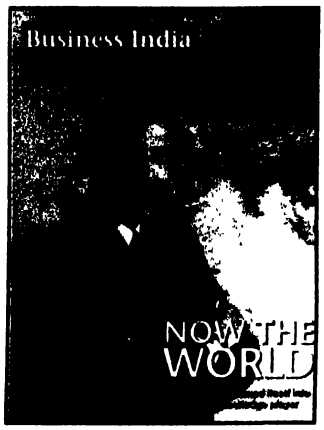
SPECIAL REPORT
58



World Tourism Day – September 27 – has come and gone, passing India by once again

FOCUS
65

As with most industrialised countries India does business with, New Delhi hails Germany as a major trading partner, whereas in German eyes our country of a billion with aspirations towards a heightened global stature is essentially just another nominal market

◆ A market leader

The management of NIIT deserves full marks for maintaining steady growth right from the beginning (Cover Feature, 19 September). NIIT is the pioneer in computer education in India and when it brought this concept to India, there were unorganised players in this business.

NIIT should, however, spend more on research as well as on advertising itself so as to make it even more competitive in computer education. No doubt its foray overseas will pay rich dividends, but it will need to introduce some extra services and new products in the Indian as well as international markets in order to emerge as the market leader in respect of its services and products in the next millennium.

AKHILESH KUMAR SAH
Faizabad

◆ Stem the influx!

Apropos of your back page interview with Maharashtra cultural affairs minister Pramod Navalkar (23 August), there has been much discussion on the influx of people into Mumbai and many suggestions on how to curb it.

There are, however, those who raise a hue and cry that India is a free country and nobody can restrain others from settling down wherever they choose to. But they ignore the fact that alongwith such right must come a degree of accountability. Mumbai is attracting rural hordes like a magnet and its population has crossed one crore and increasing by the day. It is time something is done to stem these surging tides not only from other states, but from other parts of Maharashtra as well.

Mumbai is faced with an acute housing shortage, its civic services are close to collapse and the municipal corporation lacks resources to bear any further burdens. Mushrooming slums have turned the city into an open latrine, causing serious health problems.

All persons entering Mumbai should be made to pay for using the civic services. There should be no legal hurdle in this regard and it would be worthwhile to examine whether entry could be permitted only to those who have a well-settled sponsor in the city. The floating population, of course, need not be covered by such regulations.

In the interest of Mumbai's survival, all political parties should support one another in curbing the massive influx for the benefit of the local people and the betterment of the city.

BHAGWAN B.THADANI
Mumbai

◆ Bring back the BJP

Reserve Bank of India governor Bimal Jalan is justified in his assertion that the country is entering a period of rising expectations. The Indian economy is manifesting a recovery, with industrial output recording a 5.6 per cent growth and consumer durables in particular recording a growth of 11.1 per cent.

Exports soared by 11 per cent at $2.6 billion, inflation plummeted to 2 per cent, while sentiments on the stock market remain high. The fiscal deficit at 6.5 per cent as on 31 March is now targeted at 4 per cent for the current fiscal. Foodgrain production in 1998-99 was a record 200 million tonnes, while foreign exchange reserves have touched $ 30 billion.

The Atal Behari Vajpayee government has gained the faith and confidence of the international business community in the recent past. Hats off to finance minister Yashwant Sinha. Let us therefore bring back a stable BJP-led government for that icing on our cake.

While on the subject of elections, it is surprising that not a single political party, either at the state assembly or Parliament level, has this time promised to enforce prohibition or some curbs on the liquor trade as had been the issue to entice women voters in the past. Haryana and Andhra Pradesh had to renege on their vows of a liquor-free state owing to the lucrative revenues alcohol has traditionally earned.

The visionary that Mahatma Gandhi was, he strongly favoured prohibition as he believed that our youth, the nation's invaluable asset, would be most affected by alcohol. Is somebody listening in the political fraternity?

NITIN HOSKOTE
Mumbai

◆ Unjust deserts

Regarding your article on Enkay Texofood India Ltd (5 September), we would like to clarify that the Indian Air Force Benevolent Association, a welfare organisation of the IAF, made a fixed deposit of Rs1 crore for one year with Enkay on 5 May 1998. IAFBA's primary role is to provide financial assistance to families of bereaved Air Force personnel. For this purpose surplus funds are invested with limited companies.

The company's post-dated cheques for repayment of the principal and payment of interest for the last quarter were, however, returned by our bankers for want of funds. After a meeting with Enkay's CMD, Tulsi Das Goyal, in Mumbai on 10 May 1999, the company agreed to pay our outstanding dues weekly so as to clear them by 15 August.

But the company has hitherto paid only Rs5 lakh of the total dues of Rs1.08 crore and several attempts by the undersigned to contact Goyal were of no avail. With the nation wholeheartedly supporting our defence personnel in the wake of the Kargil conflict, it is deplorable that companies like Enkay deny the dues to our brave servicemen and their widows and children.

IAF BENEVOLENT ASSOCIATION
New Delhi

◆ We're doing well

We appreciate the scathing analysis and research done in presenting certain important aspects of the banking world in The emperor's new clothes on the IndusInd Bank (12 July).

We are the associate bank of Bank of Baroda, which only holds 94.24 per cent of the equity in our bank. We are the only bank in Uttar Pradesh that has turned in profits for the last 25 years and paid continuous dividends without break. Although a small organisation, we outperformed industry-level growth in many financial parameters for 1998-99 such as net profit growth, capital adequacy ratio, cost of deposits, reduction in gross/net NPAs, priority sector advances, growth in deposits, advances, low cost deposits and net interest margins.

Watching the waves

India's biggest satellite broadcasters are ready for domestic uplinking, but the new government isn't about to give up control

Earth stations-cum-gateways are the flavour of the season and at least three important Indian players – Zee Telefilms' Subhash Chandra, Ramoji Rao's Eenadu, and J.K. Jain's Jain TV – are racing against time to complete their projects. Of the three, two are based in Noida, near Delhi, while Eenadu's earth station is situated in Film City on the outskirts of Hyderabad. Both Eenadu and Jain TV have a technology partner in Scientific Atlanta of the US, while Zee has tied up with Canal Plus of France.

More significantly, ICICI is bankrolling Subhash Chandra's venture to the extent of Rs157 crore. This project is the one to watch because Chandra remains the most formidable player in the Indian television business and is looking at uplinking by mid-November, depending on statutory government clearances. Meanwhile, his Alpha channels – Marathi and Bengali – are being uplinked from Singapore on Asiasat 3S. Chandra, always first out of the blocks, is keen to develop the subscription market through this foray so that he can be the first to reach the operator (DTO or direct-to-operator). As always, his combative skills and energy to transform threats into opportunities is standing him in very good stead. To successfully arm-twist a global media czar into parting with his stake is a tremendous shot in the arm for Indian biz.

Subhash Chandra is reinventing himself as an Indian broadcaster at a searing pace in anticipation of the Broadcast Bill. Zee has already applied to the Union government to uplink from India and permission is believed to be a mere formality. It currently uplinks from Hong Kong, but once the earth station is up and running it will become the first Hindi broadcaster after Doordarshan to beam out of India. The buzz is that, once the new government is installed in Delhi, it will be a matter of time before the Broadcast Bill sees the light of day. Needless to say, many of the provisions of the erstwhile bill have been delinked as separate policies such as uplinking for private Indian networks, DTH, notification to make two DD channels – DD National and DD Metro – mandatory on the cablewallah's prime band, and the reduction of Prasar Bharati to a non-entity.

Satellite broadcasters have been using the C band to beam signals into India and I&B minister Pramod Mahajan has time and again argued for a regulatory mechanism to keep a watch on the Ku and C bandwidths, especially the former, which has strategic implications. It needs to be stated here that, even in the US, laws vest control of broadcasting with the federal government. In fact, the law is so stringent that a broadcaster has to beam through an American satellite, giving the government the right to snap the beam whenever it wants to. Even more interestingly, this law is in place despite the fact that satellite television is a peripheral player when pitted against terrestrial television in the US and even foreign equity capital in the business is as low as 25 per cent.

Will the Broadcast Bill aim to encourage the domination of Indian television viewerspace by Indian broadcasters, with majority Indian shareholding and uplinked from India? This seems to be the case, judging by the thinking in North Block. The Union finance ministry, for instance, is planning an upward revision in the presumptive tax paid by select foreign telecasting companies on revenues presumed to be remitted abroad from 10 to 20 per cent in the short term.

Along with Subhash Chandra and J.K. Jain, Lalit Modi of Modi Entertainment Network is reportedly lobbying extensively with the party that is favoured to win the polls — the BJP. But there is a lobby that wants to see the creation of a new Broadcasting Regulatory Authority, offering a level playing field and incorporating the salient points of the Broadcast Bill. The other monkey wrench that could be thrown in is uncertainty over the appointment of the new I&B minister.

If Indian-owned companies uplinked from india are alone allowed to broadcast into India, then both Sony Entertainment Television and the Star network will have to morph themselves. For while both have Indian fronts — News Television Pvt Ltd and SET (P) Ltd, they are not Indian-majority-owned. Which means that they will have to establish new Indian-owned entities in order to uplink from India. Clearly, the new government will aim to protect the country's airwaves. Interesting times ahead.

Way to go

The healthy response to VSNL's public equity issue is a positive precedent for the rest of PSU divestment

Amidst all the hoopla about the performance of infotech stocks and the gleeful reporting of the antics of politicians aiming potshots at each other, usually below the belt, one piece of news should bring out the smile on doomsday economists. The disinvestment programme of the Videsh Sanchar Nigam through a public offer in the country has succeeded in a way that should now form a path-breaking precedent for other successful public sector enterprises to emulate.

In September the public offering of the VSNL share came to an end and the response was terrific, at least by the standards of earlier PSU divestment. The most important evidence of this was the fact that the issue was subscribed four times over. By the standards of other IPOs this may not amount to much; one IT company going public for the first time had its issue oversubscribed 65 times. But the fact that the public lapped it up presages the way that other PSUs should make public offerings.

To start with, it is true that the markets are going through a bullish phase and that the government therefore chose the right moment to offer a blue chip company. Public perception about the VSNL scrip was probably influenced by its perceptions about the company and its continuing role in the telecom sector. Despite the entry of private players, VSNL will continue to remain a major player, at least in the medium term, till such time as private companies set up their own gateways. There is also the fact that the public is literally starved of good scrips; the only ones that are coming into the market are, by and large, IT companies. Given the supply constraints, it might be said that the response to the VSNL offering was rather to be expected.

But these factors merely define the context in which VSNL came into the market; they cannot explain the public reception. What does give us some idea of the depth of response is the way the offering was structured. The offer price came at a discount, each share being priced at Rs750 as against the existing market price of Rs1,050. The discounted price and the positive perception of the investor regarding the company's medium-term prospects give the VSNL offering a significance that no other divestment has had so far.

The VSNL experience marks a break from the apathy that has marked the divestment programme so far. In fact, it was an earlier experience with VSNL that led to a kind of ostrich-like attitude on the part of officials and ministers alike on the issue of disinvestment in general despite the recommendations of the Divestment Commission that had laid down the parameters by which the concerned PSUs could offload their shares. At that time the officials searched for what they figured to be the right price; as a result GDR issues were delayed on two occasions. One of the issues that was discussed then and dismissed out of hand was the possibility of offering the share at a discount. Officials were concerned that a discounted price would seem like a slur on the company, a perception that mercifully they have overcome in this instance.

Falling in line

With the VSNL case the government falls in line with international experience with divestment. One preferred route to attract investors to state-owned enterprises is to sell at a discounted price and give the investor the luxury of watching his share move up in the following months. Given a reasonable performance with sound efficiency indicators, the investor looks for a bargain even if the state retains majority ownership. Nothing shows this up more than the experience of the State Bank of India and the Industrial Development bank of India. While SBI made a public offering at a discounted price, IDBI put a premium. The owners of the SBI are singing in the bath and it is likely that, if the bank were to offload more at a discount from the current price, there would be enough buyers. The same cannot be said about the IDBI stock, whose value has steadily fallen.

Clearly, the task for the next government has become easier with the VSNL experience. What's needed now is a bold approach by a clutch of PSUs with a good track record, all entering the market with discounted prices. At the end of the day such offerings by the *navratnas* could set the primary markets, which have yet to be inspired, on fire. •

Letting go

When cracking up of relationships is the order of the day, it's time for Indian management to examine why they happened in the first place

Two major and (at the time) much-ballyhooed joint ventures have ended up on the rocks in the last month, both involving once-revered Indian industrial houses, the Tatas and the house of Godrej, with IBM and General Electric respectively. Others have splintered earlier — Modi with Lufthansa and Olivetti, Hewlett-Packard with Blue Star, and subsequently with HCL, the Doshis with Fiat and then with Peugeot, and of course, Godrej with P&G. All of the latter partnerships had split up at a time when the economy was much smaller than now, and the future not as bright either.

Building long-term relationships with customers is the focus of top management all around the world. It therefore appears curious that this should not extend to one's business partners in a fast-emerging market like India, especially since the first pair at least of the ventures mentioned above had apparently survived the worst of the economic slowdown. Shouldn't they now be examining ways of reaping the whirlwind together, rather than apart?

One possible reason for their discomfiture is that Indian managers, being for the most part scions of long-established (second- and third-generation) business families, find it hard to accept dilution of their financial stakes, and with that, absolute control of their businesses.

It may not be entirely true that the absolute financial stake has had an identifiable role to play, since structures of convenience from decades back have often made tracing the controlling stake difficult. However, the issue at hand here is more one of control than of financial holding. This has sought to be explained time and again as one of market familiarity, where the local player has claimed that knowledge of the market is an unbeatable advantage in a partnering relationship between an Indian and a foreign company.

However, family control of businesses, the so-called Indian way of doing business, is showing definite signs of wear and tear. The richest man in India, for instance, chairman of the board with a personal holding of fully three-quarters of the public stock, is watching a blaze of publicity die down in a cold splash of massive departures of professional managers, beginning with the chief executive, from his enterprises.

These are inescapable signals of the need for Indian entrepreneurs, and especially their descendants, to look long and hard at the real need to cling on to huge stakes in their companies. The vast majority of companies in the West are professionally managed, even when they are closely held. There are just a handful left where second- and third-generation family members are still given an automatic right to govern.

Some Indian owners of major corporations have had the fortitude to let go of control without necessarily diluting their stakes. For instance, the Lal family no longer plays an active role in the management of the Eicher group.

All the more reason, then, for managers to examine the real reasons for equity alliances in the current environment. At one point, it is a fact that money was hard to come by, and technology not available for love or money. Today the scene is very different.

Strong industrial houses have very little difficulty accessing money from international markets for their businesses at very good valuations, even by Indian standards. Technology is also not an issue, for businesses can see that the posturing of governments towards the WTO is just that. Also, technology changes much faster, and acquiring new technology is only meaningful when one is prepared to adapt and improve it, à la Japan.

Next month should see the Modi house pick up around $35 million in combined debt and equity for the revival of its shut-down airline, ModiLuft. This will probably happen with a change of name and management, but S.K. Modi stands to retain a decent stake in the revamped venture when it takes off. The company will begin with current aircraft, but intends to upgrade within three years to the state of the art.

One example does not signify a trend, but it does serve as a pointer for other industrial houses. Their dependence on free handouts from the government in terms of licences and cheap money (from government-controlled financial institutions) is not the only way to build good businesses. It is not even the best way, because that kind of thinking tends to seep through and weaken the very fibre of their organisations. Strong companies need strong managers, and good enterprises need enterprising leadership. Indian management has not been short of enterprise in the past, and will not be in the future. •

A new venture

Incubator capital fund eVenture has inked a deal with acquavit, Inc, the Indian incubator set up by Neeraj Bhargava, Rajesh Jog and Sandeep Singhal to run the Indian operations. eVenture is a joint venture between Japanese infomedia giant Softbank (Comdex, Ziff-Davis, etc) and Rupert Murdoch's News Corp, through the latter's $400 million venture capital company ePartners. It is mandated to assist Internet-related ventures in four distinct geographies — Australia, New Zealand, UK and India. eVentures India will provide finance and entrepreneurial assistance services to Indian start-ups, including all the ventures already supported by acquavit. The latter recently announced its acquisition of a 26 per cent stake in e-business solution provider NetAcross valued at $1.75 million. This was directly intended to provide solutions to other acquavit incubatees in a preferred partner relationship.

Logging into Probity

After the proclamation by GE Caps' Gary Wendt that Indian infotech remains a sunrise area and that he is willing to back specific ventures to the tune of $150 million, comes the news that global venture capitalist CDC has shown interest in an Indian information provider. Signalling that venture capitalists are now looking at related areas, that is information disseminators. The grapevine has it that Commonwealth Development Corporation has picked up a 12 per cent stake in research outfit Probity Research & Services Pvt Ltd at a cost of $1 million. Probity, headed by Nirmal Jain, specialises in research and analysis of corporates. Earlier this year, the company put out all its research on its website Indiainfoline. CDC's cost of acquisition puts the valuation on Probity at $8 million.

Food for growth

The Kanan group ($100 million in revenue), promoted by the non-resident Indian Mehul Shah who earlier dabbled in diamonds, has been attracted by the business opportunities available in India. Based in the US, Shah has begun his first strategic acquisition of equity in mushroom maker Agro Dutch Foods through a preferential allotment at a substantially higher premium to the prevailing market price of around Rs130. Shah is an exclusive distributor of Amul dairy products in the US. Kanan is looking for other investment avenues in the food-related business. The buzz is that Shah is looking to acquire a substantial stake in cigarette maker VST's foods business.

Zee-Sony tango

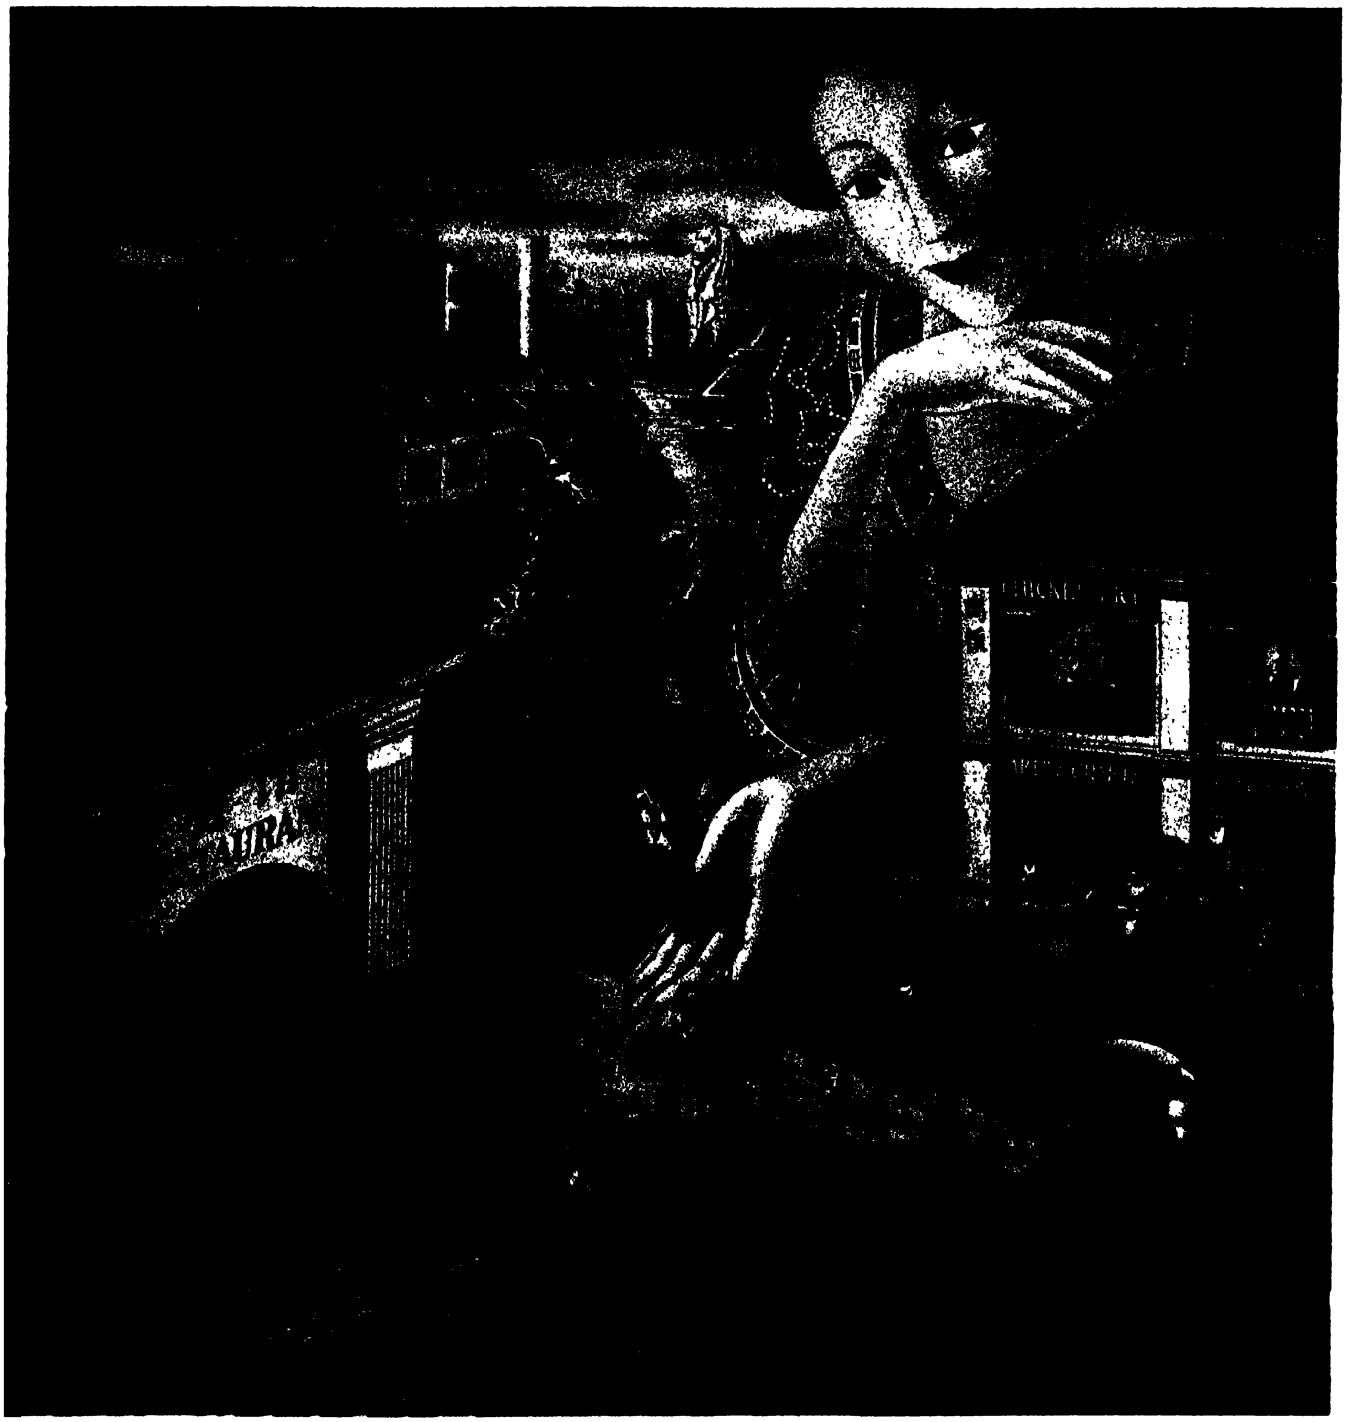
ZEE TV continues to push forward with its battle plans. Recently, Zee Telefilms supremo Subhash Chandra summoned the fund managers of leading mutual funds for a presentation on the company's future strategies. Under the new game plan, the network is looking at launching pay channels under the direct-to-operator (DTO) bouquet. According to company officials, the revenues will ramp up considerably by optimising this route. And this will supplement the monies rolling in from air time sales. That is not all. The fund managers were quite taken aback when it was announced that Zee was planning to form a cartel with its arch rival Sony TV in this pay channel venture. Is it to teach a lesson to Murdoch's Star from which Chandra has successfully negotiated a divorce by paying $300 million alimony?

Flying high

Recently, commercial pilots were reportedly besieging a hotel in north west Mumbai as the Sultan of Brunei-floated North Star airline was in the city offering absurd sums of money. Pilots are forever jumping ship, or rather airplanes, in search of new vistas and fatter pay packets. The queue included pilots from the top airlines all trying to move around surreptitiously in the hotel lobby.

She is the Taj

'She is the Taj', the highly successful TV commercial (TVC), is now ready to get an international audience. The TVC created by Rediffusion DY&R, and the very first time from the Indian Hotels Corporation Ltd stable, made waves in the marketplace. Now, after completing the process of restructuring at home and abroad, managing director R. K. Krishna Kumar (KK) is now going all out to build equity internationally. With the branding and segmentation of the Taj properties complete, breaking them down into luxury, business and leisure categories, Rediffusion's foreign associates Young and Rubicam are modifying the Indian campaign to release a major television campaign in the US and Germany.



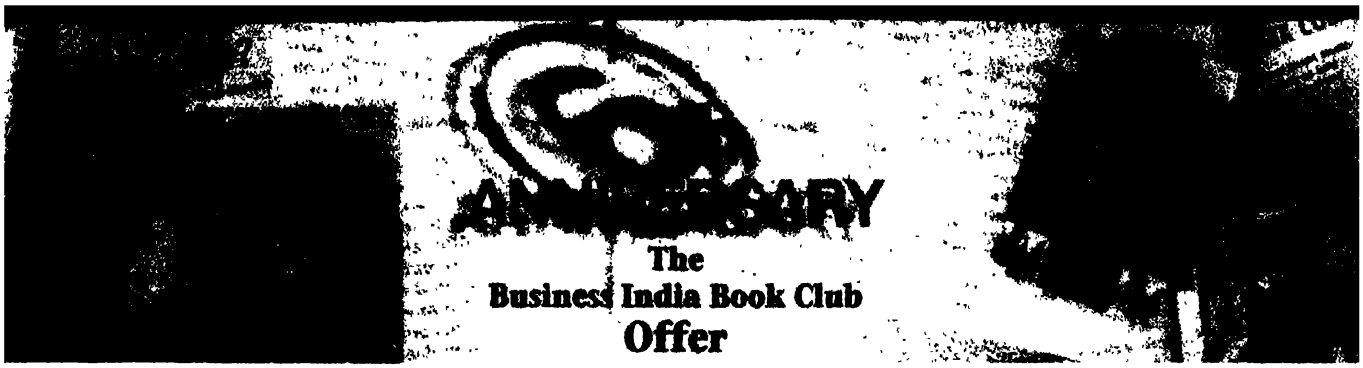
It will once again be a first for the Taj and is expected to be a major statement in markets which are expected to bring in many more visitors to India's top hotel chain with a presence in all the segments. Concurrently mirroring chairman Ratan Tata and KK's vision of making the Taj group a global player, replete with international standardisation. As such, Richey International, a US-based firm which carries quality audits, is currently touring Taj properties in India even as the new Taj management tries to benchmark its hotels and personnel with international chains.

More on advertising. The buzz is that with O&M having recently pouched the Rs30-crore-plus Castrol account, it has had to jettison public sector major Bharat Petroleum Corporation Ltd's corporate account. Suitors for the Rs10-crore corporate campaign include Lintas which is the odds on favourite to bag the account.

Vir Sanghvi for *HT*

With V. N. Narayan caught out by B. N. Unniyal in the *Pioneer* for plagiarising and having to leave *The Hindustan Times* under a cloud, the search is on for a new editor. Chief executive Shobana Bharatiya is very keen to appoint Vir Sanghvi for the prestigious position. It remains to be seen whether executive editor Bharat Bhushan is amenable to the idea. In fact, the venerable *HT* has been caught in a maelstrom lately, what with Narayan and the Mumbai bureau chief's (the Monica Lewinsky analogy story) letter to the executive editor being leaked to the press by I&B minister Pramod Mahajan.

THE NEW SINGAPORE STOPOVER HOLIDAY FROM JUST US$30*!



IT'S THE BIGGEST LITTLE HOLIDAY IN ASIA.

When you fly Singapore Airlines or SilkAir through Singapore, you can now enjoy the new Singapore Stopover Holiday from just US$30*. This includes hotel accommodation, airport transfers and *free* admission to Singapore's major attractions: the Singapore Zoo, Night Safari, Jurong BirdPark, River Boat Tour, National Orchid Garden and Sentosa – the island of fun. You will also be entitled to unlimited rides on the new SIA Hop-on – a tourist bus service that plies the shopping, civic, cultural and entertainment areas within the city district. Plus great discounts on dining, shopping, tours and car rentals. Book yourself on the new Singapore Stopover Holiday – it's the biggest little holiday in Asia! **SINGAPORE AIRLINES**

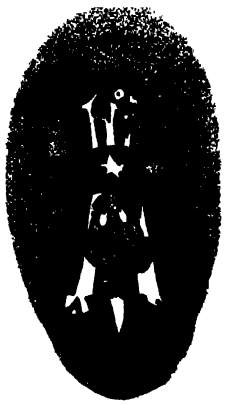
Hate on the Net... Ant attacks... Movie rating

Who's entitled to hate on the Internet? The establishment says it should be HateWatch, which bills itself as an online organisation tracking intolerance. The sites it lists include the Aryan Dating Page and the Nation of Islam. It also includes anti-gay site American Guardian, set up by Don Ellis. And it is the latter who is making waves now.

Bugged at being labelled intolerant by HateWatch, Ellis has set up Hatewatch of America. This can be accessed at hatewatch.com or hatewatch.net instead of the hatewatch.org of the original site. Both the sites also look the same, at least on the opening page.

The lists, of course, have different entries. Hatewatch of America includes Disney (which is termed anti-children for publishing a book called Growing Up Gay through its subsidiary, Hyperion, and for hosting "gay days" at Disneyland). The original Hatewatch page merits an entry because it is "anti-Christian".

David Goldman, founder of HateWatch, is planning to take his misrepresenting clone to court. But experts feel that Ellis may win the day because his site is operational.



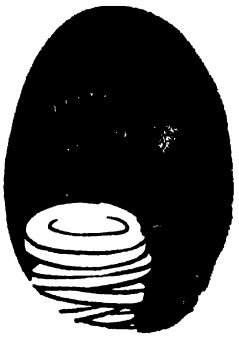
The problem with Goldman is that he did not cover his bases in time. Take, on the other hand, the National Association for the Advancement of Colored People (NAACP). It not only owns nigger.com but also several other domains with variations of the word. The objective: to prevent hate groups from getting access to them.

Some companies have also been taking precautions. Chase Manhattan Bank, for example, owns the .com domains Ihatechase, Chase-stinks, and Chasesucks. Charles Schwab & Co owns, among other domains, screwschwab.com and schwabsucks.com.

Pity the poor people who are waking up find that their own com pany names, worth big bucks in many cases, serve as domains to serve porn and the like.

Soldier ants, the sort that destroy everything in their path have been the stuff of exotic flora and fauna tales and horror movies. Now, it seems, ants of a different breed (but similarly destructive) have invaded the US.

The 21 September 1999 issue of *Annals of Internal Medicine* has two case studies of fire ant attacks in two Mississippi nursing homes. Two elderly patients were found covered with ants, with ant trails leading from the floor to their beds. One died five days after the attack, the other 13 months later. Both facilities had been treated by pest control services in the previous days.



Fire ants arrived in the US about 60 years ago and have spread across the Southeastern US and Puerto Rico. They have consumed most of the native black ant population in the Southeast and have recently been spotted in some Western states.

These ants attack people if their mounds are disturbed. They have also attacked animals if regular sources of food dry out. But they have now taken to human beings who cannot defend themselves. Horror is moving nearer home.

Predicting whether a movie will be a success or a bomb at the box office has always been a very difficult job. Now, a new mathematical model claims that it can do the job for you. This has been reported in a study in a journal of the Institute for Operations Research and the Management Sciences.

"By computing information available to a studio like star quality, past performance of similar films, and the number of screens that will debut a particular film, you can make a reasonably accurate forecast of how a film will perform," says Ramya Neelamegham,

currently with the University of Colorado, Boulder. "The advantage of this type of forecasting is that as sales figures come in, the model can do more accurate updates at each stage to help plan better." The study, co-authored by Pradeep Chintagunta of the University of Chicago, uses operations research techniques to reach its conclusions.

The authors forecast the expected number of viewers in a given week by examining information like number of screens, distribution strategy, the film's genre, the presence or absence of stars, reviews and word of mouth about the film. The authors developed their model by studying domestic box office receipts reported in Variety magazine for 35 films in the years 1994-96. They also examined overseas box office receipts for the 13 countries that account for approximately 80 per cent of international receipts.

Factoring additional information that is proprietary and was unavailable to the authors -- such as advertising, production budgets, and release schedules -- would improve the model's performance, say the authors.

Border "conflicts" don't happen in the subcontinent alone. Here's a report from MSNBC: "The United States and Canada recently squared off aggressively over a dispute about rights to the popular walleye fish that roam rivers and lakes near the Manitoba-Minnesota border. Canada bars US anglers from its side of the lakes unless they stay at Canadian resorts; president Clinton says that this policy violates the North American Free Trade Agreement. Minnesotans on a US peninsula attached to Manitoba have threatened to secede and join Canada in order to get better

access to walleyes, but in retaliation, Minnesota Governor Jesse Ventura threatened to block the Canadian National railroad, whose track makes a short dip into Minnesota to get around one of the lakes." •

BUSINESS INDIA INDEX

Net disbursements of loans to India by the World Bank and International Development Agency since 1994, in million dollars: **2,636**
Total interest and other charges on past loans that India has had to pay to the World Bank and International Development Agency since 1994, in million dollars: **4,793**

[redacted]mmended
[redacted]fastest cooling.

Nothing cools you faster than the Godrej SmartCool Air Conditioner.

Godrej SmartCool Air Conditioner has one strong advantage over the rest – the unique Rapid Heat Exchanger. It sucks in a larger amount of air, filters it and blows out icy cool, purified air – in seconds! This means that the compressor works for shorter periods of time. And therefore, a **huge saving on power**. Now that should speed up your decision to buy the best.

Log into the *desi* portal

For those who do not know how to read Internet's predominant language, English, here is a reason to be happy. At the recent India Internet World 99, Suvi Information Systems Ltd launched **www.webdunia.com**, a portal site in Hindi. The site was inaugurated by former prime minister I.K. Gujral. Surfers can choose from a variety of subjects including art and culture, news, sports, cuisine, astrology and horoscope, humour and jokes, tourism, health, beauty and so on. They can also avail of facilities like forecasts, travel tips, airline and hotel bookings, etc. Evarta and Epatra are interesting features of the website, wherein a person can send e-mail messages and engage in online chats in Hindi and several Indian languages such as Marathi, Gujarati, Malayalam and Punjabi. "Soon you will be able to chat in many other Indian languages," the site informs.

A treat for Indophiles

It has been a long haul for **www.indiainfo.com**. From a personal Web page called mahesh.com offering information on immigration laws and overseas call rates, portal promoter B.G. Mahesh has made indiainfo.com a significant player among the growing Indian Internet segment. The portal aims at presenting itself as the complete India portal, not just in relation to information but also as a one-stop shop for knickknacks that are uniquely Indian. The site has the usual mix — business, news, jobs and careers, food and recipes, law, movies, sports, travel, e-mail and the works. Apart from continually updated news, eminent columnists like Arun Shourie, M.V Kamath and Cho Ramaswamy attract lots of attention as do sections on fashion, yoga and *vaastu*. Termed as a one-stop shop for everything on India and boasting 15,000 links, the website targets Indian Internet users around the globe as well as anyone interested in India. According to the promoters, the site attracts a page view of two million a month and they are confident of driving an annual ad revenue of Rs15 crore by December 2000. Worth a visit.

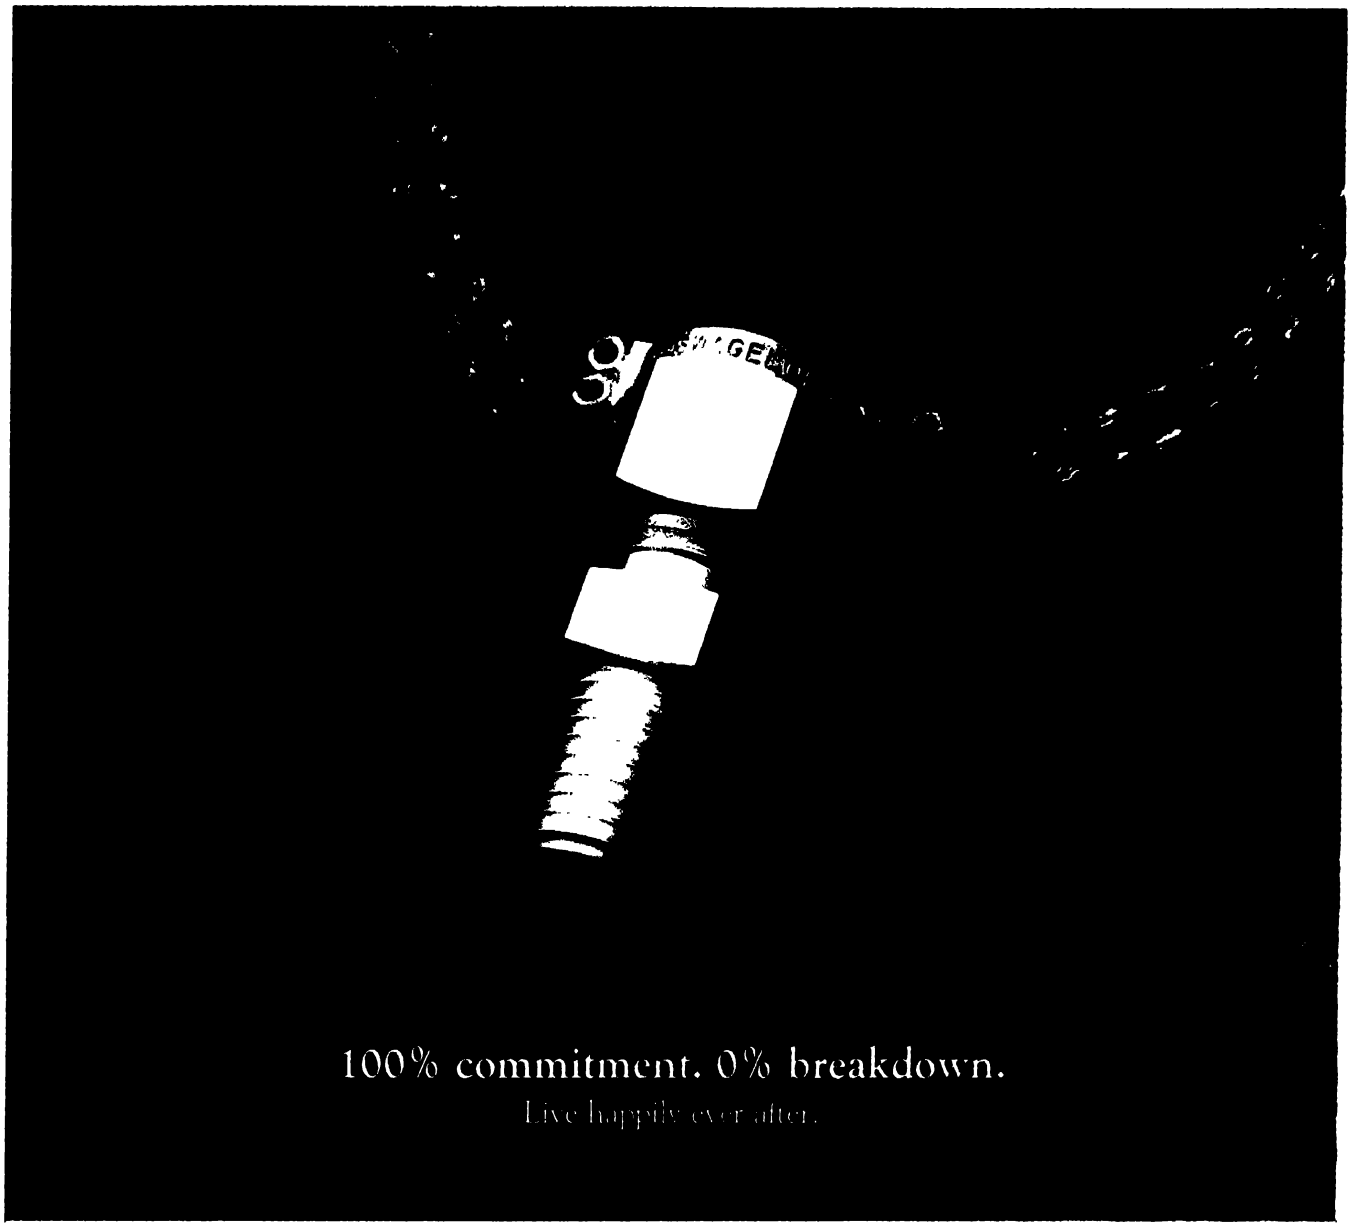
JK Pharma on the Net

J.K. Drugs and Pharmaceuticals, a JK Group company, has made its presence felt on the Net. Last month, it set up its own website **www.jkpharma.com**, listing the products it makes, the technology it has adopted, its domestic and international operations, major markets and people. For instance, the site informs us that the company incorporates state-of-the-art facilities manned by over 40 doctorate-holders/post graduates who were responsible for developing technologies for over 15 APIs and 60 finished dosage forms. The company has received process patents for six APIs in India and abroad. The company has expanded its business geographically across the globe. It has also entered into long-term supply agreements for both active pharmaceutical ingredients and finished dosage forms with leading international companies based in Israel and Bulgaria. With markets in more than 30 countries including China, Vietnam, Korea, Portugal, Spain, Brazil, Argentina and Uganda, the company generates more than a third of its sales of active pharmaceutical ingredients and finished dosage forms outside India.

WebWatch

Indians slow on e-comm front

A recent survey by the Confederation of Indian Industry (CII) has revealed that although most Indian chief executives expect e-commerce to be a winner in the coming millennium, a majority of Indian companies have not made any significant move towards incorporating this in their overall corporate strategy. The CII survey, which covered 318 chief information officers representing 4,000 top companies, found only 20 per cent of the companies were using e-commerce to some extent and that only a mere one-sixth of corporate executives were actively involved in the process. On the other hand, four out of every five respondents said they "haven't looked" or they "will look soon" into the potential of e-commerce for their corporates. According to the CII survey, in the next two years, 10 per cent of the turnover of top 4,000 companies as e-commerce transactions in the business-to-business section could translate into Rs50,000 crore whereas in the business-to-consumer segment, even if 14 million households make purchases worth Rs1,000 a month on the Net, it means Rs16,800 crore.



DoT fee may hit Net trading

A decision by the department of telecommunications (DoT) to levy an annual fee of Rs15 lakh on a 64 kpbs line to connect closed-user groups may retard the growth of Internet-based stock trading in the country, according to industry insiders. As per the format, a broker has to telecast live stock quotes to the clients from one network and then take the buy/sell orders which involves the trading network. Under the current telecom policies, a broker cannot connect the two networks without paying the hefty fees. Meanwhile, a Sebi committee is looking at formulating the guidelines for Net trading.

Case study

Last week, when venture capitalist Draper International picked up a 51 per cent stake in an Indian legal website **www.lexsite.com** for an undisclosed amount, it was one more Indian site which had won over the venture fund*wallahs*. A well-designed site, it carries extensive information on the legal scene in India and specialises on direct taxation and foreign exchange laws, besides giving law-related news, columns by noted experts and archives among others. Lexsite currently hosts 300,000 pages, 34,243 cases, 873 circulars, 179 forms and 67 tax treaties. LexSite.com Ltd is a public company formed in June 1999 with an investment from Draper International and the Small Industries Development Bank of India. With the latest infusion of funds, the site aims to create content, community and services on the Web for legal and accounting professionals and targets to become a one-top shop for legal information. The site certainly seems to have a potential for this.

SAATCHI & SAATCHI DIRECT-99 BLR

Another cookie crumbles

Business India (2 December 1996) had reported how middle-class investors saw their money vanish as Chennai's unincorporated finance companies started closing down. Now, two leading nidhi firms are facing serious repayment problems

First, the unincorporated finance companies collapsed. Then the plantation firms. Now it seems to be the turn of *nidhi* companies. (*Nidhi* is classified as a mutual benefit financial company under Residuary Non-banking Companies (Reserve Bank) Directions, 1987.)

The trouble began recently when the Alwarpet Benefit Fund (ABF), a major player, failed to honour the repayment of matured deposits. Many investors refused to believe that a reputed *nidhi* player could let them down. Others flocked to the police with complaints against the *nidhi* authorities.

Close on the heels of the ABF fiasco came the crisis at the Royapettah Benefit Fund (RBF), which appealed to its investors through newspaper advertisements to accept the rescheduling of its repayment obligations. Over 1.5 lakh depositors, who have put as much as Rs405 crore in RBF, are in a dilemma — should they approach the authorities, which may precipitate the crisis, or trust the management which is offering to repay as per a new repayment schedule? The Chamber of Nidhis, an association of *nidhi* players, has appealed to the depositors not to precipitate the crisis.

RBF has offered to repay 10 per cent of the maturity value of matured deposits and the balance over the next three years in instalments of 15, 15 and 60 per cent at the end of the first, second and third year, respectively. For recurring deposits, it has offered 50 per cent of the maturity value on maturity; the balance would be converted into a fixed deposit and repaid after three years.

According to industry sources, the cause for RBF's problems lies in the mismatch between deposits and disbursements, leading to serious liquidity problems. The *nidhi* apparently collected short-term deposits and lent it as long-term loans.

• MOHAN RAMAMOORTHY

Firm on the growth track

Our 14 June 1999 issue carried a story on Alfa Laval's turnaround. Having bagged new orders, the company continues to surge ahead

After making losses in the previous two years, Alfa Laval turned around last year (1998-99) with a net profit of around Rs8 crore on a turnover of Rs183 crore. Now, there is more good news. The company has bagged a huge order from the makers of Horlicks. "We have got an order worth Rs85 crore from Horlicks to set up a complete plant on a turnkey basis. The plant will produce around 80 tonnes of the Horlicks health drink per day," says Alfa Laval MD Satish Tandon. Once this order is completed, Horlicks plans two more similar plants in a phased manner and the contracts, worth Rs85 crore each, could go to Alfa Laval.

"We are negotiating two more contracts, each worth Rs30-35, crore," says Tandon. If these come through, then by January 2000, Alfa Laval will have an order book position of Rs300 crore plus. In the six months ending 30 September 1999, Alfa Laval has clocked a turnover of Rs92 crore and net profit of Rs8 crore. "We hope to end this fiscal with a Rs18-crore turnover and a Rs17-18-crore net. We have sold our liquid food processing division to Tetra Pak (India), which will give us a capital gain of Rs4 crore. So, the total net profits this year should zoom to Rs22 crore," says Tandon.

Next year, Tandon expects turnover to cross Rs230 crore, while net profit will rise to about Rs30 crore. On the exports front too there is good news as some product lines made by the parent, Alfa Laval (Sweden), will be shifted to Alfa Laval (India), which will be the global source for these products. "We will invest Rs9-10 crore over the next two years in plant and machinery to make much bigger separators, which will be directly shipped from Alfa Laval India to our group's marketing offices in countries like Singapore, Malaysia and Japan. So, our exports will more than double to Rs45 crore by the year 2002," says Tandon.

PRAKESH JADHAV

Tandon is bullish on the future

Power-packed

Gipco stands to gain from the revised guidelines

For the year ended March 1999 Gujarat Industries Power Company (Gipco) has recorded a 150 per cent jump in sales to Rs418 crore. Net profit zoomed 81 per cent to Rs55.27 crore. The reasons: the commissioning of the 160MW power plant at Baroda combined by the improved plant load factor (PLF) of 89.09 per cent.

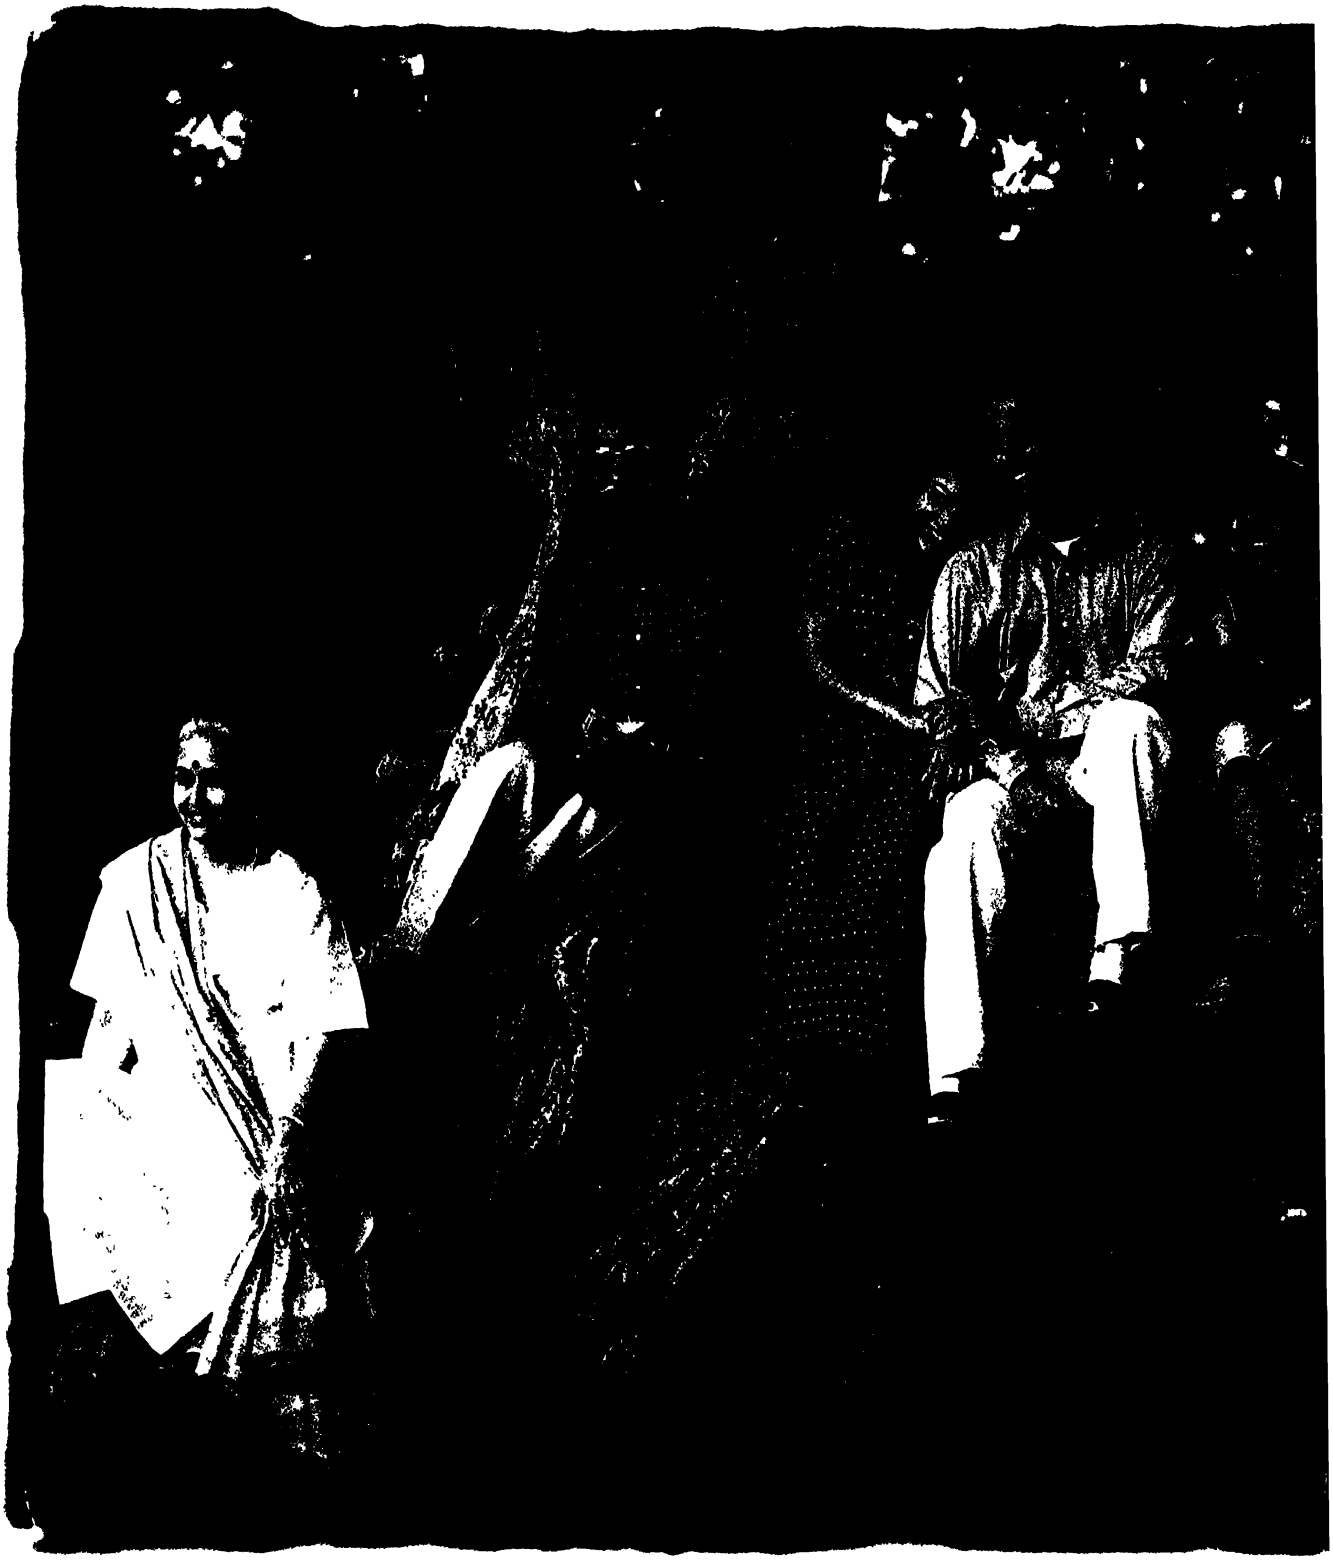
Gipco is promoted by the state electricity board and GSFC, GNFC, GACL, and the Gujarat Petrofils Co-operative. Till last year it operated a 145MW gas-based power plant which, in the first quarter of 1998, reported a PLF of 101 per cent. Subsequently, under revised government guidelines, the company decided to increase its generating capacity by setting up a 160MW naphtha-based unit. The government had assured the new independent power producers (IPPS) of 16 per cent post-tax returns plus an incentive for higher PLF. "Gipco's new Baroda plant which has gone onstream falls in this category. Hence the company stands to gain. Besides this, during the current year another 250mw lignite plant at Mangrol near Surat is expected to be fully operational. On commissioning of the new plants, both of which qualify as IPPS, Gipco would derive about 79 per cent of its revenues under the revised guidelines," says an analyst with kbs capital management. The 250MW project will take Gipco's total power generating capacity to 555MW.

"Since the new Baroda plant will use naphtha as the feedstock, the PLF will be high — and that directly translates into a higher returns. The post-tax returns could be as high as 22.6 per cent, linked with a higher PLF of 80 per cent under the new scheme," estimates the analyst.

Efficient fuel linkages are a crucial factor in determining the success of a generating unit. Interestingly, unlike other thermal plants in the country, Gipco has opted to go in for captive lignite mines. For its 250MW project the company has already secured the mining rights over 1,600 acres of land. "The lignite reserves are estimated to be sufficient to support a 750MW power plant for the next 25 years," the analyst adds.

In February 1998, when Business India *visited Gujarat Industries Power Company, the company had to defer its GDR plan. We then predicted that, as the plan took shape, the company was sure to bounce back. The journey has just begun.*

Ready to rise

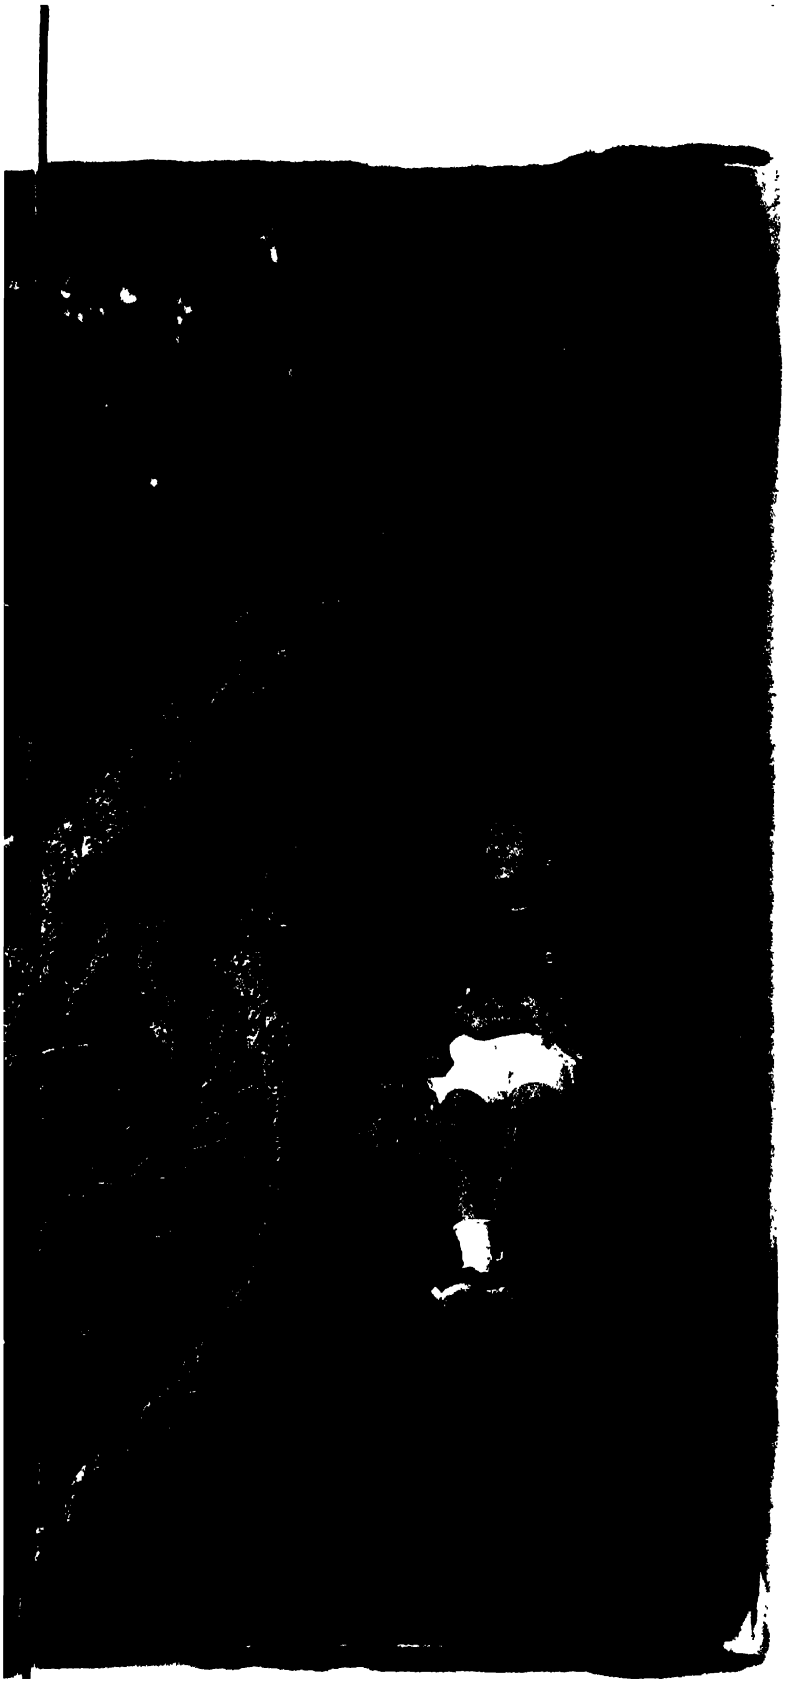


In the year ended March 1999 Unichem's sales grew by 16.29 per cent to Rs187.29 crore, a few notches below its Rs200-crore target. Its profit margin at the operating level declined marginally by 0.07 per centage points to 12.81 per cent and financial charges moved up Rs1.28 crore to Rs7.27 crore. Company secretary K. Subharaman explains: "The decline in our margin owes to the rise in cost of raw materials and selling expenses. This increase is attributed to the fact that we introduced seven new products. On the interest front the burden was primarily on account of high-cost loans which have been now replaced by lower-cost debt."

As a result, for the first quarter of the current year, interest costs are down by Rs25 lakh to Rs1.61 crore. "The second, third, and fourth quarters will witness further drop in interest charges. For the full year Unichem will pay Rs6 crore, Rs1.27 crore less than in 1998–99," says Subharaman. Sales during the first quarter are up by Rs1.33 crore to Rs5.34 crore. Can Unichem sustain this pace?

The markets seem upbeat on this counter. The stock, quoted at Rs165 when *Business India* reviewed the company, today changes hands at around Rs418. But the million dollar question is whether the markets are expecting better results for the year ending March 2000 or a bonus. Against an equity base of Rs4.26 crore, the reserves and surplus stands at Rs56.88 crore.

› KRISHNA KUMAR C N



In February 1998 we reported that Unichem Laboratories was poised to cross Rs200 crore. It did not. Now, new product launches is going to be its mantra

Celebrate a Family (From left to right) Dadima Mrs. Padma Varma, Dadaji Retd. Colonel Prakash Varma, Bahu Mallika, Beta Rajan, Poti Sneha, Pota Santosh (Sunny)

For them, life is all about deep-rooted values. They are

Menswear | Womenswear | Kidswear | Cosmetics & Fragrances | Jewellery | Homeware |

Calcutta, Chennai Hyderabad,
Mumbai, Nagpur, Pune,
Secunderabad Thane

While they enjoy their weekend, we'll quietly introduce them to you Dadaji is the undisputed head of the family But once in a while, he reports to Dadima Beta Rajan, being the younger son is pampered by Dadima even now (Bada beta Akash has settled in the US with his family) Bahu Mallika however, is not the pampering kind She sees to it that no one in the family goes off the rail (Something Rajan loves her for Even though he is the one usually at the receiving end!) Poti Sneha has her eyes on the Miss Universe crown (The living room floor often serves as a ramp) Monster Sunny rarely loses an opportunity to play a prank on someone They are all different as persons, but one in love, respect and understanding Because for the Pantaloons Family, as it is for yours, life is all about lasting values Values that never go out of style

the Pantaloons Family.

Where India shops for value

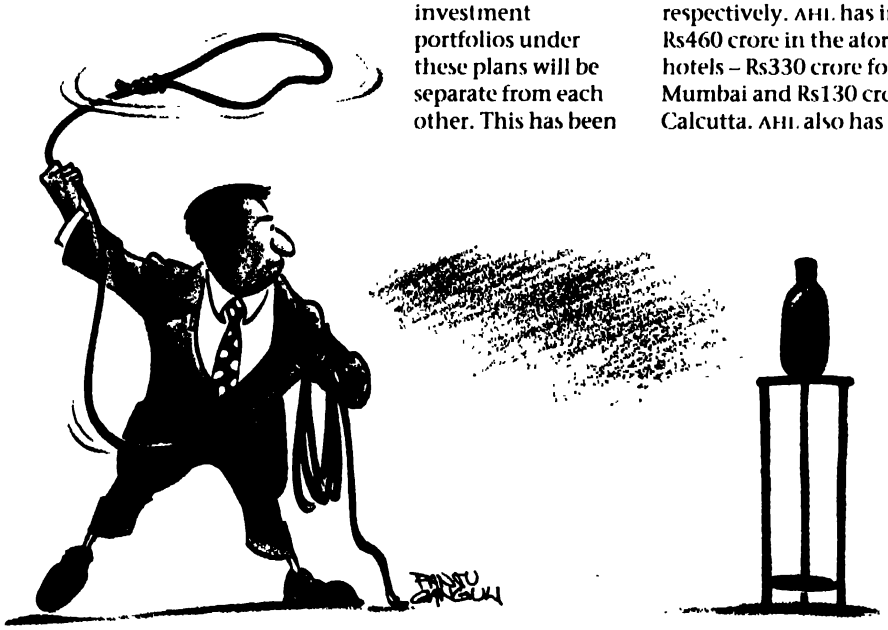
BSE plans tie-up with LSE

The Bombay Stock Exchange seems to be taking the 'go global' *mantra* really seriously. The exchange will soon enter into a Memorandum of Co-operation (MoC) with the London Stock Exchange (LSE). According to BSE president Anand Rathi, the move is a part of the 'Mission 2000' project aimed at making BSE an international exchange. The development is an outcome of Rathi's recent visit to London and his meeting with LSE chairman John Kemp-Welch and other officials of that exchange. The MoC is designed to facilitate exchange of ideas and information between the two exchanges. The BSE also plans to enter into similar agreements with the New York Stock Exchange and Nasdaq.

Godrej Soaps sells stake in Sara Lee

Godrej Soaps Ltd is selling part of its 48 per cent stake in joint venture company Godrej Sara Lee Ltd to holding company Godrej & Boyce Mfg Co Ltd. The Rs918-crore company will sell 22.5 per cent of its holding in the joint venture for Rs99.47 crore. Godrej Soaps' stake in the company will come down to 25.5 per cent after the sale. Sara Lee has 51 per cent stake in Godrej Sara Lee. The sale is intended to help Godrej Soaps retire high-cost debt and cut interest burden. Godrej Sara Lee is a leading household insecticides manufacturer in the country with well-known brands like Good Knight and Jet. Another Godrej group company, Godrej Foods, had earlier announced the sale of its 29 per cent stake in Godrej Pillsbury Ltd to Godrej & Boyce for Rs31.13 crore.

Rs800-crore Indal expansion



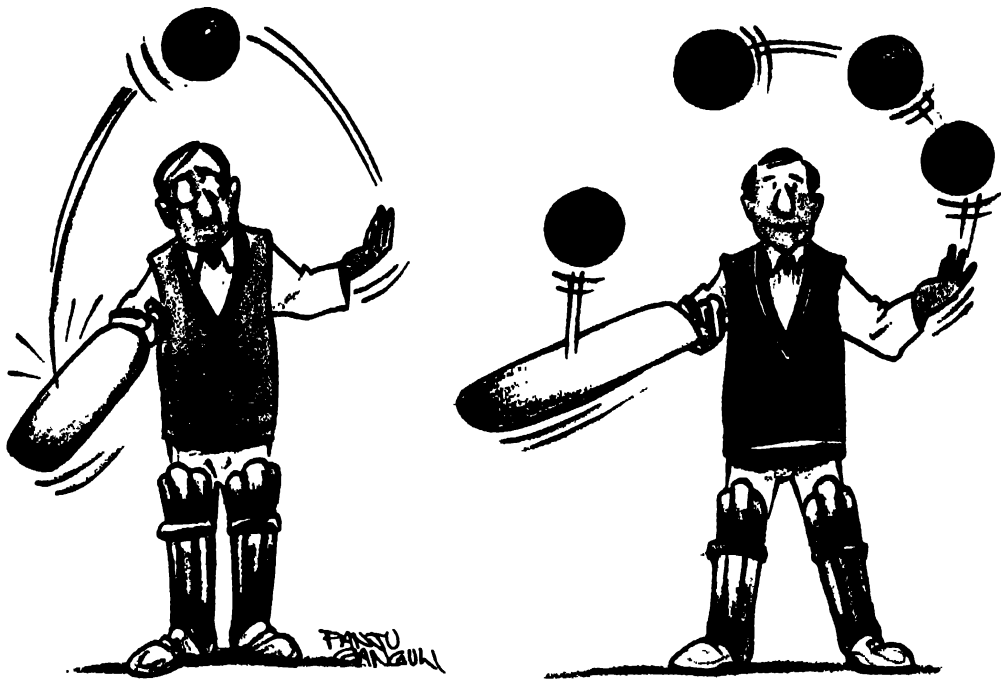
While some may sell their way to raise funds, there are others who still believe that spending more is the best way to earn more. Aluminium major Indal, for example, has drawn up a major expansion plan. The company will invest Rs800 crore in its existing operations to increase its alumina production capacity and to set up a new captive power plant. Indal aims to hike the alumina capacity at its Belgaum plant from 3.18 lakh tonnes per annum (tpa) to 5.1 lakh tpa at an investment of Rs400 crore. The capacity at the company's Muri plant will also be increased from 1 lakh tpa to 2.5-3 lakh tpa. Indal also plans to set up a captive power plant at Hirakud, Orissa.

Hindustan Lever eyes Cococare

And there are others who buy their way to growth. Hindustan Lever Ltd (HLL) is said to eyeing Cococare, the coconut oil brand of the Mumbai-based Recon Oil Industries Ltd. The acquisition will help HLL double its market share in the coconut oil segment, where it currently has a presence through its Nihar brand. Cococare has an 8.5 per cent market share in the 3,750-tonne coconut oil market, while Nihar has a 4.7 per cent share. But this is far behind the 42 per cent share enjoyed by Parachute, the market leader from the stable of Marico Industries. If HLL does clinch the deal, then it will bring the FMCG giant a few steps closer to Parachute.

Birla MF launches gilt fund

Birla Mutual Fund has launched an open ended gilt fund – Birla Gilt Plus. The aim of this plan is to generate income and capital appreciation through investments only in government securities. The fund opened for initial subscription from 23 September. Birla Gilt Plus offers three options – a liquid plan, an investment plan and a long term plan. The investment portfolios under these plans will be separate from each other. This has been done keeping in view the differences in the maturities of each of these plans. Thus the NAVs of each plan will also be separate. While the liquid plan is meant for investors looking for ways to invest in surplus funds for a short period the investment plan has been structured for investors looking for ways to invest surplus funds for the medium term. The long term plan is suitable for non-government provident funds and superannuation funds.



Asian Hotels has room for more

The promoters of the Hyatt Regency hotels in India, Asian Hotels Ltd (AHL), clearly feel there is room for more. They plan to set up two five-star deluxe hotels in Chennai and Bangalore. What is more, two hotels are already under construction in Mumbai and Calcutta. AHL feels that the hospitality industry is very much on the rise down south. These hotels are meant to target the business traveller. They will be funded through internal accruals and there will be no public issues nor will AHL take any loans for the purpose. The hotels coming up in Mumbai and Calcutta will have 450 and 250 rooms respectively. AHL has invested Rs460 crore in the aforesaid hotels – Rs330 crore for Mumbai and Rs130 crore for Calcutta. AHL also has a subsidiary, Regency Convention Centre and Hotels Ltd. With these four hotels AHL will be transformed into a hotel chain from a one-property hotel currently.

Short-circuit

The news is electrifying, to say the least. The joint venture between the LM Thapar group and US power utility major El

Passo has fallen apart. The two were partners in a bid for the 600 MW Bawana Phase II power project in Delhi. It was the former which broke off the alliance with the latter. Differences over equity stake are said to have led to the break-off. The Thapar flagship Ballarpur Industries Ltd was not happy to be a minority partner in the venture and was keen to make it an equal partnership venture. El Passo had become the partner in the venture by virtue of its taking over KLF which was the original foreign partner in the JV. Bilt held 35 per cent stake and El Passo the remaining 65 per cent in the joint venture. Of the six bidders, the JV had emerged as the lowest bidder for the Bawana Phase II project. Bilt had quoted the lowest tariff of Rs1.82 per unit. The Delhi government is expected to take its decision on awarding of the project by next month. Both phases of the Bawana project are being routed through the competitive bidding route with the final selection being made on the basis of power tariff as against capital costs.

ESPN-STAR bags cricket rights

There seems to be more action off the cricket fields than on them these days. ESPN-STAR sports (ESS) has acquired the telecast rights for all international cricket played in Australia, New Zealand, South Africa and Zimbabwe till the year 2004. This makes it one up on Doordarshan, which recently bagged the rights for all international cricket played in India during the same period. While DD had to shell out Rs230 crore to clinch the deal, ESS is believed to have paid up around Rs204 crore. The contract signed with event management group CSI International gets ESS telecast rights for 432 days of international cricket. This is in addition to the telecast rights it has already acquired for West Indies and English cricket for the next four years. With ESS and DD having grabbed the telecast rights for most of the cricket to be played in the next four years, other channels aspiring for a bite of the multi-million pie may have to wait for some more time.

Kannur Power cuts project cost

Nothing like trimming those figures if you have to get going. The 513 MW Kanur Power Project (KPP) has submitted a revised financial structure to the Kerala State Electricity Board (KSEB). According to the new plan, the project cost has been reduced by Rs104 crore to Rs1,471 crore. The revision of cost is on account of a reduction in the cost of civil works, insurance cost and other taxes and duties. Also, the cap of foreign equity has been lowered from the 89 per cent proposed earlier to 74 per cent, while foreign loans have been reduced to 60 per cent of the total debt as against the proposed 77 per cent. After US power major Enron walked out of the project, the promoters are said to be looking out for other foreign partners to step in. Promoted by K.P.P. Nambiar, the project, which has been hanging fire for the past two years, is likely to get techno-economic clearance from the Central Electricity Authority soon.

FDI for Kochi airport

More on investment in God's own country. The Centre has granted a foreign company permission to invest in the equity capital of the firm that will run the Cochin International Airport. The foreign firm will also be allowed to manage the duty-free shops in the airport premises. The trend so far has been to allot duty-free shops to the Indian Tourism Development Corporation (ITDC). The Cochin International Airport will be run by a 50:50 joint venture between Sharjah-based NRI A.S. Lal and Alpha Airport Holding BV of the Netherlands. Initially, the Dutch firm will pick up a 4 per cent stake of about Rs3 crore in Cochin International Airport's fresh equity. The commerce and civil aviation ministries' decision to allow the Dutch firm's participation is a significant development as it is the first time foreign direct investment has been allowed in a domestic airport project.

UTI's venture equity fund

The Unit Trust of India (UTI) plans to float a $65-million private equity fund to invest in venture capital opportunities in the pharma and IT sectors in India and overseas. UTI executive director Basudeb Sen said the company had applied to the regulators to float the fund which would raise $40 million of its corpus from overseas investors and the remaining $25 million from domestic institutional investors. The fund, called India Technology Venture Unit Scheme, will invest 25 per cent of the overseas contribution in companies in the domestic market, while the balance amount will be invested in various ventures of Indian companies operating abroad. The fund is being floated in a tie-up with Intec Venture Group (IVG), a group company of India Technology Ventures. While IVG will be the advisor to the

fund, UTI will assume the role of an investment manager.

New India net profit slips

The New India Assurance Co Ltd (NIA) has posted a net profit of Rs375 crore for the 1998-99 financial year. This is a 20 per cent drop from the Rs470.94 crore reported in the previous year. The company has attributed the losses to the extraordinary losses caused by the Kandla cyclone, which wreaked havoc on the industrial area of Gujarat. These translated into almost a Rs100-crore loss for NIA and a higher provisioning of Rs40 crore towards non-performing assets. This compares with the Rs11-crore provisioning towards non-performing assets last year. The company has gross non-performing assets of 9 per cent in its corporate portfolio. During the 1998-99 financial year, net premium grew 12.43 per cent to Rs2,186.92 crore, and gross premium 12.15 per cent to Rs2,729 crore. All classes of business, including fire, motor and miscellaneous recorded a growth, while marine premium fell marginally from Rs312.64 crore last year.

Orchid considers pvt placement

Orchid Chemicals and Pharmaceuticals Ltd plans to privately place 1.07 crore equity shares of Rs10 each with a premium aggregating Rs175 crore to investment funds belonging to the Schroder Ventures Group. About 70 per cent of the funds thus raised would be used for setting up two new production facilities, while 10 per cent would be earmarked for R&D. Of the remaining funds, 5 per cent will go into launching new cephalosporin products and 15 per cent would be used to meet working capital and normal capital expenditure. The company has called for an extraordinary general meeting in Chennai on 21 October to seek approval for the proposed private placement. Shareholders will also consider increasing the authorised share capital to Rs30 crore, an employee stock option involving 15 lakh options convertible to equity shares of Rs10 each as well as a proposed expansion of the company's board. The company plans to induct three officials from the Schroder funds onto its 11-member board.

Tisco plans NCD issue

The Tata Iron and Steel Company (Tisco) is said to be all set to hit the debt market with an issue of non-convertible debentures (NCDs), aggregating Rs150 crore. The NCDs will be offered on a book-building basis. The debentures will have an eight-year maturity and will carry a coupon of 12.5–12.7 per cent, payable annually. The debentures do not have a call or put option and wil be redeemed in three equal parts at the end of the sixth, seventh and eighth year from the date of allotment. The issue will be lead managed by Kotak Mahindra Capital Co and ABN Amro securities. The funds raised through the NCD issue are likely to be used to meet the company's enhanced working capital requirements.

Indocean Chase picks up Domino's stake

Indocean Chase Capital Advisors, an associate of US-based venture capital major Chase Capital Partners, is picking up a 26 per cent stake in Domino's Pizza India Ltd, a franchisee of the $3.2-billion US pizza giant Domino's Pizza Inc. The Delhi -based Bhartiyas of Vam Organics own the Indian franchise. The $8-million investment will enable an expansion drive at Domino's India. The 26 per cent stake could go up conditionally to 32 per cent, depending on the company's performance after the investment. The pizza chain is on an aggressive growth track. Worldwide Domino's has an extensive network of 1,700 franchisees. Domino's Pizza Inc, however, has no stake in the Indian franchisee.

MTNL sees fall in demand

For the second consecutive year, Mahanagar Telephone Nigam Ltd (MTNL) has witnessed a drop in demand for new telephone connections. In the capital, average registrations for new connections dropped to around 11,000 per month in the first five months of 1999. During 1996-98, the demand for new connections was between 13,500 and 15,500 per month. In Mumbai, the demand has dropped from 15,000 -20,000 a month last year to 10,000 -15,000 this year. According to MTNL chairman and managing director S. Rajagopalan, the slowdown in demand reflected the sluggish economic growth in the last few months. Rapid network growth between 1995-99 has also led to zero-waiting lists in the two metros, which could have contributed to the fall in demand. Meanwhile, MTNL is working on various strategies to kick-start demand.

NSE to set up infotech firm

The board of directors of the National Stock Exchange has decided to set up an independent information technology company. The separate company status is expected to provide a platform for taking up more challenging assignments both within and outside the country. The initiative is expected to infuse better management and harnessing of technology skills. The company will scout for strategic partners for its business endeavours and will make significant resource investments in niche product development and consultancy. The 150-strong IT staff of NSE will be transferred to the new company. •

Are taxes eating up your FD earnings?

Time you switched to Birla Income Plus.

[illegible] you invest in an income fund carrying an interest, you could end up paying a substantial portion of your returns as tax. [illegible] could be as high as 39% if you are an individual and 36.5% if you are a corporate. So if you assume an average return of 10% on your bank FD, your actual earnings could be as little as 6%.

Let's assume you invest in Birla Income Plus (BIP) instead. BIP dividends are tax free for investors (but the mutual fund pays a tax of 11%). That's a clear advantage of well over 20%.

Dividends for 1998-99 were 12% per annum.

That's not all. BIP also gives you 100% exemption from Capital Gains Tax (u/s 54EA and 54EB). And since it's a debt fund, investing in high quality bonds and debentures, you can rest assured that your money's safe.

Apart from tax benefits, returns and safety, BIP also offers a high level of liquidity. There is no lock-in period, so you can get your money back whenever you want.

BIP is brought to you by Birla Mutual Fund, the country's largest private sector fund. For more details, please call us at the numbers below.

Visit our website at www.birlamutual.com or email us at bmfmail@birlamutual.com

Birla Income Plus

BIRLA MUTUAL FUND
The name inspires trust.

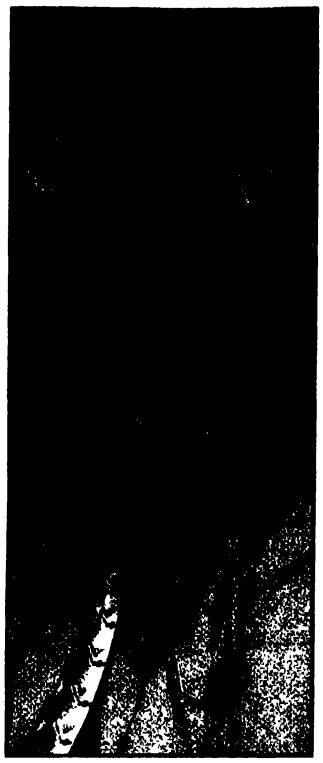
An Aditya Birla Group-Sun Life Venture. CONSTITUTION: Birla Mutual Fund (BMF) has been set up as a trust under the Indian Trust Act, 1882 **Sponsor:** Birla Global Finance Limited and Sun Life (India) AMC Investments Inc. (liability restricted to seed corpus of Rs. 1.00 lac.) **Trustee:** Birla Capital International Trustee Company Limited (incorporated under the Companies Act, 1956) **Investment Manager:** Birla Sun Life Asset Management Company Limited, Ahura Centre, Tower B, 2nd Floor, 96A D, Mahakali Caves Road, Andheri (E), Mumbai 400 093. Fax: 837 4949/5300 **RISK FACTORS:** Mutual Funds and Securities Investments are subject to the usual risks associated with capital and money market instruments There can be no assurance that the funds objectives will be achieved. As with any investment in securities, the NAV of the units issued under the schemes can go up or down depending on the factors and forces affecting the securities markets. Past performance of BMF does not guarantee the future performance of the schemes of BMF and does not form a basis of comparison with other investments. Birla Income Plus is only the name of the scheme and do not in any manner indicate either the quality of the scheme, its future prospects or returns For details and risk factors read the offer document and refer to your tax advisor before investing **Scheme Objective:** BIP To generate consistent income, through superior yields on its investments, at moderate levels of risks through a diversified approach

With enterprise resource planning (ERP) being implemented by most companies, ERP vendors are trying to find ways of attracting more customers. For Baan Info Systems, the formation of its Baan Users Club is an added advantage for its users. "We have 80 customers today, and one customer does not know how the other implements our package; it is different for each customer," says Gopal Madnani, director-operations of Baan Info Systems India Pvt Ltd. "The Baan Users Club is a step ahead to share the implementation knowledge among all the customers and to increase the usage of the Baan product," he adds. At present, ERP penetration is about 11 per cent in the country. Though the scale of the market is not large at present, the growth rate is quite high. And it is this potential that the company is tapping. Baan is also looking at introducing Baan FrontOffice, an extended ERP solution which can be sold as a stand-alone product, in the country. •

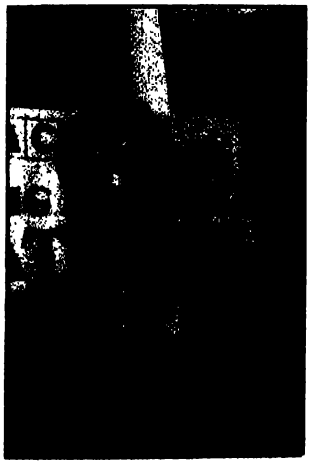


With the launch of Ju's Fresh juice vended through kiosk and mobile vans, the country's commercial capital has witnessed a new concept in fresh fruit juice marketing. "The kiosk, known as Orange Boy, and the mobile van are both equipped with juice-making machines imported from the US. The automatic juice maker is a transparent, easy-to-operate machine which takes three seconds for the entire process of peeling, crushing and extracting the juice from the fruit. All this without the touch of the human hand. Hence, the product is aimed at the health- and hygiene-conscious," says Rachna Kapoor, managing director of National Food Products. The branded fresh juice is available for Rs20 per 250 ml glass which is served in both sealed as well as non-sealed glasses. Adds Kapoor, "We will soon be launching the 'dial- a-dozen' scheme whereby any consumer who places an order for over 12 glasses of the orange juice would get free home delivery in any part of Mumbai." •

The Rs300-crore CMS computers has joined the club of technology companies whose research & development facilities have been accorded recognition by the Government of India. Says R. D. Grover, chairman and managing director of CMS computers, "Our R&D is fully market-oriented. We design, produce and market products of current technology. Unlike in the yesteryears, R&D today has to be current and user-driven. There is no time for any trial and error. Now, R&D demands special skills which we have acquired over the years and the government's recognition is encouraging." As a company, CMS has logged an annualised growth rate in the range of 30-40 per cent, which is higher than the average growth rate of the organised IT sector. "In the next five years, with strategic focus on telecommunications, manufacturing, banking and services sector, we expect to triple our turnover and join the Rs1,000 crore-plus league," says Grover who currently puts back 3 per cent of the company's revenue into its three R&D centres. •

After cola wars, it's time now for worsted wars. Last fortnight, textile major Siyaram Silk Mills, a part of the Rs900-crore Siyaram Poddar group, launched the J.Hampstead brand of worsted suitings in the country. Siyaram has been importing J.Hampstead branded worsted fabrics into the country since 1995. But the product launched last fortnight is a blended product manufactured in India with technical support from J.Hampstead of England. "We invested close to Rs30 crore for the manufacturing facility of this product," says Ramesh Poddar, vice-chairman and managing director of Siyaram Silk Mills Ltd. "J.Hampstead does not manufacture blended woolen fabric, so we are also targeting the export market," adds Poddar. In the domestic market, priced at Rs300 onwards, J.Hampstead products are targeted at the upper-middle and middle classes. For the first year, Poddar estimates sales of Rs40 crore. "The customer wants good quality at affordable rates. It is for these reasons that our product will be well accepted," says Poddar. •

Builders are hesitant about promoting a domestic water recycling system as an additional feature, admits Ajay Popat, associate vice-president (marketing) of Ion Exchange (India) Ltd. "They are scared that prospective flat buyers will perceive this as a warning of a water shortage," explains Popat, who launched a domestic-scale recycling plant for kitchen and bathroom wastewater in Pune last fortnight. Ion Exchange, which has over 400 industrial installations in India, promises a 12-18-month payback period for its new 'water assurance' systems. Installing it during construction could add just Rs4-5 to the cost per square foot, while a retrofitted unit would involve an outlay of



Rs10,000 a flat, he says. The urban domestic sector consumes 80 per cent of water supplies, 60 per cent of which is for toilet flushing, gardening and washing cars, Popat points out. The company has installed a 10,000 litres per day recycling system for a large residential complex in the Mumbai suburb of Vasai. It hopes to grow this market exponentially, obviously before other entrants make it all water under the bridge. •

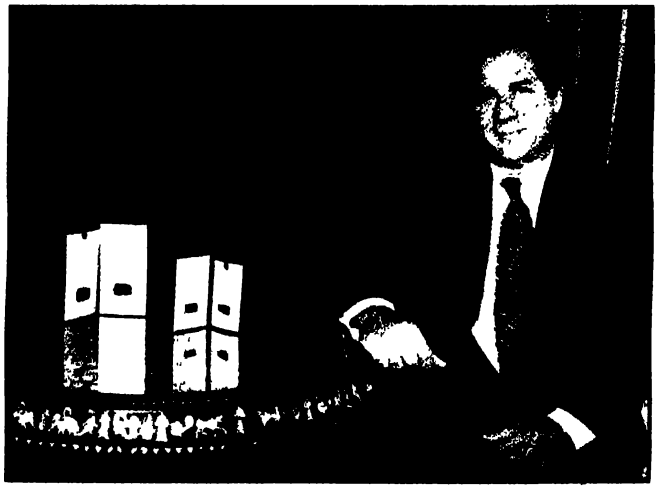
Last fortnight, Klaus Scholl, president of Titex, a subsidiary of Sandvik, was in Pune. Titex, headquartered at Frankfurt, manufactures high-speed and high-performance rotating cutting tools, under the brand name Titex Plus, which are sold all over Europe, USA, Japan, China, Australia, etc. Titex has set up a wholly-owned company in India, called Titex India Pvt Ltd, which has a year-old manufacturing plant in Pune. "We are not new to India. We have been selling our products for the last 30 years in India, to companies like Mico, Telco, Bajaj Auto, etc. Earlier, these companies were

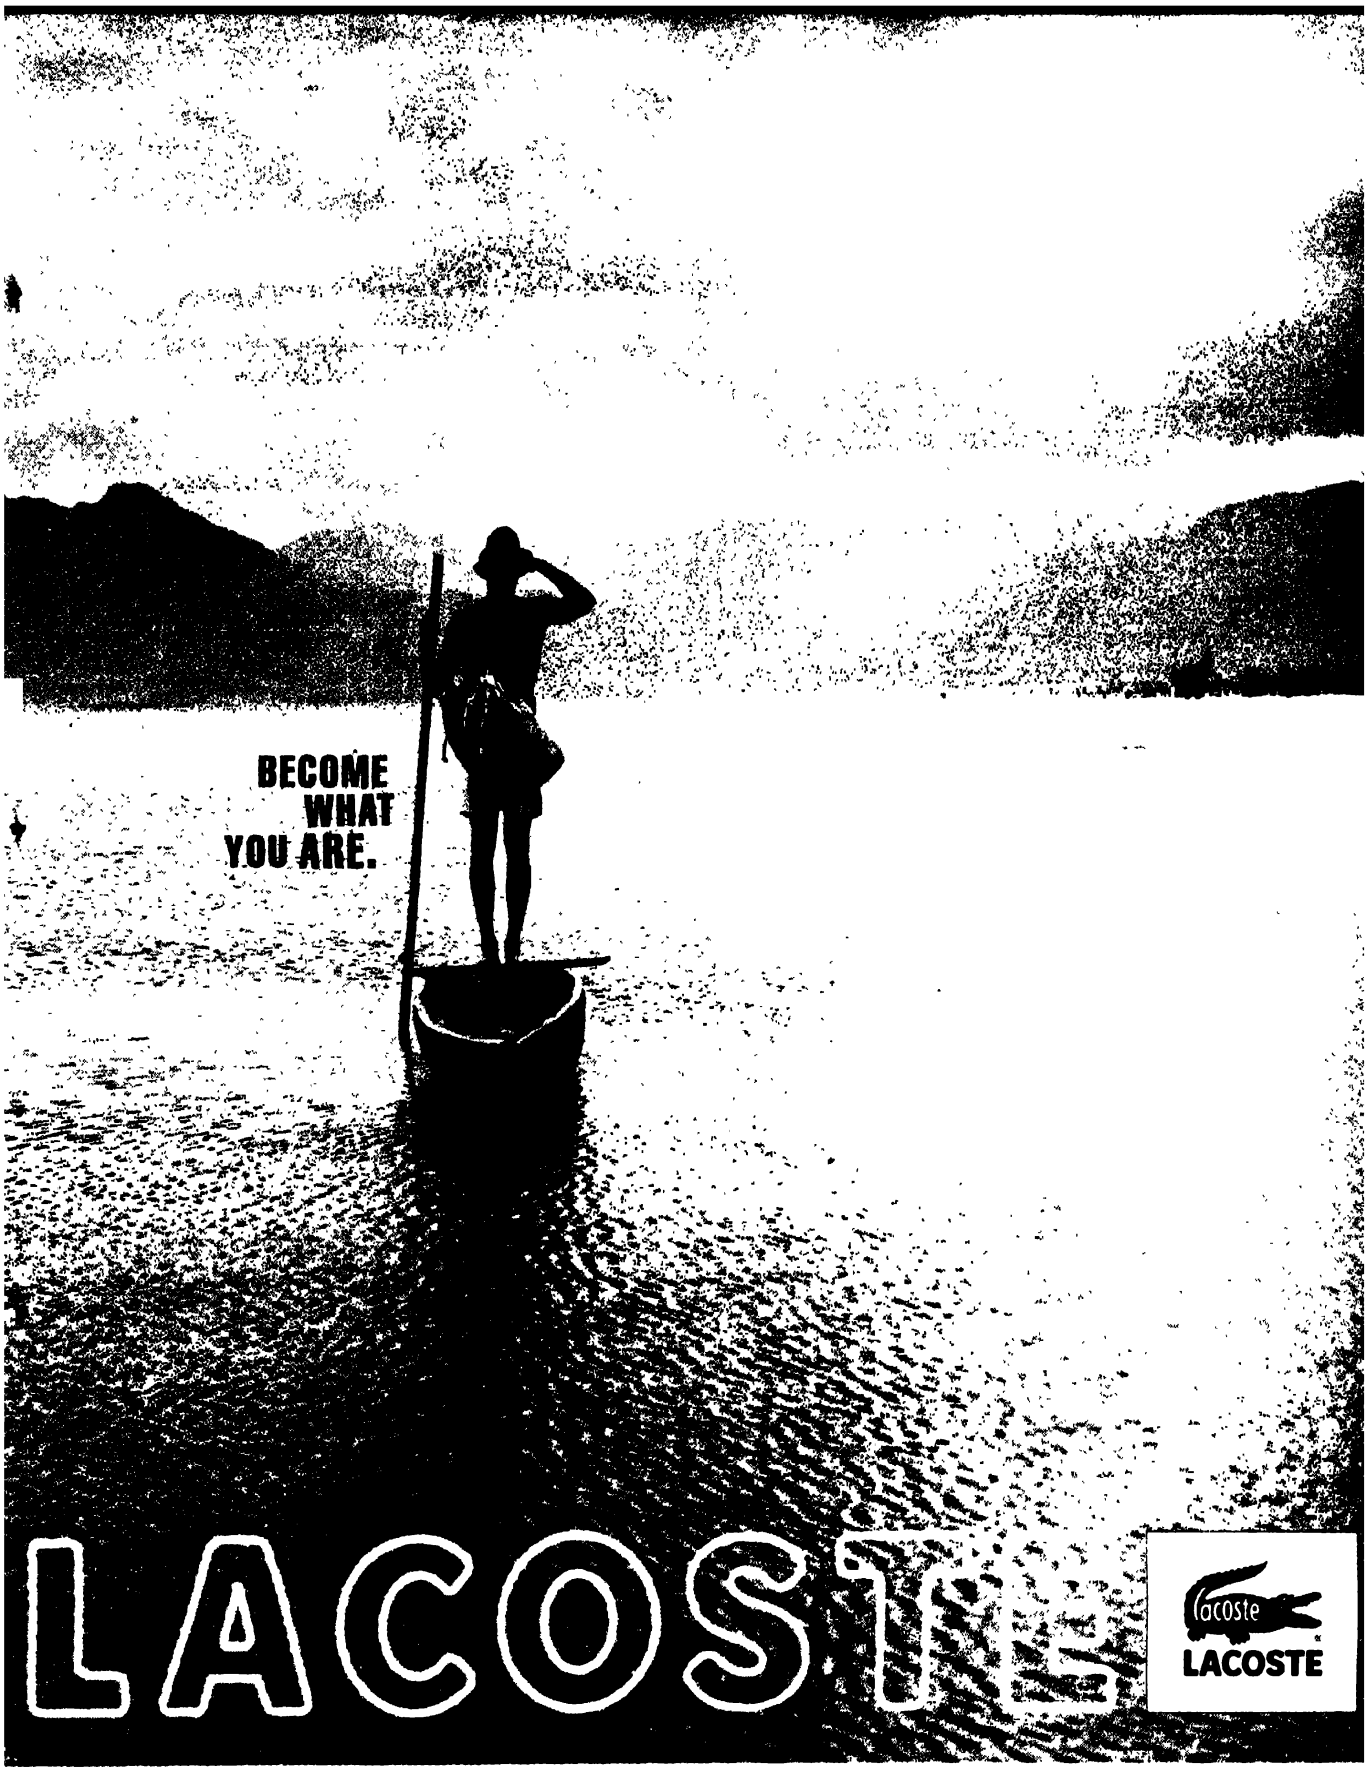
importing our products from Europe and now with the setting up of Titex India, we are manufacturing them locally," says Klaus Scholl. According to him, although the market in India for cutting tools as a whole is not growing much, Titex India is operating in a niche market, which is of high-performance rotating tools. "I have been visiting India often and I am pleasantly surprised how fast Indian companies are adopting the latest cutting technologies, as a result of which the market for our products is growing and we want to participate in this growth," sums up Scholl. •

Tasmac Management Training Resources (TMTR) Pvt Ltd has tied up with Zig Ziglar Corp to get the latter's training programmes to India. Zig Ziglar Corp, a $3-billion enterprise based in Dallas, USA, is solely into training and operates in 15 countries worldwide. Last fortnight, TMTR director Giri Dua launched Zig Ziglar's first training programme in India, called *Strategies for Success*. It is a video-based programme consisting of six modules spread over 12 weekly sessions. Initially, the per participant fees will work out to Rs29,500, with discounts for companies nominating more than one participant. Says Dua, "We have already got Clariant India Ltd as our clients and we will be training 300 of their executives in all their branches in India. Besides, our first batch in Pune of 25 participants nominated by companies is also ready to begin training. By the year end, we expect to have eight batches running in Mumbai, Hyderabad, Bangalore and Pune." •

This is for those interested in fine mens wear. Ermenegildo Zegna, a leading global brand in fine mens wear, which has no direct presence as yet in India, will open its flagship store at Mumbai's Crossroads mall this month-end. The Mumbai store is the company's 45th boutique worldwide. The boutique will open showcasing its Winter 1999 collection. "We've studied the market for three years. India is an important market for us," says Maurizio Calcinoni, Ermenegildo Zegna's managing director for Asia Pacific. The boutique will be a concept boutique, similar to its other boutiques worldwide. All the 160 suits will be imported from Italy. "For the local customer, we offer exclusive suits, in terms of both the product and our made-to-measure service at the boutique," says Calcinoni. •

Wunderman Cato Johnson (WCJ), a member of the Young & Rubicam Group of Companies, has been formally launched in India. WCJ, renowned as the world's largest database marketing firm, is now redefining the business it is in across the world. Launching WCJ in India, Wolfgang Haf, WCJ's president for the Asia Pacific region said, "WCJ is not just another direct marketing agency. It is a world-class business service provider of an entirely new class; WCJ almost routinely creates marketing history with its global expertise in customer relationship management, technology-driven marketing and customer equity management." G. Ajay Row, chief operating officer of WCJ India said, "In India, the launch of WCJ marks the dawn of an exciting new marketing era. Our *mantra* for the new millennium will be to help clients manage their customers as a strategic asset. WCJ is a tremendous force globally and their support of the Indian operation in so many ways is truly incredible." •





Teruaki Watanabe, managing director (foreign trade department) of Pentel Co Ltd, was in Mumbai recently to announce his company's 50:50 joint venture with writing instrument manufacturers Flair and Rótomac. "The new company will be known as Indo Japan Pen Manufacturing Co Pvt Ltd and will have a technical collaboration with Pentel Co Ltd of Japan," said Teruaki Watanabe. The new company will exclusively manufacture and market the Pentel brand of writing instruments in India for a price range of Rs15 to Rs115. The new company has set up its manufacturing unit at Daman with a current capacity of 50,000 pens per day, which is expected to grow up to 2 lakh pens per day by March 2000. •

Barely three months after taking over as president and CEO of International Speciality Products Inc, US, (combined revenue of $2 billion including that of Gaf Materials Corp), **Sunil Kumar** has a packed schedule. He has embarked on a six-nation tour spanning 12 days to explore and get first-hand knowledge of the potential in this part of the world. The first stopover has been India. ISP manufactures a host of speciality chemicals which go into personal healthcare, pharmaceuticals and the more recent processed packaged foods. Its major clients are companies such as Unilever, P&G, Colgate, *et al*. ISP established its liaison office about three years ago and boasts of generating revenues in excess of about $10 million in India. Kumar feels that ISP's Indian operations can generate business five times the current level. "There's no doubt. All the drivers (read MNCs) are here," says he. He is also exploring the possibility of setting up a manufacturing base in Asia. "I am comfortable with India. We are here for a long haul for we recognise huge growth potential in the country," he says. •

Mario Pages, international sales manager of Parlux Fragrances Inc, was in Mumbai recently to take stock of the company's products since its launch in India 12 months ago. Pages also launched a new fragrance for Indian men - Portfolio. "This is a perfect expression from the Perry Ellis stable for men who have a multidimensional personality. It is a new classic for the new millennium and is being simultaneously launched all around the world. The target audience is the young executive," said Pages. He sees India become an open market in the near future and an important place for Perry Ellis International as a global company to be in. Worldwide, the company has sales in excess of $800 million and a network of over 25 licensees for manufacturing and marketing in 36 different product categories. "Although in terms of volumes we have nothing much to write home about, we are building our brands in India and see it as a market of the future," said Pages who hopes to launch a few more brands here. •

Profits spelt I-n-t-e-r-n-e-t

The Internet is responsible for most it companies' business strategies today. Whether it is improving the viability of existing successful businesses or creating entirely new businesses from the tabula rasa the Web represents, Indian companies are moving up in visibility. Here two applications extend enterprise management software by two European multinational vendors to the Web, while the Indian showcase of the international Internet business conference and exhibition attracts visitors and organisations from across the world

Weaving Web solutions

Houle has set his sights on gaining 20 per cent of the ERP market in India

Amsterdam-based Scala Business Solutions NV is a $100-million global provider of business software solutions and products, operating in 60 countries and employing 1,000 software professionals worldwide. Scala set up a 100-per cent software development subsidiary called Scala Mindworks Pvt Ltd in Pune in 1995. "Scala Mindworks is one of our six development centres worldwide," says Chris Houle, president of Scala Business Solutions NV. "Besides developing software, it works in close co-operation with Bangalore-based Sonata Software Ltd, which taps the commercial market for us in India and sells our products here."

Scala is mainly into ERP solutions, and its target clientele are multinationals like Alfa Laval, Astra Pharmaceuticals, Sandvik, ABB, and Buhler. It has an 11 per cent share of a market worth $70 million (Rs300 crore), behind companies like SAP India and Baan. "SAP and Baan systems are tier-1 ERP solution providers, whereas we consider ourselves as tier-2. We target midsized companies with turnovers ranging between $25 and $50 million," says Houle. For example Bühler, a large Swiss machinery manufacturer which has operations in 140 countries, uses SAP at 10 or 12 of its large sites, but for its other medium-sized locations it uses Scala systems.

According to Houle, the ERP market in India is growing at 30–40 per cent per annum, and Scala aims to capture 20 per cent of this market in the next three years. Besides growing domestically market, the Indian operation will also play a key role in Scala's success in global markets. Mindworks plans to grow to a strength of 200 from the present 46 over the next three years. Managing director Milind Thosar, says, "While Sonata Systems Ltd does the marketing and localisation of our ERP packages for the Indian market, we in Pune concentrate on future technologies, which include Web-enabled business solutions. In fact, the evolution of global Web-based products is largely driven from our development centre at Pune."

For example, the Pune team developed an Internet-based package for First Hotel, a Swedish chain of 50-plus budget hotels in Europe. This is a company with a low-cost operating model which called for Web-based solutions. It wanted transactions to be carried out by non-IT staff like night clerks, who could key in the daily invoices received from suppliers of each hotel. These invoices would then be cleared the next morning by centrally located professional accounting managers, resulting in higher manpower productivity and cost savings.

Similarly, Scala Mindworks also developed a Web-based project management system for Sandvik, which has a lot of skilled managers who are usually travelling and at project sites. This is a time-tracking system. At the end of each day the managers log on to the Internet and key in the number of hours they have worked on a project for subsequent billing. This system is integrated with

Scala's financial accounting and project management system which includes scheduling, logistics, spare parts management, etc.

At the Internet & e-commerce conference and expo in New York in April this year, a new e-commerce product Scala.Solutions was adjudged the best e-commerce-enabling application by the Gartner Group, a highly respected computer industry market analysis company based in Connecticut. Scala.Solutions is a suite of powerful e-commerce solutions with which a company can extend its reach via the Internet to its customers, vendors, bankers, and dealers, enabling them to transact with the company on a 'self-service' basis.

The software is available in 30 different languages. The selection of the language is menu-driven, so the user can switch from one language to another on the fly, unlike, for instance, Microsoft's Chinese version of MS Word. Scala.Solutions uses XML technology for real-time data transfers. The extensible mark-up language text formatting facilitates faster data transfer. Simply put: if, for example, the language of a software package is to change from English to German, online and in real time, XML retains the basic screens and visuals on the computer and only transfers the text from language libraries in the system.

Scala.Solutions incorporates XML technology together with wireless application protocol (WAP), which enables data to be entered from wireless handheld instruments such as cellular phones. Scala.Solutions also supports multiple currencies of the 60 countries Scala operates in at the moment. "Currency tables are maintained in the system which are regularly updated by automated importation of data from a central or commercial bank," says Houle.

Scala plans roadshows to make its potential clients aware of the capabilities of its products in key cities across the world, including Delhi, Mumbai, and Bangalore, sometime in October or November this year, for its Indian clientele. With Web-based business solutions in ERP and e-commerce, Scala is all set to go places.

• ROOP KARNANI

The year 1999 was not particularly exciting for the global enterprise resource planning (ERP) vendors. Prospective customers, busy fixing the Y2K bug in the last year of the millennium, had little time and funds to think about ERP products. Even market leader SAP AG, could not escape the slowdown in the market. Having achieved 40 per cent growth in revenue in the boom year 1998, it is struggling to touch 25 per cent this year. The company is pinning its hopes on mySAP.com, its portfolio of far-reaching Internet business strategy and e-commerce offerings.

SAP has been aggressively promoting mySAP.com, launched on 20 July, through sapphire '99, an event for its clients, business partners, and professionals. The mySAP applications combine the powerful capabilities of SAP's business applications with standard Internet technologies. "MySAP.com will be launched in the Asia–Pacific region at the sapphire '99 for the region which will be held in Singapore from 13 October. SAP users will be able to envisage the future shape of their businesses in the Internet economy," says Singapore-based Nandkishore Kalambi, director of the SBU for manufacturing in South Asia and the Pacific.

Nandkishore and his colleague Georg Gradl were in India recently to participate in roadshows in Delhi, Mumbai, and Chennai to create greater awareness about SAP's new products and applications. "India is a very important market. For us, it is one of the fastest-growing. Moreover, the Indian market is very receptive to new offerings from SAP," says Gradl.

"MySAP.com is the only complete solution for doing business over the Web. It brings a new level of empowerment to a company's employees, customers, and partners, all over the Internet," says Gradl. SAP's selling line seems to be 'Turn Internet promises into profit'. The popular perception is that the Internet is some fancy technology, associated more with fun and leisure than business. "We want to change that perception among our users," says Kalambi. "We tell them they can use it to make money. With mySAP.com we will demonstrate how the Internet can be used to enhance profitability."

MySAP.com encompasses business collaboration scenarios spanning from back-end to front-end to virtual marketplaces. These cover e-commerce, customer relationship management, strategic enterprise management, business intelligence, supply chain management, human resources, logistics, manufacturing, financials,

Kalambi wants to change the perception of the Internet as a leisure medium

knowledge management, industry-specific templates, virtual training classes, and professional services.

A mySAP.com portal will enable one-step business and will be a leading source of business services for professionals. The application itself has two components — Marketplace and Workplace. MySAP.com Marketplace enables companies to participate in the Internet economy. It is a comprehensive, open e-business solutions environment comprising portals, industry-specific enterprise applications, Internet applications and services, and XML-based technology. The emphasis will be on creation of collaborative markets and facilitation of dynamic business relationships — business-to-business procurement, business-to-consumer selling, and business-to-business selling.

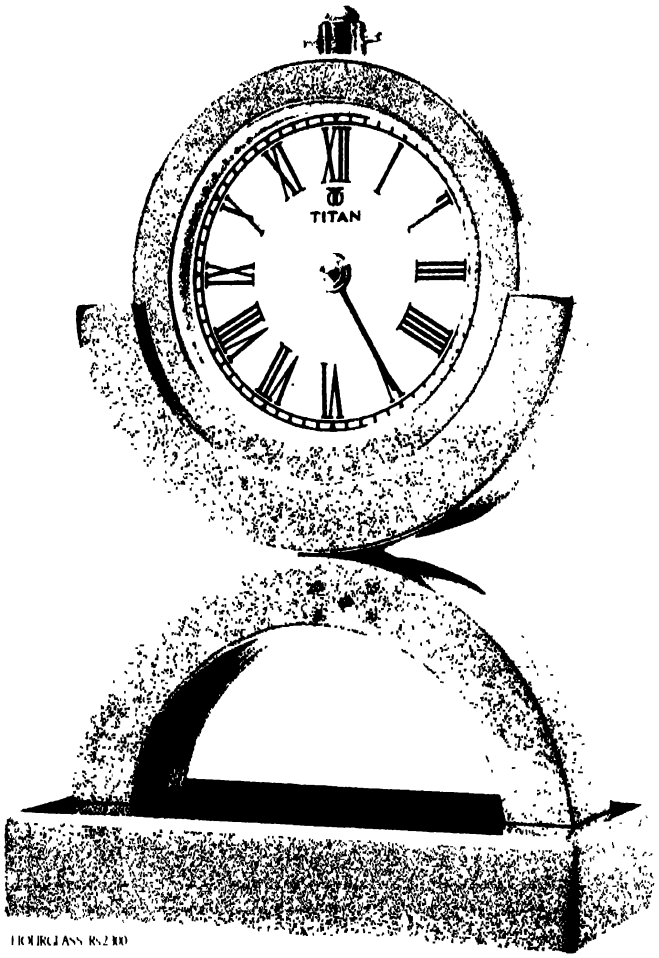
Explaining the nuts and bolts of mySAP.com, Gradl says: "SAP is establishing an Internet-based marketplace. A substantial part of mySAP.com Marketplace is a business directory, which helps companies find business partners, interact with contacts, and identify products or services. As a member of this business directory you benefit from an open marketplace, where buyers find sellers from around the world and service providers cater for individuals with professional needs. Once your company is registered you can use self-service functions to modify your detailed business directory entries, e.g. product categories or the business communities you sell to, whenever you need to." In addition, there is also a relationship library and business support services.

MySAP.com Workplace is a role-based, personalised single access point that gives users fast, easy, and convenient access to everything they need, including SAP and non-SAP components and all internal and external information and services, from a Web browser — without requiring any additional installation on the desktop. An integral part of mySAP.com, it provides an open server-based infrastructure for role-based interfaces that empowers users to perform effectively in dynamic, fast-paced, market-driven work environments.

• MOHAN RAMAMOORTHY

Where e-biz is big business

Last time they were in the wings — waiting, watching, a trifle sceptical. This year they rushed in — enthusiastic, spirited, and highly optimistic. Internet Service Providers (ISPs), Web portals, content providers, electronic business consultants, equipment manufacturers, venture capitalists, and angel investors from the US — they were all there in numbers at the second India Internet World (IIW) 99, held at the capital's Pragati Maidan last fortnight. Over three days between 22 and 24 September, the exhibition, organised by Microland-subsidiary Micromedia in association with Penton Media of the US, drew over 75,000 regular visitors, in addition to 1,600 delegates and about 20,000 business attendees, and over 100 companies exhibiting their wares. Last year, the fair attracted about 40 exhibitors, and about 27,000 visitors.



Web fever is sure running high among Indian netizens. Thanks to the end of long-distance carrier VSNL's monopoly over the medium last year, the Internet has seen a proliferation of both access providers and users. Now the country's 2.2 million users have a host of ISPs to choose from, prominent among them Satyam Infoway, MTNL, and Bharti-BT. Most industry experts expect the number of users to increase to 15 million by next year, and that is just a conservative estimate. "It's remarkable how awareness of the Net is growing," says Microland chairman Pradeep Kar, who exited his hardware business totally last year, and is now concentrating all his efforts on evolving a service-solutions model on and around the Net. "If space wasn't a constraint, we'd have liked the show to be much bigger."

Kar was among the early ones to have spotted the opportunities of the Net. Not only is the Web throwing up a new generation of entrepreneurs around the country, but even traditional companies are jumping on to the bandwagon to extend their business horizons. Their new *mantra*: e-commerce. Across industries, companies are now reorganising their office networks to reach out to their customers electronically, and also to shorten transaction cycles with their suppliers and vendors. "Even to compete in its conventional business a company has to be Net-ready," says Microsoft director (enterprise customer unit) T.S. Krishnan. "It's no longer a huge decision to make."

And a good decision it is too. Global research agencies say business done over the Net last year in the US alone totalled $30 billion, and by 2003 should cross $300 billion. But that,

The ISPs were out in force. Here: the Bharti-BT stand

OMPM RANK

according to network equipment manufacturer Cisco, which generates most of its $12 billion revenues over the Net and has set a target of $50 billion in the next five years, is an extremely conservative estimate. By 2001, says Cisco Systems vice-president (enterprise business) Prem Jain, e-business should touch $1.3 trillion.

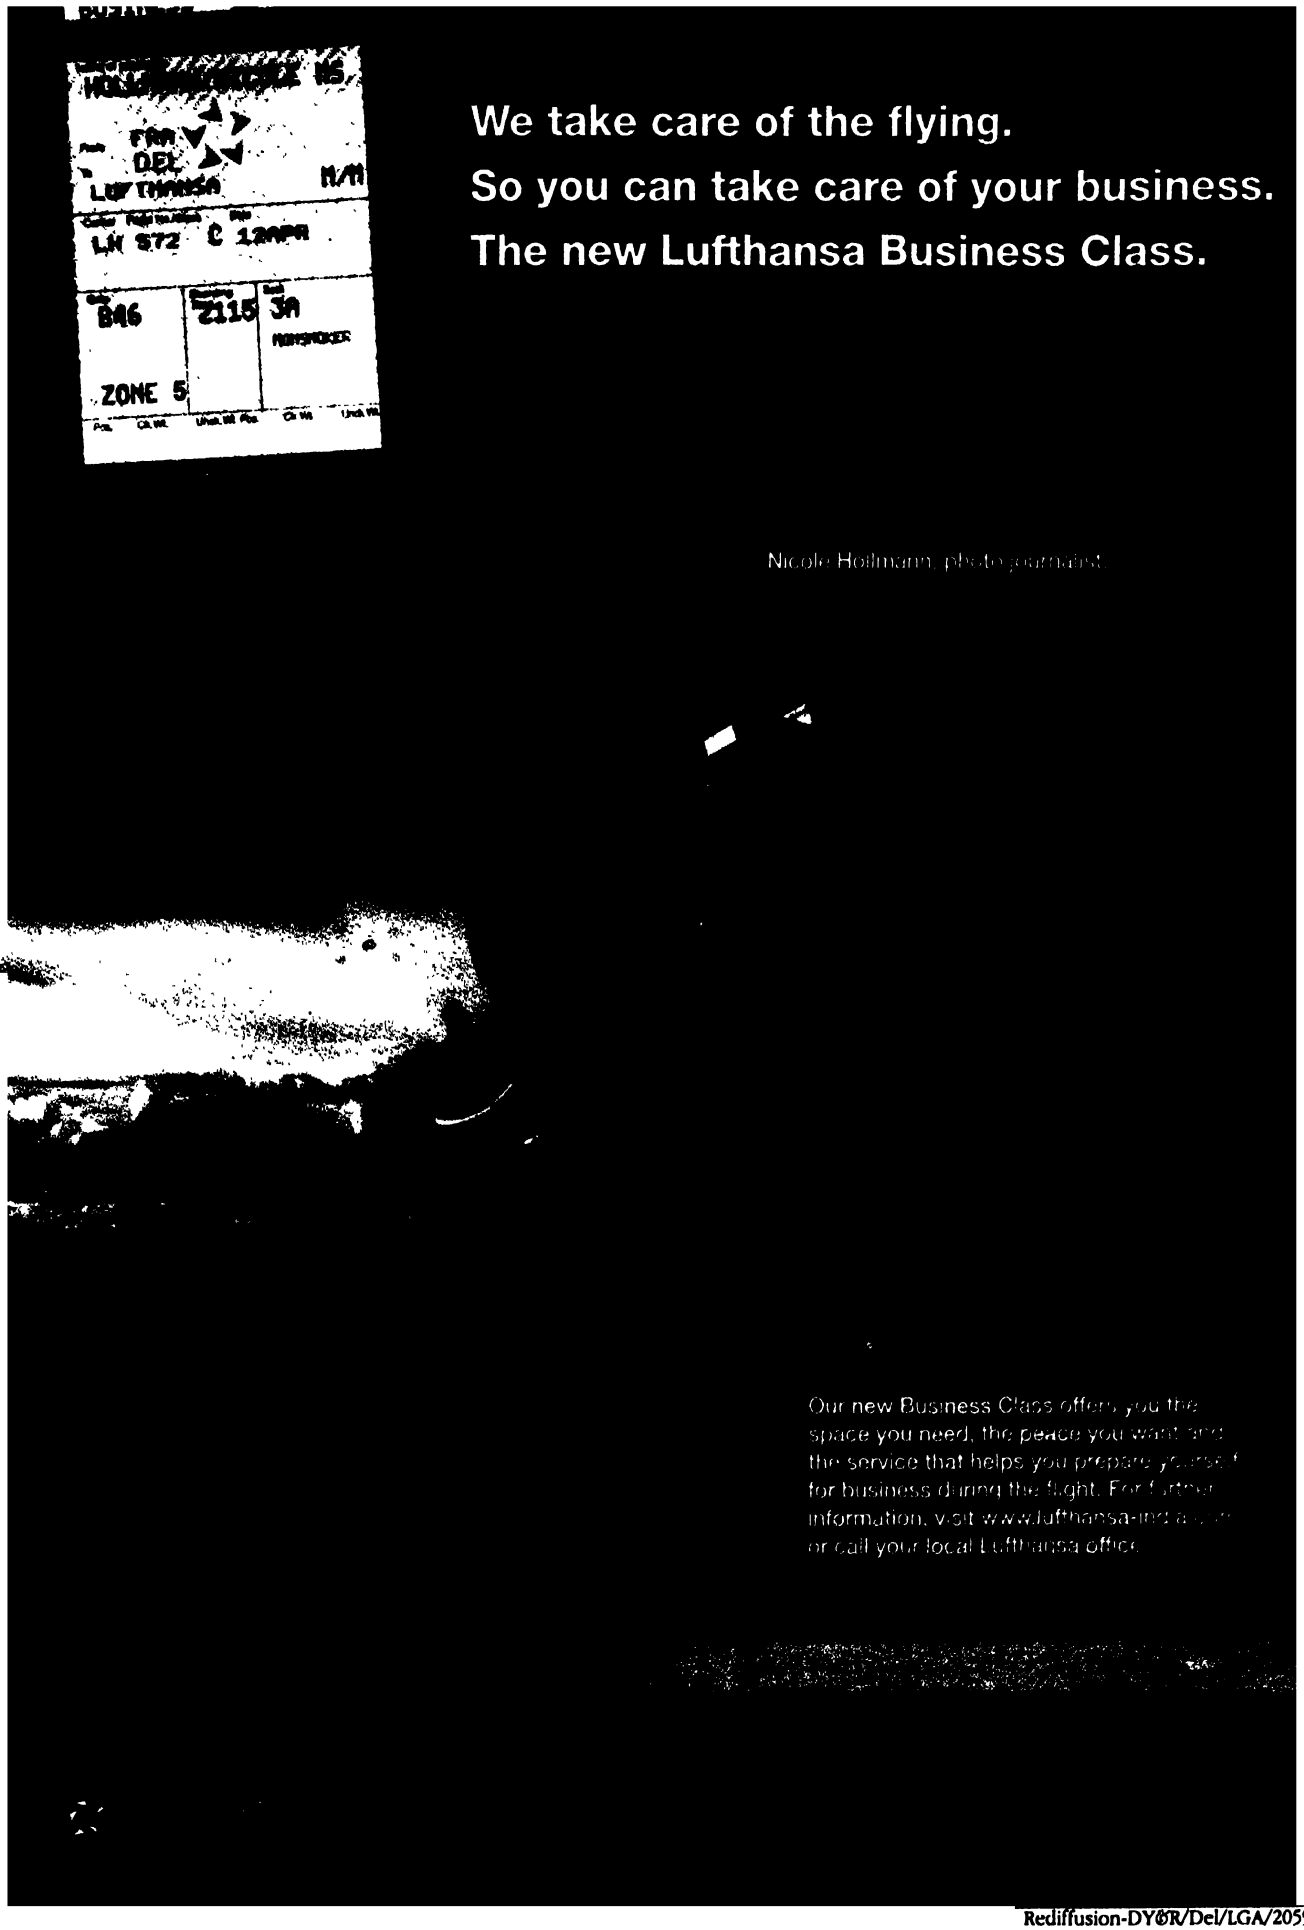
Such numbers may yet be difficult to relate to in the Indian context. But the fact is that, despite obstacles like poor telecom infrastructure, inadequate security, and unclear cyberlaws, Indian companies actually did Rs131 crore worth of business on the Net last year. Of this, Rs119 crore was in business-to-business (B2B) transactions and the rest business-to-consumer (B2C). But in the next couple of years, feel industry pundits, the amount will increase to over Rs25,000 crore. Says Kar: "The e-commerce policy expected in the winter session of Parliament will take the Internet industry to new heights." And contributing to the growth will be not only the big IT companies like Intel, Oracle, IBM, and Hewlett-Packard, which are all reorienting their business models towards the Web, but also start-ups in the areas of Net consulting, networking, and portals.

An example: entrepreneur B.G. Mahesh, a software engineer, who started a personal Website named mahesh.com as far back as in 1993 to provide India-related information to (mainly) Indians in the US. Buoyed by the privatisation of the Internet delivery business and the growing popularity of the Net in India, Mahesh invested $1 million to re-launch his site as an India portal, indiainfo.com, in April this year, after tying up with Madhu Kodali and Raj Koneru of New-Jersey-based software services company Intelli. Besides political, business, and social news and features, indiainfo.com also provides e-commerce options to its users to order books, music, and flowers. Mahesh benchmarks his portal against rediff.com, and promises to consistently provide better value to the site's visitors. By the end-2000 he hopes to make his first IPO in the US.

Targeting a very different niche is Sanjay Shetty, CEO of DBS Internet,

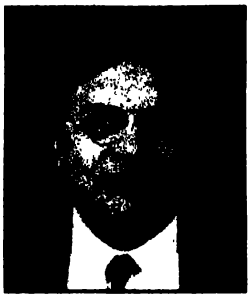
Participation and attendance at IIW 99 were enthusiastic

who started his Web consulting firm in true it entrepreneurial style from a godown in 1996. Shetty, who tied up with Diners Business Services (DBS) last year, provides Web strategies and solutions to corporate houses and has notched up a client list of over 120, including such big accounts as IndianOil, Citibank, and Samsung. DBS has helped develop the online trading system of the National Stock Exchange and reduce transaction cycles for Samsung from 40 to 20 days.



Shetty and Mahesh were just a couple of the many entrepreneurs proudly exhibiting their initiatives at IIW 99. And for those of them looking for investors in their businesses, there couldn't have been a better forum. Scouting around for a good idea to develop were quite a few angel investors from the US, besides the usual run of venture capitalists. The angel investors were mostly Indians who had struck it rich in the Silicon Valley and had now come home to seek out and nurture talent.

There was Ram Shriram, who recently chucked up his job with amazon.com and has turned full-time angel investor. Shriram, who had helped sell junglee.com to Amazon for a cool $174 million two years ago, is now mentoring three start-up ventures — google.com, a search engine, and yodlee.com and elance.com, both online transaction entities. There was also B.V Jagdeesh, co-founder of Exodus Communications, which hosts and maintains servers for mission-critical applications.



But the star of the show, undoubtedly, was Rakesh Mathur, who along with three other friends founded the search engine junglee.com, which was later merged with Amazon. Sitting on a cool pile of cash, Mathur has just quit his job at Amazon as vice-president and is now embarking on his next start-up, again along with a couple of Stanford friends. He's named the project Calpurnia, and says its a "big, big idea" but won't reveal much else. But in the next six months, when Calpurnia is up and running, Mathur says it'll revolutionise the Net.

None of them, though, was willing to commit exactly how much he wanted to invest in Indian start-ups. But Bo Peabody, co-founder of Tripod, which he sold to Lycos for $58 million last year, was very clear that he was willing to invest up to $5 million in one or more Indian start-ups. His personal initiative apart, Peabody says Lycos is partnering with Singapore Telecom to start regional portals in various countries of Southeast Asia, including India. As SingTel does not have a presence in India as yet, Peabody says Lycos is searching for a third partner, maybe Microland, to set up its India portal. With such initiatives in the offing, the rush at the fair next year may even surprise Kar.

Sleeping with the enemy

Why spurning the West for Russia and China is not a great idea

A zany idea doing the rounds of policy makers and intellectuals in Delhi is to create closer security ties with China and Russia to build an informal axis which will counterbalance the overwhelming military power of the US and NATO in world politics.

In fact, this idea goes well beyond being zany to being hypocritical, frightening and crazy. The logic behind it seems to be that India should seek Russian and Chinese defence and industrial technologies to build its military strength, since the US and the West have already flatly refused those technologies to India because of last year's nuclear blast.

Even if some kind of informal Russia-China-India security relationship were feasible, which is yet to be demonstrated, India's slant towards it would be the height of hypocrisy. That is because a very large number of our top politicians, bureaucrats and intellectuals have chosen the US, preferably Wall Street or Silicon Valley, for their children to live and work in. They see the US as the environment in which they would like their grand kids to grow up. Others, whose children remain in India, want to see them working for Western companies or set up companies doing business with Western partners. Yet, when it comes to diplomacy and policy-making our leaders see the US, together with its NATO "lackeys", as undesirable forces of hegemony and world domination! They prefer as interlocutors, a chaotic and bankrupt Russia controlled by pitiless Mafia oligarchs and a China gripped by a bloodstained and opaque one-party political dictatorship without any proper legal system.

Most of our leaders want their children to be in the US because they are convinced that it is the world's most transparent and open political and business system. Yet, they shy away from sitting down frequently and in diverse forums with US officials, legislators and business leaders to engage in transparent and co-operative dialogues to persuade those opinion makers or, God forbid, actually change their own minds after listening to Western arguments.

Hypocrisy is carried to such heights that most Indian policy-makers feel it beneath their dignity to even consider that American and European advice might be worth obtaining on how to build a better Indian democracy and a stronger economy. Everyone in India seems to have forgotten that our democracy, economy and business, banking and legal systems are patterned on Western designs and it might be wise to listen a little more closely to the inventors of the lifestyles we would like to achieve.

The idea of an informal Russia-China-India axis is frightening because it has the naiveté to assume that the West will fail to notice what is happening until it is too late to do anything about it. India can spring a Pokhran on the West just once. Now, every bit of India and everything that it does is under the closest scrutiny, especially after the nuclear scare created in Western capitals by Kargil. It is naïve to think that nobody in the West will notice if India obtains high military technologies from Russia or China by covert means. It is even more naïve to imagine that the West does not have the power to put pressure on Russia and China if they do supply anything truly dangerous to India.

The West shares the fears of India, China and Russia about Islamic fundamentalism and wants to fight terrorism together with those countries. But that does not mean it will turn a blind eye to the creation of a security relationship between two of its former cold war enemies and India, a country that never stood by it during the Cold War. India has always been moralistic and flaky, constantly flip-flopping in its attitudes to the West. It has never done anything to deserve the West's trust. So an Indian tilt towards Russia and China will not be taken lightly in the West.

Finally, the idea of an informal Russia-China-India axis is crazy because it assumes that both Russia and China are capable of being loyal to India. It is best to remember that Russia is not the Soviet Union, and even the latter was only a fair-weather friend. China, of course, thinks India deserves at best to be a lowly courtier in its court. We are spurning America and Europe, who have at least some respect for us, and are playing up to nations that have no appreciation for India.

And we are doing so because of some irrational convictions about the arrogance and cussedness of the West, instead of focusing on the traditional values of freedom, legal disciplines and human rights that bind us to the West. •

Engaging prospects

The thaw in Indo-US diplomacy is leading to mutual warmth between the two nations

Foreign minister Jaswant Singh continues succeed in winning over his counterparts in the US government. A notable acknowledgment of this winning streak was proffered by the tough-talking US secretary of state, Madeleine Albright, in New York on 28 September. At a public reception for Singh, who had travelled to the Big Apple to address the United Nations General Assembly, Albright released a collection of foreign policy essays penned by American bureaucrats and academics titled *Engaging India*.

There was more promise of a engaging interaction between the two sides. Secretary Albright formally reaffirmed the US government's plans for a presidential visit to India early in 2000. In a flash of rare sentiment, Albright expressed the insight that for President Clinton a trip to India was the "missing piece in his presidential and personal life". Other senior US government officials affirmed that the Clinton administration was determined to "rectify the lack of an engaging dialogue between the two countries". For his part, foreign minister Singh assured the US foreign policy mandarins that any new government in New Delhi would leave no stone unturned to make the visit an unqualified success. The last US presidential visit to India took place 23 years ago, when Jimmy Carter graced the hospitality of the Morarji Desai government.

Senior officials of the foreign ministry point out that such mutual warmth has emanated from a few key initiatives between the two sides during late August, and early September. These have helped Singh and Albright to temporarily bypass the issue of India signing the CTBT, a key priority for the US. The foremost among them has been a nascent action plan that would enable India and the US to collaborate against international terrorism.

In the third week of May, the US global ambassador for anti-terrorism initiatives had travelled to New Delhi, where he held extensive discussions with Singh, foreign secretary K. Raghunath, and national security advisor Brajesh Mishra. These discussions have culminated in the announcement of a joint working group of India and the US to combat the menace of international terrorism. In New York, Singh and Albright further discussed the scope of bilateral cooperation under this agreement, including institutional sharing of terrorism-related intelligence and counter-terrorist training. Senior foreign ministry officials emphasise that this initiative is proof of increasing US acknowledgment of India's problems arising from Pakistan-sponsored terrorism, as well as a reflection of the Clinton administration's concern about the sources of other militant extremism in the region, particularly that espoused by the Taliban in Afghanistan.

In recent days the US administration has shown more evidence of sharing the strategic concerns of the Indian government, particularly by rejecting Pakistan's demand for a direct American involvement in the Kashmir issue. In the two months since Pakistan's invasion was repelled by the Indian Army in Kargil, foreign minister Singh has firmly reiterated the traditional Indian stance against any third party mediation in Kashmir. In the past week, and especially during his trip to New York, top-level US officials demonstrated unambiguous acceptance of this stance. US Assistant Secretary of State for South Asia Karl Inderfurth took the position that his country felt more appropriate to act as a facilitator for strictly bilateral engagement between New Delhi and Islamabad. He also rejected Pakistan's demand for a special envoy on Kashmir.

Singh's visit was also broke some fresh ground in Indo-US bilateral relations. The two countries have sponsored a partnership to create a "community of democracies", which will work towards sharing and promoting the democratic experience around the world. A formal working group to push this idea is going to be announced by this year end.

Indian foreign policy officials argue that accord on the aforementioned issues helped to gain US restraint against any American precondition for a presidential visit. However, they are concerned by the need for the creation of "a positive environment" in other matters as well. In coming days, after the new government is sworn in, the Indian establishment is expected to work towards the lifting of US sanctions against India after the Pokhran nuclear tests and narrowing of current differences over international nuclear weapons control. Any breakthrough will be built on the foundation provided by Jaswant Singh.

Riparian row

The last week of September had been reserved by Prime Minister Atal Behari Vajpayee for the last round of electioneering in Uttar Pradesh. Senior aides had planned for him to be personally free from all prime ministerial responsibilities during September 24–26, in order to bring his personal touch to the BJP's campaign in the key Hindi-speaking state. As it turned out to be, Vajpayee had to spend much of this time managing the surge of troubles related to the sharing of the Cauvery's waters between Karnataka and Tamil Nadu.

The history of the long-standing dispute between the two states shows a renewed outbreak of conflict around the time of paddy sowing season in the Thanjavur region of Tamil Nadu, which is watered downstream by the Cauvery, after the river winds it way through Karnataka. Weak monsoons during such seasons have guaranteed serious trouble between the two states. Such circumstances, in recent years, have made successive Karnataka governments anxious to conserve the Cauvery waters for drinking and

irrigation requirements within the state, even at the cost of violating the 1991 interim award of the Cauvery Tribunal. This binds Karnataka to annually supply Tamil Nadu with 205 tmc (thousand million cubic feet) of water from the Cauvery. The riparian drama in the last week of September was a faithful rendition of this script.

Political parties of every hue in Tamil Nadu, as well as the agricultural groups in that state, had begun to sound angry against Karnataka in mid-August. The latter state was seen to zealously hoard Cauvery waters in its own reservoirs as a precaution against uneven rainfall in central Karnataka. According to officials of the Union ministry for water resources, rainfall in Karnataka was measured to be 11 per cent below normal by 31 August, and that in Tamil Nadu around 15 per cent. Since early August, the Karnataka state government had been claiming the need for emergency water storage measures on the Cauvery, on the basis that its water reserves were down to 123 tmc against the prescribed level of 184 tmc. The restricted flow from Karnataka had set the proverbial farm bells ringing among the rice cultivators in Tamil Nadu, particularly in Thanjavur and adjoining districts. Tamil lobbyists claimed that a total of 43,000 hectares under the *kuruvai* crop were in particular danger.

In the second week of September the release from the Mettur dam – the last reservoir on the Cauvery between Tamil Nadu and Karnataka – fell to 23 per cent of the prescribed norm, and this sparked off the immediate crisis. Tamil Nadu chief minister M. Karunanidhi started calling up Vajpayee up – in Delhi, as well as on election tour – and reminding him that the so-called Cauvery accord, mediated by the BJP-led government last October, was one of the key planks of the BJP-DMK alliance for the current general elections. This accord had led to the creation of the Cauvery River Authority under the chairmanship of the prime minister and the chief ministers of all the four riparian states of the Cauvery as members. The CVA is assisted by a specially formed monitoring committee. The Tamil

e-commerce

Nadu chief minister argued that any breach of the accord would make it politically difficult to participate in any future BJP-led government. As proof of the pressure that he was under, Karunanidhi also drew the prime minister's attention to the virulent campaign that had already been initiated in the *kuruvai* sowing regions by his archrival, J. Jayalalitha of the AIADMK.

As part of his crisis management, Vajpayee ordered a meeting of the special monitoring committee on 23 September. The general tenor of the meet was that Karnataka, if willing, could indeed find adequate water for Tamil Nadu's needs. This was rejected outright by the Karnataka representatives. This outcome had been already anticipated by Karunanidhi, who had already prepared a team of three state ministers, ready to seek audience with the prime minister to press the state's case further. Vajpayee was forced to cut his UP trip short to meet this team.

Subsequently, the prime minister ordered a meeting of the CVA itself in Delhi, scheduled for 29 September. This plan again ran into intransigent opposition from Karnataka. Its state government insisted that the meeting be put off until mid-October, until the final round of assembly elections in Karnataka were over. Karnataka chief minister J.H. Patel took the view that he was physically indisposed, owing to a bout of jaundice, and would be unable to make it to New Delhi. By the evening of 26 September, senior aides of the prime minister were scratching their heads about the viability of a CVA meet without Karnataka.

The problem was averted by flash rains in Tamil Nadu which begun on the late afternoon of 27 September and throughout the next day. Sensing Vajpayee's embarrassment, the Tamil Nadu chief minister held these to be adequate for the sowing stage and for the water reservoirs in his state for the forthcoming fortnight. Accordingly, Vajpayee has postponed the CVA meet to mid-October. But once again the intractability of the Cauvery dispute stands demonstrated.

Skidding on oil

The government is in a sticky mess over its management of petro-goods pricing

No standard dictionary of economics can explain the term 'oil pool deficit'. It is used to denote the net effect of a frighteningly muddled regime of price controls and cross-subsidies among petroleum and petro-products, unique only to India. Just as it is conceptually diffuse, its adverse impact too permeates diverse sectors of the national economy in a free-flowing, enveloping manner. "The problem of the oil pool deficit is like an advancing glacier of troubles," says former finance minister Manmohan Singh.

Singh calls the OPD an advancing glacier of troubles, and he should know

The OPD refers to the net difference between the import prices of petroleum and petro-goods and the prices at which these goods are sold within the country by public sector firms like IOC, BPCL, HPCL, and others. The populist politics of every successive government from the 1970s onwards has forced these firms to sell kerosene, cooking gas (LPG), and diesel at heavily subsidised rates. The difference is important because nearly 62 per cent of India's oil requirements are met through imports. In theory, the governments have been committed to making up the difference. In practice, they could not be bothered too much, which meant that the burden of the oil deficit has been really borne by the oil companies, hamstringing their own business plans.

Notably, the OPD is not included in the annual accounts of the Central government. This approach was also reflected in the way the government's drastic handling of the OPD in 1997, by which time it had grown to Rs18,200 crore. In a few sweeping strokes of bureaucratic penmanship, the government converted its dues to oil bonds credited to the respective oil firms in the country. Subsequently, the last quarter of 1997 and the whole of 1998 saw a long, sustained dip in the international oil prices and, in a period of 14 months, the government was able to clear its dues on the oil bonds almost entirely.

However, since March this year, international oil prices have come surging back to their high levels and India's oil economy is in trouble again. During the last six months since March, international crude prices have risen by almost 105 per cent. There have been identical increases in the international prices of naphtha, kerosene, high-speed diesel (HSD), and furnace fuel oils (FO). The higher price of the India's oil needs was reflected, to begin with, in its oil import bill, whose frequently revised estimates have been a regular feature of the confabulations between the petroleum and finance ministries in Delhi. Budget '99 had initially made a provision for $8.2 billion on this count (since all petroleum imports are dollar-denominated). Some time later, at around June, this projection was revised to $9.8 billion. In early September, the latest government estimates put the oil import bill close to $10.9 billion. In comparison, the cumulative bill for oil imports in the previous financial year, 1998-99, was $5.9 billion.

However, this trend has not been reflected in the domestic market prices of petroleum goods, which continued to be pegged back at 1998 levels. In the early part of its tenure the BJP-led coalition government took advantage of the low international oil prices to hack domestic HSD prices four times. For purely populist reasons, during the current election year, it refused to take measures in the reverse direction notwithstanding the sustained bullish trend of international petroleum prices. This was in direct abnegation of the policy decisions taken in 1997, at the time when the OPD was drastically curtailed. Then, the United Front coalition had also adopted an accompanying policy decision to dismantle the administered pricing mechanism (APM), which regulated the prices domestic oil firms could sell their products at, in a phased manner by 2003. Among other things, diesel prices were to be adjusted every month in line with the international prices. "Inherent to this policy initiative was the assumption that domestic prices of most petro-products would be synchronised to international markets," says the effervescent Jairam Ramesh, who was a key economic advisor to the UF government and is now in charge of the economic affairs cell of the Congress.

The result has been a massive ballooning of the OPD once again. Last November the OPD had dropped to Rs600 crore. According to preliminary estimates by the petroleum ministry, it had soared to Rs5,300 crore in August and is climbing at Rs770 crore every month currently. This is the accruing amount that is cutting into the

bottomlines of Indian oil companies and directly reflects the crippling pricing that they have to adhere too. The landed import price of kerosene, for example, is currently Rs7.86 per litre. On the other hand, the oil companies have to provide this key commodity to the government's public distribution system at Rs2.58 per litre. Similarly, the landed price of imported diesel is Rs10.14 per litre, but it sells in the domestic market at Rs8.02 per litre.

"One direct result of this skewed price management is the mounting kerosene subsidy, which is assuming daunting proportions," says a senior official in the petroleum ministry. The BJP-led government's static pricing for kerosene, too, is in contradiction to the UF government's resolution (on 21 November 1997) to adopt a flexible, dynamic policy which called for phased increases in kerosene prices in order to reduce kerosene subsidies to one-third of the overall import costs by 2001-02. According to fresh projections made by the ministry, kerosene subsidies in 1999-2000 will amount to Rs6,500 crore in comparison to Rs5,790 crore in 1998-99. The projections are based on the current international price of crude, $21 a barrel. This presumption too could turn out to be short-lived.

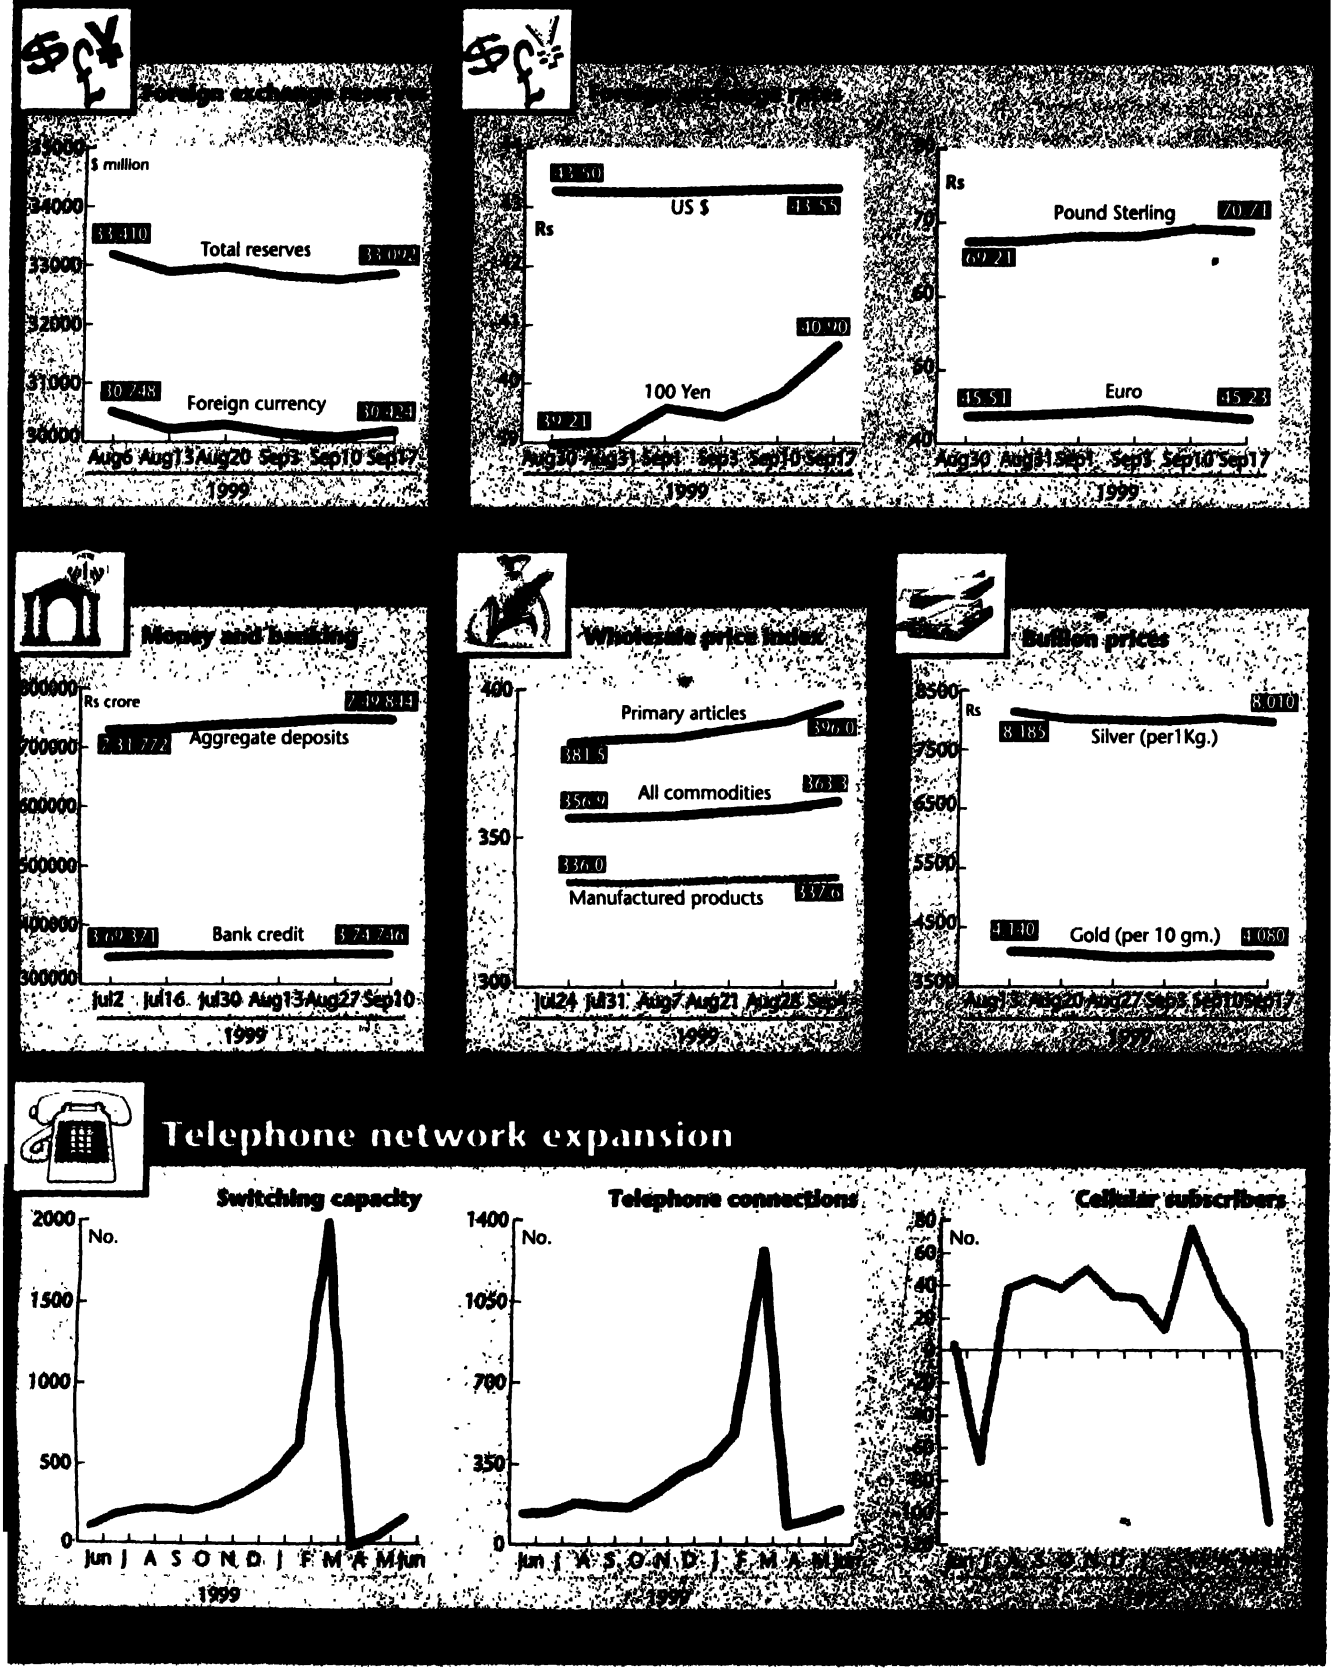
R. RAMAN

Ramamurthy has preferred to procrastinate on this "politically sensitive issue"

The current peak international oil prices are entirely the result of a deliberate effort by OPEC, which is anxious to prevent the 1998 experience. With a rare, singular unity, its member countries have cut back their respective oil production and export quotas. Their determination to keep up with policy was amply evident at the OPEC gathering in Vienna in the last week of September. Member countries agreed that the current restrictions on oil production and exports are not to be reviewed until next February. International oil traders have already begun to warn that commercially available oil stockpiles are going to drain to multiyear lows, leading to still higher trading prices. In fact some of them, such as the London-based Energy Market Consultants, have forecast a return to the 1991 oil price of $25 per barrel.

Manmohan Singh went through a nightmarish experience then. The new finance minister in the incoming government is destined for a similar fate. In fact, in mid-September, one of the last decisions of the BJP-led government in its caretaker phase was to order petroleum ministry officials to come up with a viable solution to tackle the OPD problem. This clearly implies that the buck had been passed. "We felt that only a new government at the Centre would be able to comprehensively handle this politically sensitive issue," says petroleum minister V.K. Ramamurthy.

This blasé view does not extend to the oil PSUs, which are bearing the direct burden of the OPD as in the past. The ballooning oil deficit has directly effected the value of their scrip, and threatened their much-vaunted disinvestment programme. IOC chairman M.A. Pathan, admits that he already communicated to the government that "it would not be advisable to go [ahead with] the GDR offer till the oil deficit is brought under strictly controlled limits". The delay in disinvestment would seriously hurt the government's projected resource mobilisation. Just a reminder that the oil pool deficit sucks out far more than the government imagines.



PALASHRANJAN BHAUMICK

The OPD is damaging the divestment prospects of the oil psus, says Pathan

MTNL

From a nonchalant public sector monopoly, CMD S. Rajagopalan is transforming MTNL into a savvy telecom major by revamping its existing network and entering a gamut of new services

Just back from a visit to Singapore, S. Rajagopalan can't stop gushing about Singapore Telecom (SingTel), the country's incumbent telecom operator. "They are doing very well," says the chairman and managing director of Mahanagar Telephone Nigam (MTNL), which provides basic telephone and Internet services in the cities of Mumbai and Delhi. "There are a lot of similarities between us and SingTel. Both of us are facing competition. It had its initial difficulties in cellular, but has tackled it well. I spoke to some local people and found that they appreciate the fact that despite being a public sector company, SingTel is improving the quality of its customer care services."

Why is he singing praises of SingTel? Well, soon Rajagopalan hopes to tap SingTel's expertise in mobile telephony to offer MTNL's own cellular service using GSM technology in Mumbai and Delhi. Though SingTel still has a monopoly in fixed line services – Singapore's basic telephony will be thrown open to private participation only next year – it has withstood competition in cellular, and Rajagopalan is keen to draw from that experience. MTNL already offers customers a Wireless in Local Loop (WILL) with a limited mobile application within 10-12 km radius using CDMA technology, but hopes to provide a full-fledged mobile service using the regular GSM technology by June next year.

Rajagopalan has recently managed a licence "after a lot of difficulty" (or so he claims) for cellular services as the third operator in the circles of Mumbai and Delhi, and has earmarked an investment of $300 million (Rs1,300 crore) for the project. MTNL has recently floated tenders for the

equipment and plans to place orders by the end of the year. It will initially start with a network for 100,000 customers in each of the two metros, and then ramp up to 450,000 connections in all by 2002. "We'll begin the service in the first quarter of next year," says Rajagopalan. "We are planning a strategic partnership with SingTel as they have good marketing expertise in the cellular business." The licence conditions do not allow MTNL to rope in an equity partner, so Rajagopalan says he'll simply "pay for their expertise".

The WiLL project, which MTNL began in an experimental form with 1,000 lines in 1996 around Delhi's Bhikaji Cama Place, an important commercial complex, is now being extended as a commercial service to other pockets of the city. MTNL levies a Rs10,000 deposit for the service, the technology for which has been supplied by Qualcomm, and a Rs1,000 rental for each connection, but charges the same rate as for its regular basic service. Though the service, which offers the option of being used as either a fixed line or a mobile unit, has a limited reach of about 10-12 km currently, MTNL plans to cover most of the business districts of Delhi soon. According to MTNL chief general manager (Delhi) A.K. Bhatnagar, MTNL will start with a network of 10,000 lines each in Mumbai and Delhi, of which half are fixed and half mobile, and will go up to 50,000 lines each by 2002.

There is still scope for more connections, says Bhatnagar

Mobile telephony is just one of the several new initiatives in Rajagopalan's action plan to transform MTNL into a fleet-footed operator of international standards, straddling the complete range of telecommunications services in basic, mobile, and value-added services such as the Internet. Not only is Rajagopalan taking MTNL into new areas of business, he is also modernising his entire existing network and improving customer care to take on competition, which MTNL is currently facing in Mumbai, and of which there'll be more in future.

Soon, Rajagopalan plans to add a truly global dimension to MTNL by competing in overseas markets, such as Bangladesh and countries in the Middle East and Africa, and, more importantly, by listing the company's shares on the New York Stock Exchange (NYSE). "MTNL is turning from a caterpillar into a butterfly," says S.D. Saxena, who was until recently MTNL's senior financial adviser and has now been moved to the ministry. Saxena says MTNL will invest over Rs2,000 crore over 3-4 years, of which Rs700 crore will be spent on installing new lines, equipment and services.

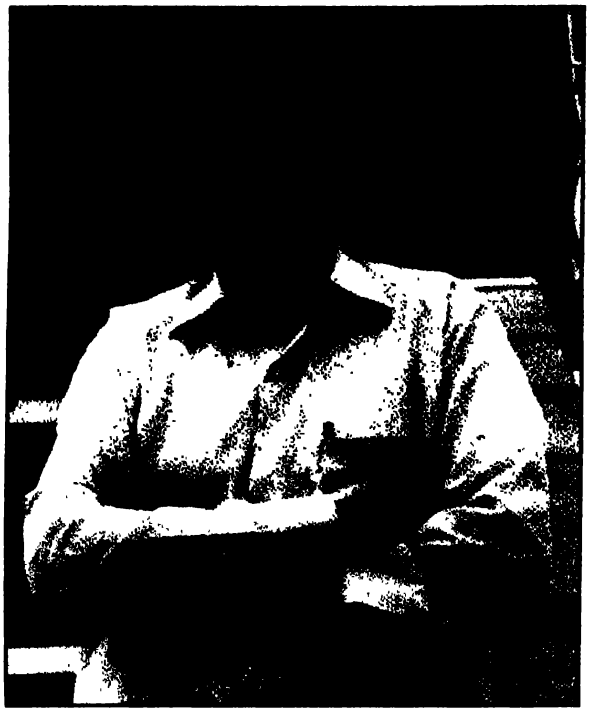
Rajagopalan is keenly awaiting conversion of its GDRs into ADRs and listing on NYSE, as he feels it will help him realise the true market potential of the company and increase shareholder value. The United States, he says, is the ideal market to tap as the investor community there understands telecom and it stocks. Also, Indians living in the US have a huge appetite for blue-chip Indian companies, and MTNL should be an ideal pick.

The process of NYSE listing will require MTNL to open its books to greater scrutiny, and the added transparency will help enhance shareholder value. "I'm subjecting myself to a strict form of due diligence which will increase the company's credibility," says he.

MTNL was planning to be the first Indian company on the NYSE, but unfortunately was beaten by ICICI, which listed its shares through an American Depository Receipt (ADR) offering last month. MTNL is still in the process of conforming its accounts to United States Generally Accepted Accounting Practices (GAAP) standards and acquiring clearances from the Securities and Exchange Commission (SEC), which are mandatory for listing on American stock exchanges; the process should be completed in the next 4-6 months. MTNL is currently talking to law firms Shearman & Sterling and Davis Polk and Wardwell to conduct due diligence.

MTNL's shares are already listed on the London Stock Exchange and are open to international investors through a Global Depository Receipts (GDR) offering of 70 million shares floated in December 1997 for $359 million, but that, feels Rajagopalan, has not served to enhance either the shareholder value or the image of the company. He explains that though the GDR float was a global sale, in a crucial market like America the stock could only be offered to institutional investors and not the public, as per SEC laws. In the Far Eastern and European markets, too, the stock was picked up by a small band of investors. Being in a few hands, the stock was often traded in bulk, leading to wild swings in price for no reason other than supply and demand.

"The band within which the stock was moving was very large," says Rajagopalan. We sold each GDR (equivalent to two domestic shares) for $11.96, but the variance we were getting ranged from $10 to $14. It went up to $15 once, but when it started falling, we found the prices were widely varying. It did not reflect the health of the company as profits were going up." MTNL posted a net profit of Rs1,288.3 crore revenues of Rs5,032 crore in 1998-99, up from Rs1,147 crore on a turnover of Rs4,655 crore the previous year. The net profit



of both years is without taking into account prior period adjustments. Networth in 1998-99 rose to Rs6,249 crore from Rs5,162 crore in 1997-98, on account of asset-building and accrual of funds from the GDR issue. Net profit earned in the first quarter of 1999-2000 was Rs325 crore on revenues of Rs1,263 crore, compared to Rs299 crore on Rs1,281 crore in Q1 1998-99.

Rajagopalan is not planning to raise fresh capital within MTNL through an international public offering, but studying the possibility of converting all or part of the existing GDRs into ADRs and trading on both the London and the New York Stock Exchanges. For this, the existing GDRs may have to be extinguished by getting into the underlying stock, before the ADRs can be issued by the depository bank, in this case the Bank of New York. Most likely one ADR will be issued for each GDR. "We are studying the possibilities," says Rajagopalan. "We'll take a view within a short time." At present the GDRs are quoting at $10.08 (29 September), while the domestic stock is trading at Rs186.

Even as Rajagopalan is working towards the listing, the government, which currently owns 56.25 per cent of MTNL, has decided to divest a portion of its holding in the overseas market. The pre-marketing of the offering (most likely a GDR) is currently on, and the issue will be co-ordinated by investment banks Goldman Sachs, Merrill Lynch, and HSBC, who also co-ordinated the first issue.

While the government is yet to decide the precise time of the offering – sources say it could be anytime in October-November – it plans to sell 19 million shares to raise about $92 million (Rs400 crore), and also offer a similar number to MTNL employees.

Each ADR, which will equal two domestic shares will be priced around $9.5, about $2.5 lower than the issue price of the earlier GDRs. After the offering, the government's stake will come down to 51 per cent, but Rajagopalan feels the government will over time bring its stake down further to 26 per cent.

MTNL is turning into a butterfly, says Saxena

"It is possible the government's policy might change and it might go for further divestment," says Rajagopalan. "These are things likely to happen. It happened with British Telecom. And even with 26 per cent the government could still take major decisions." Now, Rajagopalan is trying to dovetail the listing and the gdr issue, but it seems likely that the issue will hit the market before MTNL completes the NYSE listing requirements.

But before Rajagopalan begins to woo American retail investors, he has first a few issues to deal with at home. For the first time since it was spun off as a separate entity from the Department of Telecommunications (DoT) in 1986, MTNL is facing competition. No private operator has yet bid for a basic services licence in Delhi after HFCL defaulted on its offer, but in Mumbai, Hughes Ispat, a joint venture between Hughes and Alltel and Ispat Industries, has begun offering fixed

Bearish sentiments

A distinguishing feature of the MTNL counter is its depth. In other words, the trading volumes are high. Since January 1998, the average number of shares traded per day on the Bombay Stock Exchange (BSE) is 13.50 lakhs. Although MTNL does not fall in the league of megastars like Reliance Industries and State Bank of India, its depth is appreciated by most dealers. This depth imparts liquidity i.e. entry and exit is easy even if the volumes are large.

A highly liquid counter, an index stock and *nav ratna* status are qualities, which, ideally speaking, should help MTNL's share in scaling stratospheric heights. But this is not so. Since 1998, MTNL has been trading at an average price of Rs200. During the same period it touched a high of Rs279.50 in April 1998. Today it is exchanging hands at Rs186. Listen to what some dealers have to say. "As of now the scope of appreciation on this counter is poor because domestic financial institutions and in particular Unit Trust of India (UTI) are heavy sellers. Whenever the stock crosses Rs200 plus, they go on a selling spree thereby dampening the upward movement." There is yet another view. "Since local institutions are heavy sellers, many fund managers treat MTNL as a trading scrip. Typically they churn the scrip five times in a year with about Rs20 per share as profits. This too has kept the price depressed."

While most dealers and fund managers do not consider MTNL as a long term investment, what do the backroom boys (researchers) feel? A few number crunchers were bearish on this telecom company. They point towards the declining pace of growth in income from services. They add further: "Henceforth rate of growth of both revenues and profits will not be high because of the slowdown in line growth, the inevitable entry of private operators and falling tariffs."

That pace of growth in income from services is falling is a fact. But a very disturbing trend emerges when one sees the income statements of MTNL from 1994-95 till 1998-99. The rate of growth of income from services has been always lesser than

line services through WiLL technology, and has also started laying fibre optic cables in the business districts in south Mumbai.

Soon, there could be more such entrants in both Mumbai and Delhi; the New Telecom Policy 1999 allows for a regulated entry of more players in each service and circle through a bidding process which may take up to July 2000. The new operators could take a year to set up their networks, so analysts feel that by July 2001, MTNL could have further competition from another player in Mumbai and two in Delhi.

However, MTNL cannot be a nimble telecom player unless it is released from the iron grip of DoT. For example, senior executives are transferred between MTNL and DoT as if it is another department. Any major commercial or technological decisions like even offering discounts to bulk users have to be approved by the ministry and so on. The CMD of MTNL, however forward looking, cannot implement his vision as long as he has a small fixed term. His tenure in MTNL is treated in the same manner as just another bureaucrat in the ministry would be treated and not accorded the same importance as a CEO of a corporation whose board decides on his term.

New kids on the block

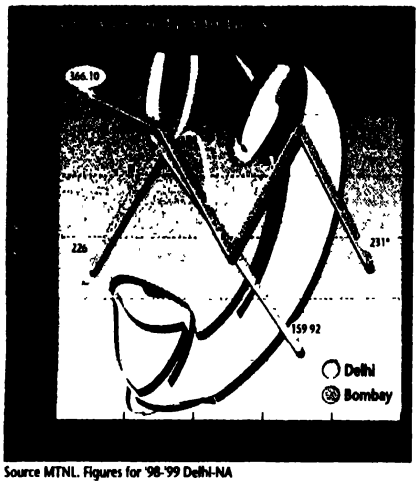
Rajagopalan knows competition is already upon MTNL and will get fiercer soon. He also has to contend with a slackening in the demand for new connections in both Mumbai and Delhi, which is not the result of competition, but a factor of penetration nearing saturation levels in the two cities. But though MTNL's revenues from fixed line services will almost certainly decline over time, Rajagopalan is confident of maintaining his bottomline by improving service to retain high-value customers, which is Hughes Ispat's main target segment. "From unofficial reports we know they (Hughes) have about 3,000 customers and are building their network aggressively," says Rajagopalan. "They have invested a lot of money. But competition will hot up only after the revenue-sharing agreement comes through. My feeling is the year 2000 will be a crucial period."

Analysts, however, seem worried even now. Most research reports of both international and domestic broking houses have a 'sell' recommendation for MTNL, a position they've maintained since August last year, when competition to MTNL became imminent. Moreover, the tariff re-balancing ordered by the Telecom Regulatory Authority of India (TRAI), the industry watchdog, in May this year, is sure to put pressure on the revenues and profitability of MTNL. Though local call charges have been increased, TRAI plans to bring down domestic and long distance call charges by about 50 per cent over three years. This, of course, will be offset to some extent by the doubling of rental charges to Rs600 per month, when implemented. Otherwise, according to Anand Rathi Securities, a Mumbai-based broking house, the revised tariffs could result in a loss of potential net profit of Rs75 crore in 1999-2000.

But the real trouble, say analysts, is the high vulnerability of MTNL's earnings stream. Currently, over two-thirds of MTNL's revenues comes from just 5 per cent of its customers, and, alarmingly, most of them say they wouldn't mind switching over to Hughes Ispat if it makes an offer. This is the result of a survey conducted by Jardine Fleming earlier this year among MTNL's corporate subscribers. To gauge the effect of competition on MTNL, Jardine spoke to 12 large corporate houses, which have lines ranging from 50 to 800 and generate over Rs1 lakh revenues per line every year compared to the average of Rs14,000 per line.

The survey found that seven of the nine companies to which Hughes had offered its services, had decided to change over completely. Of the other two, one planned to have both operators, while the other said it would shift only after Hughes had been long enough in the market and it had studied its service. The reason for the shift, they said was the quality of service Hughes had promised them. Hughes has committed, besides waiver of the

the pace of net profits. Has the company contained its expenses? The answer is no. Besides declining interest costs other factors have contributed to this unhealthy development. One year it is lower rate of tax, in another high other income, or a combination of lower tax rate, lower tax and high other income so on and so forth.



This unhealthy trend is more amplified in the first quarter results of fiscal 1999-2000. The net profit of MTNL, grew 8.39 per cent to Rs325.06 crore thanks to other income and interest costs. And revenue has dipped marginally 1.35 per cent to Rs1,263.67 crore. Analysts partly attribute it to falling call rates (rates were slashed in May 1999) and change in accounting of rentals. While MTNL officials in Mumbai say the market for commercial users has reached a saturation point which partly explains the slower growth in income from services.

Pray, how long can MTNL boost its bottomline in the way it has been doing so far? "Increasing income from services is the biggest challenge before us," say MTNL officials. What would be the scenario if private operators jump into the ring? "As of 1996-97, 4.80 per cent of the subscribers accounted for 54.80 per cent of the pulses (read revenue). Private operators might not find it difficult to wean them away," say analysts. MTNL officials observe as of 1998-99, there has been no significant change in the composition mentioned by analysts. As to what the subscriber base would be, will become clear in another two to three months, they added. Analysts bullish on MTNL have this to say. "Uncertainty in the telecom sector for the past two years has affected MTNL and consequently its share price. Given MTNL's fundamentals and infrastructure, it can withstand competition. After the software sector it is the telecom companies which deserve higher discounting. Look at the multiples of Global Tele Systems and Himachal Futursitic Communications. There is no reason as to why MTNL should not trade at around Rs300 in a year's time." Those bearish feel this company will quote around Rs170 in a year. The views expressed are poles apart. But when has there been unanimity on valuations?

• KRISHNA KUMAR C.N

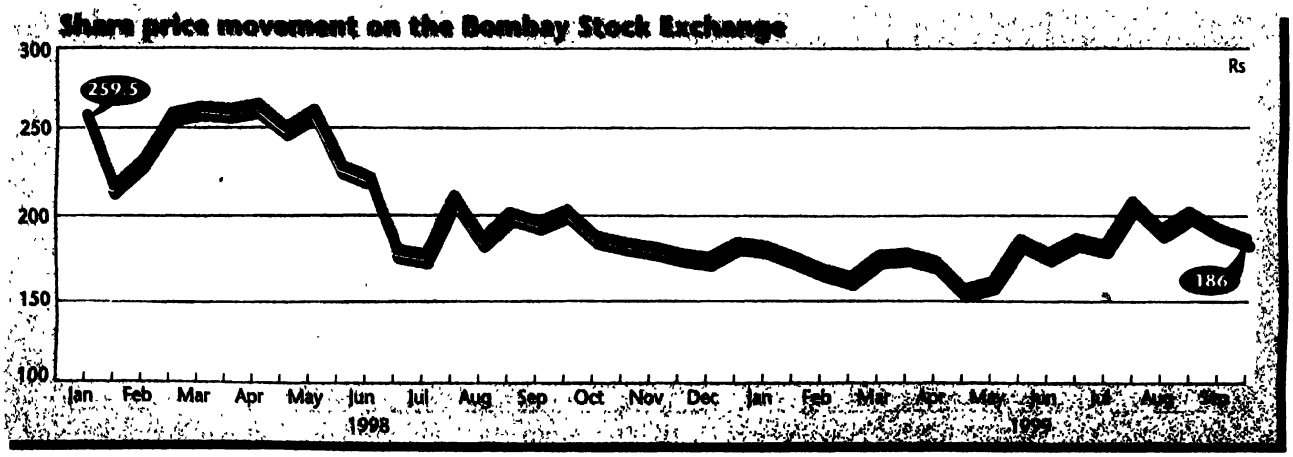
initial deposit of Rs3,000 charged by MTNL and substantial discounts for high usage, a round-the-clock customer service and guaranteed performance, including 99 per cent up-time with self-imposed penalties for poor performance. It will also provide its customers with a single consolidated bill for multiple lines and locations, thus eliminating administrative delays. Also, new lines will not require cumbersome paperwork, and Hughes will ensure instant connectivity to value-added network services such as ISDN, video-conferencing, Internet and e-mail. Its service also seems attractive as Hughes is likely to adapt faster to newer technologies than MTNL.

Rajagopalan dismisses analysts' fears by pointing out that the tariff rebalancing will actually help MTNL correct the vulnerability of distribution. Currently, the businessman is subsidising the low-users, but in urban areas the subsidy has to disappear. "You have to correct it when you are entering a competitive era," says Rajagopalan. If users in every segment, be it business or domestic, are asked to pay without any cost subsidy, the fear of the network collapsing due to churning of high-end users will not be valid. Another improvement to the revenue stream will come out of renegotiating MTNL's interconnection agreement with DoT, which is slated for March 2000. Currently, MTNL pays Rs900 per line per year to the DoT as licence fees, and shares with it 22 per cent of its revenues. But the ideal rate, feels Rajagopalan, is about 10 per cent. He is now awaiting the TRAI's working

Source MTNL. Figures for '98-'99 Delhi-NA

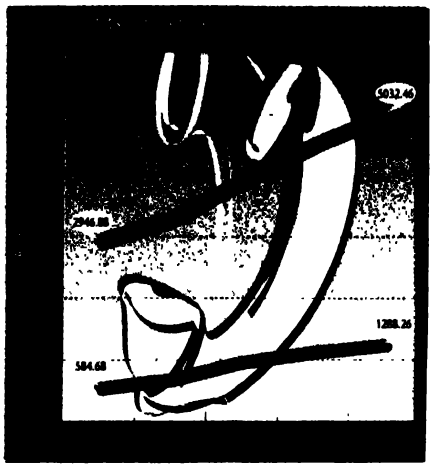
paper on standardised interconnect agreement, after which he'll renegotiate with the DoT.

MTNL, though, will have to substantially reduce its costs, admits Rajagopalan, to remain competitive. New entrants will typically start with the latest technology which require low manpower, and therefore have a huge cost advantage over MTNL, which currently employs over 65,000 people, including 4,000 officers.



Rajagopalan says he does not have the luxury of hiring and firing, as the private operators, but, a reduction of about 15,000 employees to start with would be ideal. MTNL currently has a limited freeze on recruitment, and soon Rajagopalan plans to introduce an attractive voluntary retirement scheme. Meanwhile, he has introduced a training programme in Delhi to improve the attitude of his staff towards customers, an effort which is costing MTNL Rs10,000 per employee.

However, staff quality is the real Achilles heel of MTNL. After all, it is a service industry. If the complaints of the users are not redressed promptly, if they have to bribe a linesman for minor repairs, if they have to wait for many weeks for connections despite the announced policy of an 48-hour connection, then given a choice they will definitely switch over to the private operators.

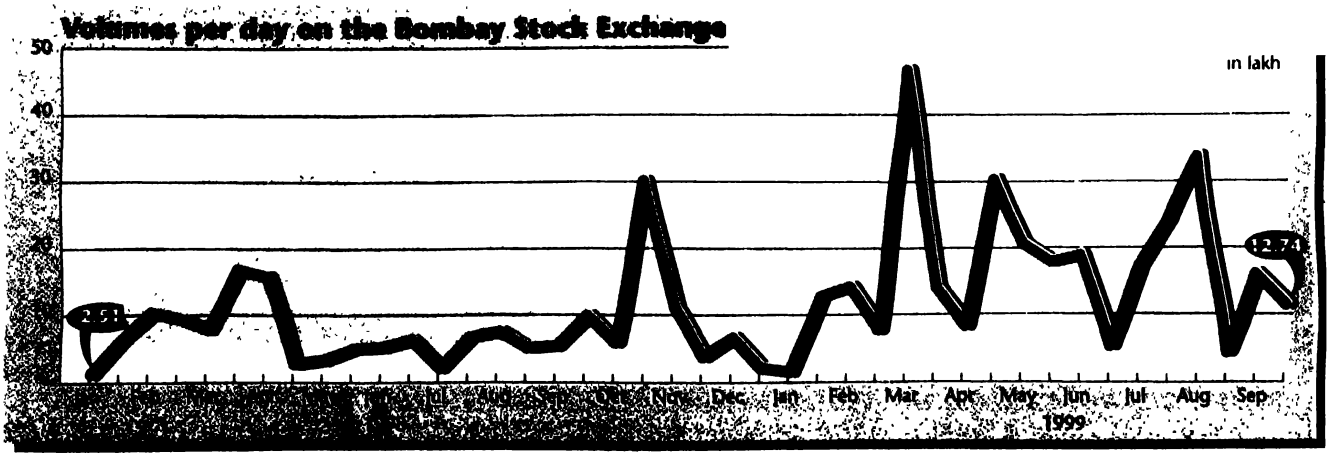


MTNL has, so far, also been slow to respond to the demands of a new telecom environment where data transfers are assuming greater importance than voice calls, but that shortcoming is being rectified fast, says Rajagopalan. Now, MTNL is preparing well for an era, he says, when it will have to, firstly, compete for its market-share in basic services, secondly, cater to the need for a variety of services, and thirdly, face an environment which is changing from voice-centric to data-centric. "Today 94 per cent of my income comes from voice and the rest from telex, data, and the Internet, but that picture will change," says Rajagopalan. "In several developed countries it is the other way and slowly India will also follow this."

The telecom sector, he says, will quickly have to meet the high demands of the tertiary sectors, such as commerce, banking, and insurance. Most sectors will soon be opened up to privatisation and will have to compete with global giants. And how can they unless they have a network which allows transfers in "a millionth of a second?"

So, how does Rajagopalan plan to deal with the change? The first on his to-do list is to achieve a 100 per cent

rate in converting MTNL's 310 exchanges into digital ones, from the current 90 per cent. This he hopes to complete by January-February next year. He plans to combine this with laying new fibre optic cables to hook up important buildings in the business districts of Mumbai and Delhi, and employing new technologies such as ADSL to expand the capacity of the existing copper-based network. ADSL is a new technology which allows normal copper pairs which carry only about 4 kilohertz analogue signal to go up to 155 megabits per second by employing switches at the exchange and the customer ends.

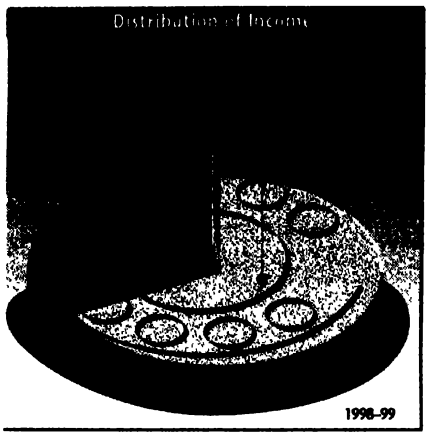


The interesting feature of ADSL is that its direction is asymmetric, that is, it provides a large bandwidth from one end and a small one from the other. This is particularly useful for Internet applications, where a large bandwidth is required to extract a large amount of data very fast, but the width and speed required from the keyboard end is minimal. The other advantage is that it allows voice, and even audio-visual, to piggyback on data. MTNL is currently negotiating with Ericsson for the ADSL equipment, and Ericsson has assured that MTNL would only need to condition some of its copper lines to employ the technology. To begin with, Rajagopalan plans to impart this facility to about 500 commercially important buildings in each of the two cities. "I can't simply wish that all my 3.4 million lines will be digitalised overnight. But ADSL is a technology we can quickly adopt," says he. "The copper is already there, you make the connections and you instantly have wider bandwidth with high reliability."

Along with ADSL, MTNL is also introducing high speed data switches, which use ATN technology, in several of its exchanges. Earlier, data switches were used only in telex. The ATN technology converts information, be it voice, data, or video, or all of them combined into a digital form and then slices it into standard packets. These packets can then be transferred at a very high speed, irrespective of volume. MTNL has already placed orders with C-DoT, and plans to commission two switches, at a cost of Rs10 crore, to begin with at Janpath in Delhi, and Prabhadevi in Mumbai. The plan is to ultimately convert all existing switches into integrated data switches and then to upgrade them to ATN switches. "Convergence is a reality," says Rajagopalan. "I must position myself as a total communications provider."

But even before MTNL achieves that status, it has to contend with a natural fall in demand for new connections in Mumbai and Delhi. The two cities currently have penetration levels of about 15 per cent, compared to the 2 per cent level of the country as a whole. Though this is quite some distance away from the estimated saturation level of 25 per cent for the two cities, and there is, therefore, scope for growth, CGM Bhatnagar feels that potential new customers are perhaps reluctant to go in for new connections because they "consider the registration and the billing procedures a nuisance." Since he took over the CGM (Delhi) chair in April this year, Bhatnagar says he's been noticing a steady fall in demand in Delhi. From 187,199 new subscribers registered in 1996-97, the number fell to 174,483 subscribers the next year and touched 130,226 in 1998-99. Until August this year, the number of new connections totalled 55,553.

To counter the dip in demand, MTNL has started initiating a number of measures to make new connections easily available to customers. The first of these is the opening of one-stop telephone shops, called Telemarts, through which MTNL aims to provide a shopping-like experience to new customers. They can walk into any of eight Telemarts that are currently operational in Delhi and the one in Mumbai, apply for a new telephone, choose the number they want, and even select an instrument of their choice. Bhatnagar says 70 per cent of those applications are being provided connections within 48 hours, and 90 per cent within a week. Also,



customers can now pay their telephone bills through the Internet, a facility which MTNL is offering with ICICI Bank.

In addition to new telephones, customers can also register for an Internet connection, in which case he is offered a new connection without the normal Rs3,000 registration fee. Such measures are already showing results, says Bhatnagar. Connections in the month of August this year rose to 13,756 in Delhi from 9,857 in May when the Telemarts were introduced. By March next year Bhatnagar expects to open another dozen such marts in Delhi. "MTNL is facing a changed paradigm," says Delhi-based telecom analyst Rajat Kathuria. "For the first time, it is chasing customers, and that's a positive sign."

Banking on Internet

The incentive of a telephone minus registration charges with an Internet account, expects MTNL, will substantially boost the demand for its Internet service. Currently, it has about 8,000 users in Delhi and 9,000 in Mumbai, but has already expanded capacity to 30,000 in both the cities and is placing orders for further demand. Rajagopalan says he expects demand to rise to 100,000 in each city in a year's time. He also plans to generate revenues through MTNL's portal by offering not only business-to-business, and business-to-consumer e-commerce services, but by also linking businesses and the consumers to the government. Their dealing with the government on matters such as income and sales tax is often a cumbersome procedure, explains Rajagopalan, and an electronic link between the two could work wonders.

"I do not want to be a simple access provider," says he. "E-commerce, content provisioning are very attractive opportunities and we could get into these areas through tie-ups." The first to lower access tariff charges among the ISPs, Rajagopalan plans to continue with his competitive pricing strategy. MTNL has adopted a policy of reviewing its access charges every three months, based on market conditions. "The trend the world over is towards

reduced costs," says Rajagopalan. "If the numbers increase, you can more than make up by volumes."

That is exactly his strategy for MTNL's mobile business, too. MTNL's charges for its WiLL service is the same as for its fixed line service, that is, Rs1.40 per three minutes for local calls and the same per pulse for long distance, and it may charge similar attractive rates in the GSM service as well. "We are positioning our service as the common man's mobile phone," says Bhatnagar, dismissing allegations from cellular operators that the only reason MTNL can afford to offer such low rates is because it is subsidising the cost of the service from its fixed line revenues. Bharti Enterprises chairman Sunil Mittal says that at the tariff MTNL is proposing, there's no way its mobile venture can be independently profitable. MTNL's move amounts to predatory pricing, says Mittal, as it would certainly use its monopoly profits to subsidise its mobile operations, which other operators cannot do.

Not true, says Bhatnagar. He points out that a turnkey GSM solution is currently available for about $100 per line, and even after adding 40 per cent duties, it works out to Rs6,000 per line. Even without a minutes usage, the rental charges alone guarantee a 100 per cent return, he says, a more than adequate return on investment. The TRAI and the cellular operators, though, are not impressed. The operators' contention is that MTNL's low rates will eat into their marketshare and further reduce their viability. "It is a zero sum game," agrees Kathuria. "If MTNL gains, the others will lose." TRAI has asked MTNL to explain its mobile pricing policy and the matter is yet to be fully resolved. Reports say that the PMO decided to mediate between the two as it wants to avoid another public spat like the one over tariff revisions between the TRAI and the DoT.

Such hurdles, though, have not held Rajagopalan back. Even as he deals with regulatory issues, he is also planning to extend MTNL's reach into newer markets, both within the country, and abroad. MTNL has recently bid for a 300,000 urban-centric network in Bangladesh in a consortium with TCIL and WorldTel, an investment company run by Sam Pitroda whose mandate is to develop telecom services in under-developed countries. MTNL is also looking for similar opportunities in the Middle East and African countries. "Every country is opening up this sector," observes Rajagopalan. "If the opportunity comes to partner with a big telecom giant, we will do so."

Overseas opportunities apart, MTNL also wants to grow beyond the current two cities in India. When long distance is opened up next year, Rajagopalan plans to bid like any other player. He also plans to ask the government to allot MTNL some of the open telecom circles – West Bengal, for example – where it could be the second operator. The terms of the agreement could be the same as the Rs900 per line, per annum licence fee and the 22 per cent revenue sharing arrangement MTNL has with the DoT, currently. "I feel really constrained operating in 1,000 or 2,000 miles," says Rajagopalan. "We have to expand in all directions." While his ambition to get out of the confines of two cities is appreciated, there still hangs a question. How can he focus on providing world class service in two cities a 1,000 km apart? Is it not more rational to have two MTNLs instead of one?

Over the next few months, Rajagopalan's initiatives could well prompt analysts to revise their now-reserved views on the stock. Says Kathuria: "Rajagopalan has the vision, but it will take time for the vision to percolate down to the employees." That could be Rajagopalan's toughest task yet.

Indian tourism: twopennyworth?

PHOTOS VIJAY

Folk singers serenading tourists

World Tourism Day – September 27 – has come and gone, passing India by once again. There were the usual tourism and travel trade gatherings where the usual platitudes about the great potential offered by tourism were mouthed by the usual people. It's been like that for 30 years and nothing is about to change

The Indian travel trade met this fortnight for yet another jamboree, this time in Bangalore for the annual convention of the Travel Agents Association of India (TAAI). The theme chosen for the convention was 'New Frontiers, Great Opportunities'. The usual suspects from the travel trade – sundry tour operators and hoteliers – made all-too-familiar noises about the great potential of tourism and quickly dispersed for the various cocktails and sit-down dinners.

At the end of the three-day rendezvous, marked by much back-slapping and bonhomie, it can be safely predicted that the participants will go back to working at cross-purposes with one another and the usual whining – about government apathy and the absence of any sort of fillip to the tourism sector – will begin. Speak to the veterans of the travel trade and they will predictably lament the hopelessness of their cause. "We've been telling the government what needs to be done to tap the enormous potential offered by the tourism sector for the last 30 years!" the veterans rail. Depending on the age of the industry person you speak to, it can change to 10 years or 20, or 40, but the lament remains the same.

Press them hard and you will arrive at the real truth: the tourism industry almost never speaks in one voice. The slew of travel agents' and hoteliers' associations have their own agenda, for which they lobby untiringly with the government. In a sense, these sundry associations can be likened to the small political parties that strive to extract their pound of flesh from the principal coalition partner. Last year, when the government sprung a surprise on the industry by announcing the Visit India Year, widespread cynicism greeted the decision. Yet, instead of convincing the government that such an ambitious initiative necessarily required enough lead time to have any chance of succeeding, the industry acquiesced to participate in the ill-planned initiative.

The Visit India fiasco

Not a little embarrassed by frequent pillorying from the media for having agreed to an impossible task, the travel trade resorted to the ruse of repeating *ad nauseam* that in India we always wait for the nth hour to do what we need to do and no amount of lead time was going to be enough. "Let's do it,"

the industry bigwigs pronounced. The initiative was never likely to succeed. After all, at the time the industry agreed to cooperate with the government in making the Visit India Year a success, it was already too late for India to be included on the itineraries of the leading tour operators. International travel companies had already published their brochures and India was nowhere on them. The person at whom the Visit India initiative was aimed – the international tourist in US, Europe, or the Far East planning his holiday – remained blissfully unaware that he was being wooed.

The war at Kargil heights provided the government and the travel industry with just the right excuse for the predictable failure of the Visit India Year. "We were ready," went their defence, "but political uncertainty, followed by the ruinous Indo-Pakistan conflict, threw the effort completely off-track." The last time the Visit India initiative was tried, in 1991, Rajiv Gandhi's assassination and the Gulf War came in as handy excuses to explain why it proved to be a non-starter.

Amazingly, however, the two top tourism bureaucrats view the fallout of Kargil for Indian tourism differently. Tourism secretary M.P. Bezbaruah is of the view that the Kargil conflict took heavy toll of tourist traffic "and the first half of 1999-2000 witnessed no more than 6 per cent growth". On the other hand Ashok Pradhan, director-general of tourism, feels the fallout of Kargil has been positive for tourism. "Actually," he says, "Kargil has been the biggest build-up that India has had recently. It has been a political and diplomatic victory with every country, including the US, being with India." Incidentally, Pradhan places the growth in tourist arrivals in the first half of the financial year at 4.3 per cent.

The manner in which the Visit India Year has fizzled out is a damning indictment of the bureaucratic ineptitude and the travel industry's lack of concern. To begin with, for reasons best known to the ministry, the Visit India Year was scheduled between 1 April 1999 and 31 March 2000. The feedback on this decision from overseas was negative. After all, what sense did it make to consider the financial year for tourism promotion? Overseas markets weren't sure whether 1999 was the Visit India Year or 2000. Thereafter, as there were no signs of a spurt in inbound tourist traffic, it was decided to rename it 'Explore India in the Millennium Year'. Ask top tourism ministry bureaucrats about the change and they shuffle uncomfortably and then weakly offer something of an explanation: "We thought it would be good to stress that, given the rich heritage and cultural diversity of India, a 'visit' to India was not enough — you needed to 'explore' India." Convinced?

Harsh Varma, regional representative for Asia and the Pacific at the

What's the use of aiming for 5 million tourists if there aren't enough airline seats to get them here, asks Goyal

World Tourism Organisation, however, thinks it's too early to dub Explore India a failure. "Tour operators and travel agents, who are the real interpreters and coordinators of tourism demand in the developed countries, have taken note of Explore India and a number of new packages have featured in their winter brochures. But attention is momentary, while interest is more lasting. Real success would be achieved only when actual sales take place. A clear picture would emerge around mid-October, when booking patterns take shape."

The Khurana factor

Most in the Indian travel industry, however, are scarcely chary about pronouncing Explore India "an abject failure". But some of the more pragmatic travel industry representatives had hoped that making the Explore India in the Millennium Year (EIMY) a success would be a matter of prestige for the government and that it would make a supreme effort in publicising India as a viable and dynamic destination, especially at a time when other destinations in the Far East – Thailand, Indonesia, the Philippines, Malaysia, *et al* – had virtually knocked India out of contention. Indeed, the year was pushed aggressively at the World Travel Market in London and ITB in Berlin.

But the promised never-before India blitz never came. Some of it, according to the industry, can be blamed on politics. Madan Lal Khurana, whose brainwave the year was, made an unceremonious exit from the tourism ministry even before the year could take off. His successor, Ananth Kumar, showed little interest in pursuing the initiative.

Delusions of grandeur may have been at the heart of Khurana's decision to have a Visit India Year, but in his short tenure he understood the requirements of the ministry and pursued them with the cabinet more doggedly than any other tourism minister. For instance, he had the annual budget of the ministry raised from Rs100 crore to Rs160 crore. He also succeeded in getting export house status granted to the tourism industry. Most importantly, Khurana was set to persuade the government that inbound tourism could only be given a significant fillip by simplifying visa formalities. Khurana was reported to be in agreement with the industry's demand that visas be granted on arrival in India to foreign tourists. Unfortunately, he quit the cabinet abruptly.

Visa on arrival, most industry observers aver, would have given inbound tourism a great shot in the arm. Subhash Goyal, chairman of Stic Travels and president of the Indian Tour Operators' Association (ITOA), says visa-related hindrances put off a great number of tourists. To attract

tourists you need tourist-friendly measures, he says, and adds that visa on arrival would have sent the right signals. The 13-member national task force on infrastructure for tourism has gone a step further and suggested that, for important markets like US, Europe, and Japan, visas be abolished altogether, and for other markets an automatic entry facility be made available on arrival.

The other important thing that the industry asked the government was to increase air capacity. "We said that all pending bilaterals, including new airlines that want to fly into India, and those that want to increase their frequencies, be cleared to allow foreign tourists to come into the country in significantly large numbers," says Goyal.

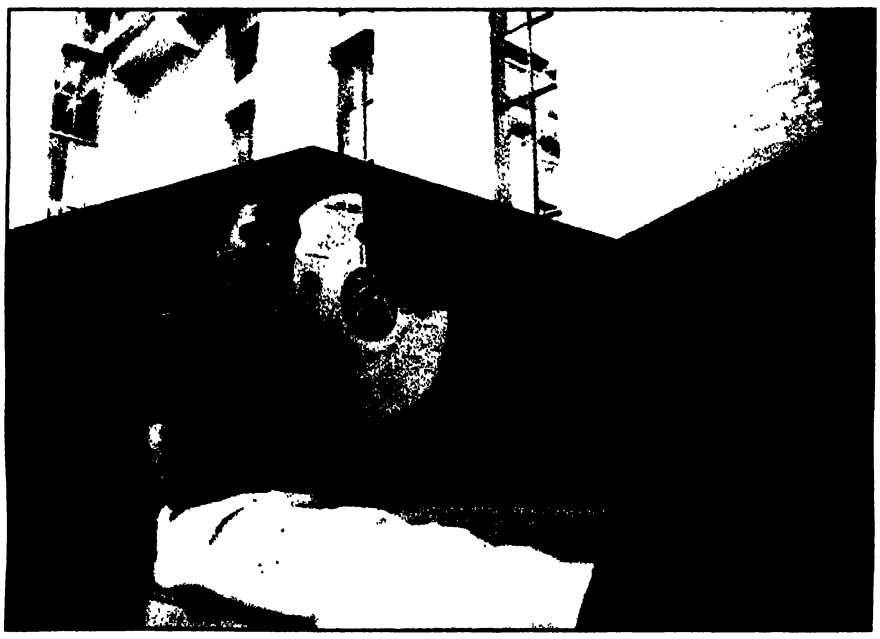
The cost of molly-coddling

On this there is absolute unanimity in the travel industry. As the erudite Prem Subramaniam of the British Tourist Authority (BTA) puts it, "You need to expand the market, not protect the national carrier — that is the realisation that needs to dawn on the government soon." What is actually happening is, in fact, the contrary: airlines are pulling out or decreasing frequencies. Both United Airlines and Air Canada have pulled out and some other carriers, including Royal Jordanian, are reported to be considering following suit.

Mega-carriers like British Airways, KLM, Singapore Airlines, and Cathay Pacific have been discussing the possibility of increasing their frequencies to India with the civil aviation ministry but are not being permitted. The government is busy molly-coddling Air-India, the teetering national carrier. Uttam Dave, a New Delhi-based tourism consultant says, "If no seats are available on flights into India and no capacity increases are going to be allowed, how did the government expect foreign tourists to make a beeline for India during EIMY?"

Goyal puts it more dramatically. He refers to the statement made by Prime Minister Atal Behari Vajpayee on 1 April 1999, while inaugurating the Visit India Year, when he said the tourism industry should aim for five million tourists. "That's all very well," says Goyal, "but how will they come into India? Will they swim across the ocean or grow feathers and fly? Total airline seats available in inbound flights are between 2.4 and 2.6 million. If there is no increase in capacity, how can traffic grow?"

With Air-India (A-I) driving a hard bargain and not letting the government allow carriers 10 or 20 times its own size to increase their frequencies, the prospects for tourism can only be bleak. Nandini Verma, vice-president (corporate affairs) of Jet Airways, puts it this way: "The policy of reciprocity is misplaced." In its report submitted to the government, the 13-member national task force, headed by Ravi Bhoothalingam, president of the Oberoi group, also recommends rescinding the principle of reciprocity. "We must," the report avers, "espouse an open skies strategy, encourage charter flights into the country, and rescind reciprocity."



What's more, A-I's decision to pull out of two key destinations in the European market – Frankfurt and Rome – has had an adverse impact on inbound tourism. DRV, Germany's national body of travel agents, had planned its annual Destination Conference in New Delhi this May. A-I was to fly the German participants at a fare discounted by 75 per cent. The conference was expected to provide a boost to inbound traffic. But A-I threw a spanner in the works. Weeks before the Destination Conference, it announced that it was withdrawing flights to and from Frankfurt and Rome.

The move left the travel trade aghast. Especially as Germany is India's third most important tourism market, just behind Britain and the United States. A tourism ministry bureaucrat says: "It may be understandable that it is a decision made by A-I keeping financial viability in mind and if the 110,000-odd German tourists who come into India every year can be serviced by carriers like Lufthansa and SAS, that's fine. But the timing of the decision shows how there are no synergies in the government."

The travel industry is particularly peeved with the government over the withdrawal of A-I flights in and out of Frankfurt, particularly as the cancellation of the DRV conference defeated the purpose of promoting tourism. "Doesn't it make EIMY seem meaningless?" asks Verma. Adds Goyal, "Couldn't A-I in the very least have delayed the move?"

Marketing is the Achilles Heel

All other shortcomings of the Indian tourism sector pale in comparison with the staggering inefficiency in marketing the tourism product. Various committees and reports have stressed

India needs to be marketed differently in different countries, says Subramaniam

To love when it can be lost. To go on
when progress seems futile. To believe with every fibre
in your body. To live... to hope. And to

Never give in.

An amazing campaign

While Indian tourism has floundered once again in its Explore India initiative, the runaway success of the Amazing Thailand 1998–2000 campaign shows what can be done to boost tourism earnings. While India is perceived as an overpriced product, Thailand has shown what value for money is. "Thailand," says the WTO's Harsh Varma, "has taken advantage of its devalued currency and offered extremely inexpensive packages — the advantage of devalued currency was passed on to consumers."

The task of promoting Amazing Thailand was with the Thailand Tourist Authority (TAT) and the entire industry supported the initiative. In cooperation with tour operators, TAT packaged the product enticingly and promoted facets of travel to Thailand that were identified as being unique to the kingdom. The entire thrust was towards ensuring that Amazing Thailand lived up to its name and that every tourist who visited the country during the period came away with the feeling of having been a part of something special.

Specific markets were targeted for promotion. China in recent times has emerged as one of the most important visitor-source markets for Thailand with 571,000 Chinese tourists in 1998, up by more than 29 per cent from 1997. Tourism has grown because of extensive airline contacts and the visa-on-arrival facilities granted to Chinese visitors at Thai border checkpoints. A number of special-priced packages were offered to Chinese tour operators, focusing on the Amazing Shopping Paradise, Amazing Thai Arts and Life, and Amazing Taste of Thailand. These were well received by Chinese tour operators and served to diversify the content of Thailand tours in the China market — away from the stereotype packages covering Bangkok–Pattaya–Chiang Mai and nearby provinces.

The Thai department of aviation helped in the Amazing Thailand effort by introducing additional flight capacity, allowing the China Yunnan Airlines 3Q additional flights. If even half this effort had been made to promote India meaningfully, something may indeed have come out of the Explore India in the Millennium Year.

• SANJEEV VERMA

the need to professionalise marketing, but so far it has failed to stir the government. Bureaucrats in the unsightly Transport Bhawan on Parliament Street, which houses the tourism ministry, are loth to let go of their power. The 18 Government of India Tourist Offices (GOITOS) overseas are meant to promote inbound travel, but there is usually a scramble for these foreign postings and incumbents are unwilling to leave their posting even at the end of their term, lobbying hard with politicians and powerful bureaucrats in the government.

Famously, one GOITO officer in the Middle East used the funds available to him for tourism promotion for organising lavish get-togethers on such occasions as the Independence Day and Republic Day. He would invite Indians living in that country to attend and serve them with 'tirangi' *burfi*. Another GOITO officer was reputed for travelling frequently to the Middle East countries and collecting visiting cards from people at the airport and producing long lists of names of people he had met to promote India.

GOITOS are a den of corruption and incompetence. Besides, given scarce resources, there are offices even in markets that are unlikely to generate much tourist traffic, among them South America. And the tourism ministry is also considering opening an office in Korea. Travel industry observers point out that these new offices do virtually nothing. In any case, it is difficult logistically to promote any tourism from South America. The geographical distance being what it is and the attendant complications of flying from, say, Rio de Janeiro or Buenos Aires to New Delhi or Mumbai are such that only the most determined Indophile will want to undertake the journey.

The numbers tell their own story. In 1998, some 3,000 Argentinians and 6,000 Brazilians travelled to India. Compare that with nearly 250,000 Americans and 400,000 Britons. Most travel industry analysts have been pointing out the need for the government to concentrate on primary markets – such as the UK, the US, Europe, and the Far East – and not spread its resources too thin. The message has failed to get through for long. However, a recent emergency audit ordered by the finance ministry could spoil the party for the tourism ministry. The finance ministry has upbraided tourism planners for spending half of its Rs160 crore budget on GOITOS, which achieve little or nothing. The finance ministry proposes that at least eight of these offices be closed down.

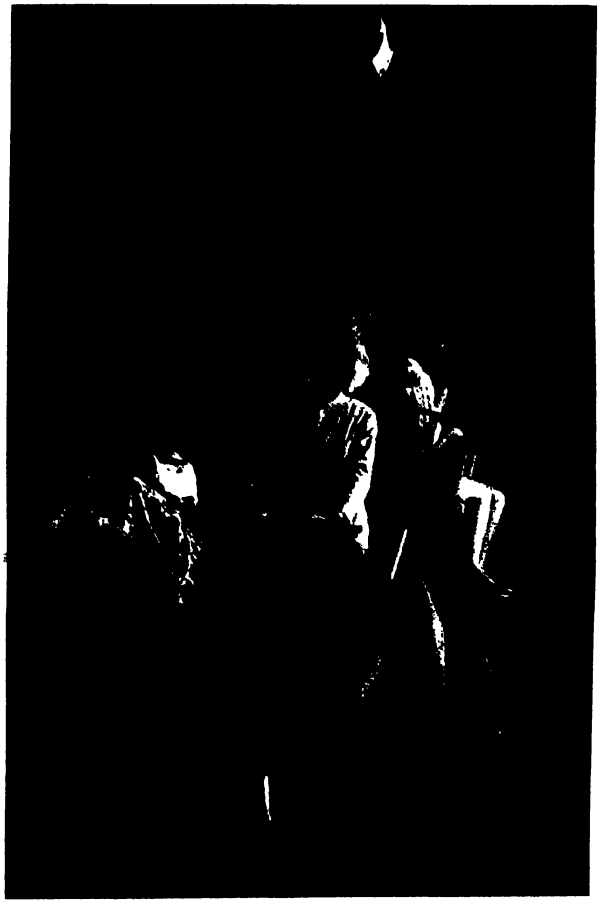
The WTO's Varma agrees that there is no sense in spreading scarce resources thinly. "The efforts," he says, "should be confined to high-potential markets which have the capacity not only to provide numbers but also numbers with quality — a higher per-capita-per-day spend."

Peddling clichéd images

Also, there is lack of any lateral thinking on the part of the government about the function of the GOITOS. Tourism director general Pradhan confidently asserts that, as a government body, "we cannot market anything; we can only promote India generically". So, GOITOS in different parts of the world peddle the same standard hybrid images of India — the Taj Mahal, deserts of Rajasthan, coastal Kerala, *et al*. No attempt is made at finding out precisely what would excite people of different nationalities into taking a trip to India.

As the WTO's Varma points out, there is an over-reliance on cultural tourism with the Golden Triangle as the beaten path. "Recreation and leisure," he says, "are 'in' these days and tourists spend more time on activities which they can undertake themselves, e.g. water sports, adventure tourism, ecotourism, etc. In my opinion the traditional Indian tourism product has become stale and is now showing signs of product fatigue. It must be renovated with a new look and something

value-added thrown in."



India's tourism planners need to look at markets individually; the days of the homogenised tourism product are over. Nandini Verma says the French, for instance, would respond to a promotion that highlights Indian culture, while the Germans need to be sold beaches. In the Middle East it makes sense to promote India as a shopping destination, rather than heap encomiums on the deserts of Rajasthan.

The Japanese market makes an interesting case study. It is an important market for every country, given Japan's commitment that there will soon be 10 million outbound Japanese travellers. Currently, India gets no more than 75,000 Japanese tourists. As Prem Subramaniam points out, it would make sense for India to find out what attractions would most interest the Japanese and specifically promote those in that market. The Buddhist pilgrimage centres are an obvious choice. Some less obvious areas would be theatre, pottery, tea, lush gardens, etc.

Britain, which annually receives 600,000 Japanese tourists, conducted thorough research into the Japanese market and found the Japanese single working woman to be the most conspicuous traveller and could scarcely be expected to relate to the normal British promotional images — of beefeaters, bowler hats, and football. For the Japanese market, then, BTA mounted other campaigns, which stressed the more feminine aspects of Britain. One of the campaigns, called Tea and Roses, was particularly successful.

India would be an alluring destination for the Japanese single working woman if only publicity campaigns in the market there emphasised safety aspects. Promoting the country as a shoppers' paradise should also bring rich dividends. Add to that the fact that the Japanese by and large tend to be insular in their tastes. It would help, says Nandini Verma, if top hotels printed their breakfast menu in Japanese as well. In European markets these things are almost *de rigueur*.

Tourism planners would do well to come up with specific strategies to make tourists from various regions of the world feel comfortable and wanted. Europeans, for instance, are used to having dinner at about 6 O' clock in the evening. Most speciality restaurants do not open for dinner until 7.30 or 8 pm. This leaves European tourists with no choice but to eat at coffee shops.

Foreign tourists often leave with the impression of having been taken for a ride, not necessarily on an elephant

India is not a death-trap

Security, research has revealed, is an aspect of overwhelming concern for tourists in such attractive markets as the US, Europe, and Japan. It doesn't help to constantly bemoan the negative publicity that India tends to get in the Western media. "There would seem to be no option but to live with it," says Subramaniam. It would help to use celebrity Indophiles – Eric Newby, Dominique Lapierre, or Paul Theroux – to focus on the safety aspects and have them talk about why India enchants them. Rather than denying outright that safety is a problem (a posture that would run into credibility problems), it would be better to emphasise that, if a tourist takes adequate safeguards, he or she would be fine.

Subramaniam points to two specific instances that India's tourism planners could have used to stress that tourists in India are no more or less in danger than in Europe or the US. When Sir Colin Marshall, the legendary chairman of British Airways, returned to London after a trip to India at the time of the plague, he was asked by reporters about it at Heathrow. "I don't know about the plague, but I've got a cold landing at Heathrow!" Sir Colin is reported to have said. A clever tourism marketing professional would have gone to town with that statement.

The other example concerns a damning statement made by Swedish tennis star Stefan Edberg many years ago at the time when he was one of the world's finest players. Edberg refused to travel to India because he said he feared he might not survive the various diseases in the country. Edberg's statement, predictably, drew a storm of protest from the Indian government and the media. For weeks the Swedish tennis star was pilloried for his 'insensitive' and 'baseless' remarks. Subramaniam is of the view that it would have been more effective to get 10 Swedes, either living in India or frequent travellers, to say that Edberg's fears were unfounded.

The Indian tourism industry needs to address a perception most tourists go away with — of having been cheated. This problem manifests itself in so many different ways — from being overcharged by the cab driver to even a premium travelling experience leaving tourists feeling short-changed. For Nandini Verma this is a

priority area. "We must change the image that overseas tourists have of India that everybody is out to cheat them," she says.

Consider the experience of Claudia and Alfredo Canetta. One fine Wednesday recently, they undertook a journey on Palace on Wheels and returned totally enchanted by the sights and smells of Rajasthan. But the Canettas could not shrug off the feeling of having been somewhat cheated. The journey cost the young Italian couple nearly $5,000 (it's $2,275 per person for seven nights) and, they later lamented, even at that price they had to share their coupé with two complete strangers. "It is a memorable journey and you are paying a phenomenal price and still there's no privacy. You can't cuddle up with your wife or change into your pyjamas at night. At no stage was there any indication given by the organisers that there would be other people in the same coupé. One feels cheated."

Tent tourism was a casualty of the indifference of self-promoting bureaucrat

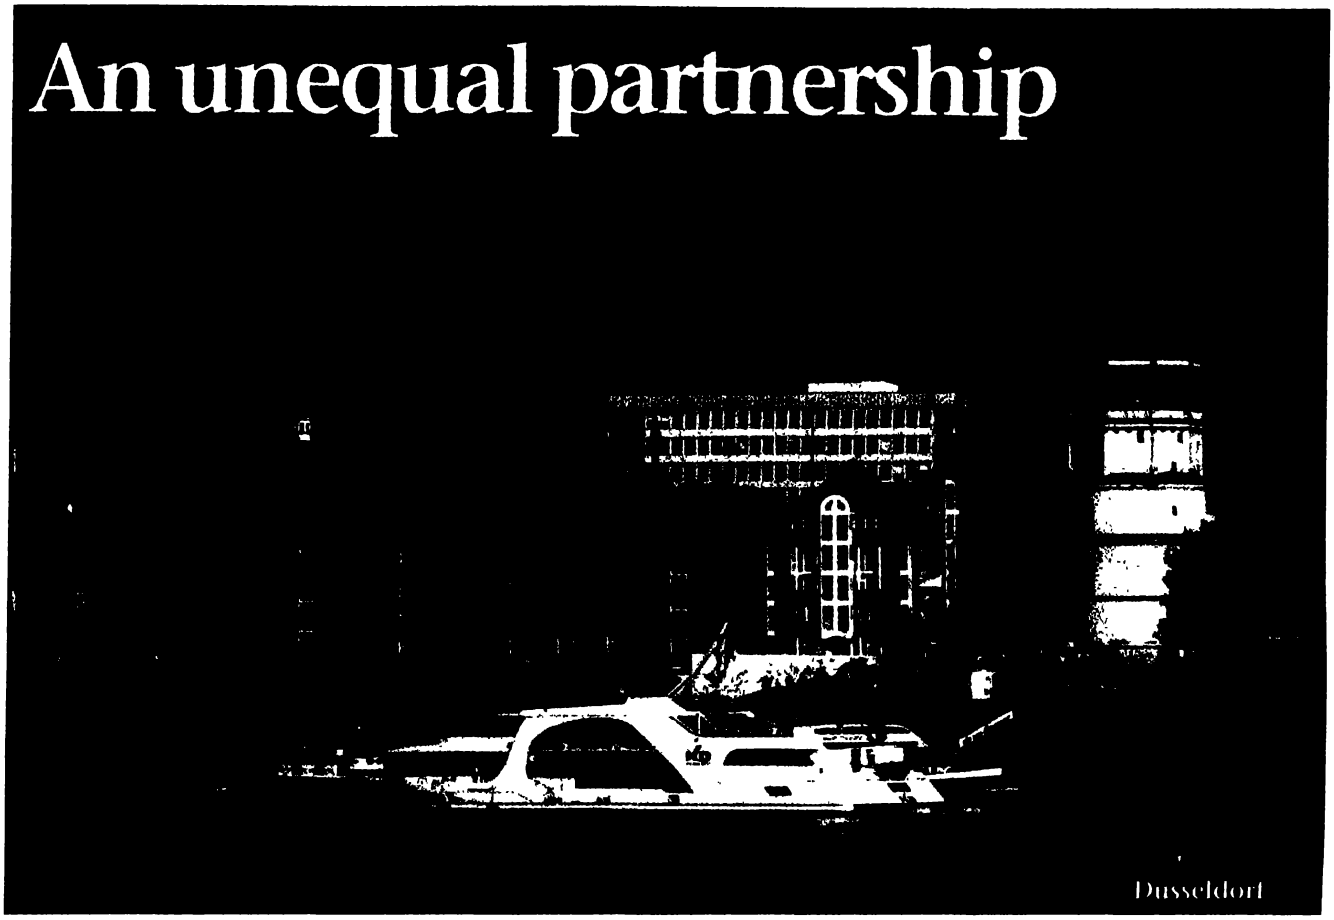
Save tourism from touts

There are legions of harrowing stories about how tourists have been harassed and cheated by touts hanging around forts and palaces. To get a sample of the menace you need to spend an hour or two in the morning at the magnificent Amer Fort in Jaipur. The elephant ride into the fort is a high point of the experience for most tourists, but ask someone how it was and you would hear the usual oohs and aahs, as also tales of incessant harassment from the touts.

Shopping in Indian tourist destinations, of course, is nothing short of a scandal. All manner of shops selling mementos and curios – from the biggest stores in Delhi to the smallest in Agra or Khajuraho – pay hefty commissions to tour operators, taxi services, autorickshaw drivers, *et al*, for bringing tourists into the shops. Unsuspecting tourists come into these shops only to be fleeced. Virtually everyone in the travel trade is on the take in this clandestine business. What's surprising is that almost everybody is aware of it but nobody does anything about it. There have been countless complaints to the Indian government about how high-priced items purchased from these curio shops turned out to be fakes, or were sold at mark-ups 50 to 100 times their actual price. But the problems remains unaddressed. Meanwhile the clandestine trade continues to thrive in tourist centres.

Some committed travel industry voices have advised the tourism ministry to introduce some checks on shopping at tourist spots. The chief executive of a mid-sized Delhi-based travel company, on condition of anonymity, says the solution to the problem lies in introducing shopping areas in the tourist complexes and keeping a check that whatever is being sold is genuine and not prohibitively priced. Another travel industry observer, however, believes it would be impossible to implement such a system. He thinks the solution lies only in instilling a sense of pride in people who run these stores. "They should be proud that they are selling something typically Indian to an overseas guest and not sell anything shoddy," he feels.

Committed professionals needed



Talk to anyone in the industry. The verdict is that the most critical, and problematic, area is that of marketing. This sector of the economy is crying out for committed professionals, not self-seeking bureaucrats and mercenary travel agents. The national task force on tourism in its report has strongly recommended to the government that an autonomous national tourism promotion board be set up on the lines of BTA or the Singapore Tourist Board. The report recommends that funding could be provided from the hotel expenditure tax collected by the government, in addition to budgetary allocations.

Indian tourism has indeed suffered from being in the hands of bureaucrats indulging in self-promotion and little else. For instance, a former director-general of tourism introduced the concept of tented tourism in key tourist areas. The idea had potential, but once a new DG came in it died a natural death. All successive DGs have had their pet projects but most of these initiatives, some of them laudable, have suffered on account of lack of continuity at the top. A tourism promotion board with a respected leader from the industry at its helm could solve this problem, apart from rescuing the sector from the clutches of inept bureaucrats.

Subhash Goyal is fond of calling India as the greatest show on planet earth. Indeed it is. But to throw open the doors to this greatest show of them all, Indian tourism needs initiatives that go beyond the 'tirangi burfi'.

• SANJEEV VERMA

An unequal partnership

As with most industrialised countries India does business with, New Delhi hails Germany as a major trading partner, whereas in German eyes our country of a billion with aspirations towards a heightened global stature is essentially just another nominal market

One cannot help recall former finance minister Manmohan Singh's high-sounding assessment: "There is no parallel example in the world of a country of India's size and diversity seeking to bring about a massive social and economic transformation in the framework of a democratic polity and an open society committed to the rule of law and individual freedom." Or the current government's official line that "India is an open economy in the process of integrating with the world economy".

On the face of it, Germany professes a patronising enthusiasm for India's programme of economic liberalisation first ushered in 1991. Such euphoria has scarcely translated into a really meaningful partnership. Germany is India's third largest trading partner, behind only the US and the UK, the third largest supplier of goods, providing 5.5 per cent of India's import requirements, and the fifth largest buyer of Indian goods, accounting for 5 per cent of India's exports. In contrast, India is placed a dismal 31st among the global suppliers to Germany and 37th on the list of buyers of German goods.

Even among Asian countries that Germany trades with, India ranks eighth, behind, of course, Japan, China, and South Korea, but also Taiwan, Singapore, Hong Kong, and Malaysia. Asia has a 12 per cent share in Germany's total foreign trade and is the second most important zone after the European Union (EU). While bilateral trade with Japan amounted to DM58.9 billion in 1998 and with China DM34.9 billion, the tally for India was DM8.1 billion.

Hilde Welte, head of the South Asia, Turkey, and Israel division of the Federal Economics and Technology Ministry, does not mince words in her explanation for this. Talking to *Business India* at her office in Bonn recently, she noted, "India's political instability and restrictive régimes yet in place are making German investors hesitant." According to her, India has erected a high barrier round itself through restrictions on imports and daunting custom tariffs like the excessive additional duty rates and the special additional duty. At the same time, New Delhi is demanding that Germany relax its own import restraints as regards agricultural produce and textiles, she acknowledges. It has also sought a renegotiation of the Trade Related Intellectual Property Rights (TRIPS) agreement with the World Trade Organisation (WTO) that takes effect from 1 January

2000, she declares.

Both Welte and her deputy, Hans-Dieter Spohn, maintain that the 1991 reforms did rouse high expectations in Germany, but the rapid change of governments, and consequently of trade and investment policy, are undermining investor confidence. "India desperately requires better infrastructure by way of new roads, railways, air- and seaports, power generation, and the like, but there was the unfortunate instance of bureaucracy derailing proposals submitted by Siemens and ABB for two power plants in December 1995," Welte recalls.

Many advantages, nevertheless...

On the upside, Welte and Spohn underscore India's potential as a burgeoning market owing to its enormous reserve of technical and scientific manpower, phenomenal advancements in computer software, a vast and affordable labour force, and a viable legal system ("At least better than Saudi Arabia's and Iran's" they concede). They nevertheless assert that, while it is nowadays crucial for each country to project itself aggressively as a significant investment destination if it is serious about making a mark in international commerce, India is just not positioning itself accordingly.

Dr Guenter Krueger, director-general of the 43-year-old Mumbai-based Indo-German Chamber of Commerce (IGCC), remarks that the depressed level of trade between the two countries is not exceptional, as German business is lopsidedly tilted towards its industrialised partners like the US, France, the Netherlands, the UK, Italy, Japan, and China. But he does concede that Welte and Spohn reflect the general mood of the Germans, who believe that while India talks much about liberalisation, the ground realities do not reflect this adequately. "It is likely that India's benchmarks for reform are different from those of Germany, but there is always the unpredictability associated with them," he observes. "The scope of liberalisation can change any time with a change of government."

India is, however, at pains to assure all potential foreign investors that "economic reform commands a national consensus spanning all political parties and is irreversible". Its missions in Germany broadcast the official sentiments that the far-reaching economic reforms have thrown up vast opportunities for business in India, which has a huge market of nearly 300 million people in its growing middle class. "India is one of the top 10 big emerging markets today," they crow. "It provides an abundance of natural resources, a rich mineral base, and one of the largest reservoirs of skilled people; it is a good base for sourcing production for both the domestic market and export and provides a stable democratic environment in which political and economic institutions function in harmony." They also add that India has a free press and a strong and independent judicial system, while English is the language of commerce and administration.

Diplomatic sources also indicate that the other assurances they project are about further simplification of the tax system, reduction in customs duties and rationalisation of excise duties, reforms in the insurance sector, phasing out of remaining quantitative restrictions on consumer goods imports, more schemes to attract foreign and private investment in infrastructure sectors, reforms in labour policies, full rupee convertibility, and reform of public sector enterprises. Krueger too is confident that the stagnating trade will have an upswing once again. "But I don't anticipate anything spectacular happening here, because German businessmen are an impatient lot and tend to lose interest if they have to scythe their way through tedious procedures," he adds. His IGCC is one of the most important institutions promoting Indo-German trade relations and, with more than 6,000 members, the largest German chamber abroad. It has its head office in Mumbai and branch offices in New Delhi, Chennai, Calcutta, and Bangalore, apart from liaison offices in Hyderabad and Düsseldorf.

Conversely, however, many big Indian players appear to be holding themselves back from exploiting the huge potential in doing business with Germany. IGCC's director (trade fairs) K.C. Damodaran points out, "Major

Indo-German trade

(in DM million)

	1990	1993	1994	1995	1996	1997	1998
Indian exports	2510	3227	3491	3602	3957	4151	4229
	(+20.2)	(+8.2)	(+3.2)	(+9.9)	(+4.9)	(+1.9)

	(+12.7)	(+9.6)	(+19.6)	(+5.7)	(-0.4)	(-5.9)	

We must be in Munich

With the reunified metropolis of Berlin becoming the new capital city of the Federal Republic of Germany (FRG) in August, India's embassy too is caught up in the gargantuan shift of ministries, missions, and government offices from Bonn.

India's ambassador to Germany Ronen Sen says half the embassy's staff of 90 have already moved out to Berlin and he will be following suit by mid-October. "We, however, wish to retain a residual presence in Bonn a while longer and also strengthen our consulates-general in Frankfurt and in Hamburg, the latter being the oldest mission in the Federal Republic," he mentions.

[Diplomatic sources indicate that prominent Düsseldorf-based businessman Dr Heinz Horst Deichmann, whose shoe retailing business in Germany has a turnover of around DM1 billion and who is known for his proximity to both the ruling Social Democrats and the opposition Christian Democrats, will very likely be India's new honorary consul in Bonn. Deichmann is a major importer of Indian leather shoes – importing around 2.5 million pairs annually – and also aids numerous charitable projects in India

SAROSH BANA

Ronen Sen argues for a more vigorous partnership with Germany

such as schools and clinics. His fondness for India is reportedly legendary, having once publicly described the country as his 'girlfriend', and Indian diplomatic officials believe his posting will bolster India's image as a compatible trade partner.]

The ambassador is keen on India's opening a new consulate in Munich as well, with Bavaria, of which this southern city is the capital, fast emerging as Germany's high-technology centre for cybernetics, telecommunications, bio- and information technologies, and artificial intelligence. "It is imperative for India to have a direct presence in Munich, because we must open up and expose our own industries to the fiercely competitive segment of high technology," maintains Sen, who took over his posting in October 1998 following a six-year ambassadorial stint in Moscow.

Sen believes India lost a vital opportunity in not exploiting to its benefit the unanticipated currency crunch that gripped the Southeast Asian economies recently. "It appears that, while German businesses are enthused by India's programme of liberalisation, they have been dismayed by the regrettably slow pace of its implementation," he maintains.

He says there is enormous potential for developing bilateral trade with Germany because it is one country that is the industrial powerhouse of Europe and is both the catalyst and locomotive in the context of European integration. "Germany can well be a vital economic partner for us and for this Indian businessmen would need to diversify their export products and conform to the stringent German standards of quality and timely deliveries," he remarks.

Indian enterprises seldom participate in Germany's varied trade fairs, which are among the most prestigious and lucrative, just because they are satisfied with their prevailing volumes of business. But their far bigger counterparts from East Asia and the Western hemisphere consistently have high-profile participation simply because they desire sustained recognition worldwide." He points out how a predominant industrial house inexplicably withdrew from Düsseldorf's GDS footwear fair in March at the eleventh hour, how knitwear is never represented at the fashion and apparel fairs, and how a leading plastic manufacturer has shunned the plastics exposition likewise.

The links go back a long way

In an exclusive interview to *Business India* at his sprawling official residence on the outskirts of Bonn, India's ambassador Ronen Sen indicated that the relatively constricted bilateral trade is not in consonance with the fact that India has been among the first countries to set up its mission in post-War Germany, apart from the fact that the University of Bonn established its department of Indology way back in 1818 and Berlin's Humboldt University did so three years later. With 18 chapters all over Germany, the Indo-German Society is also the largest of its kind in the Federal Republic, he adds. Sen points out that German industry had been enthused by the path-breaking initiatives such as in the infrastructure sector undertaken by the A.B. Vajpayee ministry. But its premature collapse put a question mark over these initiatives. German investors are not unduly perturbed by issues such as India's nuclear blasts of May last year, so long as the country enjoys political stability and can implement its policies without fear or favour, he points out. The following chart makes this manifest. The post-Narasimha-Rao period, marred by a flurry of governmental changes since 1996, shows a distinct downtrend (*see table*).

Curbed by recessionary trends and cautioned by an uncertain political climate, Indian industry's hi-tech requirements were markedly reduced, resulting in a sharp drop of 13.1 per cent in imports from Germany in 1998 from the previous year. This led to an overall decrease of DM506 million, or 5.9 per cent, in the volume of bilateral trade. Cotton fabrics and garments continue to account for the bulk of India's exports to the extent of 20 per cent, with leather, and leather goods and apparel comprising another 16.1 per cent.

In a positive development, primary chemical exports surged 17.4 per cent, accounting for 11.4 per cent of overall exports to Germany, while auto ancillaries registered a woeful drop of 15.1 per cent, reducing to 3.9 per cent of the exports. At the same time heavy machinery, and chemicals and pharmaceuticals continued to be the mainstay of German exports to India, accounting for 40.4 per cent and 15.7 per cent respectively of the overall tally. In the same period electronics goods dipped by 25 per cent and vehicles by 33.5 per cent.

India, however, registered a trade surplus – of DM356 million – for the first time since 1994. In the first five months of this year overall trade declined a further 4.5 per cent compared to the same period last year, with Indian exports dropping 0.1 per cent and German exports plunging 9.3 per cent. The Centre sanctioned 193 Indo-German collaborations in 1998 compared to 254 the previous year of which 108 (1997: 159) are to have financial participation as well. These tallies portray a 24 per cent decline in technical and 32 per cent in financial collaborations, being the fourth year in succession when there were more financial than technical collaborations.

The total number of foreign collaborations sanctioned in 1998 were 1,786 (1997: 2,325), while 1,190 were

SAROSH BANA

Hilde Welte feels India has a long way to go in globalising itself

financial (1997: 1,664). Last year Germany, with sanctioned investments worth Rs854 crore, dropped to ninth place, behind even Mauritius, South Africa, Malaysia, and Australia, having held fifth position in the two previous years. The US led the list, with Rs3,562 crore worth of investments. But though, in the first six months of 1998, German investments in India declined by about 54 per cent compared to the figure in the first six months of 1997, they subsequently leapt by 46 per cent for 1998-99 as a whole to exceed Rs2,000 crore. German investment in India had almost tripled in the first few years of economic reforms in 1991.

The Confederation of Indian Industry (CII) maintains that Germany's investments into the rest of Asia dropped from 12 to 6 per cent of its total foreign investments in the same period, though total German overseas investment actually rose by 30 per cent to reach DM54 billion. Comparative figures for India are difficult to ascertain. "A complete list of Indian investment in Germany is not available as companies are registered at the local rather than the federal level," says Dirk Matter, the IGCC's office chief in Düsseldorf. "There is, however, no restriction on foreign investment in Germany, though it is difficult to secure a permanent resident visa." He points out that, while a host of small and middle-sized Indian companies in Germany are dealing with textile and leather products, a new trend has been of software companies opening representative offices there to forge closer contacts with their clients.

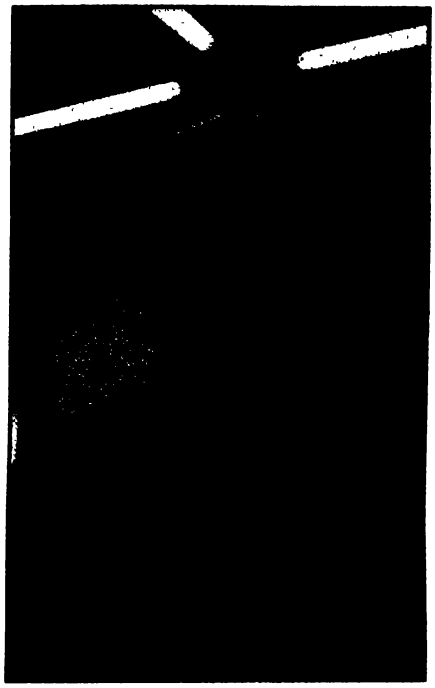
Aiming for the Mittelstand

Indian companies establishing business in Germany include New-Delhi-based Bharatiya International Ltd, which on 23 June 1997, signed a joint venture with Jaburg & Sahm Textilmanufaktur GmbH of Neustadt in Brandenburg, 75 km northeast of Berlin, that would provide employment to 120 workers in the region. A ground-breaking ceremony for a new trade and business centre at the same venue was also performed in the presence of Manfred Stolpe, minister-president (chief minister) of the federal government of Brandenburg, and then Indian ambassador S.K. Lambah, jointly by Bharatiya's managing director Snehdeep Aggarwal and his counterpart in Jaburg, Horst Sahm.

Commending the initiative, Stolpe underlined the importance of India for bilateral cooperation with companies in Brandenburg. Lambah pointed out how the joint venture was an example of India's collaboration with German Mittelstand (medium and small) companies. NRI steel group Ispat International also took over two plants of the Thyssen-based Saarstahl AG which had gone bankrupt. A CII survey showed that more than 200 Indian companies were interested in having a permanent presence in the state of Bremen, many of them from the textiles, leather, auto components, electronics, software, chemical, and pharmaceutical sectors.

CII observes that Bremen is an excellent gateway to northern, eastern, and central Europe that presents a combined market of 670 million people. Also the state, comprising the port city of Bremen and the seaport of Bremerhaven, is an international trade hub. It additionally grants subsidies of up to 28 per cent of total investment volume. In order to facilitate the setting up of Indian companies there, CII's Bremen office, along with Bremen Business International, the investment promotion agency of the state, has set up a comprehensive business support service.

Mohan Murti, director of CII's German office in Cologne, quotes a CII survey on what Germans criticise and value in Indians. "Germans face the greatest difficulties when the Indian ability for handling of chaos gets exaggerated and assumes a perverted form of dishonesty, breach of contract, and a search for immediate gains at the cost of the German partners," the survey cites. "There can also be a divergence between Indian and German ideas about punctuality or exact fulfilment of contracts; because several Indian partners do not look upon mutual decisions as unconditionally binding, they are accused by the German side of unreliability, irregularity, or lack of commitment." But what Germans value is the work motivation of Indians: "The most frequent mention is their ambitious commitment to work, combined with much enthusiasm and reliability." Also honesty and loyalty, and of being convinced of their own abilities and displaying them decisively.



Dr Wolfgang Massing, head of the federal foreign office's South Asia,

Indian Peninsula division, acknowledges that, despite being a region with a cumulative population of 1.3 billion, South Asia is not getting the attention it deserves. "That part of the world is indeed a bit neglected, but regional tensions are impeding progress," he says. "We had high expectations after Prime Minister Vajpayee's bus trip to Lahore in February, but renewed hostilities became a matter of concern." He deems it imperative for India and Pakistan to work for their common good by developing commercial, communications, infrastructural, and cultural links.

He believes it is this acrimony that is thwarting the South Asian Association of Regional Countries (Saarc) from flourishing. "Our government would like to assist Saarc in getting ahead, because it is in its progress that the well-being of South Asia can be assured," he says. But he adds that there is a general apprehension that India might try and dominate the region. He points out that though Berlin does not believe in trade or financial sanctions as retaliation for India's and Pakistan's nuclear tests, the Western media did manage to scare away foreign investment by raising the spectre of a nuclear war on the subcontinent.

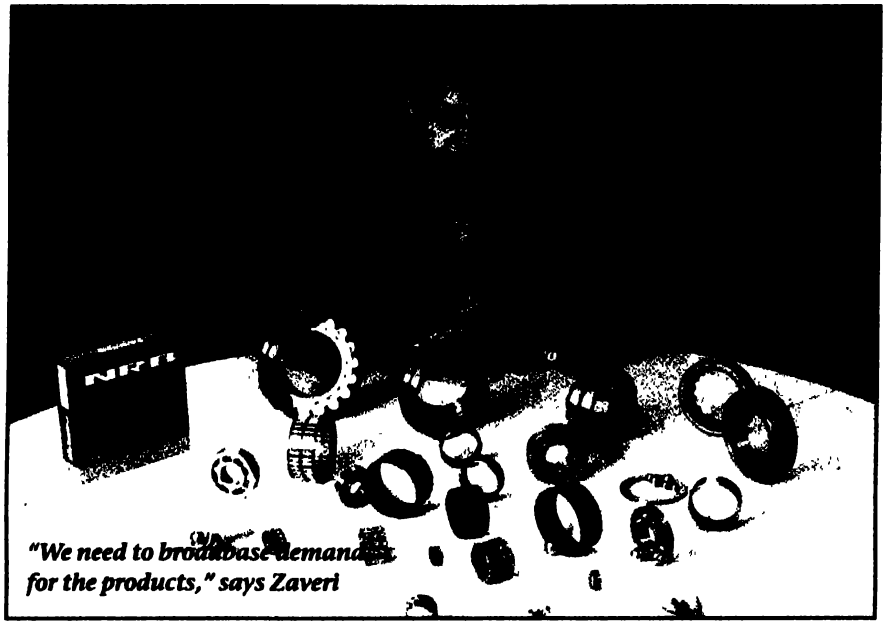
It is Germany's view, says Massing, that the United Nations Security Council, which even today reflects the situation as it prevailed after World War II, needs restructuring by being more representative of emerging regional imperatives. "Each region should decide on this question of permanent membership, though India considers itself a natural candidate and Japan aspires likewise. Germany too is an aspirant." Massing points out the Italian formula of "rotational permanent membership" as a solution. He claims there is continuity in Germany's basic foreign policy despite the Social Democrats of Gerhard Schröder succeeding the Christian Democratic Party of Helmut Kohl.

Germany traumatises over ethnic and regional conflicts and religious intolerance that threaten the balkanisation of South Asia, Massing stresses. "Afghanistan is an open wound that exports its rabid brand of fundamentalism into Pakistan which in turn can spill over into India," he reckons. "This can ignite Hindu revivalism in India which then will have no future if its secular identity is compromised."

Guenter Krueger is confident that bilateral trade will surge once again

Pragmatism is vital

On the economic front, too, India would need to be more pragmatic. Dr Anupam Ray, Head of Chancery at India's embassy in Bonn, in the midst of shifting to the new capital city of Berlin, describes the tremendous effort put in hitherto in establishing a German House in Mumbai that would serve as an infrastructural and administrative gateway into India for German Mittelstand companies. The concept for such a facility was first proposed six years back by then ambassador Kishan S. Rana to Dr Lorenz Schomerus, the state secretary at the federal economics ministry. IGCC's Krueger says that though the then finance minister P. Chidambaram was personally keen on seeing this project through, it is yet to see the light of day.



Krueger mentions that Delhi has been unable to decide either way and the two German state banks – Bayerische Landesbank of Bavaria and Südwestdeutsche Landesbank of Baden-Württemberg – have baulked at the prohibitive price of the two plots of land he has identified in the Bandra – Kurla commercial area. There has been no progress despite the fact that, in May 1998, then German foreign minister Klaus Kinkel wrote to Prime Minister Vajpayee assuring full support of the federal government in this endeavour and two months later his office conveyed its support and reciprocity in supporting the foundation of a similar centre in Germany. In fact, in September last year, the matter was also discussed during the meeting of President K.R. Narayanan with Erwin Teufel, minister-president of Baden-Württemberg.

Krueger says similar German Houses have been set up in Singapore and Shanghai, while another is coming up in Beijing and the fourth in Mexico City, where the government has donated a plot free of cost for the project. Damodaran indicates that, if the impasse persists, the project will be moved to Bangalore or Hyderabad, where the governments have shown greater flexibility. The present status is that the executive committee of the Mumbai Metropolitan Region Development Authority is examining the proposal and discussing it with the IGCC, asking it to furnish a rationale for seeking a concessional price for the land and for the size of the plot required. The Chamber has approached the two German commercial banks and has yet to receive a response from them.

But if there is no German House, there is at least a 'German Window'. The Government of India has opened a number of country-specific windows in the Ministry of Industry with the objective of further augmenting bilateral economic cooperation with the respective countries. One such 'window' relates to Germany, the functions of which involve the collation and dissemination of information, organising investment promotion seminars and contact programmes, rendering assistance to companies, and facilitating the setting up of new collaborations between Indian and German companies.

Finding its bearings

"We need to broadbase demand for the products," says Zaveri

VIVEK GOSI

Hoganas has initiated some moves to go places

Harshbeena S. Zaveri seems to be a hands-on woman. Shuttling between various departments situated on two floors of a nondescript building in south Mumbai's business district, she is in a hurry to get to the goals fixed by her company. Designated wholetime director of the Rs100-crore NRB Bearings, she seems firmly in the saddle to steer the bearing company into the Rs300 crore league by 2004.

"We have embarked on a continuous improvement programme," says Zaveri, pulling out sheets of papers containing the 'score card' methodology. Clearly, Zaveri is in the thick of things. Though her father Trilochan Sahney continues to be the chairman and managing director of the company, it is amply clear that Sahney is grooming Zaveri, who has been looking at marketing and exports for more than five years, to take charge. (Sahney has a son, younger than Zaveri, who is employed with the company in the middle-management cadre.)

NRB Bearings was flagged off in 1965 by the Sahney family along with the French bearing manufacturer Nadella. Over the decades, to keep pace with the expanding range, the company's chief promoter Trilochan Sahney set up manufacturing facilities in Maharashtra and Andhra Pradesh. The early 1990s saw an "amicable" split between the three brothers, where Sahney, the eldest, took full control and the brothers walked away with some of the other family businesses in bearings.

Part of the crossholding by the group companies was disentangled when NRB made its debut in the capital market in early 1995 through the divestment process. A simultaneous public offer was done at a price of Rs120 per share. Today, the Sahney family holding is 49 per cent, with Nadella having 26 per cent of the Rs9.69 crore equity. (Nadella is equally owned by SNR, part of Renault group, and Torrington group, part of Ingersoll Rand Worldwide). While the bearings industry has seen several of the foreign collaborators holding a majority stake (eg. SKF, FAG), NRB's case stands out in that the foreign collaborator is the second largest shareholder but "will have equal say on board matters."

For starters, NRB has embarked on a blueprint for accelerated growth. Zaveri plans a greater penetration in the replacement market, an intensive export push, rolling out new products and catering to the high margin segment. "We need to broadbase demand for the products," says she. The company desperately needs to. For demand for bearings is a derived one where their fortunes are closely linked to industrial production, which has witnessed a decline in the past couple of years. In fact, most leading bearing manufacturers such as SKF and FAG have introduced numerous measures to increase sales and have embarked on technological upgradation and an export thrust.

Besides, according to an industry source, the growth and development in the user industry, especially the automotive sector, the biggest customer of bearings, has not exactly been on a roll. The segmentation of the automotive sector shows that while the two/three wheeler market looked up 8 per cent, the commercial vehicle market shrunk 17 per cent and the passenger and utility car market dipped 11 per cent.

The bearings industry in India is estimated to be about Rs2,400 crore of which the organised sector makes up for about two-thirds of the market. About 30 per cent is made up of imported or smuggled ball bearings and the rest by the small scale sector. According to industry statistics, the ball bearing demand in India dropped by about 4 per cent during 1997-98 though it grew a marginal 1.5 per cent during 1998-99. NRB has an 8 per cent marketshare in the overall bearing market, with SKF being the *numero uno*.

In such a scenario, how has NRB fared? For the year to March 1999, turnover slipped by about 3 per cent to Rs116.92 crore. Gross profit dipped by about 8 per cent over that of last year to Rs16.84 crore and post tax profit plunged about 41.7 per cent to Rs7.67 crore. The company margins were also under tremendous pressure. At the operating level, margins stood at 18.8 per cent compared to 22.1 per cent in the previous accounting period. The gross and net level margins dipped to 15.1 per cent (from 18.6 per cent) and 6.9 per cent (from 9.3 per cent) respectively.

However, despite discouraging performance, a comparative study of the industry shows that the net margin is better than SKF (3.64 per cent), FAG (3.41 per cent) and Timken (6.35 per cent). NRB's return on networth at 10.5

per cent compares favourably with SKF's 9.37 per cent and FAG's 8.56 per cent. It also emerges tops in terms of return on capital employed at 7.02 per cent.

"The overall slowdown in the user segment led to the dip in the topline and bottomline. However, though prices of bearings were down, our volumes were up and we didn't lose marketshare. Volume-wise, the industry average dropped by 12-14 per cent," explains Zaveri. In the past several months, the company has taken a conscious decision to reduce its dependence on the commercial vehicle major Telco. More than a fourth of NRB's sales came from the offtake from Telco. This, according to company officials, has been pruned to about 17 per cent. "But this does not mean that if we get more orders from this manufacturer we would refuse," they quickly add. (It must be pointed out that Telco itself had gone on a downhill because of a slowdown in truck sales.)

NRB has reoriented its business and refocused on areas with high growth potential. In the past couple of years, the company has reduced its dependence on the OEM auto segment from 66 to 46 per cent of sales for the year to March 1999. The replacement segment has seen a jump from 28 to 47 per cent in the same period. The industrial OEM segment has been erratic between 3 and 5 per cent of sales and exports are a steady 3 per cent.

In all the four segments, Naresh Warrier, vice-president, marketing, is hopeful of making a substantial headway. NRB has put a lot of emphasis on R&D to create import substitutes for its customers. Maruti Udyog has been one of its important customers for whom it has designed 10 shapes of taper roller bearings. Other clients include Mahindra & Mahindra, Bajaj Auto, LML, Hero Honda, Kinetic Engineering, Mico and Lucas TVS in the auto and auto ancillary sector. The other companies in the heavy engineering segment are HMT, Kelvinator, Siemens, ABB to name a few.

"We plan to invest about Rs4 crore on research initially and later spend a similar amount each year," says Warrier. The company plans to be a global player in needle and cylindrical roller bearings industry by addressing

NRB has reoriented its business and refocused on areas with high growth potential

opportunities in new market segments and also be a sourcing base for Torrington (its part owner). The focus has been on accelerated product development (it brings out 700 different sizes of bearings) and process capability enhancement. "This would enable the company achieve QS 9000 certification which would open up new avenues to do business with major global auto players like Delphi Automotive Systems and GKN," says Zaveri. Incidentally, companies such as FAG have moved faster than NRB on this count as it has achieved certification of ISO 14000 for environment and safety standards. "That (achieving ISO 14000) would be our next step," says she.

With the automobile segment showing signs of revival, NRB plans to be aggressive in the replacement market. It has already identified replacement markets in Bangladesh, Turkey, Nepal, Sri Lanka, Iran and Europe and is confident of getting a foothold. On the domestic front, the company plans to go beyond just dealers. "We have got down to the level of mechanics, who are the influencing factors. The reach is getting better. Today there is a pull factor as against a push factor earlier for the products. The number of dealers has increased by 50 to 200. Now we won't appoint any more dealers in metros. Instead we are going to smaller towns," says Warrier.

In the industrial bearings category, NRB plans an increased push. "Though it is a low volume segment, the margins are very high," says Zaveri. As for exports, the company has begun doing the spadework and hopes that things would click once the ISO/QS certifications come its way. "We are price competitive in most of our products domestically on CIF basis. To take care of the overseas markets, we have started warehousing in order to take care of the logistics," reveals Zaveri.

NRB's growth formula seems to be already showing results. Though the performance for the year to March 1999 was none too encouraging, its first quarter report card shows that the gameplan initiated has already begun to bear fruit. On the turnover of Rs26.06 crore, the company netted a profit of Rs2.39 crore. The margins have also improved. While gross margins have moved up four points to 19.5 per cent, net margins have jumped from 6.9 per cent last year to 9.17 per cent. The annualised earning per share works out to a shade lower than Rs10 compared to Rs7.91 in the previous year.

Zaveri is confident of closing the full year with a turnover of Rs125 crore and a 50 per cent jump in bottomline. The market price (Rs100 on the BSE) discounts the earnings by 10 times. With a pick-up in the user industry, the bearing industry is bound to get a better discounting which gives NRB ample room for an upward movement.

In growth mode

With capacity expansion and a pick-up in demand for iron powders, Hoganas India seems set for a smooth sail ahead

The $0.5-billion Hoganas AB of Sweden, a global major in iron powders, with a 50 per cent market share worldwide seems to be on a roll in India. Hoganas India Ltd (HIL), the Pune-headquartered subsidiary, in which the Swedish parent has a controlling 51 per cent stake, has a whopping 90 per cent market share in iron powders, a hold it shows no signs of relinquishing.

Iron powders are largely used to make automotive components by a process known as sintering or powder metallurgy. The end-users of these sintered components are major car manufacturers like Maruti, Telco, Ford, GM, Hyundai and Daewoo among others. Sintered components are also used by OEMs like Bajaj Auto, Hero Honda, TVS Group, Telco, M&M, Escorts and the like. About 60 per cent of the iron powder produced by HIL goes to the automobile industry, while another 25 per cent is used by the welding industry. The balance 15 per cent finds applications in the chemical and metallurgical industries.

Despite its heavy dependence on the automobile industry which has been through a wrenching recession, Hoganas has shown a smart growth in sales. Turnover rose by as much as 17 per cent in 1998-99 from Rs24 crore to Rs28 crore. Indeed, the company's track record in growth has been undented since its inception in 1987, irrespective of the growth trends of its user industries. During the last six years, HIL has more than doubled its sales from Rs13 crore in 1993-94 to Rs28 crore in 1998-99, while net profit more than doubled from Rs1.2 crore in 1993-94 to Rs2.8 crore in 1998-99. Exports have risen from Rs0.6 crore in 1993-94 to Rs3.64 crore in 1998-99.

Last year HIL doubled the capacity of the annealing furnace at its Ahmednagar plant, which in turn resulted in doubling its capacity to produce finished iron powders from 9,000 tpo 18,000 tpa. It has even set up a mixing

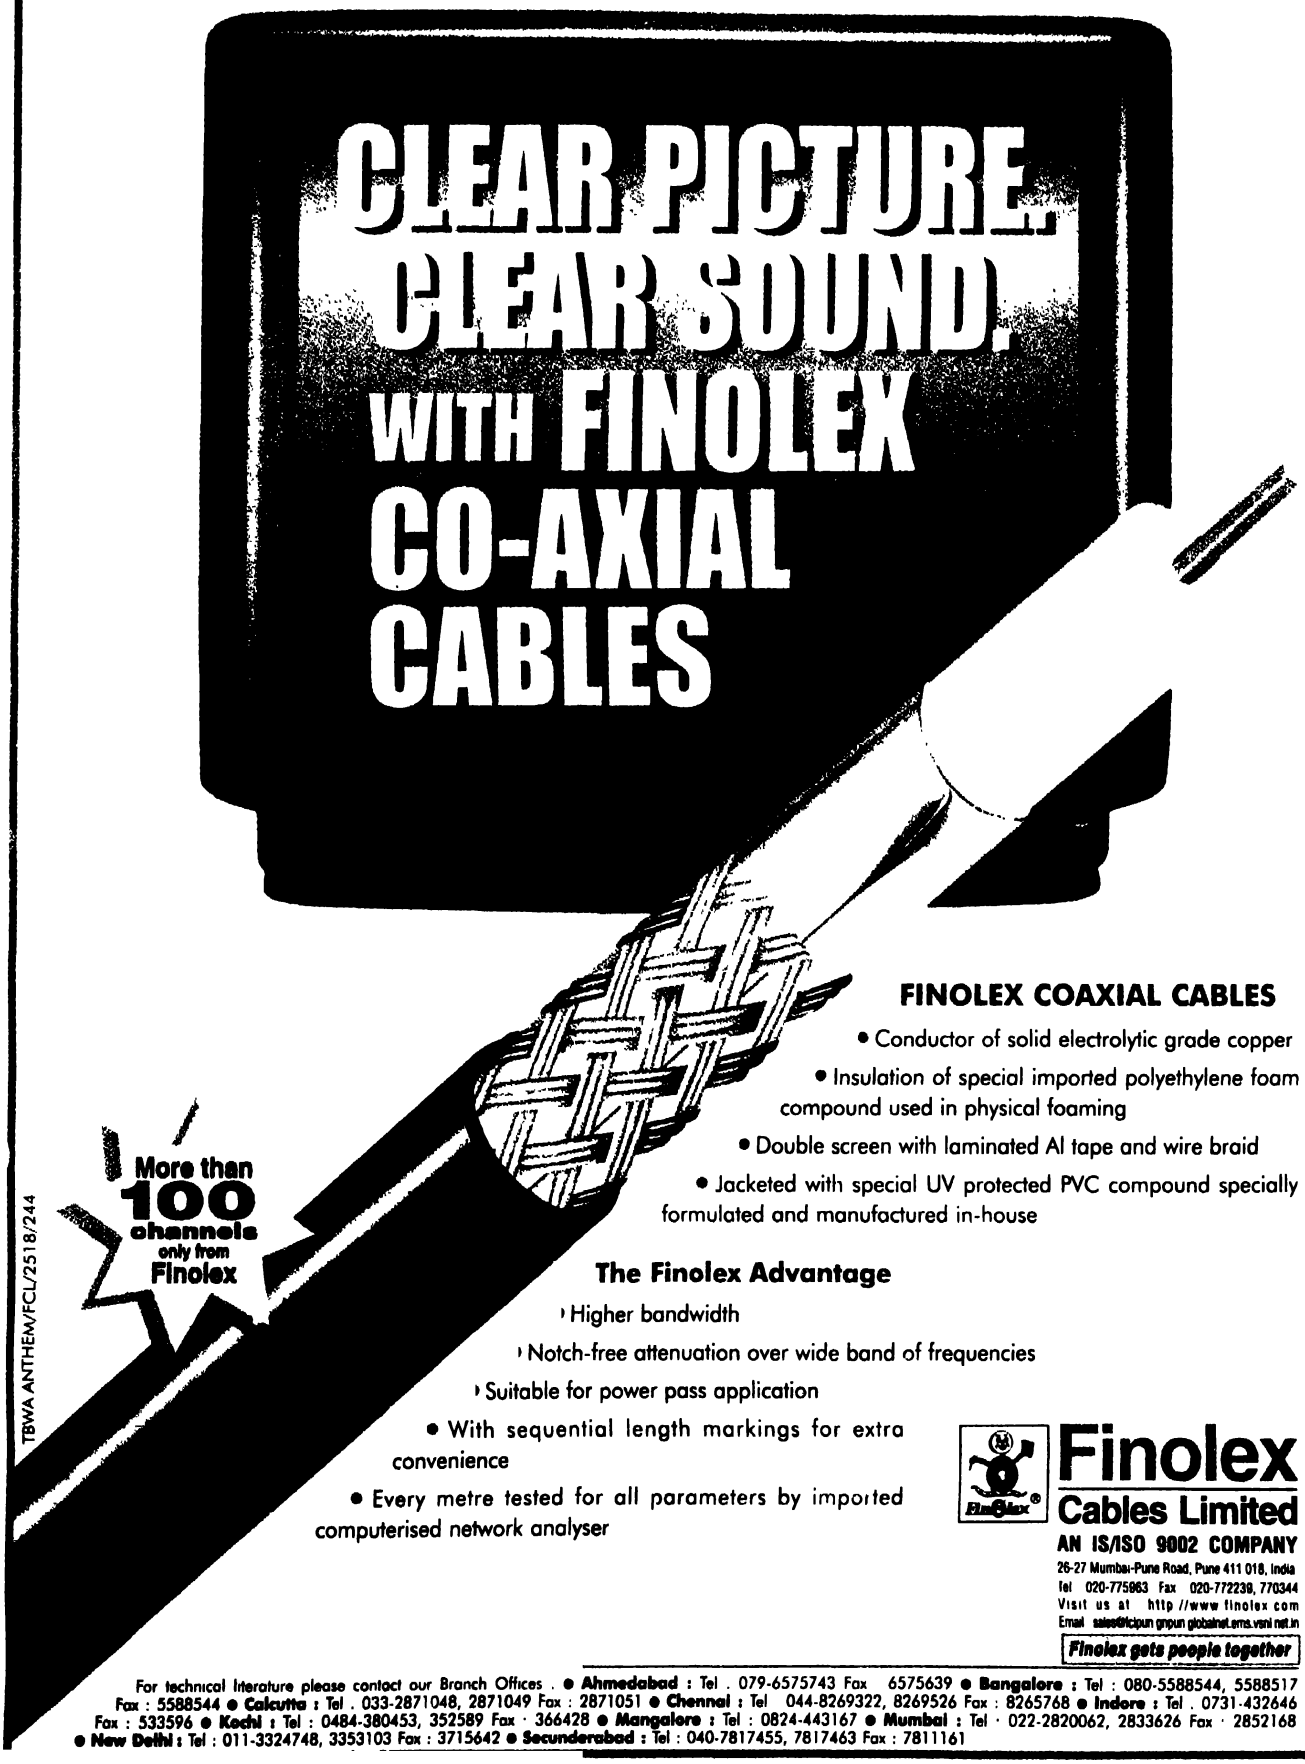
Our philosophy is to expand ahead of the market, says Sud

station for metal powders of 5,000 tpa capacity. The expansion, which was completed in June 1999, cost around Rs9 crore. Says Virendra Sud, MD, HIL, "We produce around 9,000 tpa of iron powder. But our philosophy has been to expand ahead of the market." When the company started in 1987, production was 2,000 tpa, a third of the installed capacity of 6,000 tpa. When demand spurted by 35 per cent in 1993-94, followed by a 50 per cent rise in demand the following year, Hoganas was well placed to meet it.

Even this time, the expansion has been completed at an opportune time as there has been a sharp 45 per cent spurt in the sales of passenger cars during April-September 1999, compared to the previous year. "The last quarter (July to September) has been our best ever. And even if the up trend is not sustained, we hope to end the year conservatively with a turnover of Rs33 crore," says Sud. However, the current financial year may see a dip in the company's net profits as depreciation, which was around Rs1 crore last year, will rise by 80 per cent and interest costs which were around Rs35 lakh, will go up by 40 per cent, due to the heavy capital expenditure last year. "But, once these are absorbed, the net profits should leap-frog in the following year, coupled with an anticipated 25 per cent increase in sales volumes," says HIL chairman Kamaljit Singh.

The present expansion will take care of the market needs for five-six years. In the next three years, HIL sales are projected to cross Rs50 crore.

On the export front, there is more encouraging news. Earlier, the parent company, had restricted HIL's sales to markets in and around the Middle East. Last year, however, the parent decided to source some special alloy powders from outside Sweden. To manufacture these powders, it short-listed its subsidiaries in three countries — India, Belgium and USA. "Finally, out of the three countries, they chose India to make these powders, for a variety of reasons. One, of course, being that we were the most price-competitive," says Sud. This should eventually result in exports crossing Rs5 crore in the current year, up from Rs3.64 crore last year.



Hoganas' Ahmednagar plant boasts a new mixing and blending station that allows the company to increase value addition. Says B.M. Kataria, Executive Director, Mahindra Sintered Products, "While we are geared to do mixing and blending of powders at our end, we have still shown willingness to buy a part of our requirements as ready mix powders from Hoganas India, as it helps us reduce our inventories of both elemental iron powders as well as ready-mix powders."

Meanwhile, there is an increasing trend in the automobile industry to use powder metallurgy (PM) parts or sintered parts. American auto manufacturers are planning to double the number and weight of PM parts in the next two-three years as powder metallurgy is a much more cost-effective way of producing components than conventional methods like forging. The trend even in India is to switch over to PM. Hoganas is banking on car sales picking up and the weight of PM parts per car increasing. If that happens, Hoganas will power ahead.

TOTAL CABLE SOLUTIONS

CLEAR PICTURE. CLEAR SOUND. WITH FINOLEX CO-AXIAL CABLES

FINOLEX COAXIAL CABLES

- Conductor of solid electrolytic grade copper
- Insulation of special imported polyethylene foam compound used in physical foaming
- Double screen with laminated Al tape and wire braid
- Jacketed with special UV protected PVC compound specially formulated and manufactured in-house

The Finolex Advantage

- Higher bandwidth
- Notch-free attenuation over wide band of frequencies
- Suitable for power pass application
- With sequential length markings for extra convenience
- Every metre tested for all parameters by imported computerised network analyser

TBWA ANTHEM/FCL/2518/244

Big Mac takes centrestage

McDonald's India is replicating the global concept of network economics to succeed in the Mumbai market

UMESH GOSWAMI

Managing director Jatia is targeting families

Visitors to Crossroads, Mumbai's newest and trendiest shopping mall, crib about the traffic jams they have to negotiate to get there. Blame it on McDonald's. The fast food eatery's newest outlet there is attracting hordes — an estimated 10,000 people visit the 242-seater restaurant daily. Cut to further downtown at the outlet at Chatrapathi Shivaji Terminus (CST) or in the opposite direction north to the suburban outlet in Bandra, the story is no different. Both cater to approximately 6,000 customers per day.

Admittedly, the CST outlet has seen a drop after the run-in with Bombay Municipal Corporation which has categorised the frontage as a compulsory open space — the necessary licence to operate in the area is being awaited — but the drop is temporary. McDonald's outlets are not just a hangout for Generation Next, but more vitally, are bringing in families. In essence, Mumbai's McDonaldisation appears to be complete.

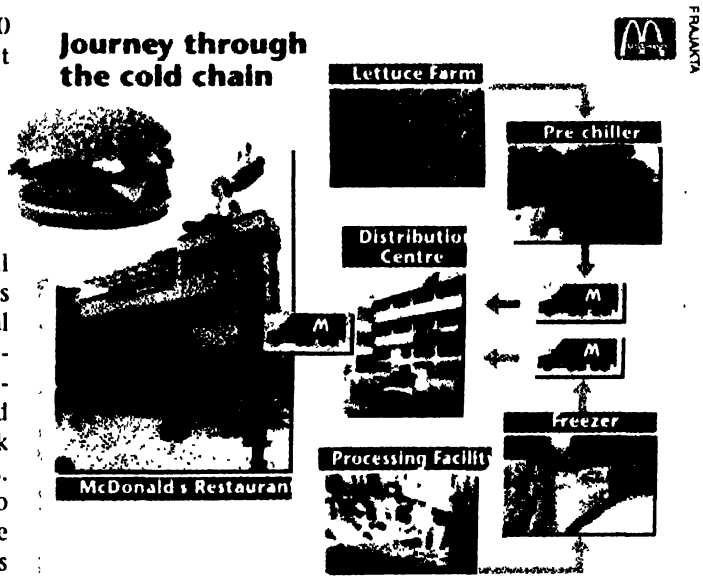
Pertinently, as recently as in 1997, fast food was not a terribly popular concept in Mumbai with a study showing very clearly that speciality restaurants dominated with a 39 per cent marketshare, while Udipi restaurants had a 30 per cent share. Meanwhile, fast food had a 25 per cent share only, while other eateries contributed the balance. But a year later, QSR (quick service restaurants) had grown by 30 per cent with Big Mac leading the charge with an astounding 80 per cent growth rate.

The man who can take full credit for luring Mumbaikars away from *idlis* to burgers is Amit Jatia, managing director of McDonald's India Mumbai joint venture. Echoing founder Ray Kroc's famous line — We take the hamburger business more seriously than anyone else — Jatia is targeting families. His catchline is simple yet effective: "We like the family." And families seem to love their Macs. McDonald's has grown from strength to strength with eight outlets in Mumbai serving in excess of 1.2 million people per month. This is expected to ramp up to 2.2 million customers per month by Y2K end.

Thirty two-year-old Jatia joined his family business in 1987 after his MBA from the University of Southern California and rose to become MD of Houghton Hardcastle India, one of the group companies in 1993. The company has a JV with Houghton International Inc of the US who are the world leaders in the field of fire resistant hydraulic fluids, aluminium rolling chemicals and other industrial lubricants. After deciding to enter into a JV with McDonald's (for which he claims his family was very supportive), Jatia prepared by taking a degree in hamburgerology from the Hamburger University run by McDonald's in Oak Brook, Illinois. Thereafter, he underwent hands-on training for a year at McDonald's restaurants in Jakarta (a marketplace similar to India). So, the go-getting Jatia who is guided by the Mac credo in the way he conducts his business is today a full-fledged member of the McFamily.

Jatia reveals that the QSR concept always takes off slowly and then grows at a phenomenal speed. He gives the examples of Turkey which had 20 outlets in 1993 and which have grown to 113 (year-end 1998) or Brazil which has shown a staggering growth from 154 outlets in 1993 to 672 (year-end 1998). Israel, which had one outlet in 1993, has 65 presently and the the sole outlet in Philippines in 1980 has mushroomed to 220 restaurants.

Jatia is now ready to unveil two more outlets in the last quarter of 1999 — on Charni Road in south Mumbai and near the Thane railway station (central suburb) — both double-storeyed and seating-oriented catering to between 125 and 150 people. Jatia says, "The setting up of all our outlets is determined by real estate acquisition and location. Ideally we have to situate the QSR slapbang in the middle of a shopping and residential area with a proliferation of foottraffic. The proximity to a suburban railway station in Mumbai obviously helps."



Jatia's gameplan is to have 20 outlets in Mumbai by 2001. According to him, of the eight restaurants in

Mumbai, only two (at Crossroads and Lokhandwala Complex in Andheri) are owned while the other six are on 25-year leases. The new properties at Thane and Charni Road have also been taken on lease. Jatia says, "Excluding the real estate cost, each outlet costs Rs3 crore. This includes leasehold improvement and the cost of the equipment. The break-up differs from site to site and normally includes kitchen equipment, cost of interiors, air-conditioning, exhausts *et al.*" Seventy per cent of the kitchen equipment is currently imported as it has to conform to McDonald's' global standards. But localisation is taking place here as well. Earlier the import content was 100 per cent; the three-year goal now is to have 70 per cent local and 30 per cent imported equipment.

McDonald's began to look at the Indian market sometime in 1990, when its executives started making exploratory trips. By 1994, some international suppliers of McDonald's visited India to identify local partners, realising the sensitive nature of the marketplace and the perforce need to eliminate beef and pork from its catalogue of dishes. India was the first country to use the complete vegetable burger, creating the eggless mayonnaise vegetable burger. Mutton burgers are once again an Indian concept. Meetings with agriculturists too were conducted with a view to set up a supply chain. Finally all this fructified when a 50:50 joint venture was inked between McDonald's India, a 100 per cent wholly owned subsidiary of McDonald's USA and Hardcastle Restaurants Pvt Ltd owned by Amit Jatia and his family.

Similarly Vikram Bakshi (whose family was in real estate) entered into a JV with McDonald's for the Delhi end of things. There are nine outlets in Delhi presently. Both partners signed the JVs in April 1995. Jatia claims that his association with the leader in the food retail business was not planned, rather it happened by chance. Jatia received a tip-off from a common friend that McDonald's was planning a foray into India. Once the dialogue was opened with Big Mac, the deal was sewn up in a year.

What appealed most to Jatia about McDonald's was the fact that they had mastered retail food management, successfully combining a global view with local expertise. While the joint ventures operate independently, Amit Jatia handles the food and paper purchase for both and Vikram Bakshi does the same *vis-a-vis* equipment. Jatia says that there is tremendous interaction between the two JV partners. If a particular promotional gambit succeeds in Mumbai, then it is instantly cloned in Delhi as well.

The $36-billion McDonald's' (25,000 restaurants worldwide) network economics model is part of modern management folklore. Economies of scale and large volumes are the determining factors to generate profits in fast food. Jatia says, "We are in a volume driven business, for it is these volumes which ultimately give profits."

And this is the model that has been successfully replicated by McDonald's in India. Local sourcing has enabled McDonald's transfer advanced technology and state-of-the-art procedures in the areas of agriculture, food processing, warehousing, distribution, restaurant equipment manufacturing and restaurant operations. Let us see how (*see supply chain*):

- Trikaya Agriculture in Talegaon, Maharashtra supplies fresh iceberg lettuce, growing the crop all year round. From five tonnes earlier, it is now producing 350 tonnes annually.
- On McDonald's request, two of its major international suppliers — OSI Industries Inc USA (chicken range of products) and Kitchen Range Foods UK (vegetable range of products) agreed to enter India through JV agreements. Vista Processed Foods and Kitran Processed Foods (McDonald's India is the majority partner in these ventures) were formed at a cost of Rs35 crore, operating the food processing facility from Taloja on the outskirts of Mumbai. McDonald's India is sourcing chicken patties, vegetable patties, pineapple and apple pies and vegetable nuggets from Vista and Kitran.
- McDonald's India approved Dynamix Dairies in Baramati, Maharashtra, for supply of cheese to its restaurants. To encourage improvements in quality standards and world-class manufacturing capabilities at Dynamix, McDonald's introduced it to two of its global suppliers — Schreiber Foods, USA and Erie Foods resulting in a JV with one company and an export order worth $12 million per year from the other.
- Most importantly, from July 1993, much before McDonald's kickstarted its operations in India, Radhakrishna Foodland (part of the Radhakrishna Group which is engaged in food and related services businesses) began to understand McDonald's operations and requirements for the Indian market. Better facilities, infrastructure and new systems were adopted to satisfy McDonald's demands. Foodland today serves as the distribution centres (DC) for their restaurants in Mumbai and Delhi while Air Freight handles the logistics management. The distribution centre is responsible for the procurement, quality inspection

programme, storage, inventory management, deliveries to restaurants and data collection, recording and reporting. Value added services like shredding of lettuce, repacking of promotional items are also carried out at the DC. McDonald's introduced Foodland to FI walkers of Australia which resulted in an affiliation between the two companies to develop a distribution set-up in India.

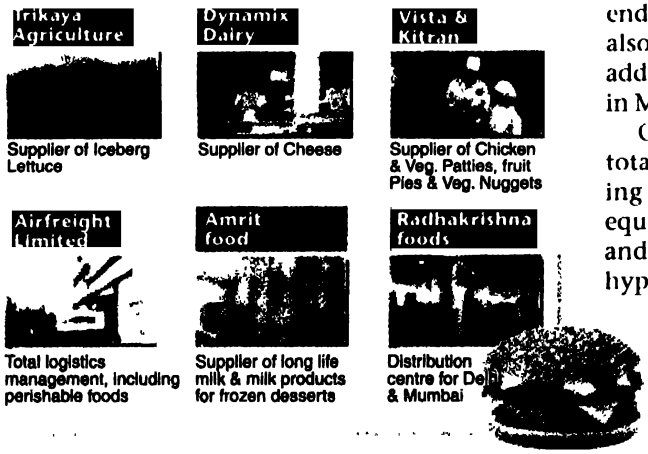
Raju Shete, chairman, Radhakrishna Foodland, says, "Our association with McDonald's has been a great learning experience. McDonald's has helped us gain knowledge and technology required to manage world-class distribution centres, which did not exist earlier in this country. Developing an equivalent expertise on our own would have taken us 10 to 15 years. McDonald's Corp houses vast resources which suppliers like us have access to, whenever we need it. They showed us new directions in the area of cost consciousness, cleanliness and waste control, thereby enabling us to substantially enhance total quality and reduce distribution costs." One of the examples that Shete gives is of using multiple temperature zones in the same truck, which reduces idle factors and increases optimisation.

Jatia says that Rs175-crore investment exclusively on the creation of the supply chain has been made in and around Mumbai (by the Indian partners, suppliers, international JVs, McDonald's Corp through its Indian subsidiary and the two JV partners — Amit Jatia and Vikram Bakshi). But this only one facet of the organisational dynamics. For the business is not only capital intensive but labour intensive as well. McDonald's Mumbai employs 1,000 people and the clarion call for quality, service, cleanliness and value (QSCV) is taking it to the next plane of competency.

QSCV remains the driving force behind McDonald's growth agenda. Training standards are rigorous and stringent and in order to maintain excellent service standards, the popular concept of mystery diner is being effectively used. The 'mystery diner' from an external agency — SS Harris — drops in at an outlet and provides the management with a critical analysis of the outlet's standards *vis-a-vis* service and hygiene, among other things. Moreover, customer satisfaction random checks and food safety checklists are commonly conducted by personnel from the corporate office.

"The underlying ethos is that McDonald's is a value-based company which is definitively volume oriented. As such development has to be focused and logistically managed. We prefer a step-by-step approach, optimising efficiencies across the board including in transport so that the cost is low," says Jatia. McDonald's Sundar S. says, "Ever since we started operations in 1996, we have managed to optimise truck capacities by over 60-70 per cent, production runs were optimised at our processing plants by following better ordering/forecasting procedures which also contributed in improving truck utilisation."

Jatia reckons that realty acquisition is proving to be the biggest impediment and, "while the government has been most supportive, we need to hasten the pace, streamline licensing procedures. At the moment, there are 50 different clearances required with as many as 24 NoCs. Traditionally, it takes 10 years in the McDonald's system to break even. I think in India it will take a minimum of 50 restaurants in Mumbai and Delhi to be on a firm footing. Towards the end of this year, we will be getting more aggressive. The good news is that sourcing is local, so forex fluctuations don't really matter. The key is how soon we can open new outlets for deep pockets drive this business. Japan, for example, opens 500 new outlets every year."



Jatia feels that he is already half way to the top. His credo now is that, "from the time I take possession of a new restaurant, I want to open it within 100 days. We are striving for this. Detailing, training and execution are the next steps. I remember a group of 25 people each from Delhi and Mumbai were flown to Indonesia for a year's training so that they could assimilate people practices and learn how to manage profit. By the end of this calendar year, which is also our financial year, I will be adding 60 new trainee managers in Mumbai alone."

Over a period of three years, total capital expenditure including training, restaurant cost and equipment has been Rs165 crore and while this has resulted in hype, hoopla and terrific customer recognition and brand awareness, the business continues to run at a loss. Jatia claims that advertising, promotion and merchandising is a huge part of his cost for there cannot be any compromise on this score. But at the same time, he refuses to divulge figures.

Jatia is unperturbed about the losses on a cumulative investment of Rs350 crore, for as he says, "Mumbai has crossed the threshold. Remember that while the concept existed in Delhi courtesy Nirula's, this food option was completely novel for Mumbai." Today it is the first serious Western, quick service restaurant and because the product is fresh, it is working very well. The buzz is that Pune and Chandigarh could be the next pit stops. Slow start, rapid growth remains the *mantra* for the golden arches in India. Their visibility is making the familiar figure of Ronald McDonald walk the talk!

Pumps and profits

Kirloskar Brothers has pumped up its order book position

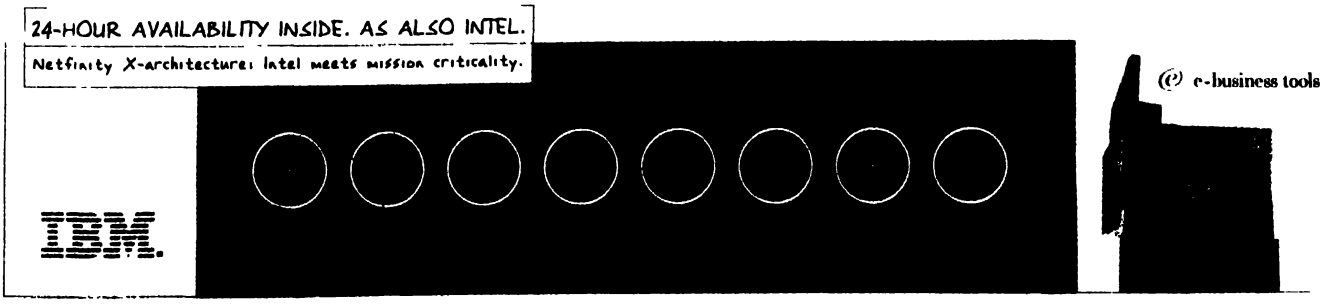
Like all other companies, Kirloskar Brothers Ltd too felt the heat of recession last year. Although sales grew only marginally from Rs342 crore in 1997-98 to Rs349 crore in 1998-99, net profits jumped up 55 per cent from Rs10.7 crore to Rs16.1 crore. The reason – concerted cost-reduction, inventory reduction and a much tighter financial management. "We managed to reduce inventories by more than 40 per cent in a period of just seven months last year. This improved our cash flow considerably. Besides, we lowered our interest costs by retiring high cost debts. This exercise will continue this year too and we will manage men, material and money more efficiently," says Sanjay Kirloskar, CMD, KBL.

KBL is a 111-year-old company. It has parented all the major Kirloskar companies like Kirloskar Oil Engines Ltd, Kirloskar Electric, Mysore Kirloskar, and Kirloskar Pneumatic, which at some time or the other were spun off from KBL and now form the Rs2,000-crore Kirloskar group.

KBL is the largest manufacturer of centrifugal pumps in the country with manufacturing facilities at Kirloskarwadi (near Karad in Maharashtra), Dewas (near Indore in Madhya Pradesh) and Shirwal (near Pune). Recently, on 6 August, KBL became the first pump manufacturer and one amongst a handful of companies in India, to acquire the ISO 14001 certification for two of its three plants, namely Dewas and Shirwal. The Kirloskarwadi plant is expected to acquire this certification by early next year. The ISO 14001 is an international certification given to environmentally 'clean' plants which meet the global environment standards.

PHOTOS PRAKASH JADHAV

We will manage men, material and money more efficiently, says Sanjay Kirloskar



KBL's entire business has been restructured into seven business groups, known as strategic business units, namely, turnkey projects division (also known as the Projects and Engineered Pumps Division), industrial pumps division, agricultural and domestic pumps division, valves division, anti-corrosion products division, machine tools division and printing division. The first three of these divisions account for 92 per cent of KBL's turnover and the rest account for the remaining 8 per cent.

The turnkey projects division, which undertakes turnkey projects for the design, manufacture, installation and commissioning of large pumping systems required in power plants, irrigation schemes, water supply and sewage schemes, etc, is the largest division of KBL, which last year accounted for 35 per cent of its turnover. It is also the fastest growing division and has grown from a turnover of just Rs3 crore in 1989 to Rs130 crore last year (1998-99). Says R.K. Srivastava, vice-president (projects), "In the current year we are targeting a turnover of Rs154 crore and if the flow of orders is any indication, we should grow faster in the coming years." In fact, according to Sanjay, this division alone has the potential to grow to KBL's current size in the next 3-4 years. "But, there are no plans at the moment to spin it off as a separate company," adds Sanjay.

Some of the recent success stories of this division include the Takari Irrigation Project in the Krishna river valley in Maharashtra. At Takari, KBL has installed a complete pumping system with 32 large vertical turbine pumps, which together lift millions of litres of water everyday from the Krishna. This water is then channelled into irrigation canals which in turn irrigate 25,000 hectares of land.

The Takari project was quickly followed by the Mhaisal Lift Irrigation scheme in Maharashtra. The Mhaisal scheme is being billed as Asia's largest lift-irrigation scheme. KBL undertook the entire project on a turnkey basis.

The Mhaisal Stage-1 was commissioned in March 1999 when water from the Krishna river was pumped from Mhaisal Stage-1 to Mhaisal Stage-2. Once fully commissioned this lift irrigation scheme will pump a staggering

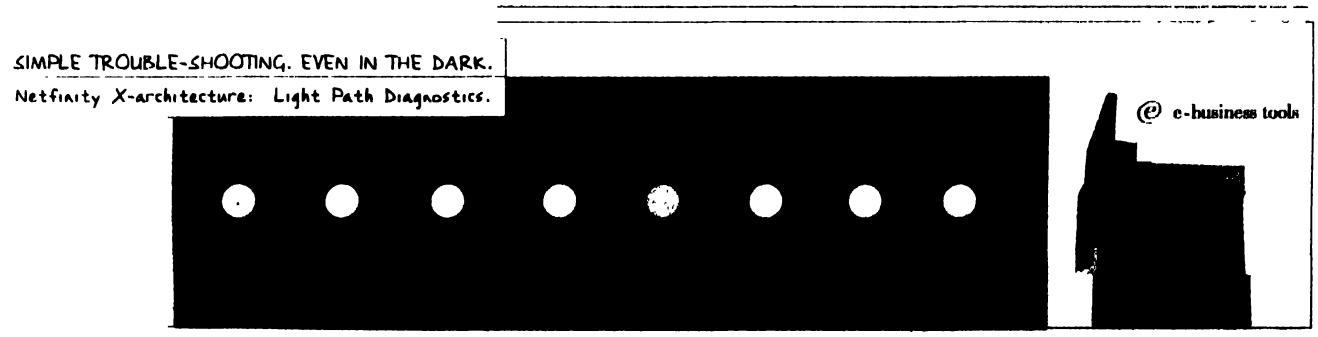
900 million litres of water per day to irrigate 46,000 hectares of land.

The Takari order was worth Rs22 crore and the Mhaisal order was worth Rs30 crore. KBL bagged these orders from the Maharashtra Krishna Valley Development Corporation (MKVDC), which has now placed another order for the Tembhu Lift Irrigation scheme, also in Maharashtra. This order worth Rs44 crore is being executed by KBL in the current year. Meanwhile, KBL has also just bagged another order worth Rs28 crore from the Andhra Pradesh Irrigation Department for its project at Chagalnadu.

KBL is the largest manufacturer of centrifugal pumps

Concretising strategy

In 1995, KBL manufactured India's first concrete volute pumps for the 500 MW BSES thermal power plant at Dahanu. After the successful execution of the BSES order, KBL bagged yet another order for concrete volute pumps from NTPC for its 1,000 MW thermal power station at Vindhyachal. This too has been successfully executed by KBL following which it bagged the third successive order for another five concrete volute pumps to be installed at NTPC's 1,000 MW super thermal power project coming up at Simhadri in Andhra Pradesh. With this, all the three concrete volute pump orders in India have been bagged by KBL, which thus has a 100 per cent market-share in such pumps. KBL is the only Indian company which has the technology to manufacture such pumps. It has won the latest of which is worth Rs56 crore. Significantly, it won the order in face of stiff competition from foreign multinationals, like GEO Alsthom, and Weir Pumps (UK).



Another prestigious order in the power sector is the one that KBL recently bagged from Enron through Bechtel. This order for cooling water pumps for the Dabhol power plant is worth Rs10 crore. KBL's other clients in the power sector include GVK through ABB, Gujarat Torrent through Siemens, Spectrum through Rolls Royce, Nuclear Power Corporation, etc.

KBL is also very strong in the water supply and sewage sector. It has set up turnkey water supply systems for several large cities including Mumbai, Delhi, Pune, Bangalore, etc. "In fact, the year before last, orders placed by every municipal corporation in India came to us," says Sanjay. Besides, the water supply system to Kuala Lampur in Malaysia has also been set up by KBL.

During the last two years KBL has entered a new line of business, namely, setting up of small hydro power projects (upto 10 MW), on a turnkey basis. Accordingly in September 1998, KBL signed an agreement with Ebara Corporation, Japan, the world's second largest manufacturer of pumps and turbines, to manufacture hydro turbines under licence from them. But even before signing the agreement KBL bagged three orders from Tamil Nadu Electricity Board (TNEB), to set up mini hydel power projects at Aliyar, Mukurthy and Perunchani. The technology required to manufacture hydro turbines is very similar to the technology for making centrifugal pumps. "We had knowhow of 80 years in pump manufacture and Ebara had given us some drawings even before signing an agreement, such was their trust in us. So we went ahead with the execution of these orders with their consent, knowing fully well that it was only a matter of time before Ebara would sign the technology transfer agreement," reveals Sanjay.

According to data compiled by KBL, there are 2,667 identified sites in 26 states across India, with a total potential of 6,700 MW for small hydro projects. "The actual potential for small hydro projects is well in excess of 10,000 MW, out of which only 400 MW has been tapped so far. Considering that it costs between Rs3 crore and Rs5 crore per MW to set up these projects, there is huge potential of Rs40,000 crore of business," says Anirudh Kathavate, vice-president (Corporate Strategic Planning Services), KBL, who heads the group that identifies new areas of business for the company.

In the total turnkey business, KBL has a dominant 60 per cent market-share, four times higher than its nearest rival. "In the last two years we have bid for approximately Rs500 crore of

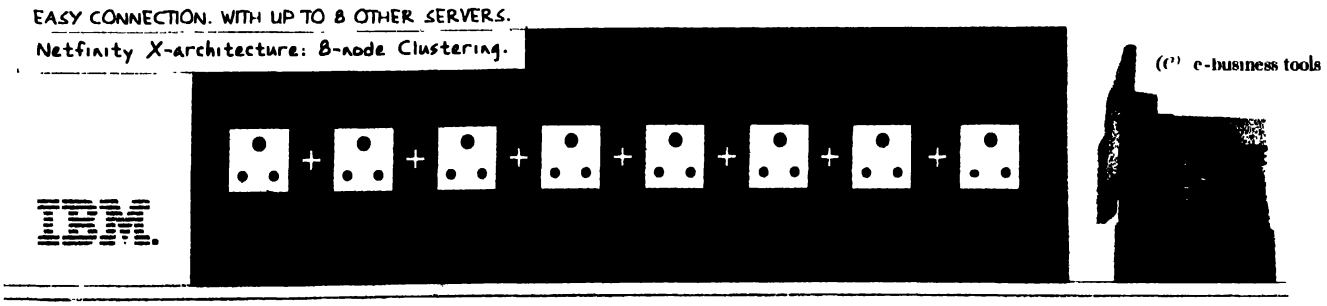
business, orders for which have still not been decided because of government delays and due to the slowdown in the economy. Now with an upturn in the economy, we are hopeful that these projects will be finalised," says Sanjay.

The industrial pumps division is the second largest after the turnkey projects division and last year accounted for 33 per cent of KBL's sales. KBL is again a market leader in industrial pumps with a 24 per cent marketshare. Last year it had a large order of Rs24 crore from Reliance through Bechtel, for the refinery at Jamnagar. In the current year, although exports of industrial pumps have been lower, it has been more than made up by increased demand in the domestic market.

V-Ps Kathavate and Srivastava: looking at greater growth

The acquisition route

The agricultural and domestic pumps division accounts for 24 per cent of KBL's sales. In this segment KBL has 9.5 per cent marketshare and is a close second to the market leader Crompton, which has a 10 per cent marketshare. These two companies are facing severe competition from around 500 small scale manufacturers who have sprung up in Rajkot and Coimbatore. "The only strategy for KBL to grow in this segment is by acquisition of smaller companies, which we are planning to do soon," reveals a senior KBL official. Domestic and agricultural pumps are relatively small in size and are manufactured at Dewas and Shirwal. Dewas alone makes over a lakh of these pumps a year, which is the largest number of pumps made at any one location in India.



On the export front, KBL is the largest exporter of pumps from India. Last year exports totalling Rs65 crore formed about 19 per cent of its turnover. Actually it was in the previous year that KBL's exports peaked at Rs76 crore and forming 24 per cent of its turnover. However, last year, the Southeast Asian meltdown severely affected KBL as 50 per cent of its exports are to Southeast Asian countries. KBL exports to 60 countries worldwide, including the US and the UK, which together account for 30 per cent of KBL's exports. There are over 100,000 KBL pumps working along the banks of the River Nile in Egypt.

"Currently we are producing 2,000 small and medium-sized pumps per month at Kirloskarwadi for exports to Sigmond Pulsometer Pumps, UK, and TACO, USA, who have been buying from us regularly for the last 10 years," says Satish Pillai, vice-president, KBL, who heads the Kirloskarwadi factory. Another 150 high-value multistage pumps are presently being shipped from Kirloskarwadi to Hong Kong and Taiwan every month. There are 4,000 KBL pumps already working in Hong Kong for supplying water to high-rise buildings. "Over the last few years we have supplied about 7,000 pumps to Lao People's Democratic Republic (PDR) and apparently this has resulted in tripling the rice production in that country," says Pillai. In fact, KBL has a very large export order — in the order of Rs150 crore — in the pipeline. If that happens, KBL's turnover and profits will spurt in the current year and the next, as the order has to be executed in 15 months.

KSB Pumps is the second largest pump manufacturer in India and KBL's largest competitor. What do they have to say about KBL? "KBL enjoys a 40-year edge over any of its competition in the Indian pump industry. With this advantage, KBL has been a force to reckon with, specially in the water market, by offering a variety of pumps, ranging from the small fractional HP monobloc to the large concrete volute pumps. Along with KSB Pumps, KBL shares the credit for offering major technical advances to the Indian customer," says B. Langebartels, MD, KSB Pumps Ltd.

KBBL is expected to clock a turnover of around Rs160 crore in the first six months of the current year (upto 30 September 1999) and its overall order book position stands at a healthy Rs260 crore (minus the Lao export order). If the Lao PDR order materialises, KBL is poised to perform extremely well in the next 18 months. But it is in the long term that this company will realy pump itself up.

Millennium moves

Long considered a takeover target, Times Bank is honing its business strategies for the millennium

SANJAY BORADE

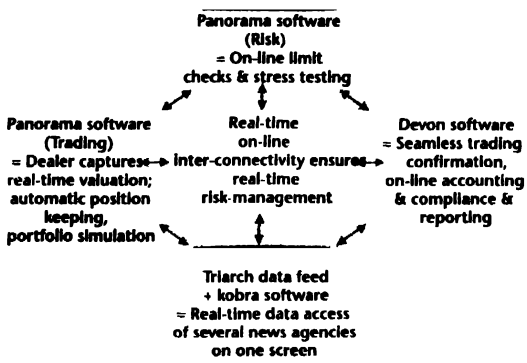
Ever since it entered the industry Times Bank has carried about an image of smallness. Uncharitable bankers took pleasure in writing off its future existence. For a year now it has been widely believed that the promoters – the Jains of Bennett, Coleman & Co – are seeking an exit route. Last year there were whispers that the Jains had made overtures to Housing Development Finance Corporation (HDFC), but the impediment was the price quoted — a whopping Rs170 crore. Now the story is that they are scouting around for a strategic alliance which will eventually crystallise into a sale.

And it's not just the gossip emanating from the Chambers (at the Taj) or the Belvedere (at the Oberoi) where M&A deals are known to be negotiated. A small bank with assets of a mere Rs3,274 crore, Times Bank may not be able to take on the competition on its own. Further, it does not have a parent from the financial sector and, for much of its initial years, seemed to lack direction, languishing at the bottom of the list of new private sector banks that sprouted in the mid-1990s.

Nani Javeri, who took charge as the bank's MD in November 1998, strongly dismisses these developments. "First of all, I cannot speak on their (the Jains') behalf. But as per RBI regulations, they have to maintain a minimum stake of 40 per cent till the completion of five years of operations, which is till October 2000. So there is no question of them selling the bank. Besides, they are very keen to continue and there is no intention to disinvest fully other than RBI stipulations," he says.

Javeri also denies any suggestion of a strategic tie-up, but admits that at some point of time this may be necessary. "We are not aggressively looking for a strategic partner now, but we may do so in future. But there is nothing on the table as of today." However, he is quick to add, "It's for the promoters and the major shareholders to decide. But they must bring in value and will have to synergise with our strategies. And, of course, it will have to be at a price."

However, he agrees that the bank did keep a low business profile and last year's performance has not been exactly heart-warming. In fact, for a bank that has been around for a good four years, it could at best be described as mediocre. Assets increased to Rs3,274 crore in 1998–99 from Rs2,430 crore a year back and income to Rs327 crore from Rs259 crore, but so did non-performing loans, which more than doubled to Rs46 crore from Rs17 crore, thereby pushing its NPA provisioning up from Rs5.33 crore to Rs5.88 crore. Even the efficiency ratios are down. Return on assets slipped to 0.95 per cent from 1.19 per cent, return on equity to 17.46 per cent from 18.22 per cent, and operating profits as a percentage of working funds to 1.15 per cent from 1.53 per cent.



"I was primarily cold when I took over as managing director of the bank in November 1998. For one, I did not track private sector banking as I was in Australia when banking sector privatisation commenced five years ago. But not having a financial parent was an advantage as it ensured no past baggage and also no inertia that would impede growth," says Javeri, a veteran banker who spent nearly 32 years with ANZ Grindlays Bank. "What eventually won me over was that this bank had the name of Bennett, Coleman & Co and a philosophy of customer value," he adds. And it's because of this philosophy, he explains, that the promoters and board opted to sell the IPO at par value last June against advice by merchant bankers to price it at a Rs5 premium. Indeed, the shareholders

Restructuring the treasury operations

Times Bank is the first Indian bank to set up a middle office in its treasury department, which will police the operations on a real-time on-line basis. It asked PricewaterhouseCoopers (PwC) to conduct a diagnostic study of the treasury operations for a comprehensive risk management of its operations in November 1997. The entire work and settlement processes of treasury operations have been restructured. Sudhir Joshi, executive vice-president (treasury), says: "Last month the bank created a middle office which monitors the front and back offices in real time." The mid-office also performs audit function (again in real time) and actually controls dealing and exposure limits, ensuring that all settlements are done within regulatory guidelines.

K.P. Suresh Prabhu, vice-president (treasury), explains: "Even in the front-office module the dealer gets on-line information of his investment portfolio and he can simulate dealings on real-time valuations." For this the bank has installed Panorama and Devon software purchased from Infinity. In addition, it has installed Reuters' Triarch and Kobra systems for real-time data feeds from all the news agencies.

The benefit of real-time risk management is that it provides a safeguard against fraud à la Nick Leeson (remember how the rogue trader interfered with the back-office functioning of Barings, bringing the venerable 200-year-old institution crashing?). Apart from effective in-house treasury management, the bank can also offer real-time risk-management treasury services to its clientele, thereby increasing its treasury revenues. Besides, an enhanced treasury would enable it to offer derivative products as and when permitted by RBI. •

benefited from this. The stock is traded at above par levels – at Rs13.50 on 29th September.

And that's not all. The bank is making an effort to change its pedestrian profile to one of aggressive tech-savvy. In its office at the Old Lady of Boribunder the picture is totally different — there's hectic activity in all departments; officials are undeterred by their bank's pygmy size and are busy chalking out strategies for the next millennium. The thrust is on technology and Internet banking. The bank made a beginning by launching a Millennium Centre (self-serviced technology kiosks — a fusion of technology, and relationship banking) in Mumbai last August and has plans for two more. Besides, it has centralised its back-office operations in Mumbai, which means that all its 36 branches will be networked to this 'factory'. This will remove duplication of work, reduce cost of operations both in terms of labour and infrastructure, and improve the speed of processing.

Says a foreign banker, "The business restructuring looks like the bank has woken up after a long hibernation and it is trying to imitate Citibank on the retail side. Their Millennium Centre approach or direct banking that the bank is talking about is similar to the Citibank's Suvidha scheme launched in Bangalore." But Rama Sridhar, vice-president and head of direct banking, counters: "We are not imitating anybody. Ours is our own model. Banking has changed across the world from the traditional brick-and-mortar concept to providing convenience and choice to the customer. Internationally banks are used as sales outlets for their own products as well as mutual funds, insurance, credit cards, bonds, and a host of other products. And this is precisely what we are doing."

Moving with the times

To its on-site ATMs the bank plans to add another ten at various airports. It also wants kiosks at railway stations, departmental stores, and any place that has "good footwork", Sridhar says. The bank did not venture into credit cards as it did not have the financial muscle, but it is launching a debit card this month so that it has a complete package of direct banking products including phone banking, utility payments, and, of course, Internet banking.

It's not that the bank moved like a rudderless ship. It commenced operations in June 1995 after consultation with Arthur Andersen with a clear strategy of balancing evenly between retail and corporate banking. S.K. Sharma, executive vice-president (corporate banking), says: "Retail for the deposits, as it is cost-effective, and corporate banking on the assets side, as the bank had an established brand equity (Times) to attract a good corporate clientele." It has moved exactly on these lines ever since. "However, after three years, we evaluated our strategies and came out with a millennium plan last year," he adds.

As part of its Strategic Plan 2002 the bank has restructured its business matrix and identified three profit centres — corporate, treasury operations, and retail banking, which includes direct banking. Javeri is confident that he can give his competitors a run for their money by the use of superior technology (*see box*). Over Rs20 crore has already been spent this fiscal on technology.

Javeri insists he's not in the numbers game. "The balance sheet will grow significantly, but my primary focus is to make sure that shareholder value isn't eroded, which will be achieved by better productivity and efficiency ratios." Moreover, the bank is positioning itself as a one-stop financial services shop both for corporations and the retail customer. Any strategic alliance in the future will only improve its valuation. Times Bank is trotting in tune with the changing times.

Uncertain factors

Various factors have affected the growth of the factoring business. SBI Factors has been badly hit

The performance of SBI Factors and Commercial Services, a subsidiary of the State Bank of India, is not something to write home about. (SBI holds a 70 per cent stake in it — 54 per cent directly and 16 per cent through its associate banks). To begin with, the company reported a dip in its net to Rs3.26 crore in 1998-99 from Rs3.62 crore a year back. This is mainly because it had to make provisions for non-performing assets worth Rs45 lakh as against Rs7 lakh in 1997-98 as the NPAs in its books zoomed to Rs5.32 crore from Rs70 lakh a year back. "The NPAs have increased mainly because several industries were caught in the recession," is the defense of S. Banga, the MD of SBI Factors.

However, the company cannot be fully blamed for its abysmal performance. In fact, factoring as an avenue of financing working capital just hasn't taken off in India. The Reserve Bank constituted a committee in 1989 to examine the factoring business headed by Kalyan Sundaram, former SBI MD. The committee suggested that four banks — Punjab National Bank, the Allahabad Bank, the State Bank of India and the Canara Bank -- should set up factoring companies. PNB was to cater to the north, Allahabad Bank the east, Canara the south and the SBI the western region. The RBI was keen to promote factoring business, as this would open another channel of financing working capital needs of the commercial sector. However, only SBI and Canara Bank showed interest and formed factoring companies while the others, it seems, did not see any business potential.

SBI Factors was set up in 1991 with a paid up capital of Rs25 crore. However, even after eight years into the business and that too with the backing of India's largest bank, the net worth of SBI Factors is a mere Rs33 crore. Moreover, the company boasts a capital adequacy ratio of a whopping 37 per cent as against the RBI stipulated minimum CAR of 12 per cent. This clearly indicates that much of its capital is not being effectively deployed.

PALASHRANJAN BHAUMICK

Banga says factoring is not a sunset industry

Says SBI Factors' Banga, "The committee saw a business potential of Rs4,000 crore in factoring business in 1989, which is equivalent to at least Rs10,000 crore in today's terms. But the ground reality is quite different. The total factoring business in India comprises mere Rs1,400 crore with 3-4 players." The prominent ones being SBI Factors (with a turnover of Rs472 crore in 1998-99) and Can Bank Factors accounting for 45 per cent marketshare each and the balance 10 per cent being catered to by HSBC, SIDBI and Foremost Factors.

What is factoring? A factor buys the receivables with or without recourse to the seller, while a bank finances the same by discounting it. Factoring is cheaper than discounting as for one, the interest rates are lower. Secondly, the financing is for longer periods, from 90 to 150 days while in discounting a penalty is levied if the period extends 90 days.

According to Banga, this is a business whose potential has not been tapped. Factoring did not grow in its formative years because it was hamstrung by certain RBI stipulations. Between 1991 and 1996 factors were not allowed to borrow more than their net worth. In 1996, this was amended and they were permitted to borrow three times their net worth; this was further relaxed in 1998 when the cap was removed.

Adds D.P. Roy, DMD of SBI, who is also a director of SBI Factors: "Factoring has not found widespread recognition because of several hindering factors like the absence of legal framework spelling out the rights of parties to a factoring arrangement. Non-availability of credit insurance, which is necessary for without-recourse-factoring also impeded the growth of this business. But the real hurdle for growth is the reluctance on the part of banks to give letters of disclaimers for the factored debts." This is despite RBI's directives issued way back in 1995 to the contrary. (A factor insists on this disclaimer from a bank for mainly avoiding dual financing by the borrower. The letter is an assurance to the factor that the bank does not have any lien and therefore, in case of insolvency the factor has recourse on assets and not the bank).

Other roadblocks exist too. For instance, the NBFC status accorded to SBI Factors bars it from having recourse to debt-recovery-tribunals. Moreover, because of the NBFC status it cannot participate in the inter-bank call money market operations and cannot as a consequence capitalise its treasury operations, Banga informs. But within these limitations, SBI Factors is looking at doubling its turnover from Rs472 crore to over Rs900 crore in the current year.

"We are seeking RBI permission to introduce new products like reverse factoring (purchase-discounted bills), factoring bills drawn under letters of credit (LCs) and without recourse factoring this year," he informs. SBI Factors is negotiating with National Insurance to get insurance cover for without-recourse-factoring which will also help boost its turnover. Such moves should help in removing some of the uncertain factors in factoring.

CHETAN DALAL

The author is a certified fraud examiner (US) and certified internal auditor (US) His e-mail address is chetandalal@hotmail.com

The 'mismatch of facts' theory

In any investigation of fraud, determine whether all facts of the matter tie in with what is observed and explained

Many organisations have multiple sites, locations, and offices that are decentralised and enjoy a fair degree of autonomy. To monitor them is certainly not an easy task. Sometimes the physical distances between remote offices and the head office restrict regular visits from the senior managers, thereby giving local managers considerable freedom, which can be abused.

The following is one such instance. During the process of risk evaluation in a large organisation with multiple project sites, a fraud examiner noticed that there was considerable expenditure on hiring of cranes at a particular site. The expenditure had exceeded the annual budget by almost 120 per cent. In addition to three of the company's own cranes, there were five cranes hired from external parties, aggregating eight cranes in use for almost two years.

The management felt it was probably a case of inflated expenditure for kickbacks which were difficult to prove. Since the project had yielded an overall profit, such expenses were not given serious attention. However, they permitted the fraud examiner to investigate because the expenditure incurred was well over Rs20 lakh.

Accordingly, he examined and tabulated the crane logsheets for idle time review. That itself threw up the first notable anomaly. On an average, the cranes were idle for almost 62 per cent of the time! In fact, on one occasion, six cranes were idle for three weeks at a stretch. The site manager's explanation was that it was not possible to predict the requirement of cranes in advance since their requirement depended on several factors such as arrival of materials, availability of technicians, weather conditions, power constraints, etc, and, since the project had to be completed within the stipulated time, additional cranes had to be kept ready so as to avoid delay.

The fraud examiner was not fully satisfied. Since rates paid for crane hire were not very high, the probability of the site manager receiving substantial kickbacks was low. Further, the kind of cranes hired changed from month to month, ranging from 10 tonnes to even 100 tonnes, which did not fit in well with the site manager's explanation about unpredictability.

He applied the 'mismatch of facts' theory to test the entire crane activity. According to this theory, all abnormal findings are viewed macroscopically for corroboration with other facts, events, or findings. The objective is to determine whether all the other facts tie in with what is observed and explained. In this case, the theory was applied to test the cranes' extent of utilisation and idle time. He identified two tests: a) match crane drivers' overtime payments with time entries in crane logsheets, and b) match fuel consumption for the periods during which the cranes were supposed to be idle.

Sure enough, both tests revealed the results he had suspected. There were overtime payments as well as regular fuel bills even for the days and periods during which logsheets showed that the respective cranes were idle! The fraud examiner then decided to visit the site. He was astonished to see that all the eight cranes were in use, even though the project was nearing completion. Considering that even when the project activity was at its peak, several cranes were reported to be idle, it was unthinkable that all cranes were required to be put into use at the fag end of the project.

He interviewed some of the crane drivers and there he hit upon the truth: very often, the cranes were not used for the company's own business but were rented out to external parties in the vicinity for cash consideration. Cash received was obviously not disclosed to the head office but pocketed by a few top managers at the site. On further investigation it was found that even dumpers, diesel, and other items on which consumption could not be easily monitored were rented out.

The total cash revenue earned by renting out the cranes was about Rs60 lakh in the two years. It was shockingly revealed that the site managers had even printed and used a separate series of cash receipts to be issued to parties who insisted on cash receipts for payments made by them.

The theory of mismatch of facts is extremely useful and effective in determining existence of fraud in situations where physical monitoring is difficult or where symptoms of fraud are evident. If there are observations which do not ring true, finding out corroborative evidence is essential. All clues must fit for any evaluation or assessment to be complete. •

The right stuff

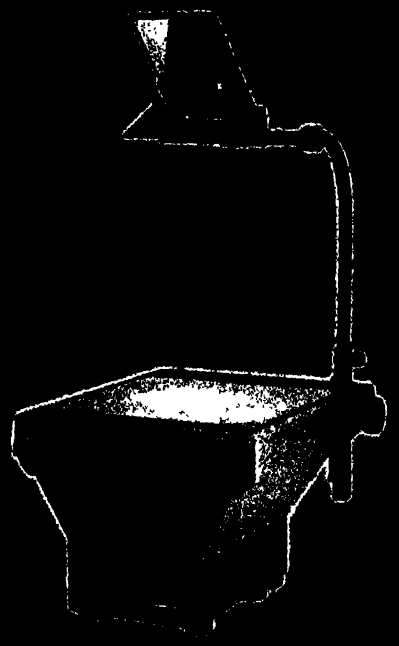
Attitude is the key determinant of a successful business leader

Stephen R. Covey, the celebrated author of *The Seven Habits of Highly Effective People*, rated as one of the largest selling business books ever, has a simple solution for leadership during chaotic times — "base it first on principles". In case the leader has been groomed through Covey's four levels of personal trustworthiness, interpersonal trust, managerial empowerment, and finally organisational alignment, he can weather any storm, personal or business. But in the real world, achieving these very principles may prove a difficult task.

Maybe, or maybe not. Shiv Khera, one of India's well-known motivation and management gurus, does not think so. He feels it is not very hard for any leader to set his personal goals based on clear principles of character, integrity, good values, and a positive attitude. These Total Quality People (TQP) are not likely to sway when the storm hits. "I have asked CEOs and decision-makers all over the world what one thing they would like to see change in their organisation to make them more productive, raise bottomlines, and promote better teamwork. The answer was attitude," says Khera. A study done at Harvard University showed that 85 per cent of the time a person gets a job or a promotion because of attitude and 15 per cent on account of educational qualifications and skill sets.

There is an increasing belief and faith in 'intangibles' rather than tangible items such as bottomline, market share, product quality, and so on when it comes to understanding the way organisations function in the current competitive scenario. Leadership experts subscribe to the view that, to be effective, leaders should have a keen understanding of not merely the functional side of the organisation but also the dynamics of its working and its relationships with external variables. Such sensitivity would come from individual attitude, its effective grooming, and the degree of decision-making freedom the organisation may allow to the individual head.

This has become more valuable to Indian corporate leaders than ever before as they cope with massive upheavals in ownership, market positioning, and future focus strategies of organisations. In the automotive sector, for instance, the arrival of international heavyweights, initially in joint ventures and later as wholly-owned companies, e.g. General Motors' Opel division, Daewoo, and Fiat, did not radically alter the leadership of the previous joint venture arrangement. Rather, they got more support and freedom to carry on with their jobs.



The international geographies concept of organisational structure which Indian software giant NIIT has successfully implemented aims at granting full autonomy and functional accountability to the geography head. The RPG group's restructuring programme involving all its 18 businesses, B.K. Modi's massive makeover bringing all his organisations under a single umbrella outfit ModiCorp, and Mahindra & Mahindra's reorganisation into six functional strategic business units with individual heads are all pointers to the way Indian organisations are coping with change, putting the professional leadership abilities of individual division heads above the top-down leadership model which was the bane of Indian family and professional businesses so far.

The Indian organisation's adherence to intangibles such as Covey's "value principles" or Khera's "personal attitudes" are merely indicators that organisations increasingly are getting more people-centric, something with which the very system of organisations itself started. It is an interesting contradiction that, while family businesses the world over (India being no exception), are breaking up and becoming professional, the dice are now loaded in favour of leadership by individuals. "It's not hard to resolve this position. While family businesses were principally based on leadership of the family patriarch or the clan, once the decay sets in it becomes apparent that those in command lack the attitudes to fend of the crisis," says Prof. R. Soni, who specialises in family businesses. The writing is on the wall. Irrespective of whether the person owns a business or is hoisted to the helm to manage its affairs, it would largely depend upon his individual ability to cope with change. It is not hard to see why, despite the ignominious fall in corporate reckoning, the once powerful Birla clan is clawing its way back based on the attitudes of the young Kumar Mangalam Birla, Soni points out.

It also goes to prove that inheritance does not automatically confer the ability to lead; rather, the attitude of the individual should be honed in such a way as to permit him to continue running his family business but also expand upon what was bequeathed. Sensing this as an interesting business opportunity, reputed business schools in India have in recent times started separate departments on family business, teaching both clan members and those aspiring to join family-centric businesses the dynamics of how these work — a right attitude to business.

PHOTOPHONE D & T
- D - single lamp; T- double lamp
- Daylight halogen lamps
- Improved cooling
- Voltage surge protection
- Sturdy build

GALAXY 2000
- High lumen output
- Edge to edge sharp image
- LCD panel compatibility
- Sleek and aesthetic
- Light weight, easily portable

35mm Slide & LCD Projectors

35AF
- Bright, clear images
- Auto focus
- Rugged and sturdy
- Adaptable to linear and circular trays

PHIL MULTIMEDIA LCD PROJECTOR
- Brightest portable multimedia LCD Projector
- 600 ANSI lumens
- 16 7 million colours for photorealistic images
- Zoom and focus control
- Connects two computers and two video sources simultaneously

Digital Printers, Scanners & Copiers

POLAROID SPRINTSCAN 35 FILM SCANNER
- Scans 35mm slides and negatives
- High resolution of 2700 dpi
- Real time colour processing and sharpening
- Compact, light weight and portable

POLAROID HR 6000 SLIDE PRINTER
- Prints high resolution 35mm slides
- Edge to edge sharpness
- Compatible to PC and Mac

MINOLTA CS PRO SERIES COPIERS
- High copy quality
- High productivity
- Easy operation
- High reliability
- Simple Maintenance
- Environment friendly

POLAROID PROPALETTE 8000 FILM PRINTER
- Highest quality 35mm slides and negatives
- Auto brightness and colour balance control
- Compatibility for PC, Mac and UNIX
- Ideal for photo restoration

Kick the habit

Remember, it's difficult to lead from the front if you're always looking over someone's shoulder

Organisations, like people, can become creatures of habit. Like people, institutions too can be lulled into somnolence by monotony and dull routine. But produce a challenge and the same lot of reluctant workers metamorphoses into a livewire team. It is this dual Jekyll and Hyde aspect in most companies that many managers find quite puzzling. How can a team that performs superbly on some days act like a pack of tired mules on other occasions? Instead of inquiring into the circumstances that bring out the best and the worst in employees, only the negative side is often emphasised.

The tempting thing to do under such conditions is to increase surveillance, supervision, and sanctions. The real enemy, however, is not inherent lethargy, the climate, or a perverse tendency to shirk work. Morale saps when confronted with routine, day after day after day. As routine transforms work into drudgery, the calibre of the workforce begins to decline. Goal-setting can help in these circumstances. But this too can become quite predictable. It is quite likely that the same goals will be repeated in terms of quality and quantum of services. Familiarity builds indifference which, if left unattended, makes the company less competitive in the marketplace. This is because employees begin to fear the new and refuse to kick back those settled ways of thinking. Consequently there is very little adrenalin in their performance charts. Combating this means more surveillance, more supervision, and more in-built distrust.

Putting life into work, upgrading quality of output, constantly motivating oneself to acquire better skills, cannot be done through methods that are purely external and coercive in character. The rules and procedures that bring such a desirable state into existence should require minimal supervisory effort. It has been found that the same team puts in qualitatively and quantitatively different kinds of work if properly stoked and enthused. When a job is given a certain charisma and surrounded by a lot of commitment from the boss downwards, the output is always much better than when it is otherwise. It is true that most jobs are humdrum and not deserving of special merit. It is here that senior executives can show their special skills. Only they can transform many routine assignments into 'high-priority jobs'.

The way to go about doing this is to periodically invest something innovative in what may otherwise be regarded as well-trammelled and well-trod regions. There should be a constant effort on the part of senior executives to create from among the routine crop of work as many high-profile jobs as possible. Sometimes delegating authority in an area hitherto only controlled by the superior can pose a challenge and positively affect the workforce. By giving every new assignment, no matter how routine it may appear, a certain cache, or distinguishing feature, transforms the perception of the job.

There is nothing like executive interest to galvanise the workforce across the board. When the need to rise to a challenge is communicated down the line it immediately brings out the best in the team. Looked at closely, it's not as if every routine job is really routine in character. There is always something specific and new in what has been condemned as uninteresting and without surprises. Perhaps the clients and consumers too do not see these latent facets either.

To be able to see something new in the old, to create adventure out of routine, can then make a great difference. Workers give more than what their formal contractual obligations require them to do, and consumers get more than they demanded. This excess is bound to be reflected in the economic well-being of the organisation. It is by periodically upping the ante in this fashion that certain players continue to stay on as leaders in the field. They preside over not just a compliant workforce, but one that is enthusiastic, motivated, and constantly keen to upgrade its skills. Most important of all, the cutback in surveillance and supervision is repaid several times over by a committed band of employees who are willing to pressure themselves for they love a challenge when they see one.

It is now up to true-blue executives to create challenges from routine exercises. This is how they pressure themselves and motivate those below them. It is difficult to lead from the front if one is always looking over someone's shoulder. So get cracking and kick the habit! ◆

Reading below the lines

Companies are waking up to the fact that advertising works better coupled with below-the-line activities

PHOTOS VIVAS

Maitra and Shankar feel the new direct marketing activities are here to stay

The last time you got a direct mailer did you notice whether it was a laser print or a photocopy? Did you check whether it was a four-colour letter head or a simple black-and-white one? And did you see whether it was addressed to you by name?

If you didn't notice these things, then you are in a minority because not only are an increasing number of people noticing such small details, they are also responding to them positively. For instance, Direm Marketing Services Private Limited, a company specialising in direct marketing, noticed that 35 per cent of frequent British Airways fliers responded to the airline's mailers when they were personally addressed to them as against a mere 5 per cent who responded to simple black-and-white letters. "Now as a routine 90 per cent of all direct mailers are personalised. We brought about this change because we want to establish a long-term relationship between our clients and their customers," says Namit, one of the directors of Direm Marketing Services.

Direct mailers, however, are not the only below-the-line activity to have come under scrutiny. Companies are also shifting to visibly appealing letter heads and reader-friendly mailers, besides putting their data banks in place so that, if the situation demands, they can make house-to-house calls as well. While these changes are happening at a more visible level, there other not-so-visible changes taking place. Attention is being paid to details such as the right point of purchase and how a product should be displayed to get maximum mileage. Participation in exhibitions, trade fairs, road shows, retail promotions and schemes is also increasingly becoming a part of the new thought.

Helping companies along this path are a host of agencies specialising in below-the-line activities. Says Shiv Shankar, director (creative and strategy), Event Engineers Private Ltd, (EEL) a company set up nine years ago by Shankar and his wife Gayatri to provide expertise in all below-the-line activities under one roof, "The days of getting a Daler Mehndi to sing for your distributors when you launch a new product are over. Companies are beginning to realise that the hype and hoopla attached to an event at the time of launch does not necessarily translate into sales. People are now spending a great deal of time working out more detailed below-the-line activities."

Take the case of Tropicana orange juice. The company hired Direm Marketing Services for a test-launch in Bangalore last year without any support from mainline advertising. Says Namit, "The company didn't have a large budget. We checked out various possibilities like what would happen if they did not have any mass media to support their efforts. We worked out the various levels of discounts to encourage people to buy Tropicana and help other orange juice drinkers to switch. This exercise also helped us start the process of establishing long-term relationships with consumers."

According to Shankar, companies need activities that are tailor-made to suit their requirements. So, if EEL recommended a complete change in the staid image of Siemens, including going in for reader-friendly stationery and mailers, when it faced competition from more consumer-friendly players like Nokia, it advised LG Electronics to participate in trade fairs so as to be able to showcase its entire range of products in India. "We have to constantly work with a client. We can't have a one-time association because below-the-line activities have to be sustained over a period of time," says Gayatri Maitra, director, EEL.

This is a philosophy that RAMMS India Private Ltd (a sister concern of Maa Bozell Communications) also believes in. The company started out as a design house six years ago, but today provides a spectrum of services to help create a brand equity at the point of sale. The company, which had a turnover of Rs14 crore last year and is looking at doubling that figure this year, helps clients look for retail locations, works out agreements between the client and franchisees and also has a store-operating manual and staff-training exercise. Says regional manager Gunthey Prashant, "Companies like Planet Kids, with more than 15 outlets, need a store-operating manual. The operating manual and

staff-training programme help create a retail identity so that the consumer gets the same level of efficiency at all the outlets."

However, while agencies like RAMMS and EEL specialise in providing a range of activities under one roof, there are a number of other companies that are also benefiting from the increase in below-the-line activities. For instance, Pavilions and Interiors India Private Ltd, which specialises in setting up stalls for exhibitions and trade fairs, has seen a substantial growth in business in volume terms in the last two years. Says N. Biju, GM-business development, "The number of exhibitions and trade fairs being held has gone up manifold. Today there are exhibitions on just about anything — handlooms, textiles, hospitality, hospital and medical equipment and even on photography."

The days of mass advertising are over, says Prashant

Though companies cite various reasons for an increase in below-the-line activities, the most recent reason has to do with the opening up of the information technology sector. "This is the sector that triggered the whole thing. Companies in the IT sector needed direct feedback from customers so they had to concentrate more on establishing a one-to-one equation with their clients," says Shankar. According to Shankar, it was the opening up of this sector which prompted EEL to set up an office in Bangalore after Delhi and Mumbai so that they could tap IT clients in the south.

The most significant below-the-line work in this field has perhaps been done by Microsoft, which has a retainer arrangement with RAMMS for its personal application software and hardware. Under the arrangement, RAMMS, which has offices in Delhi, Mumbai, Bangalore and Calcutta and 13 associate offices all

First time in India. Gift watches with Photo and Logo imprints.

Maxima Quartz is a quality product from P A Time Industries, an ISO 9002 Company. Now, Maxima gift watches come with a unique photo and logo imprint facility. Design the look of the watch as you want, and we'll make it that way. Choose from a fabulous range of over 250 exciting models, in Fibre, Metallic and Goldline options. What's more, all this comes for an unbelievably low price. Yes, there's no minimum quantity bar for placing orders. Order any number you want and we assure you a prompt delivery. So, go ahead and have the time of your like.

Place your company's logo anywhere on the watch dial.

Write anything, from slogans to mission statements. Or even a personal message.

Put the picture of your company's who's who. Or just anybody you want.

everest/99/PA/174

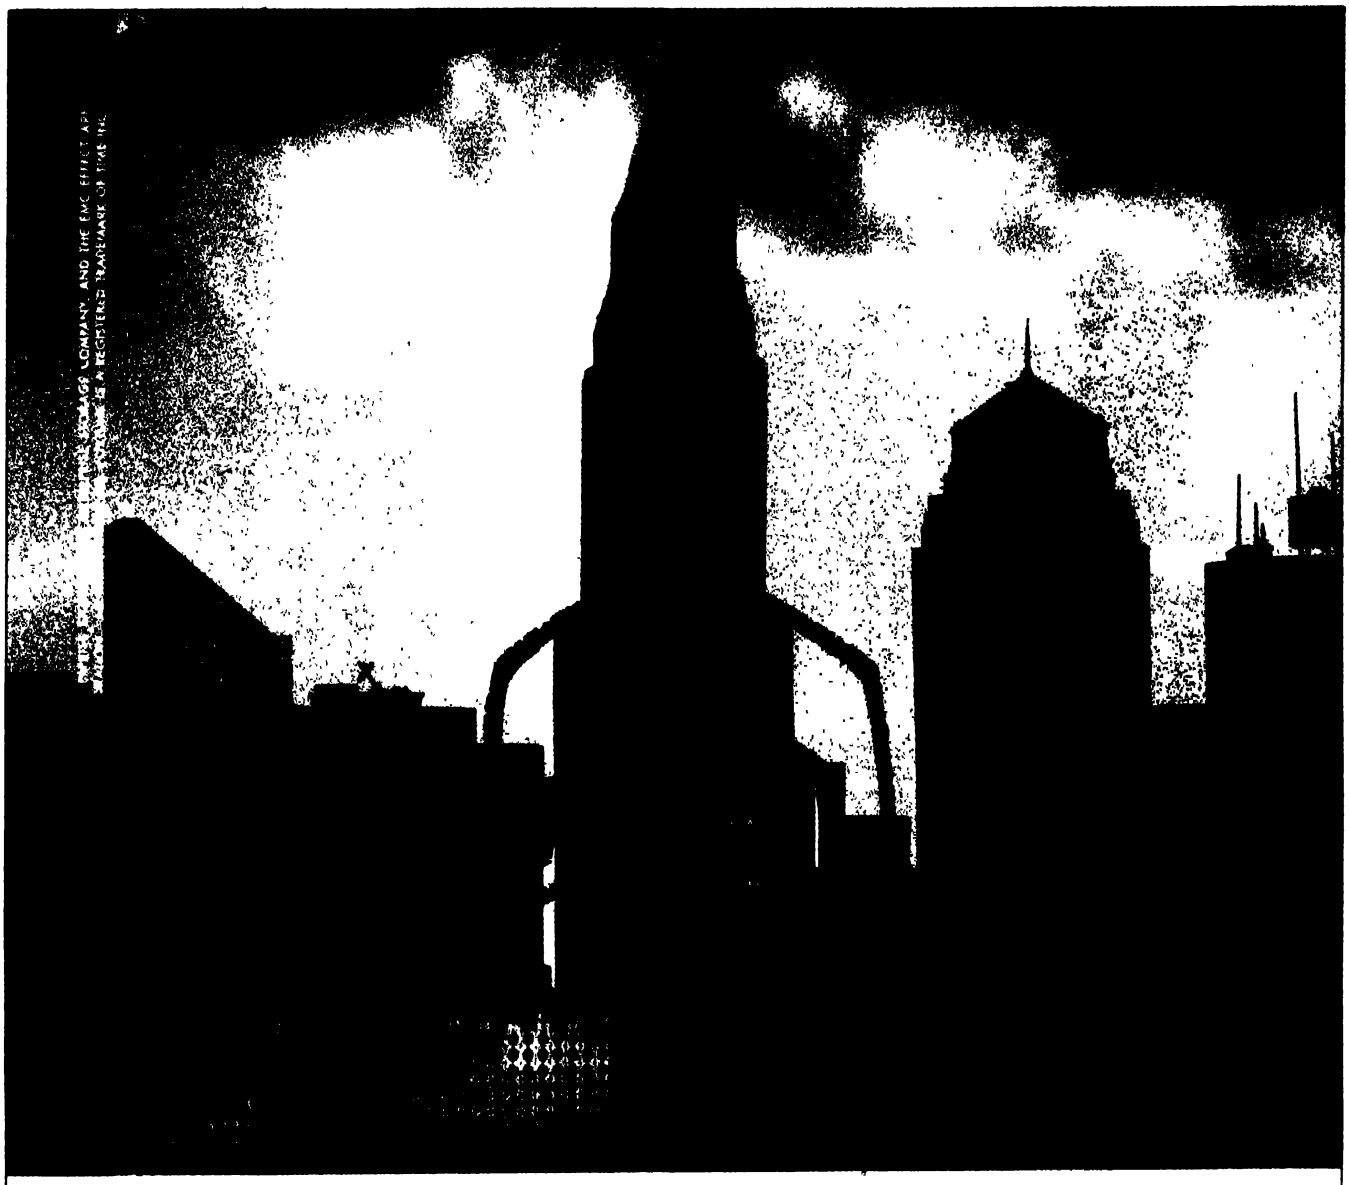
over the country, has managed the setting up of Microsoft's retail network including appointing retailers. "We have also taken care of the stock and inventory patterns and worked out the visual identity at the point of sale," says Prashant. For the launch of Microsoft's Office 2000 (for which 13 agencies got together to create the right hype and distribution), RAMMS worked out a separate identity which did not diffuse the earlier identity of Microsoft and also organised a number of contests at the point of sale.

According to industry watchers, another reason for the increase in below-the-line activities has to do with liberalisation and the consequent changes in market dynamics. Says Shankar, whose company EEL had a turnover of Rs 14 crore last year, "If you look at the situation from a very elementary level, earlier there was only one kind of washing machine and two kinds of detergents. Today, the market is much more competitive with a wide variety to choose from. In such a scenario, customer satisfaction is of more significance than ever before."

It is this trend that prompts Maitra to maintain that customer relation management is going to become very important in the near future. "A consumer will eventually settle for someone who provides the best after-sales service, so you should watch out for things like free service camps and other marketing exercises which provide a company that extra edge," she says. Couple this with a more aggressive marketing approach by companies and the situation could not have been better for these agencies. Says Sarika Mehta, branch manager of entertainment agency Wizcraft, "Did you ever imagine that automobile companies would let you drive their new cars without any frills for two days so that they can reach out to you directly? But it is happening now because everybody wants to be the first one to establish a direct contact with the customer."

There are others who feel that there has been an increase in below-the-line activities because advertising is no longer meeting the needs of a changing market. Says Prashant, "No matter how much a company spends on mainline advertising, it needs a trigger of recall at the point of sale. If that doesn't happen, all the money spent on mainline advertising goes waste." Adds Namit, "The days of mass advertising are over. This is the medium of the future."

Infotech companies have triggered the rush for below-the-line activities



Not everybody subscribes to this view though. According to Achal Paul, general manager of Lexicon Events and Promotions Ltd, the right approach has to include everything — mainstream advertising, a bit of public relations and below-the-line activities. "You will need all of them to create the right balance," he says. According to Paul, this approach was successfully tried out by Lexicon when it undertook the launch of Candico sweets in India last year.

Lexicon came up with the idea of selecting 12 children from six cities as consultants for the company to launch its new products. These consultants were selected through a main media advertising campaign which not only asked the children to participate, but also asked them to inform the company if the products were not available in their area. "The company got many benefits from this combined approach. They got 350,000 letters, thus involving a large number of children in their programme. Moreover, they also managed to get their distribution in place thanks to the response they got for their ads," says Paul.

Adds Shankar, "I don't think mainline advertising will be totally out, but budgets will have to be rewritten to include below-the-line activities as well." That, however, is still a long way off. There are no studies to determine how much money is actually being spent on below-the-line activities right now and how much this figure is likely to go up.

According to industry estimates, 10 per cent of the total Rs3,000 crore advertising money is being allocated for below-the-line activities. This figure is a lot lower than the 50-55 per cent spending on below-the-line activities in more established markets like America. "So far, there has been no pot of gold at the end of the rainbow, but we feel that things are going to change from now on," says Namit whose 10-year-old company had a turnover of Rs7crore last year (with projections of a turnover of Rs-10 crore this year). But it is Shankar who sums it up best when he says, "It is the best practice worldwide. The Indian market too will have to adapt to it." And surely the best practice in the world is well worth waiting for.

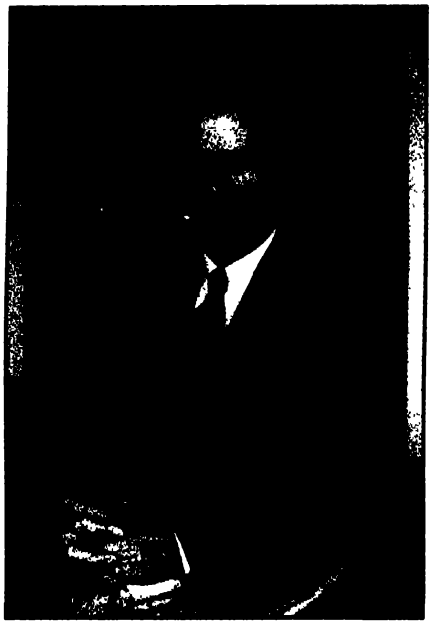
Cautious colours



New entrant Wella is counting on service to differentiate itself in the Indian hair colour market

Last fortnight, DM2.6-billion (Rs7,020-crore) German hair cosmetics major Wella AG launched its brands in the Indian market at Trend Vision 2000, a show specially organised for beauticians and hair cosmetics professionals in Mumbai. The first product to be introduced from the Wella stable is the company's flagship brand Koleston Perfect, the world's first cream-based hair colour preparation.

Wella isn't new to the Indian market, though; it has been available through the grey channel for years. However, says regional director Asia/Pacific Andreas Riecke, "We have entered the market with a long-term view. Our target is to become the leader here." Godrej hair dye is the market leader with a 40 per cent market share and is unfazed by Wella's splash. "We hope its entry will improve awareness of hair dyes and colours and grow the market," says Hoshedar Press, vice-president (consumer products) at Godrej Soaps Ltd, which has been in the hair dye business for over a decade. While liquid and powder hair dyes are its older products, it recently launched the Godrej Kali Mehndi and Coloursoft brands.

Wella AG has entered the Indian market through a 74:26 joint venture with Raghu Mody group company JL Morrison (JLM) called European Haircosmetics Ltd, which will market and distribute the Wella product range, which will initially be imported. According to Riecke, Wella was eyeing the Indian market even before liberalisation. JLM, manufacturer of the Nivea brand of toiletries, itself has been undergoing changes since 1997. The company refocused itself and defined its core competency world class distribution, making it an ideal vehicle for new global brands wanting to enter India.

Wella's strength is in the hair colour business. For fiscal 1998 hair

UMESH GOSWAMI

Wella's target is to become the leader in India, says Riecke

cosmetics under the Wella brand name contributed 70 per cent to the company's turnover. About 30 per cent of this came from sales of professional haircare. Besides hair colours, perms, and other hair treatment products, Wella also sells technical products such as Welonda salon equipment and furnishings and Tondeo cutting tools. The company's fragrance business contributes 20 per cent to turnover.

What Wella is offering on the Indian market is a good brand, a selection of different shades and application techniques. But it is treading cautiously, introducing 17 (of its 170) shades to begin with. All of Wella's products have been tested specifically for the Indian market and, depending on the response, other shades will follow. "As India is a virgin market we have to learn and see what we can offer," says Riecke.

Wella has a two-pronged strategy. Being number two in the global professional hairdressing market, it is targeting the professional hairdressing market in India with Koleston Perfect. There are other products as well for the professional market — Welloxon Perfect activator, Wellazid conditioner, salon shampoo, and Blondor dust-free decolourant. On the retail front it is launching its do-it-yourself colouring kit Wellaton Kit, India being the third country globally where this brand will have been launched so far. The days ahead will see the introduction of many more products from the international range • comprising colours, perms, and styling products, as well as Welonda and Tondeo salon equipment. The products will all be sold at international prices, at par with L'Oréal.

In the Indian hair colour market, though players such as Bigen and Godrej hair dye have been around for more than a decade, their purpose has been essentially to conceal greying. Besides, as Indians have either black or dark brown hair, it is mainly these colours that have found a larger penetration level as compared to colours such as blondes and reds. Only after L'Oréal entered the hair care market in 1992 that hair colouring became a fashion statement. However penetration in this segment is still negligible.

In this small market, Riecke's trump card is service. "There's ample scope to provide added-value services as customers today get only basic service at salons," says Riecke. The idea here is to provide hairdressers with the entire gamut of services from trained personnel to bespoke equipment to managing salons. There's more — Wella will also develop technical teams that can advise salons in Mumbai, with Delhi, Hyderabad, and Calcutta to follow.

The plan is to start manufacturing locally at the JLM facility in Mumbai by next year. So far investments have been made in advertising, promotions, education, and infrastructure. "We will make a major investment when we get a better idea of the quantity of hair colour that is used in the market. This way we will add value to our range of products," says Riecke. And "major investment" means $100 million, which will be forked out only if Wella is sure it will succeed in filling the Indian market with its colours.

IBM

"Wish I could focus on my business rather than system failures..."

Admit it. You've often wished for a service coverage that caters more than the usual parts, labour and service warranties. A service coverage that would shift your priorities to business from the day to day hassles of system maintenance. Focus. The IBM ServicePac.

IBM ServicePac - Service options that ensure what you get is what you wish!

The IBM ServicePac is a tailored, value-added, pre-packaged service that comes complete with a well defined set of service offerings. That are easy to use, affordable and available in a number of configurations. Pick an IBM ServicePac that exactly fulfills your requirements and save.

What you stand to gain with the IBM ServicePac

- Extended scope of service activities during warranty
- Maximisation of Returns On Investment in technology.
- Service offerings with specified service levels and response time
- Access to world class IBM service through 123 service outlets.
- No surprises or hidden costs.

To break the limitations of the usual Service Warranty and turn your wishes to reality, fill in the response coupon and ask for more information. Or call for a FREE Assessment. Once an IBM ServicePac is created it will fulfill your needs.

Surging ahead into the new millennium

Soldiers of fortune

The growing need for security has spawned a new breed of sentinel — the private security guard

Anushasanpuram in Bihar certainly lives up to its name. For discipline is a way of life here. Ex-majors, colonels and lieutenants stride the camp turning supple striplings into brawny boys. This rigid rigour has a very firm purpose. It is meant to turn the docile into competent combatants.

It is the Naxals who have necessitated this parallel policing. Hundreds of years ago Buddha attained *bodha* (realisation) in Bihar. Today, lawlessness in the only law of the land. The palliative for persistent pain, is, therefore, private police.

Cut to Delhi. No Naxals lurk in the bushes. Nor is there a steady staccato of AK-47s. The criminal here is no roughie. For, clad in a white-collar shirt, he does not need to whip out a gun. When he decides to deceive, human ears do not feel the reverberations. The steadily emptying till is the only indicator of fraud.

"Criminals use sophisticated methods now. So security personnel too have to keep pace," points out Ravindra Kishore Sinha. Sinha is the CMD of the largest national private security agency, Security & Intelligence Services (SIS). So, out goes the Nepali 'gurkha', thought as adequate security in the past. Step in please the computer literate guard.

Liberalisation has added a new word to the lexicon of lawbreakers — the cybercrook. Swindling using the computer as a via medium is on the rise. From 2 per cent last year it has surged to nearly 13 per cent of the total crimes recorded this year. Unethical practices and white-collar crimes form over 50 per cent of the loss for any corporate house today. SIS's Sinha has a solution to this problem. Proper training in a security institute plus constant refresher courses.

Hence, the need for an Anushasanpuram. This SIS-run camp offers comprehensive training using sophisticated equipment and electronic gadgetry. The sprawling campus contains over a thousand students with ease. Also a state-of-the-art affair is the training centre of the UK-based Group 4 Securities in Delhi. In the capital, the number of special security agencies has shot up in the last couple of years. That Delhi is turning into a toughie turf is clear as these agencies are burgeoning at the rate of 100 per cent every year. The entry of foreign agencies has proved to be the cannon for this boom. The hundred registered agencies (including Indian ones) provide employment to over 15,000 people.

In terms of visibility, the parallel police vies with the Z-security of politicians. Private security guards of the various agencies can be sighted at virtually every nook and corner of the

Security personnel have to keep pace with the growing sophistication of criminals now, says SIS's Sinha

city. Does this unusual rise in special security indicate that Delhi has become the crime capital?

For the moment, the major players are not really looking the gift horse in the mouth. For they are secure in the knowledge that, in value terms, the industry is growing by over 150 per cent. Industry turnover was Rs55 crore this year, up from Rs22 crore in the last fiscal.

The need for private security

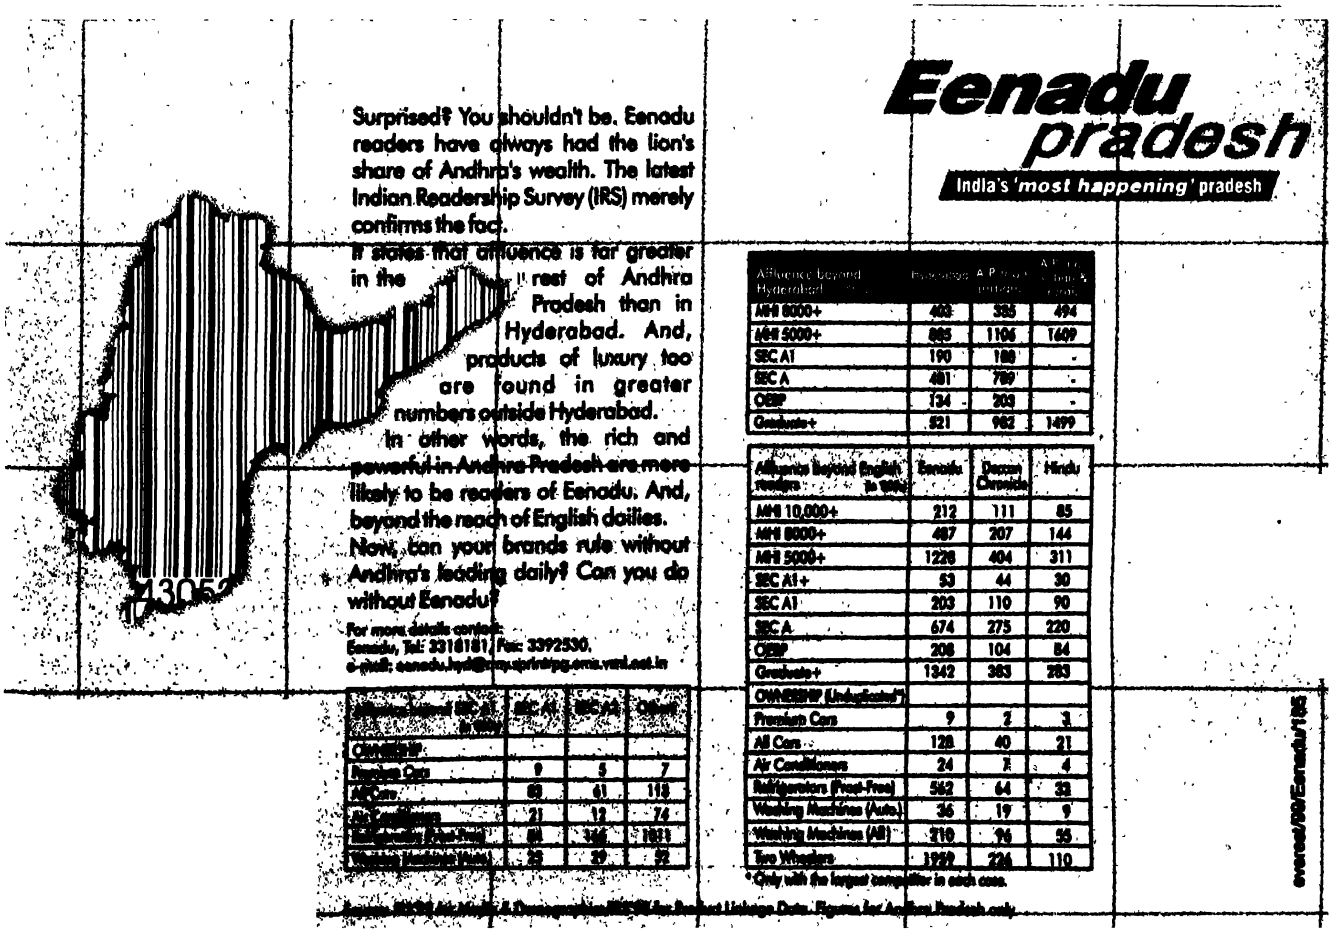
The state has contributed in no small measure to the rise of this industry. The ever increasing need of politicians for greater security has shifted the focus away from the common man. With bandobust duty (for festivals, polls, etc) that the cops are put on, becoming more frequent, investigations into petty thefts or minor crimes are put on the backburner.

Scenes from Anushasanpuram: Karate training is a must...

The pathetic state of police training has hardly helped the cause of the legal law enforcers. It has however, the private guard's. Witness the complete anarchy and chaos at the state-run training centre for Bihar Police, about 100 km from Anushasanpuram. The recruits lounge around lazily along with their trainers. They are into in all kinds of 'policing' and can be hardly seen doing what they are meant to, i.e., training.

Besides state apathy, the emergence of the modern security guard is also a function of the evolving needs of corporates. Executive director of

Group 4, Nandini Vaidyanathan, details how the humble gurkha metamorphosed into the computer-literate guard. Initially, when a corporate house employed a guard, his brief was merely sentry duty. When this advanced to monitoring the movement of goods and vehicles, the need for a slightly educated guard arose. Value continued to be added with the guard evolving to the modern-day computer-literate version.



The private guard has certainly proved a better alternative than his counterpart in the government. "Recruitment, training, postings and appraisals are conducted professionally. Hence, efficiency is evident. The guards are accountable too, as, on their performance hinges the reputation of their companies. The state forces lack all these qualities," says SIS's Sinha.

"Being an MNC, we are able to instill a high level of motivation through comprehensive training. It helps the guard not only in honing his physical skills but also in acquiring the aptitude required for tackling sophisticated crimes," says Group 4's Vaidyanathan.

...the rigid rigour turns boys into men

Less high profile is the connection private guards have with heritage structures. Other than acting as guards for corporate houses, government offices, diplomatic missions and residential complexes, private security is being employed to protect heritage monuments too. Such historical edifices include the Taj Mahal, Qutab Minar, Konark, Ajanta & Ellora caves,

Khajuraho and Fatehpur Sikri. The private police protects these sites from pilferage, misuse and natural hazards.

Besides basic security services, some agencies provide total solutions to their clients. Such valued-added services include cleaning, meter reading, and training to client staff and placement services. "Our core competency is security. However, as we maintain a 24-hour control room and have other infrastructure, we can provide services for all the activities of the client," says Vaidyanathan.

SIS's Sinha reveals that even the state police and anti-riot forces employ their services. This is because the private agencies maintain a force of well-trained professionals, many of whom are ex-servicemen. The medical facilities, trained animals and transport belonging to private agencies do come in handy for state forces at short notice. The highly reputed companies also command some respect in the police force. The latter uses the former's services not only in its routine work but also during emergencies.

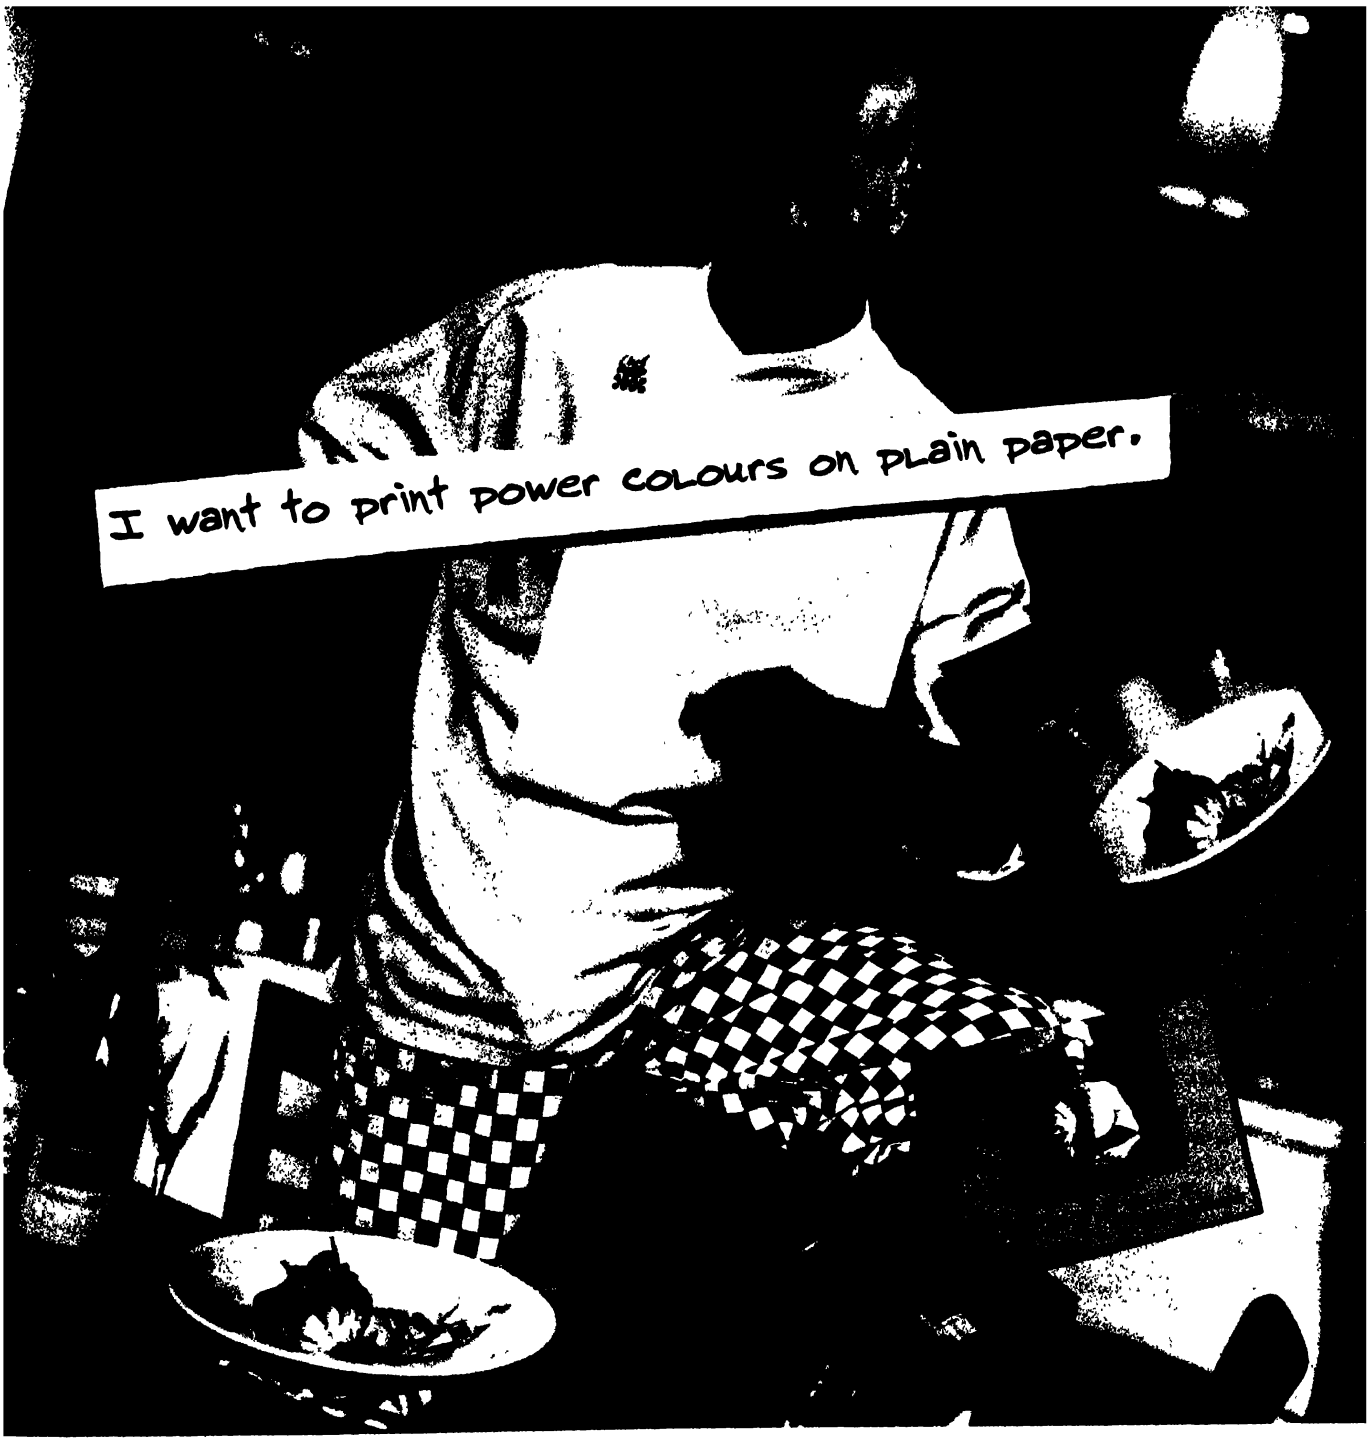
Patrolling with dogs in progress at Anushasanpuram

Guards or blackguards?

Barring the reputed agencies, the police is however apprehensive about the credentials of others. The unorganised nature of the industry makes it difficult for the authorities to differentiate between the genuine agencies that can aid the police force through their intelligence network and manpower and the spurious ones.

Electronic security gadgets too are becoming increasing popular. "The emphasis is shifting towards advanced electronic gadgets which can do the job more efficiently and accurately. Hi-tech electronic gadgets have become available in India in recent years. Besides corporate houses, residents too are beginning to find use for security gadgets," reveals K.N. Prasad, formerly the Union home secretary and now consultant to security agencies. Closed TV circuits and other security systems are bound to figure prominently in the security map of the future.

Whether gadgets can eventually replace humans is a moot point. The focus currently is on the doubts the sudden emergence of this class of security force has raised in the minds of many. Put simply, are private securitymen guards or blackguards? Shravan Kumar of Ruchi Security Services details the shady manner in which many security agencies operate. "Over 500 agencies that have come up in the last few years belong to some local toughie. Young lads from Bihar, UP and Haryana are chosen. A good physique and tough talk suffice as qualification. No training is imparted. The product is tough domestic helps."



Besides providing guards of a bad quality, there are other dangers too. "The cost of churning out such guards is ridiculously low. No reputed agency can compete with the low costs of such agencies. As all private guards are dressed in smart uniforms, the common man is not able to make out the spurious from the genuine. As the army of spurious guards is burgeoning faster than the number of recruits in the organised sector, the entire trade gets a bad name," Kumar adds.

A closer look at the industry reveals how ridiculously easy it is for the wrong kind of person to gain an entry. Procuring a licence is a simple task. There is no distinction between a company that provides a slew of sophisticated services and another that provides only sentry services. Thirdly, there is no regulation regarding the fees that a company can charge. This leaves the established companies vulnerable to severe undercutting by small-timers.

Another aspect worrying legal experts is: where does state policing end and that of private agencies begin? For example, how far can a private agency participate in curbing espionage activities, or contain riots or violence. There are no guidelines for this. While registered agencies can use even firearms or resort to a lathicharge to check violence, those without firearm licenses are likely to resort to other means to achieve their ends. And lack of regulation makes it difficult to control them. So is the private police dressed to kill? Group 4's Nandini clarifies her outfit's position. "We emphasise unarmed combat rather than making our guards trigger happy."

The unorganised players cannot, in the long run, curb the growth of the organised private security agencies. Once the dust settles, each sector will end up having its own well-demarcated turf. Also, there are no doubts on the growth of the private security industry. For, till the desire to pinch pelf persists, so will the need for parallel policing.

HP PhotoREt 3 Colour Layering : prints incredible photos, text and graphics in any mode, on any paper, fast.

Unlike conventional printers which place blue dots next to yellow dots to create the illusion of green, Hewlett-Packard has developed PhotoREt 3, the colour layering technology that precisely mixes drops of colour to create shades of green. Or purple, or millions of other colours, on almost any paper you choose – right on your desktop. Using a digital camera to capture images, and our computers and software to manipulate them, you can create your own powerful colour communications – from bright ideas to brilliant reality. It's one reason why HP's DeskJet printers are the world's biggest sellers, and just one way HP is making colour printing at home and work better, easier and more affordable. Now everyone can tap into the real power of colour.

HEWLETT PACKARD
Expanding Possibilities

BI/IN/267H/203M/C

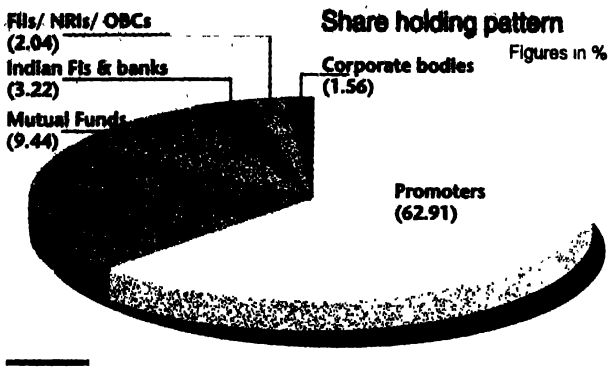
UMESH GOSWAMI

The Adhikari brothers are sitting smugly in their spanking new glass-fronted office — Oberoi Chambers — in Mumbai's western suburb of Andheri. During the auspicious Ganpati festival, they moved into their 16,000-square-feet office complete with studios, post production suites, FX, promo-graphics and non-linear DG Beta rooms. The whole ball of wax has cost them a fat Rs9 crore. State-of-the-art equipment which is being imported is going to cost an extra Rs5 crore. Brothers Markand and Gautam, joint managing directors of the eponymous Sri Adhikari Brothers Network, are in the throes of their most ambitious project yet: launching a general entertainment Hindi channel.

But wait, wouldn't that be a case of one too many? Besides, bigger names have met their nemesis when embarking on just such a course. No way, says Markand Adhikari. "We have concentrated on television software for years now and built a solid reputation. When you want to expand, you should first strengthen your core competence. Unlike so many of our peers we didn't stray into unplanned diversifications. Now we are ready to take the big leap forward into broadcasting and turning into a full-fledged entertainment conglomerate."

The channel titled SABE TV (pronounced Sahib TV) will be free to air initially. According to Markand, "In the first quarter of 2000, we should be up and running. I am already negotiating with two or three satellite platforms and we will be uplinking from either Singapore or Hong Kong." Which means it could be a toss-up between the more expensive Asiasat 3 or Singapore Telecom 1 or the cheaper Apstar or Thaicom.

The Adhikari brothers have gone about their venture in the right way, appointing international consultants KPMG to prepare a business plan for the channel. The duo now have other reasons to be pleased as punch. KPMG's valuation of 1,500 hours of television software is a staggering Rs53 crore. This, working in conjunction with the vaulting share price — Rs431.45 (28 September) with a P/E of 30.7 on the BSE — can only mean more smiles all round.



The Rs32-crore (1998-99) Sri Adhikari Brothers Network Ltd (net profit of Rs7.2 crore) is obviously on a high growth path. Projections for 1999-2000 are Rs40-crore turnover and a net of Rs10-crore. The new premises were funded by preferential warrants which were issued last year, raising Rs7.5 crore. The balance came from reserves and internal accruals.

But considering that the new project will require substantial capital the company's financials are being restructured. The first tentpole is expansion of equity from the present level of Rs7.5 crore. Markand is gung ho because a very high premium is being offered by a couple of foreign institutional players. While the promoters' stake will be diluted from 62.9 per cent currently, the Adhikari brothers are keen to retain majority shareholding. So, 11 per cent dilution of the promoters' stake is likely to be the first step.

As Markand says, "We are not in favour of a great expansion of equity. KPMG will decide the share price for the placement. But for now everything is under wraps." KPMG, meanwhile, has

decided not to discuss this subject at all since the sensitive due diligence process is currently on.

What makes Markand Adhikari so confident about the venture? Says he, "It is not a question of being different. I genuinely believe that there is scope for a new channel. Remember every sixth individual in the world is an Indian. Let me give you a preview: Sri Lanka has five general entertainment channels, Indonesia has six and Tamil Nadu has half a dozen. I honestly believe that with the right kind of software, this country can easily soak up many more channels."

Anil Wanvari, editor of *Indian CabSat Reporter*, reckons that there is room for another channel. But, he says, "The matter of positioning is important, if it is going to be a family entertainment channel. Content remains paramount, followed by packaging, branding and distribution. Remember, there are only four million television sets which can receive more than 12 channels, so you have to force your way into the prime band to grab the viewer's eyeballs." Wanvari says that the Adhikaris are masters of mass-based programming and if this is effectively packaged and backed by very deep pockets, they could pull it off.

Yet, broadcasting remains a different kettle of fish, as distribution carriages have to be strategically managed. Moreover, marketing commercial time for programmes and marketing channel air time is once again a different ballgame. With Zee TV and Sony Entertainment TV battling for ratings and advertising revenues and Star Plus now divorced from its bedfellow ready to turn into a complete Hindi entertainment channel, there is enough competition as it is. And, let us not forget Doordarshan which is trying to reinvent itself! Further, the south of the Vindhyas is replete with regional channels which are dominating marketshares.

How then will SABE TV distinguish itself from the others? Adhikari's response is that nothing new will work on television. His programme list includes the usual — sitcoms, drama, thrillers, horror, talk shows, countdowns and film-based programmes. Adhikari's action plan is to have 25 per cent in-house programming while the rest will be contributed by all the production houses. In fact, in many ways, the Adhikari brothers are already working like a *de facto* channel — making programmes, marketing the commercial time and retaining the copyright — so it is just a question of operating their own channel.

Hit parade

Programme	No. of episodes	Channel
Commander	150	Zee TV
Shriman Shrimati	150	DD Metro
Waqt Ki Raftar	550	DD 1
All the Best	200	DD 1
Suraag	just started	DD 1

The edifice of the Adhikari Brothers success story is low-cost, high rating, mass-based hit programming. The two brothers — Gautam directing and Markand managing — have come a long way over the last 11 years. From Marathi serials for Mumbai Doordarshan to *Commander* for Zee TV to one of the most dependable programmers for Doordarshan — that is the road they have traversed. Concurrently, they will not be taking their programmes off Doordarshan as it is the world's largest broadcaster with terrestrial connectivity. Adhikari says, "I have been a dedicated producer for DD with top rated shows like *All the Best, Shriman Shrimati, Suraag* (the latest one-hour thriller on DD-I), *Damini* (one-hour daily Marathi soap on DD-1 regional)."

Coming up in October and November are premieres of *Chehra*, a tele feature film and Marathi film *Anthar*, respectively. Also in October, Adhikari Brothers will unveil *Aao Jume Gaye*, a talent search anchored by Annu Kapoor for kids.

"The project cost is in the vicinity of Rs125-130 crore and I expect to break even (accumulated) in the fourth year. The channel will be a 100 per cent subsidiary of the listed company SABTN Ltd. My greatest concern is that I have to provide value to my shareholders from day one and more importantly the capitalisation of the channel should be to the advantage of my present shareholding. However, all this is subject to not just shareholder approval, but all statutory requirements will be fulfilled. We will be calling an EGM within the next two months for this."

Many professionals (the buzz is that Karuna Samtani from Star TV is joining as programming head) will be joining and the present board consisting of actor Jeetendra, hotelier Arun Kakkar and the two brothers will be expanded. Adhikari says that there can be no soft launch for his up and coming channel, "I will be painting the town red. Programming today is a consumable commodity and it has to be marketed in an aggressive manner."

Immediately after the launch of the channel, the next step in diversification will see Brothers Adhikari venturing into three screen multiplexes in Mumbai, Pune and Ahmedabad. Mumbai's suburbs will see the first multiplex being launched by mid-2000. And then, a network – news and Marathi – to follow.

The Adhikari brothers were quick to seize advantage on the stockmarket in 1994, when their share offered at par was oversubscribed 42 times. They have made the right moves till now – not deviating from their core competence and entering the capital markets at an opportune time – but dreams of turning into an entertainment conglomerate will take some doing to fructify.

• SANDEEP BAMZAI

In choppy waters

Labour unrest and an impending lockout put a question mark over the future of India's largest shipbuilding yard

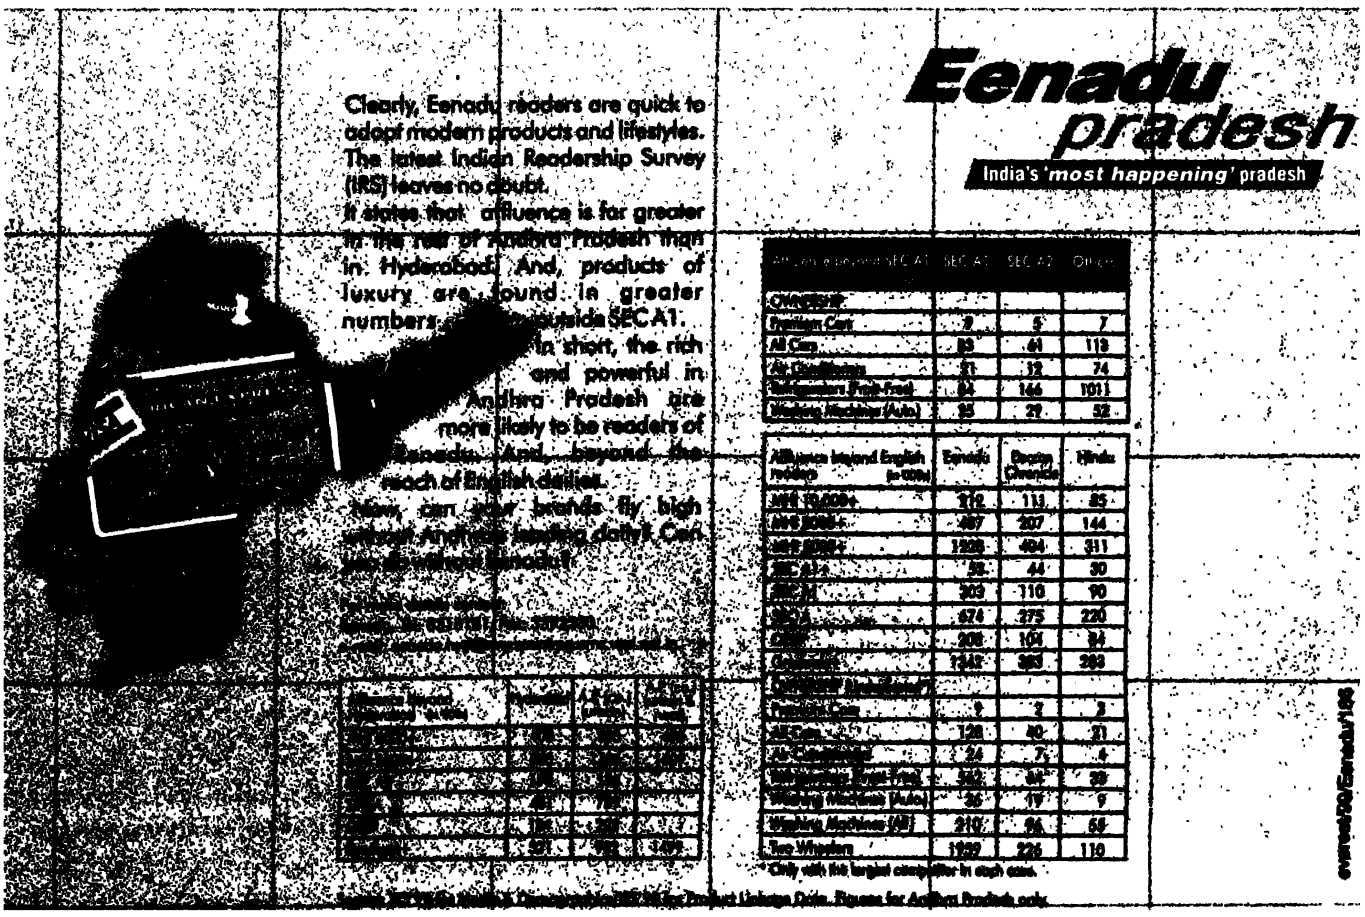
Garden Reach Ship Builders & Engineers Ltd (GRSE), the country's oldest and largest shipbuilding yard, seems set to become another statistic in the ever-growing list of sick government enterprises. The management has decided to declare a lockout at the yard from 4 October following a 'cease work' by workers since early September. The workers are demanding pay parity with other PSUs.

At GRSE, trouble has been brewing for nearly a year and, according to workers, a solution through mutual consensus is imperative if the company is to function effectively. GRSE, which is under the defence ministry, has five units, employs 6,500 workers and is nearly a hundred years old. The yard primarily caters to the Indian Navy's requirements. All kinds of vessels are built here, including frigates and bigger war ships. Like many other public sector enterprises, GRSE too has been affected by the forces of change. Despite its once pre-eminent status, GRSE now finds itself competing for orders from other shipbuilding companies: Goa Shipyard and Mazgaon Docks in the west coast as well as shipyards in Kochi and Visakhapatnam.

In spite of the common problems that ail PSUs — huge unwieldy operations and a large workforce, GRSE actually managed to hold its own and improve profits during the last 10 years, despite constraints on the defence budget. Last year, it reported a profit of Rs45 crore against the Rs32 crore posted in the year before. This year, however, profits could be uncertain with workers on 'cease work' and prospects of an indefinite lockout. However, the management was unavailable for comment and the CMD's office preferred not to talk till the situation normalises.

The agitating workers would be glad to see a settlement. The issue at stake is the implementation of a wage settlement for the year 1996 paving the way for yet another settlement in 1997, which would bring their wages on par with that of workers in other PSUs. Says M. D. Hussain, vice-president of the GRSE workmens' Union "At present, our wages are far below what other PSUs offer. Also, we get no medical benefits." Adds Kamal Tewary, president of the union, "In March this year, the Department of Public Enterprises under the ministry of industry had allowed for a pay revision for 1996, in order that parity in relation to other PSUs can be done from 1997 when other PSUs are slated to receive revised pay. The management has been given full autonomy to negotiate a settlement with the workers." The last wage settlement at the company took place in 1994. Workers point out that GRSE employees earn Rs600

SAJAL BOSE



GRSE workers are demanding parity of pay with PSUs

-1,000 less on basic wage than their counterparts at other shipyards in the country. A wage settlement for 1996 will cost the company around Rs6.6 crore.

Wages apart, workers also resent the fact that the management has been bringing in cheap casual labour, at last count numbering around 1,500, to do the work while a portion of the regular workers have little to do. The management has often complained in the past that the workers fail to meet delivery schedules. Workers on the other hand say that most of the raw material inputs are given to casual workers while regular workers have to wait for more inputs to come in. The management's decision to use outside labour has hampered deadlines as a fair bit of work has to be redone after being rejected during inspection, allege workers.

While the management has to decide how to resolve the present issue, it is important for the future of the company that they do it fast. Apart from the obvious defence needs, West Bengal cannot afford to lose yet another profitable company. Sources within GRSE admit the company is underperforming and could do profits of Rs100 crore a year. Which is why the state labour department is doing its best to see that the crisis is defused as early as possible. Although the lockout may be lifted, GRSE's industrial relations will continue to be under siege for some time to come.

Daktar Babu's Amazon army

A septuagenerian doctor has changed the Dooars, perhaps for ever

The martial-looking man with a clipped moustache and greying hair bounds out of his van to say hello. "Doctor Diptendra Nath Chatterjee. I'm better known as Daktar Babu in these parts," he says brusquely.

Dr Chatterjee is the unsung hero of a social programme that has destroyed shibboleths about rural upliftment, women's issues, and the wretchedness of the tribal lot. Rarely heard of outside the seven-lakh tea worker population in the Dooars area of West Bengal, he is intensely searching for a successor to carry on his work. "I am 76 and want to step aside. But in 15 years we have now built a massive machine for change. If only somebody carries the work on," he says.

Chatterjee came to Dooars in 1983 at the age of 60 after retiring as chief medical officer of the Sindri fertiliser plant. His job here was project director of a family welfare project funded by the International Labour Organisation and sponsored by the Indian Tea Association (ITA). "I had three advantages to begin with — I had worked in the Ranchi area and could speak the Chhotanagpur tribal dialect called Sardi; I had worked in the public sector and was not overawed by the 'dastoors' and traditions of the tea industry; and I had survived the worst Bihari excesses of the sterilisation campaigns of the Emergency and had learnt some hard lessons. It had completely destroyed three decades of family planning in India," he says.

ITA secretary-general Ronnie Das says he also saw the destruction of the family planning after an enthusiastic start in the 1950s. Das, who was secretary of the Dooars branch of the ITA at the time, hit it off well with Chatterjee. "He (Chatterjee) was an outsider and hence managed to get over the resistance of tea company managements. He probably faced quite a few problems trying to convince the estate managers," he says. The ITA and its branches in Dooars and Assam represent tea company interests in the area. "Tea companies were very driven by traditions set by the British over a century. There was much resistance to change," he admits.

Dr Chatterjee talks to a tea picker at Dooars

Even today Chatterjee's work among the poor is largely unheard of despite Das's accolades for the programme. Tata Tea officials feign disinterest in the programme, saying that they had their own social welfare programmes in place. "Tata companies have for years run their own programmes," an executive told us.

Bhaskar Banerjee, managing director of Duncans Industries and president of the Bengal Chamber of Commerce and Industry, the umbrella chamber for the ITA, said: "I have heard about the programme but don't know any details. Maybe you should talk to Gurbaxani." Duncans' vice-president (tea) Mahesh Gurbaxani expressed similar ignorance about the programme. Duncans is one of the two largest tea companies in the Dooars after Goodricke.

Even after the success of the programme was documented and discussed, the Darjeeling area tea gardens refused to adopt it. Efforts to interest the Darjeeling Planters Association have failed. "For tea gardens or other industries the most crucial condition is commitment of the management. Otherwise mothers will soon lose enthusiasm and start feeling that they are merely being used as a cheap delivery system," says well-known NGO consultant and social worker Maitreya Ghatak.

Chatterjee says the south Indian tea estates were always much more progressive and had been dabbling in similar programmes under the aegis of the United Planters' Association of South India (UPASI) for decades with notable success.

One of the problems was that Darjeeling tea garden managers found Chatterjee a modern socialistic interloper in their arcadia they felt they had built. Here was a daktar babu who would boldly walk into their office and sit down whereas even today no one can enter the manager's presence unless specifically asked to. Tea garden managers did not like the concept of an outsider messing around on their land. They did not, however, run him off the land on a split rail, tarred and feathered, because he had been sent by Das who was well-liked in their club.

They gave Chatterjee a cup of tea and listened to him with stoic silence. They would hem and haw for a while and then say, "Is that all? thank you for the taking the trouble. We'll get in touch. Thanks again." Even today there are tea estates where Chatterjee is not welcome.

Chatterjee's deworming programme translated into better efficiency on the tea gardens

Chatterjee made no progress till he hit them with a googly that they all loved. Spurred by what he heard at a conference, he made a careful scientific calculation of what the companies would save if they listened to him. He made presentations of his findings at manager's bungalows, at their clubs, and at ITA meetings.

At a time when daily wages were Rs11.25 a day (now Rs35) he showed that the tea company saved Rs6,659.37 per averted pregnancy, which averaged to an annual expenditure of Rs4.09 lakh in each of the 125 tea gardens in the area. His calculation won over managers who were responsible for costs on their estates.

The ITA effort was based on encouraging women tea pickers to adopt family planning. The programme used video vans and other promotional literature to educate the workers. However, these initial efforts met with limited success. A video show was quite a novelty before dinner even if it meant that they had to listen to a subject as dull as population and babies.

A dismal landscape

About 12 per cent of the women were literate, and about 31 per cent of the men. Some 76 per cent of the one-lakh-plus families live in single-room *pucca* shacks of about 480 square feet built by the tea companies which compares favourably with equivalent national averages. But less than 22 per cent of these houses had toilets compared to the national average of 8 per cent for rural India. The pupil–teacher ratio in the tea garden schools was 169:1 and the pupils continued to reject tea company schools because the teachers didn't speak their language Sadri but taught in Hindi or Bengali; going to school was a completely bewildering experience. As many as 200 people shared a single water tap in some tea gardens, and almost a quarter of the population received untreated and unsafe water.

"The workers were very suspicious of do-gooders, partly because they were an insular tribal population and also no one had ever paid them too much attention," says Chatterjee. The tea worker population is different

from the rest of the local population — 72 per cent are Santhal, Oraon, Munda and Kheria tribals from Bihar, of which about a quarter are Christian. Of the remaining 28 per cent, 19.6 per cent are Nepali with a token presence of the local Bengali population. "The Nepali section like the good life and prefer smaller families. They took to family planning well. The Christian tribal took to the hygienic aspects well, but Catholicism often stood in the way of family planning," says Chatterjee.

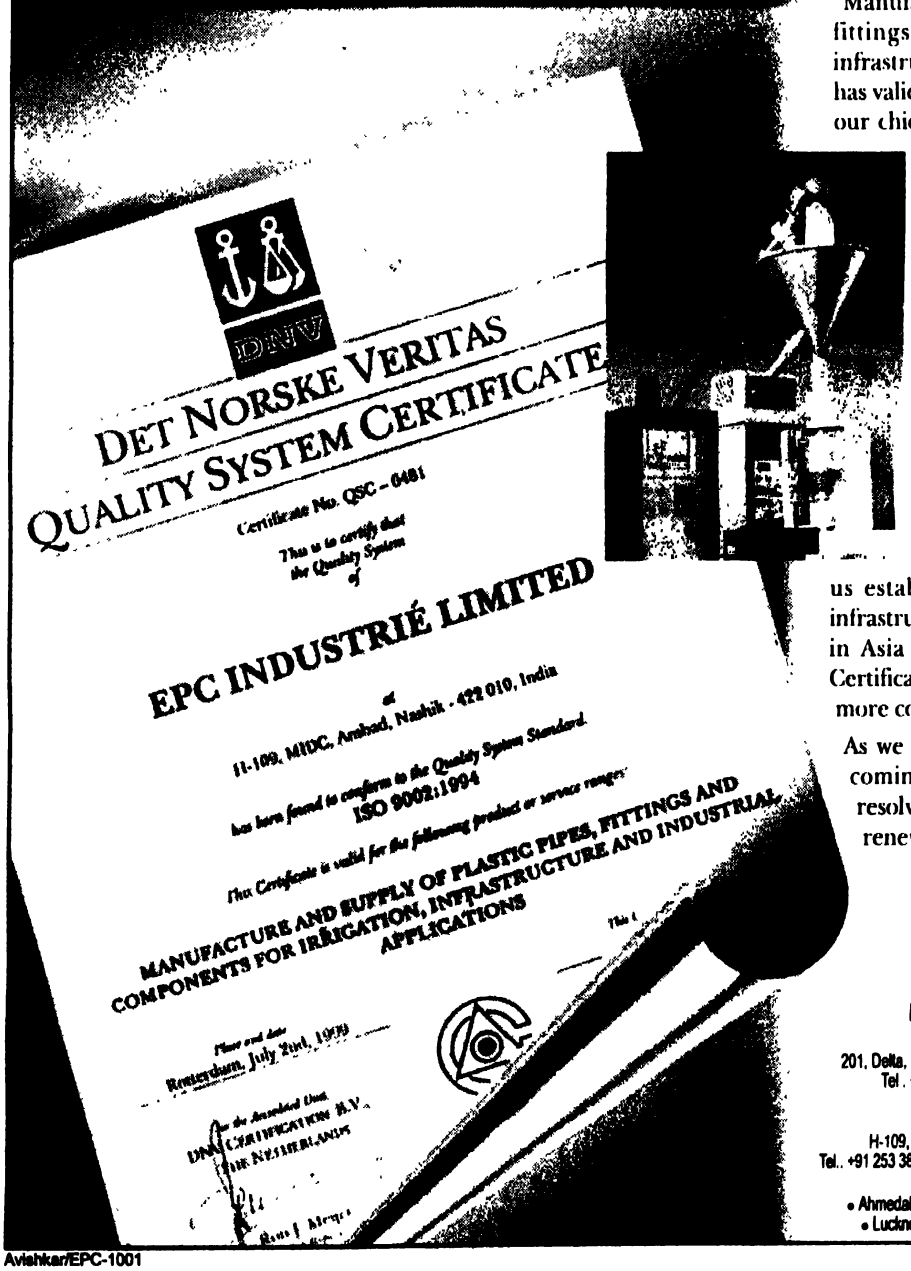
"The workers were outside the local political process and, while there were over 260 registered trade unions among the 125 gardens, the unions were often unrelated to state politics," says Moni Kumar Darhal, secretary of the National Union of Plantation Workers affiliated to INTUC. He admits that even the unions were very suspicious about Chatterjee's efforts but with time came to accept him as one of their own. Chatterjee says the veteran union leader of the area, Manik Sanyal, was soon won over and helped out with the programme.

'Mothers' at a tea garden's labour line

Once he had been permitted by the tea garden managers to operate in their areas, Chatterjee came up with a new strategy to increase local involvement. He contacted a Japanese foundation, which agreed to add to his kitty if he also added a children's deworming programme to his efforts.

"The ITA programme was based on a few lakh rupees spent in the first few years, but once Unicef and the Japanese NGO JOICPF under Chojiro Kuni came in, they pumped Rs3 crore into the project over a period of five years," says Chatterjee. He met Kuni, who was doing a deworming programme in nearby Bhutan. Much of the funding went into subsidising sanitary toilet construction in the tea gardens. Toilet usage consequently increased from 84 per cent to almost 100 per cent. "They preferred to use the toilets to keep poultry and pigs or firewood," says Chatterjee.

The efforts to educate the workers to use toilets also led to a greater demand for toilets, which tea company managements did not like. Even though the pour-and-flush two-pit latrine was significantly cheaper and better, costing just Rs2,700, it has proved to be impossible to convince tea garden managements to abandon the older and costlier Rs4,500 PWD septic tank latrines for the newer technology. This ignorance also added to the delay in management adoption of the toilet programme. Even today, most newly constructed latrines continue to be of the older kind, says the current secretary of the Dooars branch of the ITA. According to a manager, managements use the PWD manuals as a benchmark. Unicef's consultant, Environmental Engineers Consortium, criticised this inflexibility in its assessment of the programme.



However, despite this setback, Chatterjee pushed ahead by selling the managers a clear line of logic. If children had fewer worms, they were healthier since their nutrition levels increased. Better nutrition meant that they fell ill less often, which in turn led to less absenteeism among the women and also fewer patients at the tea garden hospital. The deworming programme gave pulse doses of 1.5 lakh children at the height of the programme in 1994. It has distributed over eight lakh deworming doses in the last six years.

Toilets also led to increased demands for clean water and this created their own pressures. "Workers would puncture the pipelines passing in front of their houses so that they have a continuous flow of water. This led to contamination," says Chatterjee. Efforts to stop the puncturing led to a demand for more taps. One manager says he spent years corresponding with his head office accountants in Calcutta justifying cost-benefit assessments. It was tough — things would move forward by two steps and then be pushed back one step, says Chatterjee.

"There was a marked increased in community participation once the children grew healthy," says Chatterjee, and the popularity of the programme began to generate its own solutions.

One was simple. Literate worker-volunteers would be trained to be barefoot social workers who lived in the worker's lines. Each 'mother', as they were called, would be given a distinctive green-bordered saree, a pair of canvas shoes, and an umbrella. Each garden's 'mothers' would form a mothers' club to coordinate activities. The 'mothers' would be serviced by the eight field workers employed by

QUALITY
THE CHIEF COMPONENT IN OUR PIPING SYSTEM NOW GETS ENDORSED.

Getting the ISO 9002 Certificate for "Manufacture and supply of plastic pipes, fittings and components for irrigation, infrastructure and industrial applications" has validated our claim of using "Quality" as our chief component. Right from day one!

All our products conform to the highest BIS & ISO standards, specified by domestic and overseas end-users. The latest achievement is another endorsement of our pledged commitment to quality, making us the country's first complete Quality Plastic Piping System Supplier.

EPC today is the major supplier of Gas and Water Distribution Systems to cities like Delhi, Mumbai, Chennai, Surat, Hyderabad and to various countries abroad, helping us establish our credentials in creating infrastructure. EPC is also the only company in Asia to have the coveted British Gas Certification which has resulted in winning more contracts abroad.

As we stand poised to forge ahead in the coming millennium, it strengthens our resolve to carry forward our mission with renewed determination.

the programme to supervise activities in the seven subdivisions of the Dooars tea region. The first 'mother' was trained in 1991, and today there are 2,500 of them in 110 tea gardens, each of whom looks after an average of 43 worker households in a worker line with 265 members. "I heard about it for the first time at an international conference and I tried it out when I got back", says Chatterjee. "The mothers' club is a potent weapon for social change and it can develop this area like never before," he adds. It is equipped with flip card books dealing with subjects like personal hygiene, health, and sanitation.

What Chatterjee achie

Note: ... project figures are based on an independent assessment by M. Ghatak and L. Chatterjee, two consultants ... Social statistics are drawn ... Statistical Outline of India 1998-99, Tata Services Ltd.

Then there was a massive change. Indebtedness and alcoholism is the bane of the male tea garden worker. Mothers' clubs, with the active help of the managements, began to crack down on the bootleggers and *sahu* moneylenders in the gardens. The menfolk did not like it but soon the cry went up. "*Sada sari, hara par, hunshiar, hunshiar.*" Das says the anti-alcoholism drive has been a major social catalyst in the gardens. Now the sale of alcohol is banned on payday, the vendors scared of attacks from the women led by the 'mothers'. In Purti tea garden, bootleggers caught on the premises are fined Rs500. Mothers' clubs also patrol the weekly markets at the tea gardens to see that traders do not underweigh or pass off rotten goods.

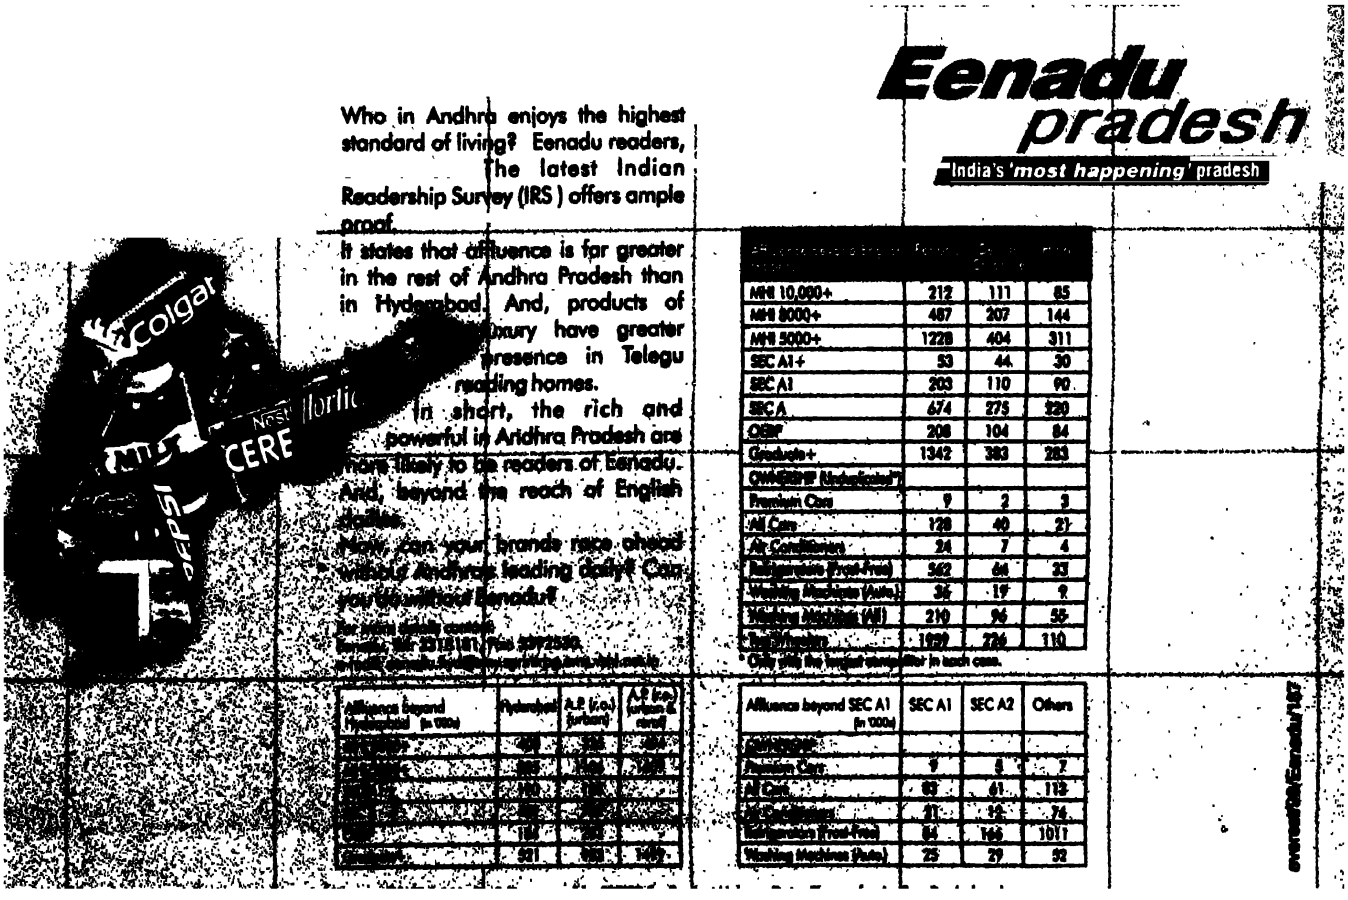
Things did threaten to get out of hand when the movement against alcohol took root. "We had to call in the police a few times and we had some enthusiastic managers joining in the attacks against the bootleggers. We had to ask them to desist from using violence because it was giving the mothers' club a bad name," he says.

There were attacks on mothers, some were threatened with knives and there was an effort by the trade unions to label the club as a handmaiden of the Jharkhand Mukti Morcha (JMM). Yet others faced the wrath of the bhagats, ojhas, and witch doctors of the tribal society.

Women workers, who form about half the workforce, continue to be completely under-represented at 20 per cent of elected office in the trade unions. There is a massive undercurrent of resentment that the mothers' club movement may supplant the traditional *gaon bura* leadership and the mainline trade union movement in the tea gardens.

But change is coming. For example, it has become increasingly common to have weddings without alcohol, considered absolute blasphemy till recently among both the Nepali and tribal populations. Similarly, 'mothers' began to preach the savings habit. A 'mother' from Nangdala tea estate says that when bonuses were paid last year, a record 42,000 Kisan Vikas Patras were sold by the local post office, which agreed to stay open to accept the savings. The mothers' clubs also force all newly married couples to attend lectures on family planning, mother–child health, sanitation, and personal hygiene.

His workers also tried to set up similar clubs in the non-tea areas such as Satnali and Mondabari panchayats in the Kalchini block, with some success. However, Chatterjee says that since there is no funding except for a few lakhs from the ITA for the project and longer, this has not been a focus. Also with just eight employees, he says that he does not have the infrastructure to increase the area under the programme.



A good foundation

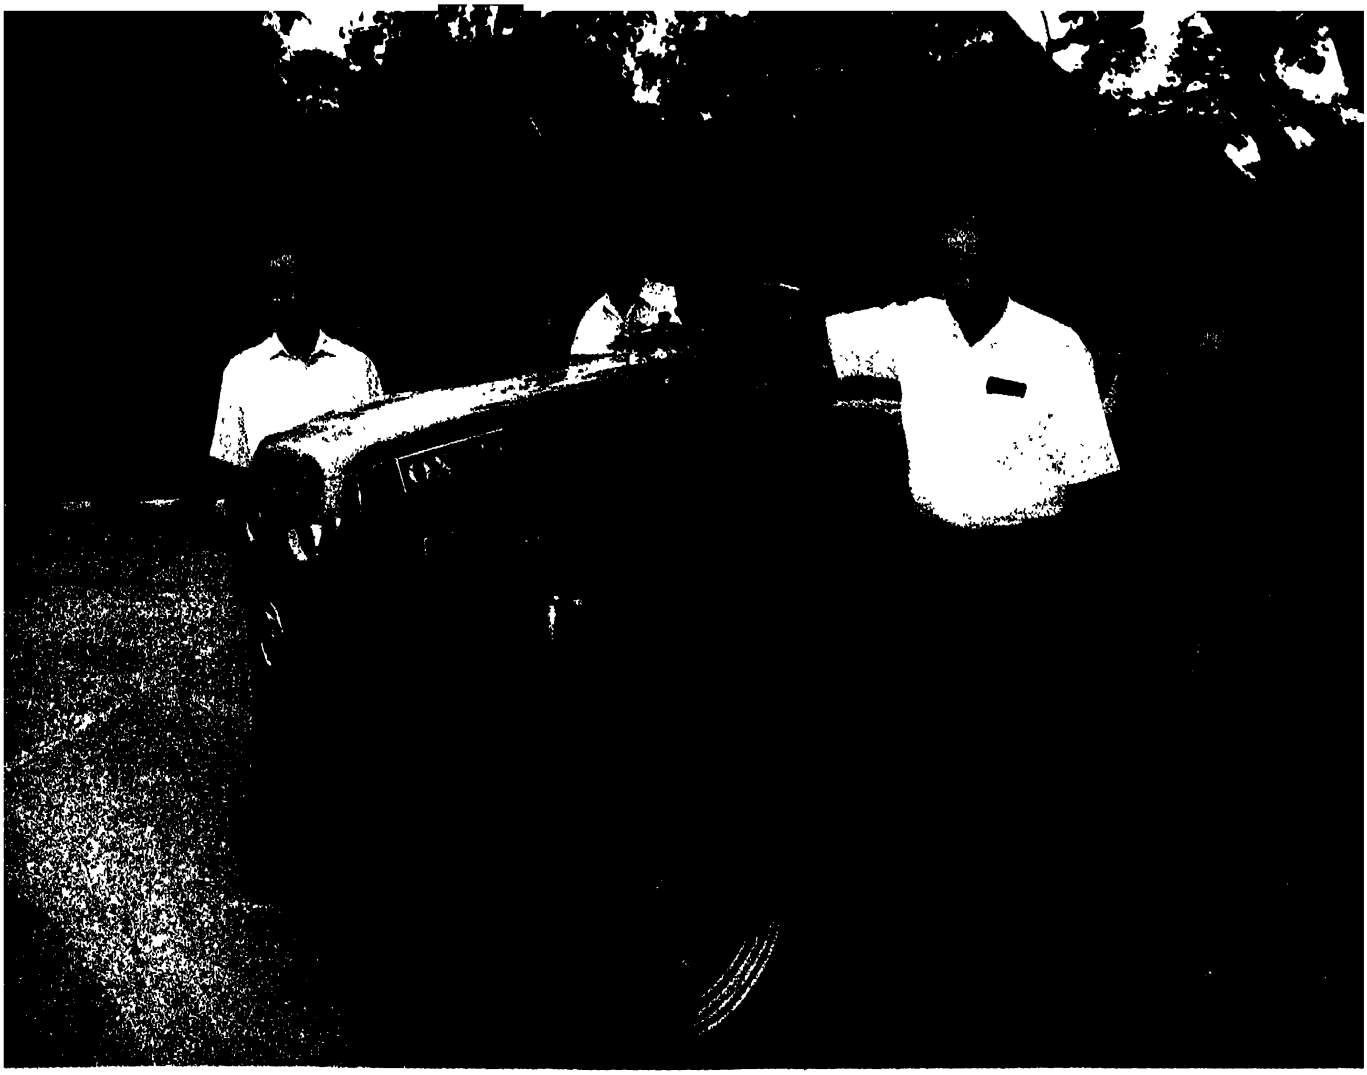
Mercifully there was little direct political interference or attempts to hijack the movement. The target population of almost one million was homogeneous and distinct from the local population. The tea industry traditions also meant that organisations and processes were very similar in the area and the Plantation Workers Act had created the physical infrastructure through which the programmes were delivered. For example, in terms of medical facilities, there was a hospital bed for every 300 workers compared to the national average of 1,000 persons for each bed.

Now Chatterjee is looking for a visionary to take his struggle forward as he is getting on in years. He says he has now embarked on a programme to eradicate tuberculosis from the gardens. The state government has agreed to fund a TB programme through the mothers' club network. "But this year it failed to deliver. When we wanted to have a few sterilisation camps it said it did not have the funds," he says.

So how does Chatterjee view the future course of the work he initiated so successfully? "This movement now needs a younger leader who can take it into new areas. After all, I am a doctor and I understood women's health issues very well. Now people ask me why I only favoured the women with my work," he says with a laugh

SUDIPTO DUTTA

Birth of a tractor



Bajaj Tempo has pulled off a remarkable feat. It has launched the first indigenously designed and developed tractors

There are few Indian automobile companies in India which have totally indigenously designed and developed new models from scratch and that too within three years. There are fewer tractor companies in the country which have achieved this feat. Pune-based Bajaj Tempo, which has mainly been an LCV manufacturer for over three decades, decided to indigenously design and develop a range of latest generation tractors – that too without any foreign collaboration. It succeeded in designing such a tractor with many advanced features from the concept stage to the production stage in a record time of 30 months, which is extremely good even by international standards. Globally the shortest development cycle for a new model is three years. Two tractor models, OX-35, a 35 HP tractor and OX-45, a 45 HP tractor, are now in regular production at Bajaj Tempo. That's not all. The company, in the last 4-5 years, also developed three new LCV models and one new three-wheeler model, all of which are already productionised. It is currently developing a 25 HP tractor, a 65 HP tractor and another new three-wheeler model and these will be launched shortly.

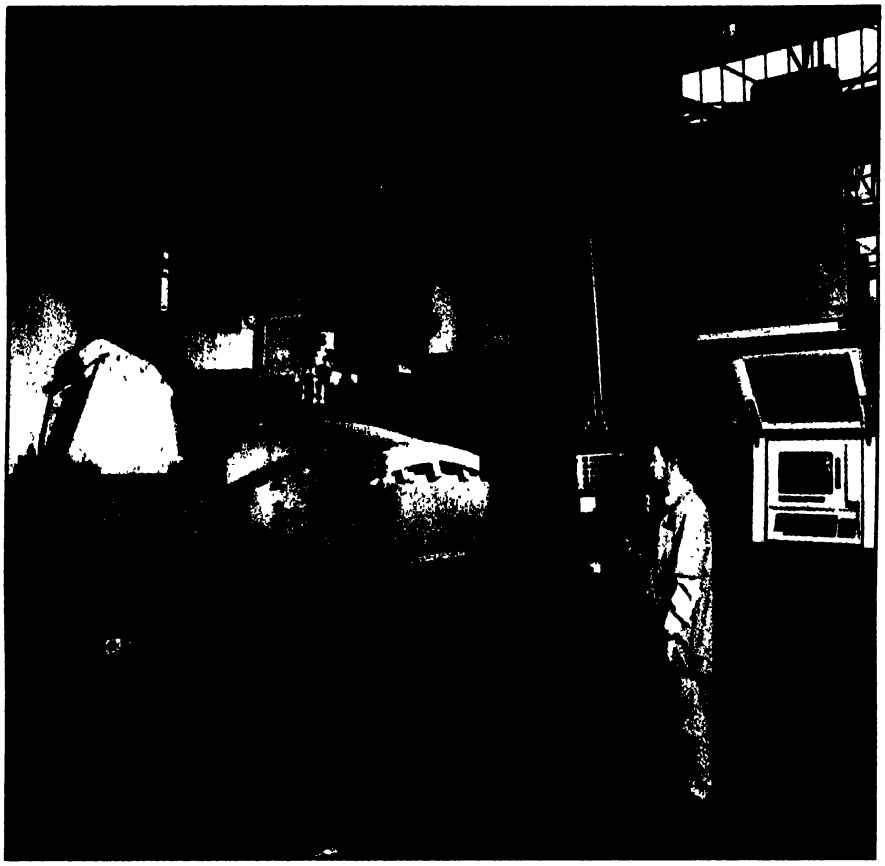
Few in the auto industry know that Bajaj Tempo has one of the best R&D facilities and new product development capabilities in the country, matching those of a giant like Telco. With sales of Rs600 crore last year, Bajaj Tempo has been regularly investing between 5 per cent and 6 per cent of its turnover in R&D, which is the highest ratio for an Indian automobile company. Over the last 10 years, Bajaj Tempo has even built up a Rs100-crore toolroom (one of the best in India), with huge high-speed CNC die sinking machines from Pratt & Whitney, Yoneda, Deckel, etc. This modern toolroom has a capability to completely tool-up one new model of vehicle every year, which involves making over 1,000 toolings like dies, jigs and fixtures.

This state-of-the-art toolroom is backed up by the latest CAD/CAM

INDERJIT SINGH GUJRAL

All CNC machines in the toolroom are controlled by CAD workstations

facilities. Bajaj Tempo has over a hundred CAD workstations for product design, analysis, simulation, etc. Besides, it has comprehensive test facilities with a large number of test rigs for testing every single critical component. "We have 850 people including 400 engineers working in R&D out of a total of 6,000 employees in our company," says Abhay Firodia, CMD of Bajaj Tempo.



The initial product design is done using a number of CAD packages. For example, the engine of the tractor was designed by completely re-engineering the Mercedes OM 616 engine which has been the powerhouse of Bajaj Tempo's LCVs for many years. Several good features of this rugged Mercedes engine were retained, like carbide tipped rocker arms which ensure that valve settings don't get disturbed even if the engine is subjected to heavy vibrations in uneven field conditions.

Although the first prototype of the tractor was ready in six months, it took Maikhuri, Venkatramanan and Firodia one year to test each and every component, including the engine, transaxle and hydraulics

"However we made several radical changes in the engine design. For instance we converted it from an indirect injection engine to a direct injection one. This gives more power, better combustion and better fuel efficiency. We then increased the stroke of the engine because in a tractor we need a much higher torque compared to an automobile. The crankshaft had to be redesigned for a higher stroke. The bore and the compression ratio were also altered," explains C.S. Maikhuri, GM(R&D) of Bajaj Tempo. In case of the 35 HP tractor, the original Mercedes engine, which had 4 cylinders was truncated to make a 3-cylinder engine, while in case of the 45 HP tractor, all the 4 cylinders were retained.

Simultaneously the styling of the bonnet and fenders as well as the seat layout was done keeping in mind ergonomics and driver comfort. "We then generated the surface geometry of the sheet metal parts, and used a design package called CATIA to do curvature analysis and smoothen the skin panels. Once designs were frozen we used the design data to design the dies for these parts using CAD packages again," says G. Venkatramanan, divisional manager (R&D) Bajaj Tempo. Not only are the dies designed on the computer but the entire manufacturing process of the die is simulated on the computer to check for any fouling of the cutting tool. The computer also decides the optimum cutting speed for maximum rate of material removal and desired finish. Once all this is checked out the entire data is downloaded to a CNC die sinking machine in the toolroom. All the CNC machines in the toolroom are integrated, networked and controlled by the CAD workstations in the R&D. "All the machine operator has to do is to clamp the raw material onto the machine bed and the cutting process is done automatically as the machine is controlled by computers which have all the design data stored in them," says Maikhuri. Earlier when the manufacturing process was dependent on the skill of the operator it used to take between three months and six months to design and manufacture a die depending on the complexity. Now due to CAD and Computer Integrated Manufacturing (CIM) it takes less than a month to do the same job.

The Bajaj Tempo engineers also designed a synchromesh gear box for the tractor, with eight forward speeds and four reverse speeds, because many of the ploughing and tilling operations are done at very slow speeds, between 1.5 to 3.5 kmph and some operations are done only in reverse gear at varying speeds. "Our tractor is the only Indian made tractor which has a synchromesh gear-box, which enables as smooth a change of gears as in a car," claims Abhay Firodia. It is also the only gear box which offers as a standard feature a power take-off or a separately driven shaft for driving

agricultural implements. Again the power take-off is the only one to offer two different speeds of 540 rpm and 1,000 rpm. The lower speed is used for driving implements like a rotavator or a harvestor, while the higher speed can be used to drive a compressor or a similar equipment. The gearbox has yet another driveshaft, which drives the hydraulic pump for operating the hydraulic powerlift system. The tractor also has a superior hydraulic system which has a unique sensing mechanism, which senses the softness or hardness of the soil to be ploughed and applies the correct hydraulic pressure on the plough for obtaining the optimum depth of the furrow during the ploughing operations. The critical parts of the hydraulic system like the hydraulic valve block is manufactured in-house by Bajaj Tempo under licence from Bosch, Germany.

The Bajaj Tempo tractor is also the first Indian tractor to have disc brakes instead of drum brakes. Moreover, these disc brakes are immersed in oil (for cooling) and hermetically sealed. When the tractor gets into waterlogged fields for wetland cultivation, if the brakes happen to be of the drum variety then water enters them and they fail. "But since in our design the brakes are hermetically sealed, no water can leak into the brakes, and they function normally, even when the tractor is under a feet or more of water," says Firodia.

Also, these brakes are guaranteed to work trouble free and without maintenance for the life of the tractor (15 years). "We also designed the Transaxle, which is called thus because it combines transmission and the rear axle. We built a special test rig costing Rs1.5 crore, which can test the transaxle non-stop for 24 hours for three months, under a variety of load conditions, which are programmed into the computerised test rig," says Venkatramanan. The transaxle was tested under the heaviest duty cycle, non-stop for three months, which is equivalent to a life of 15 years in actual field conditions. "Although the first prototype of the tractor was ready in six months, it took us one year to test each and every component, including the engine, transaxle, hydraulics. We have a number of test rigs for each of these components. It was a continuous process of testing and redesigning wherever excessive wear and tear was observed. After correcting the designs, again testing was carried out until the design was perfected," explains Firodia.

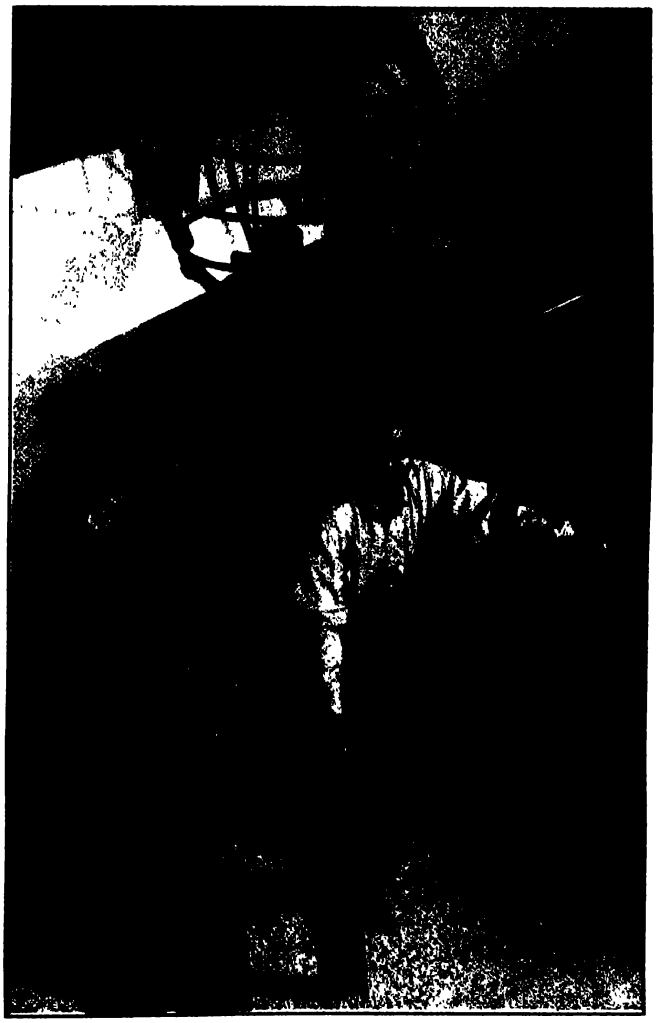
After designs were frozen, it took several months more to manufacture the toolings like dies, jigs and fixtures and within 30 months of conception of the product, the first tool-made prototype was ready. This is a remarkable achievement for a company of Bajaj Tempo's size. The company is one of the smallest automobile companies in India, but one of the most vertically integrated, possessing not only a fantastic toolroom and R&D capabilities, but also facilities to manufacture all critical parts such as engines, gearboxes, axles and even hydraulic valves in-house.

Over the last 10 years, Bajaj Tempo has built up a Rs100-crore toolroom, which is one of the best in India, with huge high-speed CNC die sinking machines

The OX-35 and OX-45 tractor models are already in the market and this year Bajaj Tempo will produce and sell 7,000 tractors, which will be increased to 24,000 next year. In the current year, Bajaj Tempo will also complete the design of a 25 HP and a 65 HP model. Both these tractors will be launched in the market next year to give Bajaj Tempo a complete range of tractors.

This is how Bajaj Tempo, which for decades had been manufacturing just one model of LCV, called the Matador, has now become a multi-product company with a range of products like tractors, LCVs, three-wheelers and multi-utility vehicles.

◆ ROOP KARNANI



Failsafe quality

Kirloskar Copeland carried out a unique exercise to put new systems into place for total quality and zero rejection

"Gopal Amin threw the challenge at us," says Suresh Lulla, managing director of the Mumbai-based Qimpro Consultants. And because Qimpro are quality consultants to compressor manufacturer Kirloskar Copeland Ltd (KCL), and Amin the managing director of KCL, Lulla took on the job of trying out the quality tool of failure mode and effect analysis (FMEA) in implementing the new ERP (enterprise resource planning) system in KCL plants at Atit and Karad, 150 km from Pune.

A TQM technique usually applied for design and processes, nobody had used FMEA for ERP before. "We put the whole project through FMEA, and went live with no problems during the changeover," says Amin. "The most difficult thing was that we did it in July, a season month." Most companies, Lulla explains, run a parallel legacy system while implementing ERP, and gradually ease themselves from the old system to the new. Most ERP systems encourage this, and expect the plant to be shut for a number of days even before running the parallel system. Going by this, KCL was faced with an 11-day shutdown during the peak sale time in the air-conditioning and refrigeration (ACR) industry. Amin, however, did not want to do this. "He said, 'Hong Kong airport did it, switching over totally at midnight one night, so why can't we'," Lulla recalls. And he gave Qimpro the mandate to carry out an analysis and extend the assurance that the ERP system would go live at the touch of a button.

So KCL, ERP vendor Baan, implementing agency Ashok Leyland Information Technology (ALIT) and Qimpro in its role of facilitator carried out a risk analysis, taking into account the likelihood and severity of failure in each operation, and the probability that it could be caught before it happened. "We had a brain-storming session to list every point, even those that sounded stupid," says Randal Pereira, KCL's information technology manager. "We assigned a risk priority number (RPN) to each point, and attacked those with high RPNs."

We did it!" Amin is all smiles

All the employees were involved. "People know their own 100 square feet best," says Lulla. "So we worked from section to section for three months, asking everyone for a written commitment that his part of the ERP would work without a problem." Four teams were formed for each business process, each with a team leader, a key user, an ALIT consultant and the department head. The company used what Pereira calls a 'big bang' approach, implementing all the ERP modules simultaneously. "The FMEA exercise brought people on a common platform, and gave us confidence," he says.

Vice-president K. Taranath led from the front: "He really walked the talk!" says Lulla. Everything was planned in detail, including lining up trucks and organising excess dispatches to warehouses and distributors so that customers didn't feel the lack of physical transactions during the two-day closure while KCL switched systems. "It was seamless, there was no problem!" says Amin, a statement which Lulla qualifies: "No problem which we couldn't handle." Adds Pereira, "There were minor problems, but no disruption: everything was on from day one."

But going live is only the beginning of the process, Pereira points out. "Now, we have to derive the benefits. These will take a couple of years to crystallise." Amin, however, insists that the results are already visible. Production is up, and quality has improved to a level where rejections are "almost zero", he says. At the newer plant at Atit, set up in September 1996, the monthly production has gone up from 12,000 to 18,000 compressors. The plan is to keep raising this figure, without any fresh investment. "The next target is 20,000. There is no reason why we can't go up gradually to

Production is up and rejections are almost zero

50,000, even 100,000, by cutting process times," he says.

The Kaizen quality technique introduced in September 1997 has gone a long way to help this growth. Kai means change and zen means betterment, explains Pramod K. Katdare, factory manager at Atit. Implementing high quality standards needed what Amin calls "a major cultural change", especially among the older employees in the original plant at Karad. "We have had to move many people out of key positions and find replacements with the right mindset," he says. "We spent a lot of time matching the right set of talents with the right job. The basic question is, what is your passion, what you would drop everything else for?"

KCL also customised compensation packages for employees' specific needs — like financing higher education for the children of the older people at Karad, and consumer durables for the younger set at Atit. The Kaizen awards also vary: from steel tumblers and plates, clocks and gas stoves for individual achievers, to field trips for teams. A worker with 80 improvements to his credit gets to go on a training course to Copeland's mother plant in the US.

S.L. Kalbhor, an operator at the Atit plant, is the first with 80-plus Kaizens. In the US, he intends to study how they ensure zero rejection, and help implement it here when he returns. Kalbhor, a farmer's son who worked his way through an industrial diploma, admits his colleagues were initially jealous. "But I explained the advantages to the company, and they understood," he says. Among the improvements he is particularly proud of are the introduction of an ink bottle within the cycle to automatically put a dot on each compressor when its oil is changed; a safety device to stop the conveyor belt when a shear pin breaks; a modification to prevent couplers from flying off, so that there is no leakage; and a slide fixture so that the operator does not burn his hands lifting down dehydrated compressors.

The magic of Kaizens

These, and other Kaizens, brought set-up change times down from 30 minutes to eight, and reduced rejections drastically, Katdare says. One particular operation increased the per-shift output from 175 compressors to 225. Kaizen, introduced for permanent employees and later embracing contract workers too, has everyone contributing now. "We have achieved an average of three kaizens per employee per year — we want to increase it to six," he adds. Next, the practice is being extended to ancillary suppliers.

Amin is clear on the Indian operation being not just a low-cost manufacturing base for global markets, but designing compressors for the rest of the world, too. So KCL has installed India's first, fully computerised decarbonising furnace for motors, at an investment of Rs7 crore, and an engineering centre to design new hermetic and semi-hermetic compressors.

"We get a lot of support in this from Copeland," Amin says. "They are looking at us as a resource for engineering in India." The changeover from chloro-fluorocarbons to R-134a and hydrocarbons was done internally, and the compressor's performance was fully simulated before making a prototype — which was "very close to target, needing only some amount of tweaking". KCL does not want to export for the sake of exports, but is looking at some countries to which it plans to become a big exporter, with Copeland's help. "We have the quality, now we need to coordinate our capacities for the export and domestic markets," he explains. With a turnover of Rs230 crore in 1998-99, KCL — a subsidiary of Kirloskar Brothers Ltd — has grown by an average of around 23 per cent a year over the last five years. "Our growth has been consistent, with no spurts," says Amin. Manufacturing a range of air-conditioning and commercial refrigeration compressors from one-ninth of a horsepower to 40 HP and capable of supplying up to 60-HP compressors imported from the parent company, KCL sees no competition from Tecumseh, which boasts of being India's largest compressor manufacturer.

"They are a big player in the domestic refrigerator market where we are totally absent," Amin explains. "But they have a very small range in our field." KCL lists Amtrex, Blue Star, Carrier and Voltas among its biggest customers apart from a host of small air-conditioner assemblers. "Nobody knows us, apart from the equipment manufacturers; but all your rooms, soft drinks, ice-creams are kept cool with our compressors!" adds Amin.

› SEKHAR SESHAN

Onto a new benchmark

With GATT around the corner, this Rs110-crore company has devised a new prescription to be among the top 20 Indian pharma companies by the year 2005

They are all set to take over the baton from their father. Glenn and Mark, the two sons of Gracias Saldanha, who promoted the pharma company Glenmark, are busy formulating plans to steer it into the next millennium. As Gracias puts it, "Glenmark is all set to celebrate its 21st birthday. Hereafter, my sons are going to lead the company and devise the growth strategies." And he is pretty convinced that he is leaving the company in safe hands.

The elder, Glenn, joined the company last year and as executive director is looking after sales and marketing. He has done stints with some pharma MNCs abroad. The younger, Mark, is also a director (operations) in Glenmark. He joined Glenmark straight after college four years ago. He takes care of the manufacturing side.

In its two decades of existence Glenmark has been conservative. Launched in November 1978, Glenmark began as a loan licence manufacturer. It has since set up manufacturing and R&D centres at Nashik (Maharashtra), Goa and Bhavnagar (Gujarat).

Before setting up his own outfit, Gracias was employed with MNCs such as Franco India and E Merck. He was marketing manager when he quit his career. "Getting into business was a tough decision. The seed capital of Rs1.50 lakh came from my provident fund which was enough to take care of the deposit for the place and three months rent. It was only 30 months after I started out that I could get the first bank loan of Rs50,000," recalls Gracias. The first major hurdle came in the form of the drug price control order (DPCO) of 1978-79. "To stay afloat, we kept out of the DPCO by maintaining the small scale sector status. We entered the therapeutic segment. Our first speciality product, Candid cream, came from the antifungal dermatology range which was launched in 1979. Till date it is number one in its category," adds Gracias.

Glenn and Mark have taken the baton from their father Gracias Saldanha's hands

Gracias never realised that Candid could do what it did. "Candid gave us the launch pad," he recalls. However, hitting on the right product is just the trigger point. It was hands-on experience in marketing that helped Gracias. Experience taught him that it was important to have an ongoing dialogue with the medical fraternity and the need for a trained field force. "Based on this model, which is in practice even today, we have been able to enhance our basket of products and broaden the customer base," explains Mark.

Over the years, Glenmark expanded the Candid range with a slew of products in the form of lotion, powder, vaginal tablets, gel, and ear drops. In fact, one of its product – Candid mouth paint – is an innovation. According to an ORG sales audit conducted in February 1999, two of Glenmark products, the Candid vaginal formulations (in the gynaec anti-infective segment) and Candid cream, lotion and powder (in the anti-fungal dermatological topical segment) have emerged as market leaders with 32 and 14 per cent marketshares respectively.

Glenmark has also made a mark with its 'Ascoril' expectorant, which ranks third after Benadryl and Corex in the cough preparation segment. Again, as per the ORG survey, Ascoril ranks 103 in the list of leading brands by value in India. "Candid and Ascoril contribute 55 per cent to turnover," adds Glenn.

"As sales started picking up, the Nashik plant could not cope with the demand. Hence in the early 1990s we targeted Goa. We constructed three units there," states Mark. But as the growth in manufacturing was an ongoing process, the Saldanhas never lost sight of R&D. "If we had not looked at R&D, we would have been finished. Four per cent of turnover is regularly ploughed back into R&D. The results are evident from our basket of products," explains Glenn, who however remains tightlipped on several products at different stages of development.

One smart move by Glenmark is that, unlike most Indian pharma companies which have integrated backward, the former stuck to manufacturing prescription based formulations. "We neither went into bulk drugs nor have generic products rolled out of Glenmark," adds Mark.

How do all these moves translate into moolah for Glenmark? To get the correct picture, one would have to go back five years in time. From 1994-95, while turnover increased at a

compounded average growth rate (CAGR) of 23 per cent to Rs107.59 crore, the net profit logged a CAGR of almost 50 per cent to Rs12.77 crore. During the same period the gross block has bloated at an average rate of 32 per cent per annum to Rs20 crore. Another indicator which shows how much the company has been ploughing back into the business is the reserves and surplus account which on an average increased by 42 per cent per annum and currently stands at Rs30.57 crore.

But the Saldanhas are looking at more ambitious figures. Glenmark has set out on a four-pronged strategy keeping in mind the likely implications of GATT on the Indian pharmaceutical sector. "We have decided that we should move up from the 35th position and occupy one of the top 15 slots among the Indian pharmaceutical industry by the year 2005. To do this, we need to achieve a growth rate of 30-40 per cent per annum. This will be achieved through the introduction of several new products, aggressive growth from weaker regions and through the newly christened Gracewell division. The objective of this division, which has 50 managers and 220 medical representatives, is to concentrate on select therapeutic segments," explains Glenn.

The second part of Glenmark's strategy is to focus on growth in the export markets. "Currently, Glenmark exports to 24 different countries primarily in Asia, Africa and Russia. We plan to penetrate the US and European markets. In order to achieve this, Glenmark is working on building a state-of-the-art US FDA approved manufacturing facility," adds Glenn.

Glenmark has already established an overseas office in Portugal — Glenmark Pharmaceutica LDA. "This will provide access to the European Common Market. The Portuguese drug authority has given marketing authorisation for eight products and export of the same has commenced. The Canadian subsidiary will cater to Canada and the US," states Gracias.

Continuing with its R&D efforts, Glenmark plans to be a research driven pharmaceutical player. "In 1998-99, the company's R&D expenditure tilted towards its exclusive formulation R&D centre at Sinnar, Nashik. This R&D centre currently develops unique dosage forms, new drug delivery systems, etc. We have also recently initiated the construction of a New Drug Discovery Centre at Mumbai to be commissioned in August 2000. This centre will focus exclusively on new molecular research. During 1999-2000, we plan to step up the R&D expenditure and spend 12-15 per cent of our revenues on R&D," explains Gracias.

Lastly, in the post-GATT era, Glenmark plans to scout for various alliances and co-marketing agreements besides product licensing opportunities in the world market. It has already initiated discussions with two Japanese companies for product licensing opportunities, to market their products in India.

This, in a nutshell, is Glenmark's strategy for life after 2005. It remains to be seen how graciously Glenn and Mark take the company up the corporate charts.

Initiatives that build media brands

INITIATIVE MEDIA
A little initiative goes a long way

Raising reliance

A group of seasoned systems strategists positions itself as the right partner for small and medium businesses

V Ramakrishna and his team are all set to take on VeriFone in its established strengths of payment systems, smartcards and e-commerce applications. Ramakrishna, who headed the US-based transaction automation pioneer's Indian operation, is managing director of a two-year-old start-up in Bangalore. On the board of his Reliance Systems Private Ltd (RSPL) are three members of his former top management team. Co-promoter P.N. Karanth is also a former colleague, though not at VeriFone. They worked together in the Usha group, and registered a software company in 1984, one of the first 100 per cent export units. Now, with a workforce of over 200, they target a turnover of Rs60 crore by 2001-02.

Ramakrishna and Karanth see great potential abroad

Set up as a mainly training-based company imparting specialised mainframe training to combat the Y2K problem — which Ramakrishna describes as the 'global scourge of the century' — RSPL is now concentrating on supplying solutions to small and medium enterprises (SMEs). "The change of focus was inevitable because the training needs have shifted out of mainframe to Java and other areas," he says. "But we did a good job: we trained 400 professionals both in the public domain and for corporates."

Along the way, RSPL has developed 'Gemini', an enterprise resource planning (ERP) software for SMEs. Systems from the world-renowned big names had to be implemented by them — which was expensive and took upto three years. Many companies, looking for quick results, had second thoughts about going in for ERP.

Gemini, on the other hand, shows results in two to three months. "People are surprised!" says Ramakrishna. "But this is appropriate in terms of the company's capability, size and budget — we need packages suitable to our marketplace." SMEs have simple business processes, he explains. Many SMEs still have manual processes, while the larger organisations tend to have more complex operations. Once the package is found suitable for the Indian market, it can be taken to other developing countries where companies have similar needs. But Gemini, he hastens to add, is also scaleable to large organisations as it is built on open systems platforms.

Now that it has crossed the 'critical mass' of 150 engineers, it has the confidence to take on big jobs, and move into the global market. The company has received approval for a branch in the US; it is awaiting RBI approval to invest in a Swiss subsidiary, and has a country manager in Japan. Says marketing director Karanth, "The export market is more lucrative — domestic business doesn't yield so much revenue." RSPL targets at least 60 per cent of its revenues from exports operations.

Ramakrishna, however, admits that the company's sales projections depend largely on the growth of the domestic market. "Our products need to find acceptability in the marketplace; software services will continue automatically," he says. The market seems to be good, both at home and abroad — especially the developing and 'just developed' countries, where RSPL sees a great need in the areas in which it operates.

The company has tied up with the US-based WRQ Inc to market WRQ's connectivity products in India, and may get a complementary base to market its own products in the US. "The software business is becoming more and more a two-way street," says Ramakrishna. "But the immediate aim is to use our own domestic marketing operations more efficiently."

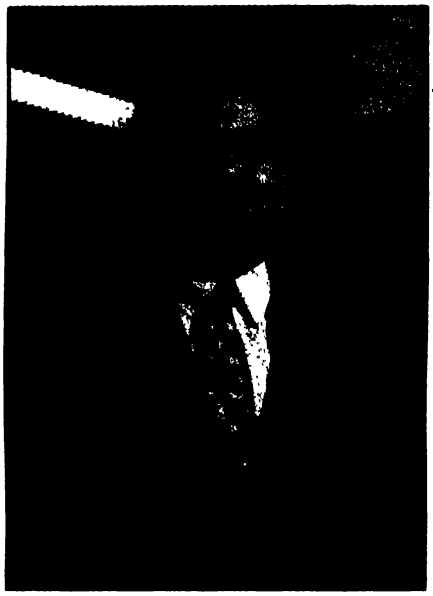
Boasting domain knowledge in the fields of insurance, integrated information systems, paging and telecom, payment systems and smartcards, e-commerce applications and MIS, RSPL aims to leverage this knowledge and experience its top people have gained from VeriFone. "We will focus heavily on Internet applications, e-commerce, electronic payment systems and smartcard technology," says technical director M.G. Balakrishna Rao, who was development director in VeriFone India (VFI). Adds quality director Vandana Malaiya, who looked after quality at VFI too: "Efforts are on to become ISO 9001 certified as well as SEI CMM Level 3 compliant this year." Ramakrishna says RSPL is already compliant with both standards, though it has not yet got formal certification.

Two other products on the anvil after 'Gemini' are a payment system and a card-related activity, both fields which VeriFone had made its own. But VFI is apparently not a rival. "We will be working with device manufacturers, mainly VeriFone — to supplement their applications work, create application software for smartcards, and align with them for sales," Ramakrishna adds.

• SEKHAR SESHAN

The Power and the Glory

Mainframes are not dead, nor are they sleeping. The giants of computing continue to deliver on the premise of reliability



You have stored complex multifaceted data pertaining to half a million customers and you need to analyse it, virtually in real time. Perhaps you are an equity depository service and need to calculate the real cost of a competitive option, or maybe you run a telephone service and need to offer revised slices of time-of-day rates. When you have made a decision, you will want to implement it across the board with total reliability.

Forget about doing it with Unix or desktop systems, if you are in a competitive market and have to fight to retain your customers. What you need is a good old traditional mainframe, operating your back-end data systems with bullet-proof dependability and lightning speed.

Cost and access have typically been the key doubts for businesses, especially in India, for long considered Unix territory. The total cost of computing, a value that covers upfront cost of hardware and software, training, and maintenance, usually gets lowered as systems get bigger. However, Dr Guru Rao, the scientist responsible for much of IBM's current advances in mainframe technology, says that even the upfront cost "has been dropping 35–40 per cent per year for the past five years".

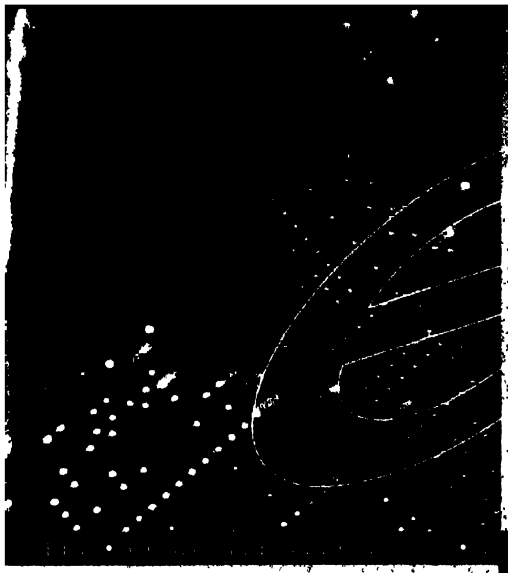
The other aspect of Unix and Windows-based applications, their widespread portability, is no longer so relevant, since IBM has spent a huge amount of effort over the past 10 years ensuring that mainframe applications are equally accessible on Unix and Windows-like emulations, when necessary. Also, the growth of middleware standards has made accessibility across systems much more commonplace. Middleware constitutes a set of software applications that translates data and processes between different, often alien, systems.

The main reason that the mainframe is returning to relevance for forward-looking Indian businesses today is that unlike the old days, when mainframe

PALASHRANJAN BHAUMICK

Chaudhari says Alltel's mainframe supports five million subscribers

suppliers operated in an entirely proprietary mode, market forces ensure that mainframe power is coupled with desktop convenience and accessibility.



Thus at Alltel, supplier of back-office telecom solutions to Hughes Ispat Ltd, the independent Maharashtra circle telecom provider, a powerful S/390 (one of IBM's most popular mainframes ever, and the current state-of-the-art) provides the principal computing platform. Unix-based networks provide front-end access for Alltel's staff, enabling them to deal with customer queries using graphical user interfaces, but as Sanjay Chaudhary, who heads India operations at Alltel Information (India) Private Ltd, comments, "with a mainframe as the back-end processor in our Virtuoso II application architecture, Alltel is certified to handle five million subscribers. This would not be possible with a Unix platform."

At Tata Steel's massive campus in Jamshedpur, two S/390s handle brute computing power (80 million floating point operations per second) to provide 130 GB (130 billion bytes) of memory capacity instantly to run online, real-time business operations. These include finance and accounting, order management, production planning and control, and supply chain management and logistics, among other things. According to Varun Jha, the chief of information technology systems at Tata Steel, while Digital (now merged into Compaq) was a contender when Tisco bought its first mainframe in 1991, service, reliability, and familiarity (many other steel plants around the world run their systems on the S/390) were important considerations that tipped the scales. The experience was obviously happy ("Good," says Jha of his experience with IBM) enough, so that Tisco went in for a second, more powerful, system in 1997.

Indian Airlines, the government-owned air carrier, also runs two S/390s, but as real-time redundant fallbacks in case of unavoidable disasters. Each system hosts over 200 GB of disk memory to provide an internationally available online ticketing system (Speedwing's passenger services system, PSS) on a 24x365 basis (computer industry shorthand for 24 hours a day, 365 days a year availability). A.K. Rastogi, director of information technology at Indian Airlines, says, "Our experience has been satisfactory. We have a system configured to handle our requirements till the year 2001."

Technology advances in chip design and in overall architecture have combined to assure the mainframe a place in the spotlight, even as enterprise resource planning and the Web seem to dominate attention. In fact, half the enterprise planning implementations in a recent study were effective only on mainframes, and Web enterprises looking for unlimited growth know they can continue to serve their customers reliably only if they choose to host their services on mainframes. Clearly, as these business needs grow in India, mainframes will find a renewed call from the market. The technology institutes are already gearing for the expected growth in demand in mainframe-related skills, and this will become more visible in the next couple of years.

Intelligent Enterprise 99

16-18 November 1999, Nehru Centre, Mumbai, India

The first strategic corporate information technology event in India.

Intelligent Enterprise 99 — a one-stop enterprise technology showcase, is structured specially to address the needs of any business corporations, from small and medium firms to large enterprises. It brings under its umbrella modern-day business solutions like Enterprise Resource Planning (ERP), Computer Telephony and E-commerce, creating for the first time in India, a platform for the corporations to learn, network and adopt the latest technology available, integrating IT into their business.

If you have solutions for the enterprise, you just cannot afford to miss Intelligent Enterprise 99. Your competition is going to be there!

Intelligent Enterprise 99 is an IT event with a difference...

We understand technology.

We know the business.

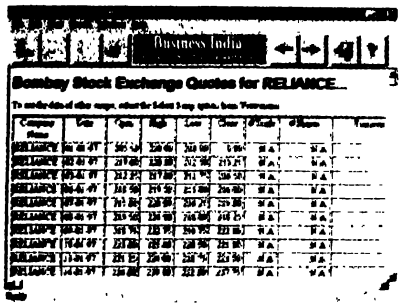
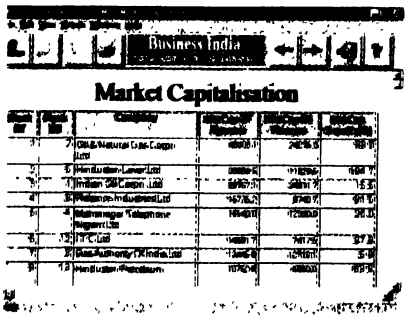
Managing your information

Four *years of* Business India* *on* CD-ROM



India's leading and most respected business magazine is now available as an even more powerful research and reference tool.

The Business India CD-ROM 1995–1998 incorporates a powerful and easy-to-use Search Engine which allows users instant access to India's most comprehensive business and corporate databases.



Article Search Powerful searches that get straight to the answer. When you need an answer, simply key in a word for instant results or choose 'Category' or 'Author' for more specific searches. Articles can be viewed with or without pictures and arranged by author, category, or month/year. They can be printed or saved on your hard disk or a floppy.

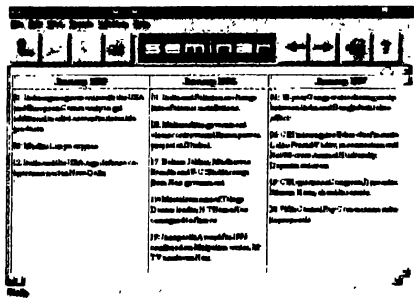
BUSINESSMAN OF THE YEAR
Complete selection of Business India's award winners from 1982 till 1998

BSE Stock Quotes Daily traded quotes of companies listed on the Bombay Stock Exchange for 1997 and 1998. Quotes can be accessed company-wise.

SUPER 100 Business India's most incisive analysis of the leading 100 companies is a separate module for easy and ready reference.

Business India and Seminar CD-ROMs are an indispensable tool for academics and libraries, researchers and corporate analysts, advertising and public relations agencies, trade organisations and embassies, companies and media houses — indeed anyone who needs business and political information on India.

* *Contact us for an attractive update offer. Valid for existing users only.*



ıeeds has never been so easy

Eleven *years of* SEMINAR* *on* CD-ROM

For over 40 years, SEMINAR has set the nation's agenda, debating national and international issues, month after month. Now available in an electronic edition covering 11 years, from 1988 till 1998.

The SEMINAR CD-ROM is an extremely efficient and effective research tool, enabling users to rapidly locate and access information. All data is retrievable by any choice or selection, depending on the user's preference. And the presentation of individual articles has been designed specifically for convenience of screen viewing.

Over 2,000 articles that can be easily searched by theme, author, keyword, or simply by month/year. SEMINAR CD-ROM brings India's most exhaustive archive of political and social analysis and comment to your desktop. Articles can be printed or saved on your hard disk or a floppy.

Old wine in new bottle

As yet another government comes to power, will the nation's real problems be addressed?

Another government and another leader. By 6 October, the counting will begin. A few days after that, the trends will become a reality and a new government will emerge. It will be a coalition – a BJP-led coalition or a Congress-led one. And the constituents of the coalition will jockey for power, fight for position, and hold the government to ransom. Routine matters will be inflated into major policy decisions and major policy matters will be converted into routine decisions as the give-and-take of political reality surfaces on the government in power. The coalition, whether led by an Indian or an Italian, will see a bumpy ride. By October 2000, the country's 500 million voters will be faced with another election as yet another coalition falls under the pressures of its own contradictions.

That is the pessimistic view. The optimistic view is that poets will actually be asked to implement the visions of the India that was sold to the freedom fighters before 1947. An India where poverty is eradicated and its people armed with education and opportunities. That the government will invest its time and money in rural India and encourage others to do so, too. And the money so invested will reach where it was supposed to and not get lost into the "dreary desert, sands of dead habit". Contrary to popular belief, the language of implementation of a benevolent policy or the nationality of the leaders who crafted it have little effect on the success of such a do-good-for-India project. A good policy is good, irrespective of who writes it or who implements it, how the policy is corrupted along the way and to what extent matters more.

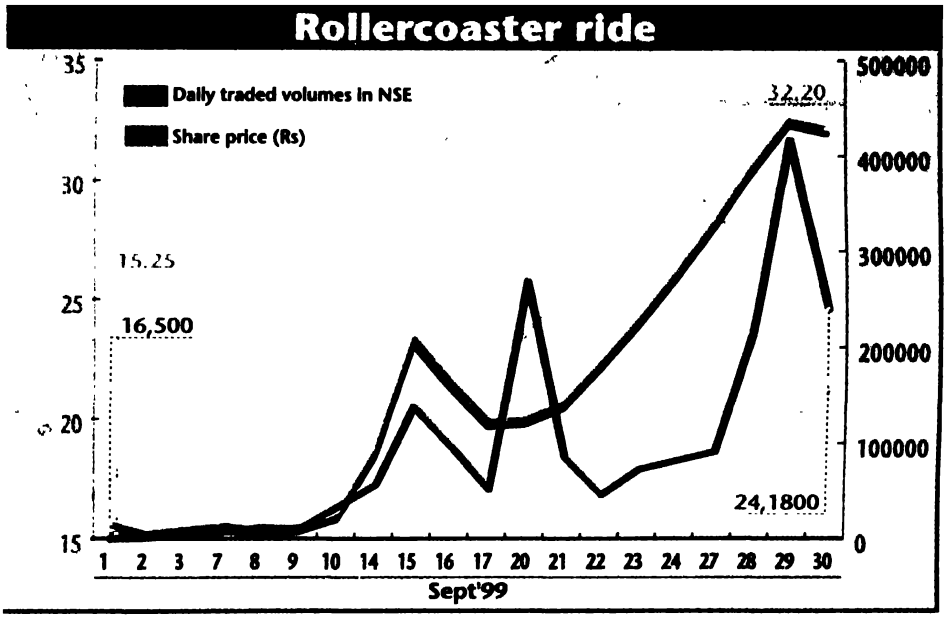
Take taxation. Conceptually, it is good. The government collects money from the transaction of goods and services and then uses the money collected to invest in education, benefits for the poor, defence, and to pay the bills for running a government. It was created by the British. But then we, along with other nations of the world, got carried away by the concept of taxation and took it to its illogical depths and discouraged the creation of wealth. If no wealth was created, how could the government ever have any money to redistribute it? Furthermore, if the government went haywire in its own expenditure with a bloated bureaucracy, how would it ever have any money left to do the things it was supposed to do – help the economically disadvantaged? The destroyers of the Indian wealth creation machine were not the British, but we Indians.

Or take the population control programme. When Sanjay Gandhi and Indira Gandhi made it the focus of their *garibi hatao* programme, they took a good policy (control population) and ruined it by using frightening methods. What is scary is that not a single political party since the Emergency has had the courage to state that the growth in population is the country's number one enemy. Yes, the Gandhi family had Indian passports but even the politicians since then, who have perpetrated the crime on the country by not encouraging population control, have Indian passports. A bad policy costs the country dear and, many times, inaction dooms the country onto a costly path.

For most Indians, who are not connected to the Internet or to the phone lines and power lines in this country, the luxury of time is fast running out. Their problems need to be addressed quickly

But these are all things that have gone wrong in the past. As we sit in front of the TV and watch the new government taking shape, our hope is that policies on population control, land reforms, education, and taxation are at the forefront of decision-making. There are too many Indias within our India and some of us can wait to seek remedies of wrongs done or things lacking in our lifestyles. But for most Indians, who are not connected to the Internet or to the phone lines and power lines in this country, the luxury of time is fast running out. Their problems need to be addressed quickly. The founders of this nation had a vision for rural India. That vision did not talk about religion or nationality: it spoke of dignity and equal opportunity. May the next government have a higher agenda. •

Swift moves



Ind-Swift Labs is making rapid strides on the stockexchanges. Is the rise for real?

Its stock seems to be pumped with steroids. Ind-Swift Laboratories (ISL), of late, has been hitting the upward circuit breakers with rumours of the company being taken over or a strategic investor is desperately seeking an entry into this lesser known company.

ISL is part of the Rs107-crore Chandigarh-based Ind-Swift group, which has four companies under its banner. Two of these — India Swift Ltd and India Swift Labs — are listed on the bourses. While the flagship company, Ind-Swift Ltd, is listed on the Bombay Stock Exchange (BSE), Ind-Swift Labs is traded on the National Stock Exchange (NSE). These counters have witnessed active trading and are currently changing hands at Rs60 and Rs32 respectively. The latter, in the last three days of September 1999 alone, attracted daily average volumes of over two lakh shares. And its share price over the month on the NSE has galloped by over 100 per cent to close at Rs32.20.

Ind-Swift Labs manufactures intermediates and bulk drugs and at present its emphasis is on rolling out macrolide antibiotics. The company recently launched Omeprazole and Lansoprazole. Its plant in Punjab adheres to the GMP and USFDA specifications in order to facilitate quicker clearance in future. While the company sells its bulk drugs to the top rung Indian pharma companies, to take care of the exports it has appointed agents in over 30 countries. The major competition comes from Alembic Chemicals for the macrolide antibiotics. The other competitors are Abbot Laboratories, Hoechst Marion Roussel and Kopran.

What has attracted marketmen to this counter? The news is that one of the northern India based pharmaceutical giant which has also been its consumer has put the company under the microscope. While the deal has yet to be sealed, according to another grapevine, the group is looking at merging the two listed companies. Although, V.K. Mehta, the joint managing director of ISL, would like to be silent on these issues, there can't be smoke without fire.

The lure

But there is more to entice marketmen towards the counter. For one, ISL is the only company in the world (apart from the innovator) to have developed clarithromycin granules which goes off patent in 2007. Again it is the first to develop roxithromycin granules besides azithromycin granules and clarithromycin dispersible in the dosage form.

As it happens, ISL is one of the lesser known companies in the Indian pharmaceutical industry whose core strength lies in macrolide antibiotics business which the company has developed within a period of only two years. The product range includes erythromycin stearate, roxithromycin, clarithromycin and azithromycin. "We have recently launched omeprazole which will be followed by lansoprazole during the current year," adds Mehta.

The company opened its doors to the investing public in 1997 with a Rs5.70 crore equity issue at a premium of Rs5. The issue was oversubscribed by 1.5 times. Currently, the company manufactures intermediates for captive consumption and bulk drugs for bigwig pharma companies like Ranbaxy, Cipla, Cadila, and Lupin. In fact, since ISL's plant is built as per the USFDA, the company has also emerged as a supplier of bulk drugs to formulation companies in more than 30 countries. "Within a span of two years, almost 40 per cent of our sales come from exports," says Mehta.

A strict analysis of ISL's results shows that for the year ended March 1999, while the income has risen from Rs27 crore to Rs46.89 crore, the net profit has pole-vaulted from a mere Rs1 lakh to Rs1.23 crore causing the EPS to rise from one paise to Rs1.28. Again for the first quarter of the current year income and net profit continue to show a rising trend moving to Rs14.23 crore and Rs75 lakh respectively. "For the full year ISL should end up with a sales in excess of Rs75 crore," states Mehta.

• LANCELOT JOSEPH

HUGHES SOFTWARE

Huge potential

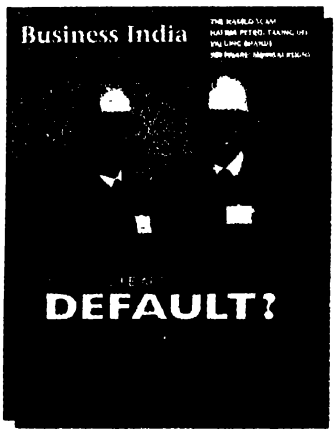
Who says that the primary market is dead? The response that the software offerings are receiving only shows the investing public's bullishness on the sector. The recent blockbusters have been Polaris and Kale Consultants. But there are offerings from the financial sector that are also getting a good response. What it basically points out is that if somebody has a good stock to offer there are takers. Take the case of Hughes Software Systems which is coming out with its IPO. Its book building process (for 90 per cent of the offer) has managed to fetch the top end of the band of Rs630 per share raking in Rs6,000 crore. The balance 10 per cent of the public offer will be open for subscription in the first week of this month.

The HSS equity is being held by Hughes Network Systems (Mauritius route) and Hughes Network Systems India Inc, US. Together, they hold 76.2 per cent. This holding would come down to about 56 per cent post equity offering.

HSS is engaged in developing communications software and caters to communication equipment manufacturers, system integrators and service providers. With the explosion in Internet usage and e-commerce, the applications for multimedia and increased transmission of data and video communications, has thrown up immense potential for communication software products and services. Being in the field since the early 1990s, the company has developed excellent delivery model.

Since inception, HSS used to develop such software exclusively for its parent. However, the company changed tack by developing software for other companies too. Today, a fourth of its revenues come from outside clients and the promoters expect this percentage to increase over the next couple of years.

There are a handful of companies that have demonstrated their ability to develop and sustain high quality products used in the communications industry. Since HSS is an Hughes group affiliate, it enjoys excellent brand image, which should be leveraged to increase its client's list.



Of the total revenue of Rs85 crore during the 15-month period to March 1999, about Rs8.5 crore comes from sale of products. According to an analyst with KR Choksey, the product segment of business is expected to grow "exponentially" and its contribution to total revenue would be about a third in a couple of years. Some of the products developed by the company are ProtoQuickTM, MultiQuickTM, SwiftBillTM and AAPEIM. Because of the large investment in R&D amounting to Rs8.5 crore, the product business is not yet profitable, but a large part of the profits would come from this segment. Here a prudent accounting practice has been adopted by writing off the entire R&D expenditure in one year.

Belonging to the category of companies that are dependent on intellectual capital, the staff strength assumes significance. HSS employs about 750 engineers and the number is expected to double within a year.

Performance-wise, for the 15-month period to March 1999, HSS sales jumped from Rs41 crore to Rs85.6 crore — an annualised jump of about 67 per cent. Post-tax profit increased from Rs10.35 crore to Rs18.9 crore — a 46 per cent increase on an annualised basis. However, margins have dipped largely because of the R&D expenditure. The earning per share on an equity of Rs6.3 crore works out to about Rs24 on an annualised basis.

According to an analyst quoted earlier, HSS has developed excellent skills in product development. Only a few companies have demonstrated their skills in product development and the investors have begun giving them substantial weightage as can be seen from their price/earning multiples. Looking at the past year's performance, the price fixed for the public offering at Rs630 per share translates into a price/earning multiple of 56 times (annualised) on post-equity capital. This is much lower when compared to several of the infotech companies' stocks which are quoting at a price/earning multiple of around 100 times. Taking into account the track record of Hughes Software and the potential that exists in its line of business, the offer is clearly irresistible. •

VERYTHING under the IT sun

@

IT WORLD '99
COMDEX INDIA

THE NATIONAL IT SHOW

December 8-11 1999 • Pragati Maidan New Delhi India

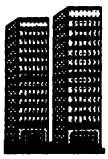
LAST YEAR

Over 178 exhibitors
Over 8,500 sq. metres
Over 70,000 attendees

THIS YEAR

Promises to be

BIGGER, BROADER & BETTER.



THE NATIONAL IT SHOW - STILL THE LARGEST

THE HIGHLIGHTS

The Exhibit Floor has Special Technology Pavilions :

IT for Dalal Street : focuses on the core issues of the financial services industry - Banking, Securities and Insurance

Infrastructure for IT : brings together key players to leverage existing and proposed infrastructure initiative to lay the foundation for India to become an IT Superpower

The Internet : ISPs, e-Business Solution Providers, Web enabled Enterprise Solutions, Value Added Services and lots more

Country Pavilions : Internatfonal participation and global reach

The unique Match Making Programme : endeavours to create synergies within the Indian software market and distribution channels. The Programme will also bring together investors and technology start-ups. It consists of :

- **The India Software Forum**
- **The Channel Partner Programme**
- **The Investor Forum**

THE WEB SPOT

The Web Spot : A special area for Web designers to showcase their expertise. For Rs. 10,000 only, it's an opportunity to get their own space, meet over 80,000 business prospects and gain large returns for little money

The Conference Programme : Conceived by an Advisory Committee comprising leading IT experts, the Conference will deliver strategic insights and solutions that focus on urgent needs of Business. Acting as a compass it will point in the right direction to leverage technology for improved performance

Attendee Marketing Programme : A large, quality attendance is ensured through Direct Mailers, Show Previews, Personal Invitations, Public Relations, Audio-Visual Presentations and Web Advertising

Event Marketing Programme : To optimise your investment, the Show offers tools like Web Advertising, Hoardings & Banners, Sponsorships & Special Products, Direct Mailers and Publications

Universal Serial Bus (USB) Pavilion : is the solution for any PC user wishing for an instant, hassle-free way to connect a new digital joy-stick, a scanner, a set of digital speakers,a digital camera or a PC telephone to a computer. It encompasses products like cables, connectors, semi-conductors, utilities: a one-size-fits-all plug and socket connection

Go, gilt it

Government securities have become the flavour of the season as mutual funds look for safer investment offers

The Indian financial markets are no different from those elsewhere, they too are driven by the herd instinct. Consider the mutual funds industry. The early 1990s saw practically every financial player, from a brokerage outfit to a commercial bank, getting into the mutual funds business. The equity market was in a boom phase with the onset of liberalisation.

But the euphoria was short-lived. The stockmarket plummeted and interest rates started hardening. Equity lost its sheen. Having burnt their fingers pretty badly, the mutual fund party-hoppers shifted to debts and bonds. The focus shifted from growth to steady returns. But, alas, this too met the same fate. All efforts by the Reserve Bank of India, the National Stock Exchange, *et al* to widen, deepen and create a vibrant debt market proved futile. Most fund managers are still stuck with the papers they picked up and any appreciation (or for that matter even depreciation) continues to remain in their books.

But the mutual fund breed is a feisty lot that does not easily call it quits. Their new theme? A steady return which is also safe and assured. And what could be safer than sovereign paper? Witness now the hordes that are jumping into gilts. It is not that the markets have just discovered a new maxim. Can Bank Mutual Fund had launched it way back in 1993-94. But the market did not lap it up. For one, it was launched ahead of its time. That was the era when interest rates on the government borrowing programme were driven not by the market but by the RBI. Secondly, it was not a dedicated gilts fund. The credit for reviving this goes to Kotak Mahindra Mutual Fund, which launched the first gilt scheme in December 1998.

After an initial wait-and-watch period of two-three months, practically every mutual fund has been announcing a gilt fund. It was obvious they could not deny the fact that money was gushing into Kotak's gilt fund. Its two open-ended schemes, K-Gilt Savings and K-Gilt Investment plan, mopped up Rs90 crore in the IPO. And nine months later, the corpus has zoomed to over Rs375 crore.

Last June, Canadian Dundee Mutual Fund launched its Sovereign Trust closely followed by Templeton's Government Securities Fund. Tata Mutual Fund, Prudential ICICI and UTI also launched their schemes in the subsequent months. The gilt fund as an investment concept is just a nine-month phenomenon but one that has already mopped up over Rs1,000 crore. And that is not all — a host of mutual funds are lining up to launch their gilt funds. By the looks of it, the gilts market seems set to grow only one way — northwards *(see table)*.

Says Kotak Mutual Fund CEO Chandrashekhar Sathe, "The market for gilt funds is huge. Its growth is dependent on two factors: the growth of banks' aggregate deposits and the government's borrowing programme. Both, we reckon, will continue to grow." According to Sathe's calculations, bank deposits are estimated to double in the next five years from the present Rs7,40,000 crore and the share of the mutual fund business is in the region of 5-10 per cent. Of this, a substantial allocation will be to gilt funds. There are plenty of reasons why this is likely. For one, the RBI has made it easier for gilt funds to invest in government stocks and it also extends line of credit to them. (RBI has undertaken to purchase up to 20 per cent of the total investment of the fund in government securities at any time,

The gilt rush

K Gilt (Investment)	Kotak Mahindra	21-Dec-98	10.89	17-Sep-99	354.50

* the corpus is for both options investment and Treasury plan Net Assets is as of 25 Sept., 1999 Source: Credence

thereby ensuring that the fund never experiences a liquidity crunch.)

Second, the last few years have seen a steady narrowing of the gap between the returns on corporate and government paper. The gap, which was as high as 400-500 basis points (1bps =1/100th of 1 per cent) for AAA-rated paper about three years ago, has now shrunk to around 100 bps, which makes it unattractive considering the credit risk involved. The third reason has to do with fiscal incentives. The Centre has made dividends tax-free for investors, while the fund has to pay a withholding tax of only 11 per cent. Which means a corporate or a bank investing directly in a paper may have to cough up 38.5 per cent tax (depending on the tax slab). But the income from a gilt fund is tax-free. Besides, gilt funds also have other tax incentives under section 80(L), section 54 (EA) and section 54 (EB).

Sathe is bullish on the gilt funds market

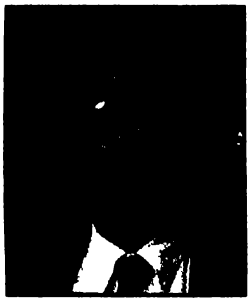
Swings in NAV

	K Gilt investment	Prudential ICICI Gilt Treasury	Templeton on Gilt Fund (G)	[illegible] on Gilt Fund (D)	Prudential ICICI Gilt Investment	K Gilt savings
27-Sep	10.94	10.13	10.37	NA	10.12	10.81
20-Sep	10.92	10.10	10.34	10.03	10.10	10.79
23-Aug	10.86	10.04	10.29	10.27	10.04	10.72
27-Aug	10.87	10.05	10.30	10.27	10.04	10.73
09-Aug	10.84	10.00	10.28	10.25	10.00	10.70
26-Mar	10.31	0.00	0.00	0.00	0.00	10.28

So far it looks good. We all agree that there is no credit risk involved in gilt funds as they invest only in sovereign paper. But what about interest rate risks? Also, even if they are dedicated gilt funds and invest only in government securities, then why does the NAV of one fund differ from the other? (*see table*). Is it meant for the small investors?

Kotak's Sathe insists that it is meant for the small investor and points out that it is far safer and offers better yields than investing in a bank deposit. Says Sathe, "Unlike in the past, banks frequently change their interest rates on deposits and a depositor cannot take benefit from this as there is a penal interest involved if a deposit is broken before maturity. But gilt funds being open-ended schemes, an investor can enter and exit at will." Also, if interest rates go down, the value of the paper should move up. But that does not happen in the case of bank deposits. Therefore, considering the liquidity and opportunity costs, gilt funds are superior to bank products, he adds.

However, Ashutosh Bishnoi, president and chief executive of JM Capital Management, cautions that although gilts do not have credit risk, interest rates can be quite volatile and the returns may not always be positive. He stresses that the product is meant for big-ticket investors like corporates, banks and provident funds as they also benefit from tax arbitrage. Says Bishnoi, "Interest rates can be quite volatile as was seen during the Kargil episode." An investor must first understand the nuances of his investment, that interest rate movements are directly linked to several factors driving the economy. They are linked to government borrowing and expenditure, fiscal discipline, exchange rate movements and also the RBI's monetary policies. Unfortunately, the average small investor is not equipped to understand this. In fact, the differences in the NAVs of various funds are a pointer to the element of interest rate risks, Bishnoi explains.



Besides, there seems to be a risk in the NAVs also. There is lack of transparency and uniform methodology in the calculation of the NAVs. If it is to be the parameter of investment, then that does not spell much for safety either. This also means that it is not just the instrument that the investor has to track but also the experience and track record of the fund manager as it requires investment as well as bank's treasury expertise.

"But an investor staying in the fund till the maturity of the paper cannot lose as government paper is always redeemed at face value," defends Kotak's Sathe. Adds Dileep Madgavkar, chief investment officer at Prudential ICICI AMC, "The investment has to be with a specific time horizon. Investing for the short term in a long-term instrument could result in a loss. It is a loss not just for the investor but also for others; if a big investor moves out, the entire fund can get affected."

Having a skewed high-net worth investor base is yet another risk for a gilt fund. Market players point out the case of UTI-Gilt which has a corpus of Rs212 crore, where it is believed that around Rs200 crore is invested by just three banks. Imagine the fate of the fund even if one of the banks withdraws from the fund. Therefore, a wide investor base is crucial. Hence, keeping this retail aspect, Kotak has launched the K-Gilt serial plan where the investor has a choice of 10 maturity options from K-Gilt 2001 to K-Gilt 2019 with a gap of two years, informs Sathe. Each plan will invest predominantly in those gilts maturing during the two years immediately preceding the maturity date of the plan. "The investor can use this as a pension plan as well and spread his investments over the next 20 years," Sathe adds.

Some funds like JM Mutual have even started a media education campaign highlighting the risks involved in the gilt funds game. Investment in equity and bond funds have not fetched any pot of gold, the returns came with a risk. Gilt funds looks a little less risky but nevertheless are not risk-free either. Therefore, the *mantra* for investing in them is the same — tread with caution.

Old media, new media

It's impossible not to take notice of great stories, whether they are told around a Neolithic campfire or in the cathode-ray glow of the digital hearth

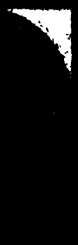
When the Schumpeterian gales of fury and destruction have cleansed out the outmoded old and ushered in the nascent new, the competitive landscape might surprise even the most visionary media mogul. The footloose footprints of the Internet have desultorily and digitally dotted every conceivable business model (the oldest profession might also have to combat virtual brothels). Can the media industry, broadly defined, be an exception owing to its historical habit of adapting to new technologies? The media family tree has deep roots – scribes, Guthenberg's printing press, newspapers, radio, motion pictures, television, and home video – and every new evolution has un-Darwinlike abetted the older species not only to survive but also to prosper.

Viewed cursorily the Net looks like another distribution tentacle of the media octopus. Shopping at Amazon.com surely helps broaden the demand for books just as online music retailers find a hitherto invisible demand for many titles. The Net will cannibalise on some of the juicer morsels of the traditional media, enervating their economics. The Internet has been a decimatory débutante in old media social circles with its all-free allure. Traditional local newspapers will find with the growing Internet cult that their bullet-proof franchises and the sustenance of their economic existence – classified advertisements – will not provide the same succulence — the margins of on-line newspapers will not be as attractive even while their geographical scope will have widened and distribution cheapened and simplified.

Publishing empires, like the aristocratic titles of the nobility of the past, will become less influential in the future. The ensemble of special skills once performed by publishing company employees – line editors, designers, publicists – will be found on a cheaper (even unpaid) and freelance basis on the Net. Though it is impractical to have a distribution mechanism for books over the Net, this may not be the case in the future. The Internet has become a free publicity mechanism – copious passages can be freely copied and circulated on the Net – creating a network of readers that will underpin the demand for the physical printed version. Expect publishers to have lower negotiating clout with the attendant damage to their profit margins.

Advertisement agencies, confronted with the birth of another medium of patronage, will come to realise that consumer brands will be bifurcated — some will be commoditised, while others will be immeasurably enhanced. In either case the balance of power is likely to shift from FMCG players to retailers who can make the shopping experience invigorating — as something to have fun doing rather than something to buy.

Even with increasing globalisation, regional and local entertainment businesses will flourish. A large part of the programming in every country will have its own cultural and ethnic bias. Even emerging economies will witness the rapid penetration of home entertainment technology and delivery systems (cable, DVD, computers) — and more importantly for investors, this will be largely independent of the overall macroeconomic growth rates. Media companies will have to forge local alliances — India's stockmarkets have correctly acknowledged that trend by the dramatic re-rating of some home-grown players.



As Michael Wolf concludes in his book *The Entertainment Economy*: "The great wild card in the entertainment economy is the creative element. There is no spreadsheet that can fully predict [consumer preferences]. I believe successful companies will be the ones that create talent-friendly environments. Ultimately, it's really not about corporate behemoths, mergers, or finances, or the box on top of the TV set. It's about stories that move us, characters we can root for, ideas that transform the cultural landscape, special effects that take us to a world we've never seen before, situations and lines that make us laugh, and ideas that are so universal, they forever change the way we live. In the hi-tech entertainment economy the old-fashioned, low-tech motivator of change and innovation still reigns supreme: The most valued commodity is the human imagination. Humanity makes it impossible not to take notice of great stories, whether they are told around a Neolithic campfire or in the cathode-ray glow of the digital hearth. It all starts with a well-told "Once upon a time...". •

Net those deals

Although it may seem unimaginable today, over the long term the Internet poses a threat to the very existence of stock exchanges

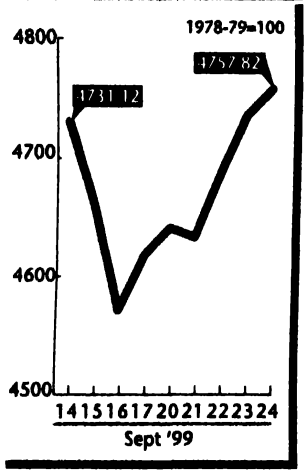
Electronic trade in the US has started after-market trade. This is an encouraging response to action in the market hours. Such trades can take place through the Internet without the involvement of stock exchanges as such. In response, both the NYSE and NASDAQ plan to extend their trading hours.

Stock exchanges came into being to enable buyers and sellers to come together and transact business. In the case of the present-day stockmarket, the number of buyers and sellers is very large and there is always a risk of default. Keeping this in mind, only recognised stockbrokers, who are certified members of the exchanges, have been allowed to carry on transactions. The exchange controls their trading operations, ensures they have significant financial backing/net worth and provides recourse in case of default. Such intermediation and overseeing by exchanges obviously involves a cost. The Net allows buyers and sellers to meet in cyberspace without physically moving from their offices or homes.

In the age of Internet trading, barriers of capital cost and financial backing will wither away. Don't get startled when I say that capital adequacy may not remain a barrier. I am imagining a situation where all trade happens in a dematerialised form and all banking is electronic. Therefore, when seller A sells to buyer B, there is instantaneous transfer of shares and money from one account to another. As transactions take place simultaneously, there would be no need for capital adequacy to facilitate trade. In other words, if I want to buy 100 shares worth Rs1,000, there has to be a balance of Rs1,000 in my account and if I want to sell a certain number of shares, they have to be there in my demat account before I can execute the transaction. In an electronic world, it will not be difficult to track such information regarding registered users.

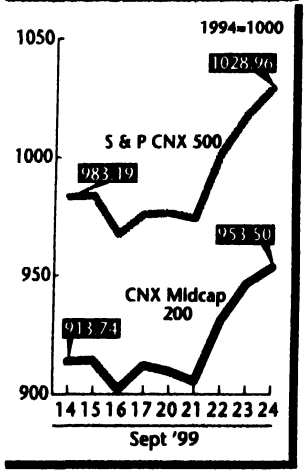
As we are so used to the physical world, apprehensions regarding fraud, problems in the back office, etc, are natural. But electronic trade does away with the back office and the possibility of fraud as we know it today. But there will be electronic fraud which will require a different kind of security system. No system can be foolproof, but at least the system will allow easy tracking of transactions. This will be something like the auctions on e-bay site where buyers and sellers match their bids and offers and strike deals.

Theoretically, hundreds of websites will facilitate buying and selling where buyers and sellers match their bids without the need for an exchange. However, in practical terms, some of the sites will emerge as leading markets for exchanges due to volumes and liquidity.



The question that arises is, will the government, the regulators and the state allow it? I cannot imagine how they can stop it. But it will take them some time to understand that free trade and the most efficient way of conducting it cannot be put off for long.

This obviously is more likely to happen first in the developed US market. Most people will laugh if I say it can happen in India too. However it will happen not because of our 'progressive' or 'forward-looking' regulators or banks or financial markets, but rather because of technology. If I can draw an analogy, 10 years ago nobody could have imagined that STD facility would be available in most villages in the country. This has happened without any significant effort on the part of the government, primarily because of technology driving the cost of hardware down and making it feasible to expand rapidly.



Even in our stockmarkets we have seen how the trading system has evolved from trading ring to BOLT. Competition from NSE led to the extension of trading to a number of cities and terminals, and people started trading on stock exchanges from wherever they could put up the BOLT screen. This will take 10, maybe 20 years, but we are entering into an era of excitement, an evolution of system in a manner which has been unthinkable till now. In the Indian context there are reasons to be pessimistic. A number of steps taken by regulators are regressive. For instance, off-market trades were recently discontinued. Many a time, regulators in India (may be in several other countries too) forced certain regulations to make their life simple or sometimes apparently to correct a small problem. Inadvertently they might create inefficiencies, which might cost much more in the long term. The corollary of this development would be that commission rates would go down. Technology will force everyone to become more efficient (they can delay but they cannot deny). •

HOCL	-	Secured Deb/ 13.50	20	3

Snapshot

The debt market continued to be subdued on account of tight liquidity conditions in the money market. Outflows on account of bond issuance caused call to rule high during the early part of the fortnight. Call rates spurted over 12% levels as players sought funds even after accessing refinance. There was no issue of dated securities. TB auctions witnessed devolvements as RBI kept the cut-off yields steady. There was a hike in the 364D TB cut-off yield. Secondary volumes were low earlier but improved towards the end of the period as market sentiment improved following lower call rates. Forthcoming redemptions and a fall in call rates resulted in a bullish undertone. The corporate debt market also witnessed low activity. The market is expected to be firm during the period.

NOTES

1. Shortlisted schemes are those with common investment objectives and an NAV history of at least one year.
2. Scheme returns are adjusted for dividend, rights and bonus payouts.
3. Price-based returns are fairer indicators and consider "real" entry/ exit facilities. These are based on market-price (including entry and exit brokerage cost), and/or/resale/repurchase price offered by the funds.
4. Risk grades: I - Least downward risk (relative to other schemes), V - Most downward risk. Downward risk measures how often, and to what extent, NAV declines on a month-to-month basis.
   Grades are based on relative downward riskiness of scheme within its peer group.
5. Scheme Peer Group returns are median returns on all short-listed schemes.

COMMENTS

The shortlisted growth schemes have marginally under-performed the benchmark, the broad based S & P CNX 500 Index. The annual median return of these growth schemes is positive 58.06% versus positive 59.24% of S & P CNX 500 Index. The present rallies in the market have been broad-based. During the selected period S & P CNX 500 Index has marginally out-performed the premier index BSE Sensex. THe expectations of an impending turnaround in the economy have caught the investor's attention on small and medium cap stocks too. Of the shortlisted 66 schemes, 49% of the schemes have out-performed all the benchmark indices.

The investment performance, however is not uniform across the schemes with top 4 schemes generating an annual return of over 125%, while the bottom 3 schemes managed to return less than 10%. With the Indian economy on a recovery path, cyclical and commodity stocks have appreciated remarkably with Infotech sector out-performung the other segments of the economy by a large measure.

Compared to last mutual fund ranking (as on August 6th, 1999) on growth schemes, Alliance Equity Fund from Alliance Capital MF, Magnum Multiplier Plus from SBI MF have been added to the top 10 rank while DSP -ML Equity Fund from DSP Merrill Lynch MF has dropped out of the list.

PRAJAKTA

The lost wasp

The sale of Piaggio gets Italy emotional

If Piaggio was in the news in India for the launch of its Apé range of three-wheelers, it hit the headlines in its home country for quite another reason. The proposed sale of Piaggio Veicoli Europei SpA to an American investment company, Texas Pacific Group, has brought patriotic tears to the Italians' eyes. Recently several well-known Italian brands like Gucci, Perugina, and Martini have all been acquired by foreign companies. When Telecom Italia was threatened with a takeover by British Telecom, the nation heaved a sigh of relief when it finally passed into the hands of another home-grown company, Olivetti. The *swadeshi* Piaggio's passing into *videshi* hands has led to outrage among the locals. The Italians, you see, have always had a soft corner in their romantic hearts for the Vespa.

The promiscuous Vespa is about to dart into foreign hands

Launched in 1946, a silver model with a rounded shape, it symbolised hope amidst the ruins of World War II. The scooter rolled out of a wartime airplane factory, was designed and made completely indigeneously from spare airplane parts, and brought a whiff of optimism in the air. *The Times* of London described it as "a completely Italian product such as we have not seen since the Roman chariot". Its name, Italian for wasp, was because of its shape and the buzzing sound it made when its engine was revved up. The Italians, of course, have another explanation. "Wasps are promiscuous creatures which dart here and there. Likewise, the ragazzi (youth) loved to zip around on their Vespas with *bella signorina* (beautiful girls) perched at the back, a different girl each time," they tell you with a laugh.

Literary critic Umberto Eco writes of this snazzy little scooter being the icon of desire, symbolising "exciting sin" and "subtle seduction of faraway seas". When Audrey Hepburn took a ride with Gregory Peck in *Romantic Holiday* (1953), the Vespa became a legend. In Italy, like in India, mothers nag their grown-up daughters to make correct marriages. Elopement was not always possible since the bicycle was the chief vehicle of conveyance. A pretty Hepburn clinging on to a penniless reporter, Gregory Peck, with the speedier Vespa as an accomplice, translated the dreams of the youth into a reality.

Piaggio has a 32 per cent share of the scooter market in Europe and a dominant 39 per cent in Italy. It failed to make inroads in the US because of pollution concerns, which have now been addressed in a newer model with a low-emission engine. In 1997 the company made a net loss of 51 billion lire on sales of 1.85 trillion lire. With cost-cutting and restructuring the company bounced back to health last year with profit of 10 billion lire. Why on earth a profitable company should be sold is the common refrain.

Piaggio's problem, however, is the bane of several small and medium-sized family-owned companies. Their complicated family holdings make it difficult for the company to raise equity in the market, thus thwarting growth in a global economy. Its largest shareholder, Antonella Bechi Piaggio, died in April this year. But even earlier in 1997, on the sudden death of her heir, Giovanni Alberto Agnelli, 33 years, who was slated to be the Chairman of Fiat and was chairman of Piaggio, the company had been looking for a buyer.

Texas Pacific Group is a US investment company controlled by the financier David Bonderman. This is not the group's first acquisition in the two-wheeler market. In 1996 it bought out Ducati Motor Holding SpA in partnership with Deutsche Asset Management. The American company is expected to pay 1.3 trillion lire for the Italian scooter-maker. It has gone to great lengths to explain that the brand, technology, and management will remain Italian. Analysts expect it to take Piaggio public, the way it did with Ducati.

While the general public vehemently oppose the sale of Vespa, one section of the Italian corporate world points out that this is an inevitable fallout of globalisation. Recently, the well-known Ray-Ban sunglasses, an American brand, was bought out by Belluno-based Luxottica. Benetton and the Fiat group have also been acquiring US companies to grow in their core businesses. These acquisitions have been heralded in the media with much fanfare. Presently, however, the nation laments the loss of its *cosa nostra* (our thing) — the Vespa.

• MEERA SHENOY in Italy

The UK's biggest Internet service provider, Freeserve's first results have failed to reassure the market even though they were largely expected. A pre-tax loss of £8.8 million in combination with a debate over Internet valuations was disheartening news for the market and Freeserve's shares fell by 8 per cent. The dismal results have only cast a further pall of

free serve

gloom over the UK Internet market. CEO John Pluthero has placed the blame for the decline in share prices on technical factors. Current figures show that there are 1.4 million Freeserve users with a further 78,000 registering by September end. Despite its dismal showing the company is now all set to establish its high-speed Internet service using British Telecommunications' asymmetric digital subscriber line (ADSL) technology that will enable Freeserve users to have unlimited Net access as well dual use of their telephone line for a flat monthly fee.

• Japanese video game addicts have speculative times ahead as a result of the latest joint venture between Sega Enterprises and Nomura Securities. The JV is to allow owners of Sega's Dreamcast electronic consoles to trade stocks online. Japan's equity commissions have recently been fully liberalised and Nomura, the country's biggest broking firm, is setting the ball rolling in the online broking sector. Sega's plans will

NOMURA

intensify competition in the games industry. The service is the first instance of an online trading service being available through a videogame console. Sega reports that Japan has 1.4 million Dreamcast video games console users with 420,000 already in a position to access the Internet using the console. The company now expects to increase sales of the Dreamcast console after the launch of its online service. Sega also has a tie-up with Toyota which allows the carmaker's dealers to sell Dreamcast consoles with special access to Toyota's Internet page. The online services are expected to generate the bulk of Sega's revenues within five years.

• Microsoft intends to offer its popular desktop software for rent over the Internet, as early as the first quarter of the next year. The move is a response to a shift in the way the software industry sells its products right now. Many analysts see the future of computer software in the form of renting software over the Net instead of buying packaged software and running it on a personal computer. Previously reluctant to operate in this fashion, Microsoft's rival Sun Microsystems' plans to offer a competing range of software free on the Net have provided the impetus for this action. Analysts have long maintained that the market for software rented on the Net will expand rapidly. One estimate puts the demand at $11 billion by 2002, although some marketwatchers predict a figure twice its size.

• Mitsubishi Motors has been dealt a low blow by its European partner, Volvo Cars. This Ford subsidiary has rejected Mitsubishi's offer to continue building cars together in the Netherlands. Volvo Cars, which was acquired by Ford in April this year, has informed the Japanese carmaker that it would not be extending its shared manufacturing platform when it expires in 2004. Mitsubishi and Volvo own equal shares in a company called NedCar and the majority of Mitsubishi's passenger cars are produced at NedCar. Mitsubishi has been struggling to restructure itself amidst dismal Japanese car sales. NedCar, which built nearly 243,000 vehicles last year, also produces the Mitsubishi Carisma sedan on the same platform as the Volvo S40 and V40 models. Marketwatchers say it will need now to find a new partner, use its plant at half capacity, or buy out Volvo's 50 per cent stake. Mitsubishi already faces huge liabilities to the tune of $16.7 billion and now maybe forced to align with a foreign carmaker, a move the Japanese carmaker has resisted so far.

• Tyre and cable group Pirelli has launched a $2.3-billion bid for leading Italian property investment company Unim. The 'friendly' bid is being fronted by Pirelli's wholly-owned property investment subsidiary Milano Centrale. Unim, a newly established

company, comprises the extensive property assets of Rome-based insurance company INA. Pirelli officials also confirmed that the company intends to bid for other Italian property investments which include all the property assets of Italian oil group Eni. The bid for Unim, if successful, will make Pirelli Italy's leading property investment group. The tyre giant had started building up its property investment and services business early this decade with the redevelopment of an old industrial area in Milan, where its tyre company is headquarted.

• Amazon.com's share price jumped up 23 per cent last week when it revealed its new plans. The Internet bookseller intends to act a storefront for a variety of other online retailers. Amazon.com announced that it would make its site available to other online retailers for a certain fee and a percentage of their sales. The new service titled zShops is to enhance Amazon's current inventory by at least half a million new products. Amazon is to charge other online retailers 2–5 per cent of their sales and a monthly fee of $9.99, and the bookseller also intends generating fees by guaranteeing payments to merchants. The merchants using Amazon will also pay an additional 60¢ for every transaction and 4.75 per cent of the price of the product sold. •

WORD COUNT

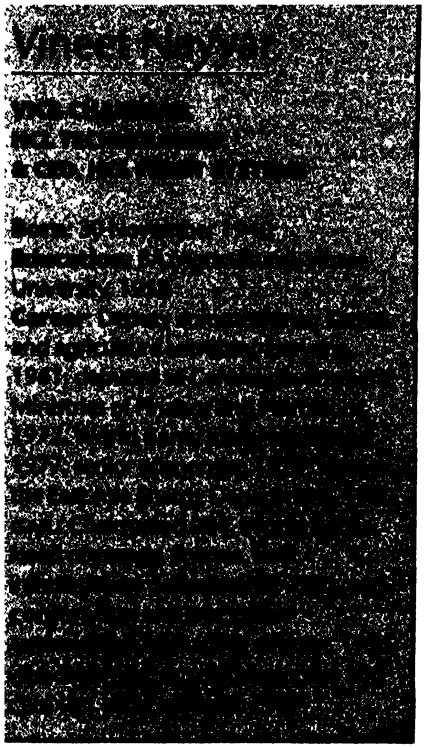
"It would be incredible if 1999 could be remembered not for the destruction of two countries – Kosovo and East Timor – but for rebuilding 50 of the poorest nations on earth."

BONO, lead singer of Irish band U2, on the cancellation of Third World debts by developed nations to mark the millennium, in NEWSWEEK

"It's too early to talk about oil."

Respected East Timorese economist JOÃO MARIANO DE SOUSA, about whether East Timor is likely to inherit the country's offshore oil and gas fields currently comanaged by Australia and Indonesia, in BUSINESSWEEK

"Mel seduced me. I was originally skeptical, but as I began to see the enormous fit of the assets of both companies, he began to turn me on. This guy is a master salesman."



SUMNER REDSTONE, Viacom's 76-year-old CEO, about how CBS chief Mel Karmazin talked him into merging Viacom with CBS, in FORTUNE

Meeting his targets

For someone who has spent the better part of his career in the public sector and who finds public policy the "biggest turn-on", the switch to the private sector should be a tough decision. But not for Vineet Nayyar. "I wanted to have no illusions left in life," says Nayyar, who joined the HCL group in 1995. At that time HCL had a number of small companies within the group like HCL Corporation (the holding company) and HCL Office Automation (which made computers). "We did a mid-course correction and synergised all these companies to come up with HCL Technologies. Group chairman Shiv Nadar saw the changing world and realised that the future in India was in the services sector. Moreover, there is also more money to be made here," he adds.

Today, as vice-chairman of HCL Technologies, Nayyar is the driving force behind the $230-million (the figure includes revenues from joint ventures HCL Perot Systems and Intelicent) company's multi-pronged activities like technology development, professional, and networking services. And as if all this weren't enough, Nayyar is already training his eyes on another fast-developing area in the technology development sector — embedded technology. "All machines are becoming smarter. For this they require embedded software. We have married our expertise in hardware with the desire to go into software. This is one area we are going to push," he says.

His enthusiasm is fast catching up with the rest of the staff as well. C.P. Gurnani, executive vice-president of HCL Perot Systems, says: "Vineet has a collaborative style of working. I have gone far in my personal development because of his participative style of management and the open way in which he shares his plans and visions."

Nayyar has a simple explanation for his clear thinking and precise goals: work on one target at a time. He says this is something he has done ever since he became district collector of Karnal after clearing his civil services examination. The district was considered the most backward in agriculture, but with a graduation in the subject Nayyar knew he could change things. He came up with one target: double the number of tubewells in the district. "Look at the state today. Ninety per cent of the surplus it produces is distributed to the rest of the country," says Nayyar.

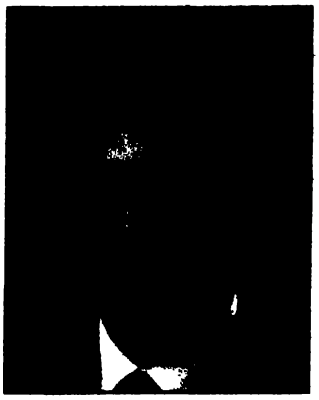
According to Nayyar, what has also helped him is the fact that he has been at the right place at the right time. When he came up with his revolutionary ideas in Haryana, the country was going through an agriculture crisis and when he was asked to move to the Centre in 1972 there was an oil crisis. "I knew nothing about oil and when the finance minister told me that I would be working in the field I thought he was talking about edible oil," says Nayyar with a laugh. But it didn't take him long to figure out that the minister was referring to crude oil, the prices of which were skyrocketing in the international market and it was Nayyar's task, along with the chairman of IndianOil, to negotiate with countries like Iran, Iraq, and Saudi Arabia.

This stint opened a number of more exciting opportunities for Nayyar, the most significant of which was at the World Bank. "The Bank was coming up with a department of oil and gas especially for economies like ours and they invited a senior economist from India," he says. Nayyar, who filled the post, first worked as a junior economist and eventually moved up to head the energy department for East Asia. "China had just opened its doors to the World Bank and the first energy mission was being sent to the country. I had 20 people in the group and it was something of a feat because it was headed by an Indian," he says.

Even though he was enjoying working on projects in the power, oil, and coal sectors in China and other areas in Asia, he came back to India when he got a call from the cabinet secretary. He was given three options, of which he

selected chairmanship of the Gas Authority of India because he found the task of working on the biggest public sector project of building the 2,000-km-long HBJ pipeline in 10 months "highly challenging". "This was the most fascinating experience of my career," says Nayyar who gave up his "highly-paying job" at the World Bank to return to India, against the advice of friends. "Everybody was sure that I could not complete the project in 10 months because it was not practically possible."

Well, he did complete the project, not in 10 months but 11 — not bad going. "There was a lot at stake with this project," he says. But he was so confident that he told prime minister Rajiv Gandhi that the pipeline would be ready before the fertiliser plants came up. "Everybody keeps talking about the efficiency of the private sector, but the only fertiliser plant that came up on time was the one by Fertiliser India."



According to Nayyar the public sector in India is highly efficient but lacks the right leadership. "There are isolated pockets of good management. But what is lacking is good leadership," he says. However, rather than add another pocket of efficiency to the Indian public system, he decided to move back to the World Bank in 1991. There he spent the next five years working on projects including reforms at the central banks of South Korea and the Philippines. "The effectiveness of working on such a large scale depends entirely on how seriously the other person takes you. In India, on the other hand, the sense of involvement is a lot more," says he.

It was this reason, coupled with personal reasons – his wife, also an IAS officer, had not accompanied him on his second stint at the World Bank and his three children had grown up – that prompted Nayyar to leave the World Bank and return to India to work with HCL. "My life has been a cross-section of experiences and I wanted to add the private sector to it to complete the picture," he says with a satisfied smile. As HCL Technologies readies itself for an IPO, Nayyar confronts a test of a different kind.

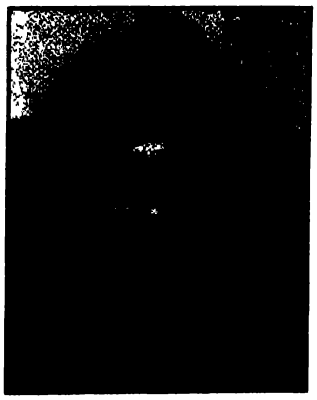
FRONTRUNNERS

An unlikely director



Three months into his assignment as director and country manager for the cables and components sector of Alcatel in India, 31-year-old Anil Mehndiratta still can't get over the way he was selected. Mehndiratta was one of 17 people interviewed by Alcatel and for the final interview he was sent to Paris, where he was grilled by 11 people over three days. "The worst three days of my life," he admits. His mandate: ensure that this division becomes as well known as the telecom division of Alcatel.

Mehndiratta is used to challenges like this one. An electrical engineer from Pune, he started his career at Grasim Industries as assistant instrument manager. After his MBA (in marketing from Indore), he worked on linking the company's offices all over the country. "Don't forget that that was a time when there was no e-mail or Internet," he says.

Mehndiratta left the company in 1993 for personal reasons. On a flight to Delhi, he was offered a job by the chairman of the Indore-based Ruchi group. His responsibility there was acquiring telecom licences for the group, whose strengths so far had been in soya and steel. From Ruchi to Qualcomm India, where Mehndiratta worked in business development and sales & marketing was a natural step. "When I did my engineering 10 years ago I never imagined that I would one day head a company," he says. "It's a great thing for a boy from a lower middle class background who grew up in the small town of Nagda." And perhaps it is because of this background that he ensures, when he travels across the globe, that he goes with his entire family — mother, wife, and five-year-old son. "That's the way I want it," he beams.

• PUNAM THAKUR

Made for marketing

Meet Sabina Saksena, the 34-year-old CEO of Taj Services Ltd (TSL) and Taj Trade and Transport Company Ltd (TTT). A national-level swimming champ in her school days, Saksena never tires of testing new waters. But there's one thing she wants constant — that she has a hard core marketing role, whatever the industry may be.

Saksena began her career as an executive assistant to Xerxes Desai of Titan, after a course in business management. She followed this up with stints at Lakmé, where she worked in the international marketing division, Tata Infotech, and Tata Industries. In January 1998 she took up her biggest challenge: as CEO of TSL and TTT she had to bring back business focus to the two firms. This involved getting rid of businesses that were not directly related to the parent's business, setting up an efficient retailing and marketing network, and building a good team. Despite dipping occupancy rates, the two firms together managed a turover of Rs45–50 crore this year compared to Rs40 crore before she took over.

On the anvil are an expansion of the Khazana boutiques, which are currently run only at 10 Taj properties. "We'll add two more this year and three more in the next two years," she says confidently. "I call these two firms Taj Plus. Worldwide, customers spend 50 per cent of their travel expenditure on services other than room and F&B." And where does she go from here? "The Tata group and I make a perfect fit," says the lady, who loves releasing her work-related tensions by spending time with her five-year-old daughter.

• SANGEETA MENON

Chip chaps

Changes are afoot at the Indian office of chipmaker Intel Corporation. Bangalore-based South Asia director Atul Vijaykar, who is in effect country manager here, is on the last lap of his present assignment. By early next year, when he completes his five-year stint, the well-regarded Vijaykar will be heading back to Intel's Santa Clara headquarters.

Vijaykar, 45, an alumnus of IIT Mumbai, has spent his entire career at Intel. He joined the finance department in 1980 after acquiring an MBA at the University of California,

Vijaykar: back to base

Berkeley. In the course of his various assignments he worked closely with Craig Barrett, Intel's current president and CEO, when the latter was running a manufacturing facility at Phoenix, Arizona.

To Vijaykar goes the credit of building the $30-billion corporation's franchise in India, or as he calls it, "playing the role of evangelist". Intel's developmental activities run the gamut from big-buck advertising to setting up cyberschools and introducing the hugely effective Genuine Intel Dealer scheme, all of which has added up to a 90 per cent market share. Up next is an engineering development centre and perhaps a data centre, both of which fit into Intel's vision of itself beyond microprocessors, as a supplier of building blocks for the Internet economy.

Vijaykar is passing the baton to Avtar Saini, another hardcore Intel man who has spent some 16 years with the company. Saini has already relocated to Bangalore from Folsom, near Sacramento, where he was general manager of the chipsets division.

Just-in-time service

We've all heard of placement services, right? Now there's a new service on the market: outplacement. "Basically, placement is about finding people for jobs. Outplacement, in its most simplistic definition, is finding jobs for people," says Sunit Mehra, senior partner, Horton India. Last month Horton set up a separate division – Omni Outplacement – for this. Mehra claims it is a first in the country, modelled on the lines of international outplacement firms like Drake Beam Morin.

The concept arrives not a day too soon, considering the downsizing trend sweeping through certain industries. Executives handed the pink slip are left to fend for themselves. Now they, or their company, can tap an outplacement firm. Omni's services are not hugely expensive. The firm charges Rs15,000 for building the personal profile of the candidate. "We work in the interest of the candidate," explains Mehra. "Our attempt is to package an individual's capabilities and skills into a highly marketable format." This runs the gamut from preparing a résumé to helping improve interview skills. Once the job comes through, the standard fee of two months' salary shared equally between the prospective employer and candidate kicks in.

Express exit

The churning at the new-look Vivek-Goenka-owned Indian Express group continues. Ever since K. Digvijay Singh, formerly of Hindustan Lever and Zee, took over as CEO, changes have been afoot as old turfs get demolished and new power equations build up. The latest man to bow out is Santosh Goenka, Vivek's cousin. Santosh, 36, used to run the publications division, which publishes a dozen-odd niche magazines like *Express Computing* and *Pharma Pulse*. Significantly, while the group has been ramping up losses, this division has consistently been turning in profits. The new head is likely to be Vineet Chibber, executive vice-president (publishing and administration).

There are rumours that Santosh's exit followed a run-in with Singh, and in private Santosh has admitted that he no longer felt that he fitted in to the new regime. Reputed to be a doer, he is believed to be setting up his own publishing empire under the name and style of Strategic Press. Apparently he's in the process of roping in investors to contribute the initial capital of Rs15 crore. No prizes for guessing that this publishing business will also focus on niche areas where Santosh has built his network. Now it remains to be soon how many editorial folk, who have always been generously paid, follow him out of the BPD.

Chemical reaction

The writing was on the wall ever since Debu Bhattacharya, head of Hindustan Lever's chemicals business, put in his papers and joined the Aditya Birla group. Chemicals is a low-priority area for Lever, which has sold it to ICI globally and in India has been in an endless search for a strategic partner. The uncertainty has taken toll of the ranks. The latest to go is Shiva Gulvady, who used to head manufacturing at Lever's Taloja factory. He's joined Owens Corning as head of operations.

University of Manchester

University of Wales Bangor

Administrative Staff College of India

offer

The Premier

Distance Learning MBA

for Finance Professionals

Manchester Business School and University of Wales, Bangor, distance learning MBA offers flexibility, availability and immediate career benefits to finance specialists. Also, students can select subjects from a range of specialist options to suit their career requirements.

Distance learning is recognised as a highly effective method of delivering MBAs of equal status to full time programmes and is firmly established as a learning route with all major employers worldwide.

Delivery methods consisting of self-study, workshops and project work help combine the convenience of distance learning with advantages of regular contact. Workshops (one week every six months) and Project-Work ensure that the programme is grounded in reality.

Workshops, to be held at Hyderabad, provide an opportunity to interact with the faculty from three institutions.

Accelerated programme is available to the candidates with qualifications like CA, CWA and CS.

HFCL GROUP

future is .... where we are

Himachal Futuristics Communications Ltd. is one of the fastest growing telecom groups in India, active in all segments of the industry, including manufacturing, turn-key telecom projects and solutions, paging networks, software products and solutions.

The Group is expanding rapidly with operations spread all over India. It has fully integrated, state of the art manufacturing facilities and a Centre of Excellence in Telecom R & D. It has many joint-ventures and collaborates with some of the best names in the telecom industry worldwide. The Group has very ambitious growth plans in the telecom sector and is planning to set up offices in USA / UK and a major Software Development Centre near Delhi to provide software products and solutions to the global market.

Within a decade of its inception, this dynamic group has reached a turnover of over Rs.500 Crores and is targeting Rs.1500 Crores in the next four years.

To give impetus to its ambitious growth plans to be a truly global Indian company, it's keen to develop a world-class professional team. The " Vice President: Corporate Human Resources " will spearhead this transformation in the new millennium.

VP - CORPORATE HR

"The company believes that the Human Resources function is not only an integral part of its corporate growth plans but is central to its long-term success."

The VP-Corporate HR would be responsible for strategising the Human Resource policies and practices all across the group companies and locations in India and abroad. He would have the initiative and drive to implement the entire gamut of Human Resource Development activities including career planning, performance appraisal, performance enhancement and training / development of technical and leadership skills, management of personnel and employee relationship etc. He would be fully responsible for percolating the corporate philosophy and beliefs to all levels of management.

The VP-Corporate HR would be a post graduate in Personnel Management from a reputed institute having an experience of 15-18 years in a fast growing dynamic organisation, preferably in the field of tele-communications, services or software development sectors. He should have been in a corporate function in a multi unit / multi location environment for at least 5 years and handled the HR function in totality.

The ideal candidate would be a self motivated individual having qualities of leadership, initiative, ability to get along with people, team working, adaptability, conceptual skills and vision. He will be based in Delhi and the remuneration and other benefits shall be at par with leading business groups.

CRICKET

The art of deception

Lala Amarnath's words reverberate through this writer's memory : "You have to reach the pitch of the ball while playing spin bowling. You cannot be crease bound. Subcontinental batsmen are most adept at playing spin because they possess nimble footwork." It has been most heartening to see Indian spinners — Nikhil Chopra and Sunil Joshi — use the wiles and guile made famous by their illustrious predecessors such as Bishen Bedi, Erapalli Prasanna, Srinivasan Venkataraghavan and Bhagwat Chandrashekhar. Luring batsmen to their doom with flight, loop and variations. Making them walk the gangplank, teasing and tantalising. By bowling India to victory in Toronto and Nairobi, Chopra and Joshi have shown that Indian spin is alive and kicking. Dravid at slip and Jadeja at silly point taking sharp catches reminded one of Indian spin's halycon days. What was pertinent was that all this was happening in limited overs matches.

Over the years, since the decline of the quartet mentioned above, the cupboard has been a trifle bare. The reason was the emphasis on pace bowling, a craft perfected by Kapil Dev and utilised to the hilt by Sunil Gavaskar. While Gavaskar as captain used veteran left arm spinner Dilip Doshi and off-spinner Shivlal Yadav to bamboozle the hapless Kim Hughes-led Australians, it was the three-pronged pace attack, a hitherto unknown concept, which demoralised Pakistan in the fabled grudge match of the 1979 season double-header. Kapil Dev riding in harness with Karsan Ghavri and tyro Roger Binny brutalised the psyche of Zaheer Abbas and company. It was a revelation for most Indian spectators to see swing and seam winning matches for the nation. Remember that in the past both Mansur Ali Khan Pataudi and Sunil Gavaskar had opened the Indian bowling. And the joke doing the rounds in that era was that India opened with *khadi* pace.

Warne has been a match-winner for the Aussies more than once

With the accent shifting to pace bowling and the great Kapil Dev dominating the show for years, the youth decided to use him as a role model. The emergence of the MRF Pace Academy in Chennai obviously acted as a booster in this regard. However, over the last 20 years, spinners have appeared and disappeared rapidly on the Indian firmament, even fashioning spectacular triumphs in the process. Lakshman Sivaramakrishnan, Arshad Ayub, Venkatapathy Raju, Narendra Hirwani *et al* could never manage longevity. Only the unconventional leg spinner Anil Kumble has managed to keep his head above water, winning matches for his country with his unorthodoxy. Not the quintessential leg spinner like Subhash Gupte or even Siva, Kumble's forte, like Chandra's in the past, has been a deceptive action, quick through the air, using underprepared surfaces with devastating effect. Like a rattlesnake, making the ball hiss and bite as it unleashes its venom on the stranded batsman, defeated as he is by the pace and bounce.

Kumble succeeded where others failed because even with his limited repertoire, he was constantly innovating, trying to bowl slower through the

air, trying to get the leg break going. He remains a thinking bowler, not afraid to experiment. But unfortunately for him, he was caught and thought out by the South Africans who realised that he should be played as a regular inswing bowler. On treacherous wickets, he has always proved to be a handful — ask the touring Englishmen or the Australians more recently. A rhythm bowler, Kumble has of late been struggling with his line and length, directing his line of attack too much on the batsman's legs. Actually more than the South Africans who thought him out, the battering at the hands of Pakistan opener Saeed Anwar in the Independence Cup game at Chennai hit his psyche. Since then, the unthinkable has happened — Kumble has been dropped from the team twice in the last couple of years. That the first time he returned to devastate the Aussies is a tribute to his mental strength and practice.

India is once again playing at home, there are five Tests slated against the visiting New Zealand and South African teams this winter. In between, India will be visiting Australia for the first time in a decade for what has been billed as the millennium series. At home, India has to play to its strength, which is create underprepared wickets aiding and abetting spin. As such, both Joshi and Chopra in tandem with the ever dangerous (at home) Kumble will be the perfect Molotov cocktail for the visitors. One remembers how Kumble, Venkatapathy Raju and Rajesh Chauhan spun a web around English batsmen at the turn of the 1990s.

Killing them, softly

Remember that India has not lost a Test series at home since Imran Khan's team won here in 1986. It is a record which India will try to keep intact. Chopra, who bowls a flatter trajectory due to which he has succeeded in limited overs cricket, will have to make the transition to the longer version of the game. However, he will be competing with Harbhajan Singh for a place in the side. The real revelation has been Karnataka left arm spinner Sunil Joshi who has been in and out of the side for sometime now. After spending time (close to three weeks) with that master of left arm bowling, Bishen Singh Bedi, during the summer, Joshi seems to have added more tricks to his armoury. He is more relaxed in his run up, his head is very still at the point of delivery and most importantly, his loop is near perfect with the arm action high. Bring the batsman forward, make him play and then defeat him with your variation.

Despite his limited repertoire, Kumble has impressed with his constant innovation

Joshi is 30, but he can still be a match-winner, he needs to be persevered with. Russian roulette should not be played with his career at this juncture. Between Kumble and Joshi (and, of course, wickets which turn after lunch on the first day), India has every opportunity to vanquish the Kiwis, buoyant after a series win over England. Spinners, like fast bowlers, hunt in pairs and troikas, and India has a rich history and tradition of this beguiling craft — from Vinoo Mankad to Subhash Gupte to Ghulam Ahmed to the deadly quartet to Kumble and his partners.

Tiger Pataudi as captain gave the foursome of Bedi, Chandra, Venkat and Pras their heads. He realised how effective they could be together and provided men with sharp reflexes around the bat to pouch anything off the bat or bat-pad. And it began to work. His successor, Ajit Wadekar, enjoyed the fruits of a system put in place by Tiger when he won three Test series back to back. Somewhere along the line, pace emerged as a more suitable weapon and that is where everything got blurred. After all, India needed to win matches abroad as well. With the emergence of Javagal Srinath and Venkatesh Prasad, India found somebody to retaliate with. Both have won matches for us, following in the plimsolls of Kapil Dev and Manoj Prabhakar.

But spin will win you matches. Look around you — Muttiah Murlitharan, Saqlain Mushtaq, Shane Warne are some of the match-winning bowlers. This is India's core competence which mirrors our profile, and we should excel in it.

Pace can be handled in the contemporary era, for the batsman is well protected. Spin with all its variations has a mysterious air about it. It is all about deception. The art, mercifully, is flourishing across the cricket playing world, even the Kiwis have Daniel Vettori, so why should India be left behind? After all, isn't spin India's version of the magical mystery tour for the unsuspecting tourist?

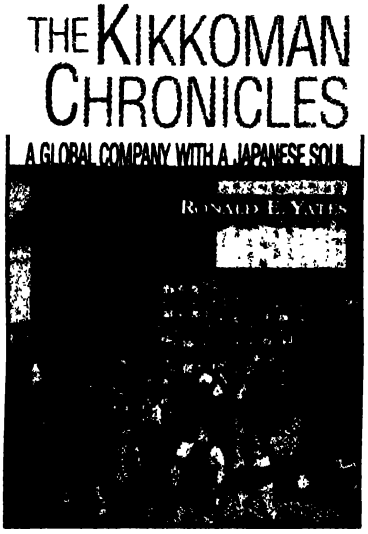
The soy of cooking

THE KIKKOMAN CHRONICLES



A Global Company With
a Japanese Soul
Ronald E. Yates
McGraw Hill
206 pp

When you think Japanese these days, you will almost always think small, as in miniaturised. When the Japanese make small things, they make them big. This book is about a company that has made a seriously big thing out of small bottles of soy sauce. From a beginning in straightforward soy sauce 360 years ago, the company is now a global brewing and biotechnology leader with about $2 billion in annual sales. After around 300 years of being a purely Japan-centric business, it now has plants in the US and Europe, making both soy sauce and crucial biotech products.

Kikkoman soy sauce bottles are found in 25 per cent of US restaurants and half the supermarkets in that country. It is as ubiquitous the world over as, say, *sambhar* is in south India. Its lead product is clearly differentiated from the competition: it is a pure, naturally brewed sauce made from soya and wheat. Kikkoman has successfully taken a traditional process and applied technology to shorten the production cycle without using artificial additives or changing the finished product in any way. As a result, it has remained price-competitive against chemically modified sauces.

However, merely making the best soy sauce in the world shouldn't and wouldn't qualify a company to have an independently written book published; indeed, had that been the case, this book wouldn't have been written at all. Yates first encountered Kikkoman while eating Chinese food in Boston in 1963. The restaurant owner, a first generation Nationalist refugee, taught him that Asian palates were trained to appreciate subtle flavouring. Later, posted as a correspondent in Tokyo, Yates was to learn more about Japanese food and its tightly-knit relationship with soy sauce. He acquired a taste for the food, and developing an interest in the company whose products were always found in good restaurants (and in all Japanese homes), soon found that the company was one of Japan's earliest multinationals.

Kikkoman was the first Japanese company to set up manufacturing facilities in the US. In fact, since the plant, which opened in Walworth, Wisconsin in the middle of 1972, was designed from the beginning to use local materials (soya and wheat), it was a truly local operation for this globally selling company.

Kikkoman soy sauce bottles are found in 25 per cent of US restaurants and half the supermarkets in that country. It is as ubiquitous the world over as, say, sambhar *is in south India. Its lead product is clearly differentiated from the competition: it is a pure, naturally brewed sauce made from soya and wheat*

As Yates notes, it was not just raw materials that Kikkoman localised. The plant initially hired only junior staff locally, bringing managers from Japan to run the plant, but quickly reduced its dependency on expatriates as it learned the advantages of teaching local Americans to respect their 360-year-old traditions, while focusing on locally accepted trading and hiring practices. The US operations were championed by a member of the founding Mogi family, Yuzaburo Mogi, the current chief executive. He was the first Japanese to receive an MBA from Columbia University (New York). And he continues his internationalisation drive till today, so that non-Japanese sales of Kikkoman soy sauce account for 26 per cent of the company's $2 billion revenue, much of that made in its plants (two today) in the US and Europe (one in the Netherlands).

Mogi's ancestor, Shige Maki, who founded the business, was the widow of a *samurai* warrior who was killed in a historic battle at Osaka in 1615. Forced to flee with her children into hiding, she changed the family name to Mogi, and settled down in a small village, where she discovered the recipe of making soy sauce. Over the years, the group of descendants that continued the family tradition of making first-class sauce was able to gain a licence to brand it, the first such branded product in Japan. This involved some creative synthesis between the family groups that made various competing recipes at the time, yet the company's strong value-based management was able to overcome this hurdle.

Today, as the company spreads its wings beyond soy sauce into modern biotechnology and global production and research, it is able to skilfully blend the values of a 360-year-old tradition with the demands of a global business. Many of its senior executives are from outside the family; indeed, from outside the country. Yet the traditions of family still hold the company together in a velvet grip, even though the current product range has around

2,000 products. Growing from its original food products to making test reagents for complex micro-organisms and new varieties of genetically engineered fruits, Kikkoman has engineered an example of effective use of growth opportunities in an increasingly competitive and yet smaller world.

• VICKRAM CRISHNA

Demystifying management talk

THE POWER OF SIMPLICITY

Jack Trout with Steve Rivkin
Tata McGraw-Hill
205 pp

The only thing that may be reasonably found objectionable about this book is the fact that it takes 191 pages to explain in detail just how complicated most leading management consultants tend to make life.

There are 116 people (and consulting companies) named in this book, of which it can safely be estimated that Trout has explicitly denigrated about half (including all the consulting companies). The others are various chief executives and other such flotsam and jetsam whose actions may or may not support Trout's thesis: most management consultants and experts drown their advice in great gobs of jargon and complexity. This happens to such an extent that managers on the receiving end behave much like the emperor of the new clothes' story: they are too stunned to admit they haven't understood either the advice being given or how to go about implementing it.

Little wonder, feels Trout, that so many transformation projects do not deliver quantifiable results. Even competent managers feel intense peer pressure to endorse the consultant's advice, largely because they don't feel strong enough to challenge the verbiage. The book is written in the familiar no-nonsense style that Trout's readers will recognise. This is clear from the contents page onwards. The contents are laid out chapterwise, but each one is accompanied by a brief phrase that lays open precisely what Trout will explain within.

For instance, under the section on Leadership Issues, chapter 11 is titled *Mission statements. All they add is needless confusion.* Turn to page 85, the opening page of the chapter, and find a quote from John Rock, general manager of General Motors' Oldsmobile division, "A bunch of guys take off their ties and coats, go into a motel room for three days, and put a bunch of words on a piece of paper — and then go back to business as usual."

The chapter itself opens with a scathing criticism of Swedish automobile company Volvo, whose cars are well perceived for their safety. The Volvo mission statement is 130 words long, with 'safety' coming in just once at word number 126. The point of this being that a company that ought to focus on its strengths is busy fuzzying up the market instead, confusing perceptions of its leadership position in safety and attempting to make sports cars that won't sell.

According to Trout, US-based multinational P&G has trimmed its product line and brand promotion activities. In five years, its marketshare has gone up by one-third, and by five points in hair care alone, where the product line was cut in half. Leading business papers reported on 22 September that Unilever now plans to trim its product range by 1,500 items. Obviously, Trout is on to something. Something quite simple, really.

For someone fairly active on the lecture circuit (he has visited India at least twice), Trout pulls no punches while attacking other public speakers whose names will be very familiar — Tony Robbins, Stephen Covey and Deepak Chopra. He even quotes *The Economist* bureau chief Adrian Wooldridge on consultants like Robbins, "scalawags in the field". He concludes that personal improvement programmes can be very good for individuals, but this is a personal matter, and should not be done on company time or money.

While companies like NIIT in India do make company money available to executives on a case-by-case basis (monitored by both their seniors and the human resources department) for personal improvement programmes, Trout's point is that all kinds of faddish and expensive exercises are sometimes passed off as being designed to improve corporate efficiency levels. Consultants like Claus Moller, the Danish consultant whose advice helped British Airways and SAS to turn around from a decade of falling profits and business, also advise the personal aspect strongly.

However, like Trout, Moller's message is tightly focused on business.

Most management consultants and experts drown their advice in great gobs of jargon and complexity

Corporate quality is linked to personal quality, defined by Moller partly as being a sense of continuous improvement of responsibility and efficiency. Self-esteem, well-being, attitudes and behaviour all contribute to strengthening effectiveness. Wasting time on the golf course (at company expense, a favourite taunt for Moller) on the pretext of striking business deals is not the best way to improve one's self.

Trout closes the book on a discussion of success and how to achieve it. Perhaps surprisingly, he defines personal improvement in this context as finding the right horse to ride, and that isn't the personal horse. Rather it could be ideas, mentors, companies or family. These are rated in terms of likelihood of success. Ideas and products rate high, over hobbies (like Hugh Hefner's *Playboy* and Paul Prudhomme's foodie columns — in India we have Jiggs Kalra, who has reached country representative status in the same field) and companies (will your company even be around in 20 years? Safe choices of the late 1970s like the Tatas and Birlas look shaky today

compared to Johnny-come-latelies Wipro, Reliance and Infosys in India).

The best choice, in fact, is the *other-person*, according to Trout. For Paul Allen and Steve Ballmer, it was Bill Gates, not corporate advancement, at Microsoft. For chocolate leaders Mars, it's their grandfather, for Arthur Garfunkel, it was music partner Paul Simon. Whether the person is a mentor or a partner, finding the right person at the right time could be far better than all the *career planning* exercises of the big companies and their human resource departments. Ask Vijay Thadani at NIIT, and he'll eulogise on Rajendra Pawar; ask Pawar, and he'll talk about Shiv Nadar.

Ask Shiv Nadar? Ask Bill Gates? They have the wisdom to marry their personal drive with the collaborative work of many hundreds and thousands of associates. Trout concludes that "you don't find success inside yourself. You find success outside yourself." It's not easy. As Disraeli said, "How much easier it is to be critical than to be correct." Trout has the last word, "The best revenge over critics is being correct."

Exports sans pains

A PROFESSIONAL GUIDE FOR EXPORTERS

K.S. Saluja
Jaico Publishing House, Mumbai
Rs1,575

The clarion call for a 20 per cent export growth in dollar terms remains a non-starter. Since the unshackling of the economy, successive Union commerce ministers have spoken about the increasing need for an outward-looking strategy. Sadly, 20 per cent appears to be a Utopian ideal. At this juncture, even half of that would be a refreshing change. In the first quarter of 1999-2000, the export growth logged was 6.5 per cent in dollar terms. Exporters have been consistently arguing for a softer rupee and external forces have seen India's currency depreciate, without any significant growth on the export front.

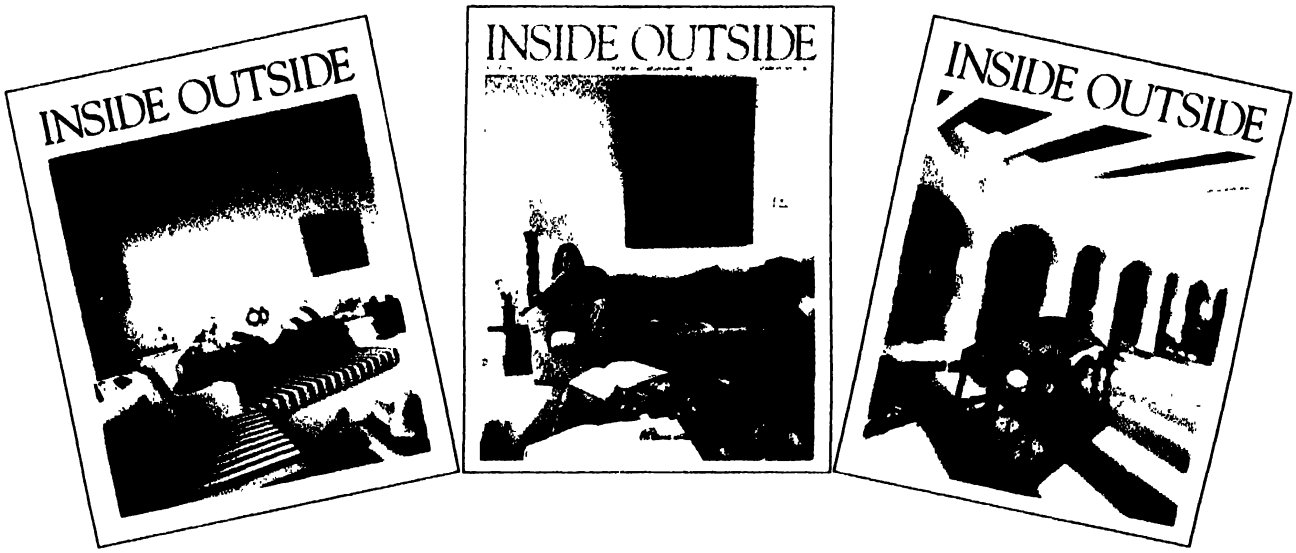
First-quarter figures raised some hopes that operation turnaround was underway, after close to three years of endless lethargy. But unfortunately, a sharp drop in July has once again pulled down the cumulative export growth position for the first four months to 4 per cent, dampening a sentiment which seemed to be on the revival path. This has once again

India's total exports form less than one per cent of international trade

thrown out of gear the commerce ministry's estimate of an 11 per cent growth this financial year. The country's exports, at $33.7 billion, declined 3.9 per cent in 1998-99.

What is the malaise affecting Indian exports? The Reserve Bank annual report clearly states that it is a lack of global competitiveness and absence of adequate diversification in the export basket. Add poor quality products and you have the three main reasons for India's abject performance on the export front. India has not managed to keep pace with the challenges on that front. The country's total exports form less than 1 per cent of international trade. Such shocking statistics calls for strategic imperatives and drastic measures from the new government which should be in place sometime later this month.

India remained a protected economy for years, keeping its doors shut to new technology and progress. When we did open our doors, we found ourselves grossly underprepared to the cutting edge of international development and competition. The result — India was branded a country with low-quality and low-priced products.



Controls on the economy were so overbearing that those attempting to explore international markets were hard pressed to meet their documentary obligations. The amount of paper work took the better of the exporter and efforts to market were blunted by documentary controls. However, things are being remedied. The government has taken steps to lower controls. For instance, only the other day, the commerce ministry said it was actively toying with the idea of modifying the duty entitlement pass book (DEPB) scheme to make it compliant with the World Trade Organisation regime. As a senior functionary in the commerce ministry said in Mumbai, "The DEPB in the current form does not show a nexus between the import of raw materials and export of finished goods, which is imperative as per WTO rules."

In this age of change, it is vital that an exporter understands all the nuances and obligations he has to comply with. The book under review provides exporters with information on all that they wanted to know about exports but didn't know whom to ask. A treasure-trove of information, the book covers documentary procedures for shipping, excise, octroi, claiming export incentives like advance licences, duty drawback and DEPB and many other important facts.

With a recent International Monetary Fund survey stating categorically that the new government should establish conditions for strong and sustainable economic growth over the medium term, exports will obviously play a key role in bolstering the economy. The book also examines two hot topics relating to doing business through the Net and electronic data interchange, which enables transfer of documents through the Internet. Moreover, it provides information on Indian embassies and high commissions overseas, as also details about the diplomatic corps in India.

The botttomline remains that India has to improve its export competitiveness if it wants to make a dent in global trade. India was not able to take advantage of the Southeast Asian crisis at all and it will now have to do all the running in this regard. And Saluja's book provides exporters with key insights into all these matters.

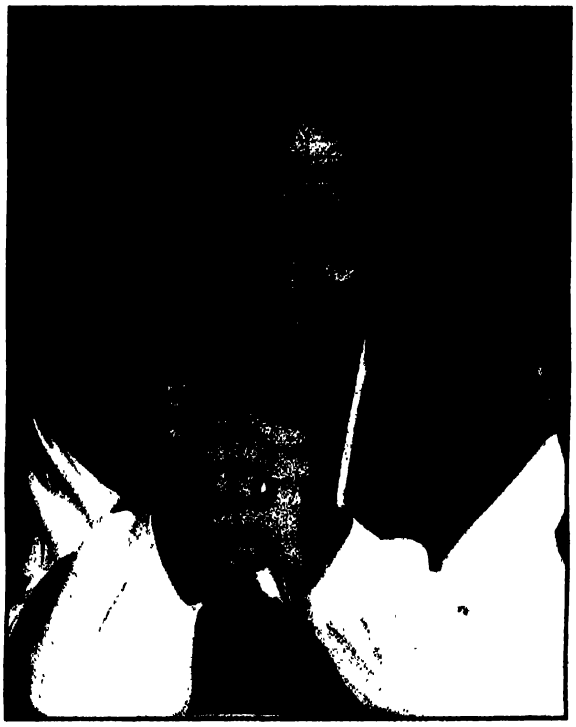
Mistress of spices



SORAB MEHTA

Retail is in. And with it the concept of the most unique shopping experience. That's the idea behind Cinnamon, a lifestyle store to be opened in Bangalore later this month. For Radhika Poddar, whose brainchild this is, Cinnamon is an expression of individual, yet striking, style. "At Cinnamon, we are trying to offer a complete shopping experience," says Poddar. "Besides it is the culmination of my long-standing interest in design, textiles and unusual jewellery," she adds. Cinnamon is housed in an old-style Madras house, amid tall trees instead of a concrete jungle. On offer is a mix of the old and new, women's fashion, sarees by weavers from Bengal, Bihar and AP in an effort to revive dying traditions, a jewellery collection comprising both antique pieces as well as unusual contemporary designs and home furnishings including metalware, glassware, stoneware, lamps and candles. Reputed Italian designer, Andrea Anastasio, has been roped in as well for his unique sense of design. Just like fine stores overseas, it will have a colour story for each season. To keep visits to the store interactive and educative, Poddar is planning to organise special shows to highlight different crafts from all over the country. Just the subtle spice to spruce up shopping. ◆

The sound of music

It was just one of those cases: one thing leads to another and hey, you have an ubharta sitara. This is exactly what happened to Vikas Kasliwal, director of the Rs700-crore SKumars group. With no formal training in singing or music, Kasliwal has launched his own debut album Jaane-jana. How did he manage to weasel out the time? Well, Kasliwal spent three hours a week over a three-month period. The fact that the album will soon hit the stores doesn't mean that Kasliwal is hoping to rake in the moolah. "It's just something that I wanted to do for a long time," he says of this Hindi-pop, romantic album. Moonlighting under the name K.Vikas, Kasliwal has gone the whole hog. The music score is by Vishal, the music director of Pyar Mein Kabhi Kabhi. Besides the cassette which will be launched in the next two weeks, he's also got a video soon to be aired on the music channels. Kasliwal's contribu-

PALASHRANJAN BHAUMICK

UMESH GOSWAMI

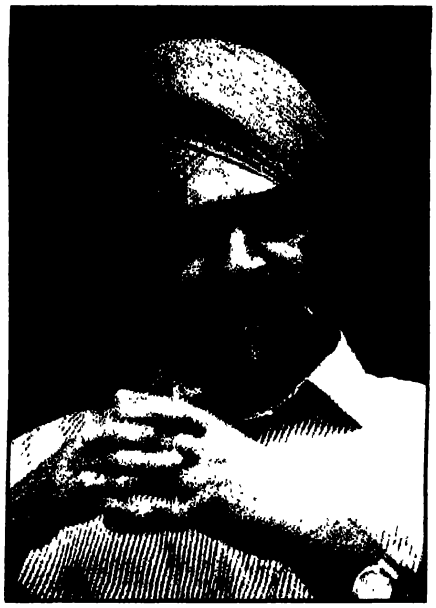
tions to the album include whistling and adding an aalap in the lead track. "Music must represent what you feel," he says. And uppermost on his list are family values and love. Now that sounds mushy for a moneymaker. •

Man with a mission

Canadian Georges Brossard is on a mission. He wants to reconcile humans with insects. After being a tax lawyer in Montreal for 25 years, he has taken up the cause of insects, be they bugs, beetles, scorpions, tarantulas and the like. Today his astounding collection includes 500,000 insects from 120 countries. But don't get him wrong, he likes people as well. Towards his mission of reconciling humans and insects he has set up insectariums. The first one in Montreal set up a decade ago is such a success — it attracts 600,000 paying visitors — that the governments of Australia and South Africa have asked him to set up insectariums in their countries as well. Now Brossard has gone a step further; he has made a documentary on insects, Insectia, and has sold it to 160 countries, also to the National Geographic. Naturally, Brossard is the mind behind the documentary; he has written it, acted in it and presented it as well. "I have put a lot of humour in it to make people understand insects. You'll love it," he says. •

Animal farm(er)

PALASHRANJAN BHAUMICK



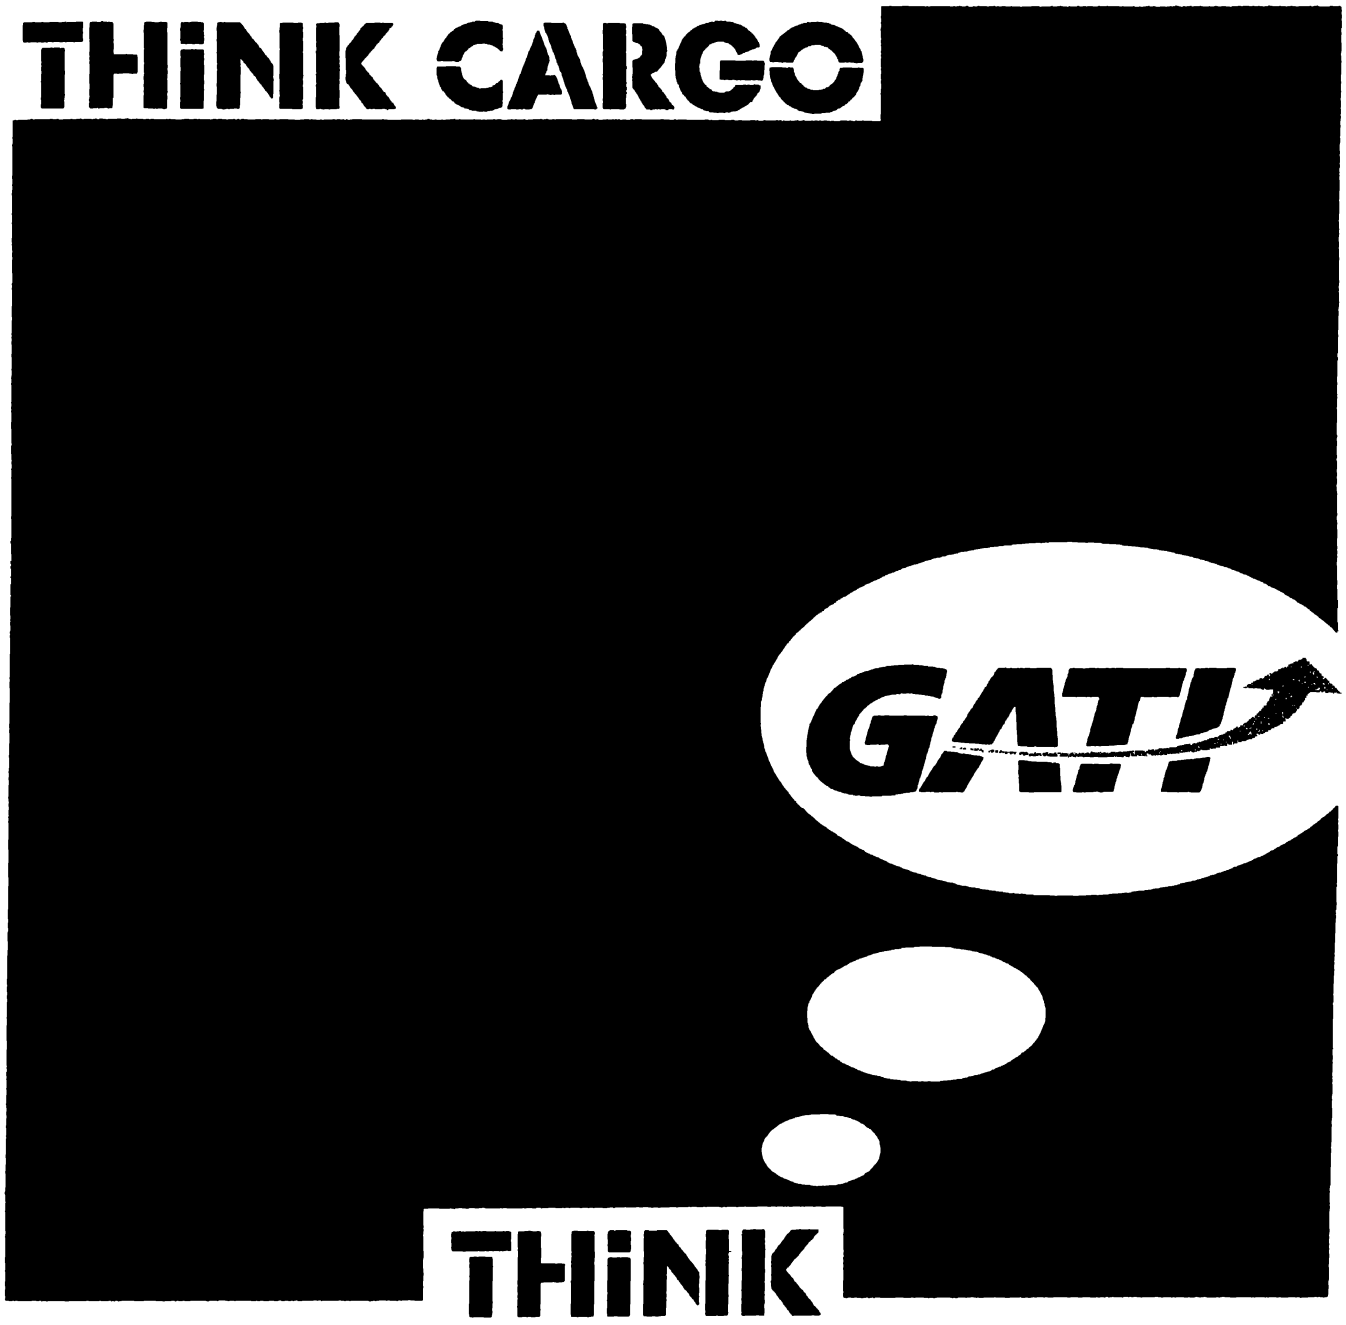
We've heard of horses and dogs being special animals. But a king cobra? Well, Romulus Whitaker, known more for his crocodile farm on the outskirts of Chennai, has started breeding the king cobra. "If one is interested in snakes, the macho thing to do is to go for the dangerous type," says Whitaker. There's more to that than just being macho — the king cobra behaves differently as compared to other snakes and it is intelligent. Besides, "I like the king cobra," he says.

Whitaker has liked snakes since the age of five and kept one while he lived in New York. Moving to 'snake land' with his family at the age of seven was a godsend. Now he is making a documentary, along with Janaki Lenin, a documentary film maker, on his favourite animal. Another documentary is to follow, on what he knows best, the mugger crocodile. According to him there are very few genuine crocodile films; "I guess I expect more from a crocodile film as I live with them," sighs Whitaker. •

"We're well placed in Y2K compliance"

Veteran economic policymaker **Montek S. Ahluwalia** has suddenly become the most recognisable face of the government's strategy against the Millennium Bug. Ahluwalia has been chairperson of the government's Y2K Action Force since 1998, but has come into the limelight in this role only as a result of the publicity blitz launched by his organisation recently. Perhaps no other bureaucrat of the Indian government has become the icon of a public programme as Ahluwalia has done. Talking to **Anupam Goswami** of *Business India*, Ahluwalia asserted that Y2K compliance in India could compare with the best in the world

Q *How okay is the Y2K action plan of the government at the moment?*
A I am reasonably satisfied with the work done till now. We have increased consciousness among all government departments about the impending deadline, and finalised action plans for the critical infrastructure sectors. Within each of the 11 critical infrastructure sectors identified, comprehensive action plans are in the process of being implemented. We have contingency plans for identification, isolation, and amelioration of any crisis. So overall we are quite okay.



RAMESH PATHANIA

Q *But there is some sense that the Y2K Action Force may have been constituted too late, when the millennium bug problem is directly upon our heads?*
A Well, it is a specific deadline-related problem and its ameliorative action has to fall together in time for the particular date. So there is a sense of galvanised activity. But I would like to point out that the government's initiation of strategy to handle the Y2K problem began in 1997, when all departments were asked to take cognisance of the Y2K problem. Agencies like NIC and the Department of Electronics have been undertaking departmental monitoring and review since then. The Action Force was created in 1998 and has been operational continuously since then. Its primary responsibility has been to ensure that all the government departments as well as agencies concerned with the 11 key infrastructure areas respond to a monitoring-and-review system that would ensure that compliance is being carried out everywhere.

Q *Are there crisis areas, where ameliorative measures may be not up to the desired level?*
A Each of the 11 infrastructure areas are potential crisis areas; in case they do get affected there is potentially a very large problem. But all the departments related to these sectors are working towards full compliance, and have very well-developed contingency plans. The Action Force has ensured that there are several layers of back-up arrangements.

Q *Just last month, you sounded a warning shot on the fallibility of the power sector, in particular, on the Y2K count?*
A Yes I did, but not in any sense that the problem could not be handled. I was actually referring to the intricate functioning of the state electricity boards, and the complexity of our task there. But if you look at the broad figures, the picture is quite assuring. Out of the total 93,000 MW of installed generation capacity, 61,000 MW are not subject to computerised controls. Out of the remaining 32,000 MW, 92 per cent have satisfied full compliance norms. The rest will be secured by mid-October. This achievement compares very well with the international benchmarks at present.

Q *What are the capabilities of the state governments to handle Y2K-related problems? Could the Action Force or the Planning Commission undertake any special initiative to galvanise the state governments in this regard?*
A The NIC has a long and durable experience of working with computer-related logistics in the states and has done magnificent work. But I agree that implementation has its own complexities at the level of the states. I think the work of the Planning Commission has been particularly useful in this regard. The deputy chairman of the Planning Commission took the initiative by asking all the chief ministers to get them personally involved in the compliance activity. This set the stage for the cabinet secretary to similarly motivate the chief secretaries. Subsequently, the various departments of the Central government have monitored the compliance activity of their counterparts in the states. So, I think that India has been able to mount a comprehensive compliance programme. Of course, there could be gaps but our own review system and increased media attention to the problem will enable us plug these quite expeditiously. •

Business India

The formation of the third Atal Behari Vajpayee-led government has clearly been very different from the two earlier efforts. This time, however, there is a general belief (and opinion polls too bear this out) that the government will last its full term. For the first time, economic issues have been dominating the day. No other government has ever put basic economic issues right up front.

Vajpayee has set three goals for his government on the economic front. First, is the need to get the government's fiscal house in order. The prime minister knows that hard decisions need to be taken and he is prepared to do so. Second, is to carry out programmes to meet the basic needs — water, roads, electricity — of the people. Lack of these amenities was an election issue in Lucknow, perhaps contributing to the large fall in Vajpayee's own victory margin. Third is to flag off the second-generation reforms.

Vajpayee is not alone in stressing hard-nosed economics over populism. His key lieutenants, such as finance minister Yashwant Sinha, have been talking about belt-tightening. Commerce & industry minister Murasoli Maran has been categorical that if the Foreign Investment Promotion Board cannot deliver, it must go. Others are talking in the same voice.

It makes sense to do so. If there is a lesson in these elections, it is that performance counts. Perhaps the best example of this is in Andhra Pradesh where N. Chandrababu Naidu and his Telegu Desam Party have been returned to power with a thumping majority despite pollsters and pundits alike predicting his comeuppance. Naidu took the anti-incumbency factor in his stride. The Congress was offering largesse such as free power and a waiver of dues for the farm sector. For the first time perhaps, voters didn't prove gullible.

It's not in Andhra alone. In Madhya Pradesh, too, voters have rewarded chief minister Digvijay Singh for performance. One can possibly draw a similar conclusion from the results in Tamil Nadu, a state that is fast developing as a favourite destination for foreign investment.

If performance has paid dividends, non-performance has met with rejection. In Maharashtra, a state that has been slipping in the industrialisation pecking order, the BJP-shiv sena has been humbled despite Pawar and his Nationalist Congress Party spoiling what would otherwise have been a clean sweep for the Congress. In Karnataka, the BJP sunk, leg-shackled to a ineffective Janata government. And Laloo Prasad Yadav has been cut to size in Bihar, a state he had taken for granted.

The stress on performance and economic issues is natural. The Indian voter is no longer content with being treated as part of a vote bank. This is the way things have developed all over the world with growing electoral maturity and there is no reason why the Indian voter should not expect the same. It is now up to the Vajpayee government to deliver. It has a lot going for it: the economic indicators are improving, the stockmarkets are booming and there is a strong feel-good factor. As the new government puts its best foot forward, if it delivers on its promises, the BJP could displace the Congress as the 'natural' ruling party.

The spurt in business plans for Net-related activity is changing the nature of the funding process and business practices

• Cheers to south India

South Indian businessmen are becoming the veritable backbone of the Indian economy (Editorials and Cover Feature, 3 October). The promoters of Infosys Technology and Satyam Computers have stolen the show and similarly, the Sundaram and Ramco groups have raised the stature of Indian industry. Corporate raider Rajarathinam has no doubt sullied the image of south Indian industry on the national stage, but by and large, south Indians as well as south Indian industries are still considered reliable.

The Murugappas have given a solid footing to South Indian industry, though they have yet to make their name trustworthy on the stock-markets. Also, in the actual consumer market, TI cycles has yet to make itself familiar like the brand names of Avon, Atlas, and Hero.

• Open end only option

In your interesting survey of mutual funds (17 October), it was frightening to note that the net assets of close-ended MFs exceeded Rs36,000 crore as on 30 August. Assuming an average discount of 30 per cent between the market price and their NAV, they can add enormous wealth amounting to more than Rs10,000 crore by converting themselves into open-ended ones.

If they do not, unit holders will demand and exercise their legal rights. Many of these funds have a corpus exceeding Rs1,000 crore and the sponsorship/AMC investment in the fund is barely anything, in many cases less than Rs10 crore.

If these funds do not go open-ended, unit holders will have to wait for another 10 to 15 years to get what is due to them, be at the fund management's mercy to get dividends cleared and suffer a loss of 10 per cent income tax paid by the funds on dividends when they are not open-ended.

But while you have published a detailed article on MFs, it did not include the performance of the 10 top close-ended funds. Could you kindly do so?

• A great bank

The State Bank of Travancore (SBT) with its premier network in Kerala is not only a lead bank but the pride of that state. If *SBT tries harder* (6 September), it can well achieve an all India stature with the best parameters in profitability, efficiency, systems and technology. Its best feature is its focus on customer service. Even in rural areas, it has attained heartening NRI business with special NRI branches and sections. Special facilities have provided to help the semiliterate and illiterate to open and operate accounts. And the management is ready to take immediate action to redress any grievance or improve services.

• NIIT impresses

I was impressed by the business plans and models of NIIT (Cover Feature, 16 September) and my congratulations to the author who has been able to simplify and explain the workings of such a complex IT company. Success has not come to it by chance, as it has been the planning and vision of its promoters that has enabled it to scale these levels of excellence.

Do send a copy of the article to Warren Buffett so that this famous cult investor will not in future state that he does not invest in IT or software companies because he does not understand them. The loss of Coke and McDonald's may then be NIIT and Infosys' gain.

SUDHIR KARNIK

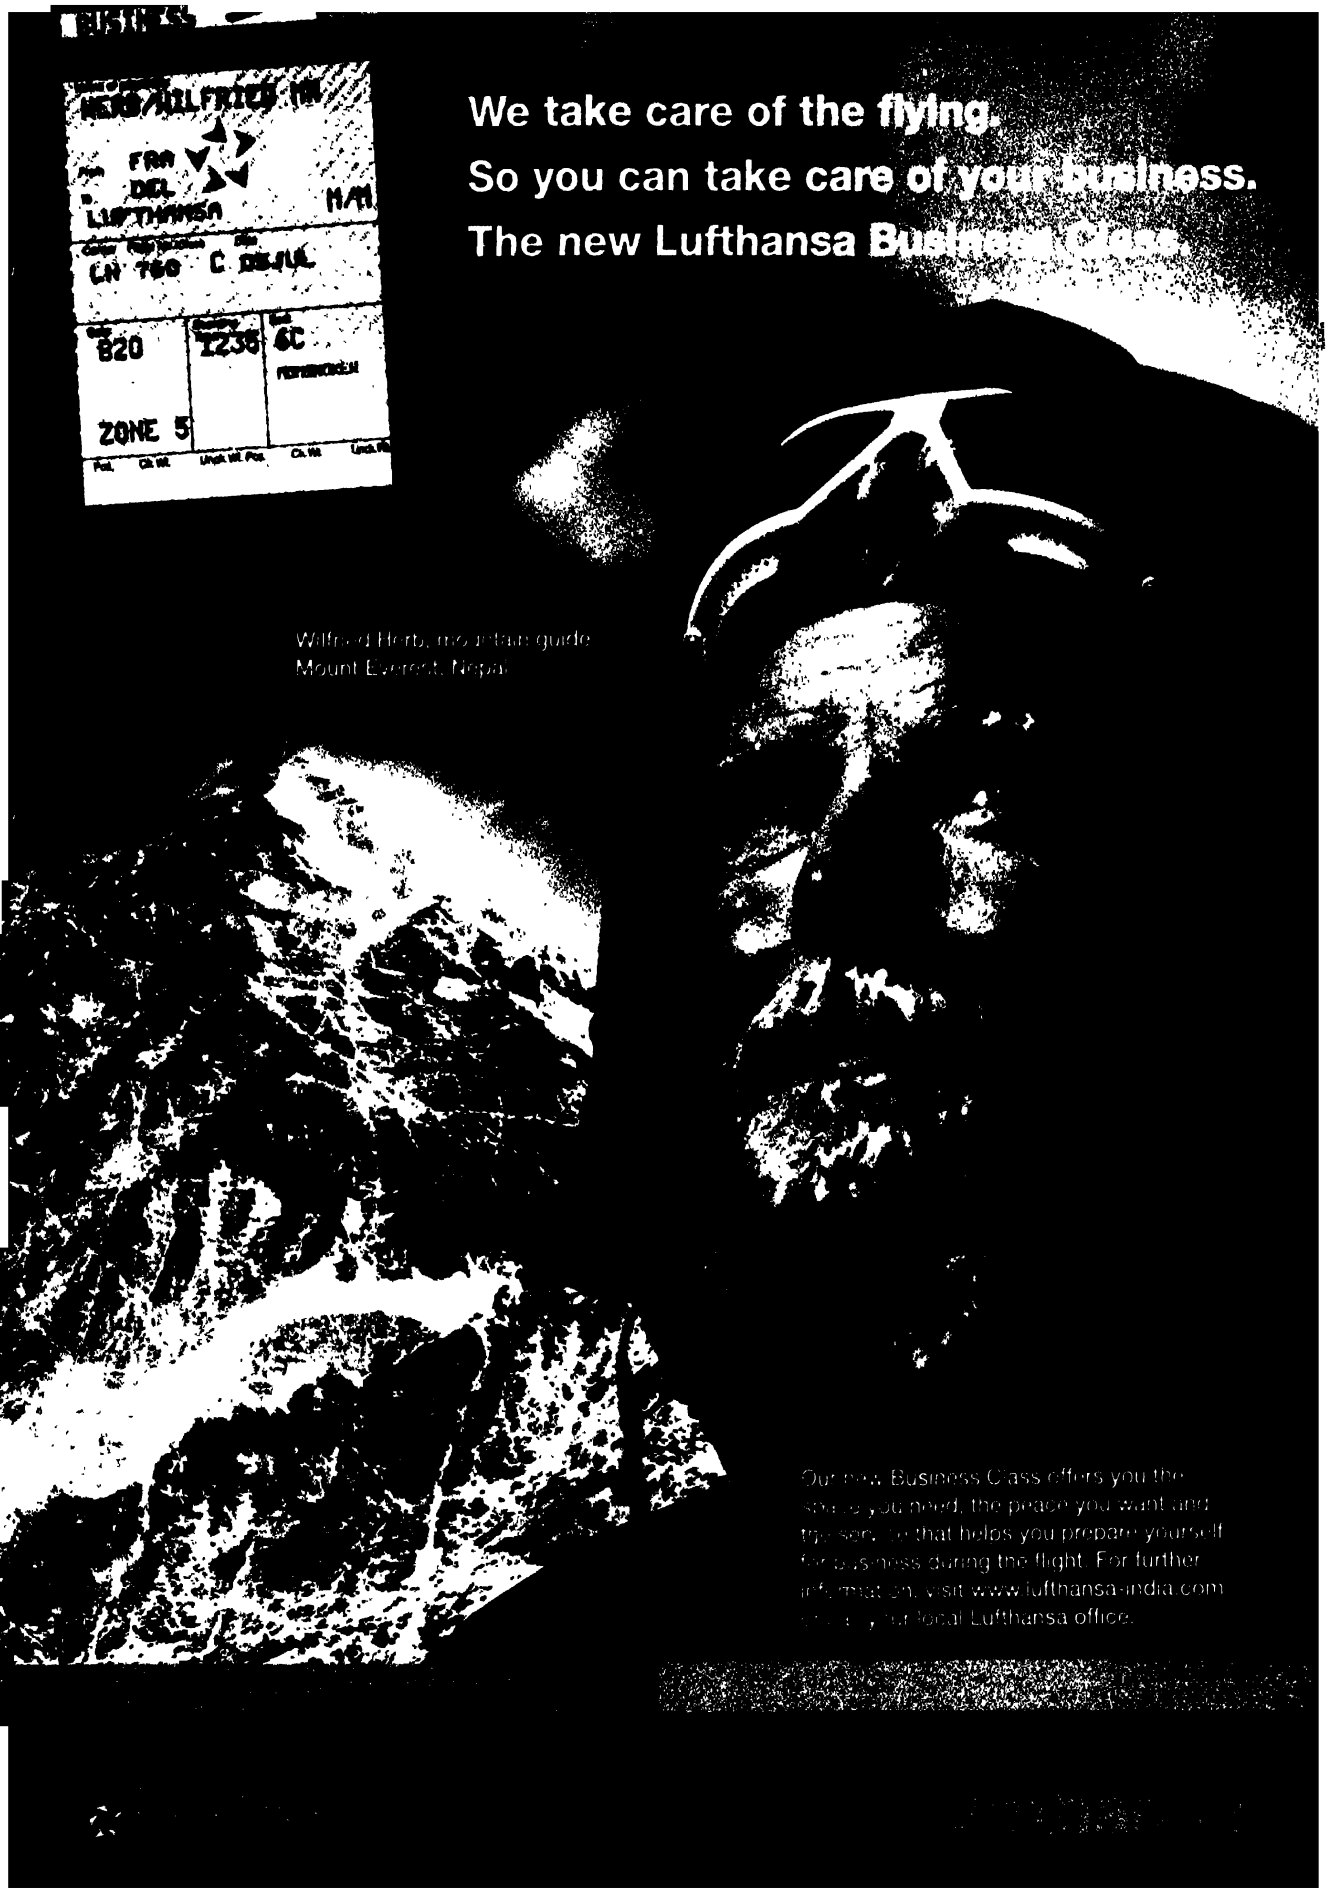
• Sanjeev Duggal, president of NIS, replies:

The facts of the case are as follows: Mahendran himself projected gestation periods of 10 months for his franchise to begin to show a positive monthly contribution and 22 months before it showed a cumulative positive contribution. This is in line with our experience with our other franchisees. As per our normal business practice, all statutory and necessary support was extended to the centre. On 28 October 1998 Mahendran requested NIIT to consider closing the centre since it was not performing as per his expectations. Based on this letter and subsequent discussions with our geography head in Chennai the closure was agreed to.

• An investor deceived

I was very disturbed after reading your cover story on NIIT. I started an NIS centre in 1997 believing that, since it was owned by NIIT, I could be sure of the profitability of my investment. However, while the company has created great wealth for itself, it has destroyed my wealth in a very short time and I have had to wind up my operations. I met the regional head several times but he refused to do anything. During my association with NIS the support I received was inadequate. When I expressed my desire to close my centre the regional office simply stopped communicating with me. I have since written to a few responsible persons in NIIT and NIS but none has cared to respond. I later met Muralidhar Rao in Delhi and explained my position to him but he told me his company would not compensate me for my losses. I believe an organisation like NIIT should make sure that those who invest in its franchises reap the benefits of its own success and vision. I have had to pay a very high price for believing and trusting in the company.

N.R. MAHENDRAN
Chennai



• Take tough action

The ouster of the Pakistan prime minister Nawaz Sharif by Pakistan army was due to sharp differences between Sharif and army chief General Musharraf on Kargil issue in which Pakistan army was defeated by Indian troops while crossing the Line of Control (LoC) which tarnished the image of Pakistan army following the withdrawal of infiltrators from LoC.

With the army coup in Pakistan I strongly feel that Indian troops has to be on the red alert because the army chief General Musharraf is the enemy number one of our country and is today a frustrated man today due to defeat in the Kargil and is likely to create trouble on the LoC border between India-Pakistan and will create tension in the subcontinent.

It is the duty of the Union government to take tough action against Pakistani army if they attack us and finish them once for all to teach them a good lesson to take Indian armed forces into confidence and the people of the country who have elected them to rule the country.

BHAGWAN B. THADANI

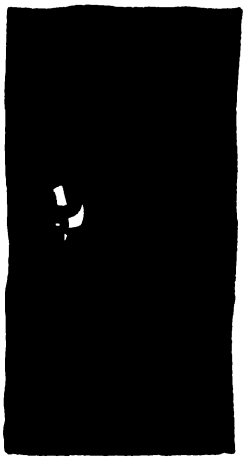
Perils of privilege

Vajpayee has some of his old reform-minded ministers back; but also some populist spoilsports

Looking at the front page of a financial daily on Friday last, you couldn't help being struck by the glow of self-confidence that shone out of the page. The top half had Yashwant Sinha, elbows on his desk, right hand probably readying for a benediction on the reader. Arun Jaitley, the new I&B minister, R. Kumaramangalam, the power chief, and Murasoli Maran, who heads commerce, are all given prominence under their respective headlines. Each one of them gazes over your shoulder at some point in the future, perhaps looking for their vision on the horizon.

Reading those headlines, you'd imagine that the baptism of the recent election had served to cleanse the BJP and its allies of the fears and uncertainty that marked the run-up to the election. Look at us, the photographs seem to say, we're serious about reforms and you are going to see some smart agendas around here sooner than you think!

Most readers of this magazine would wish them well and hope that they can sustain the enthusiasm that marks their first announcements on their bailiwicks. The discerning reader would do more; he would refer to the first day that the cabinet was announced for a look at the ministers who will adorn the various offices in North and South Block. We have, starting with the ladies, a redoubtable and highly excitable Mamata Banerjee in charge of railways, home-spun socialist champion-of-the-underdogs Ram Vilas Paswan, and (of course) Sharad Y. all in charge of critical ministries; critical not simply because of their strategic importance but because these worthies could spike any attempts by the other more experienced and reform-minded ministers to reform not only the economy but the government itself.



Vajpayee has a cabinet of 70 and he hasn't yet appointed the junior or deputy ministers. If you thought Uttar Pradesh took the cake for having at one time 100 ministers, watch out for Vajpayee's team. He has won the government for the BJP and the allies single-handedly, but he will have learnt his lesson well and will try to please as many parties as possible by creating new posts if he has to. And there will lie his undoing.

At some point in the expansion of a cabinet of ministers the government will turn unwieldy; not just in terms of governance itself but in terms of its capacity to speak and act with one common agenda. Messrs Sinha, Maran, and Jaitley, with the blessings of Vajpayee, may talk of cutting government expenditure by pruning staff, perhaps divesting the PSUs. The fiscal deficit is a constant nightmare for any government and Sinha has had enough experience to acknowledge its awesome impact on the economy. Then they will have to contend with the likes of Banerjee and Paswan, both of whose strategic visions are constrained by geography and community; Banerjee hopes to become the apostle of West Bengal and Paswan of the lower castes.

Much more on his hands

But it is not only in the realm of financial prudence that Vajpayee will have to exercise statesmanlike leadership. With the army in power in Pakistan the temptation to turn hawkish will be strong in the defence establishment; war cries cannot be ruled out from the Hindu fringe groups that gave Vajpayee so much heartburn in his previous term. It will require the combined efforts of the finance ministry, ever watchful of expenditure, and the temperate views of Vajpayee himself to control the urges to jingoism. What he and his colleagues will have to understand is that a government committed to the development of its people on democratic lines is the best defence against a neighbour whose government cannot stop its sabre-rattling.

For Vajpayee the task of pulling such a huge team together in one direction will be made all the more difficult by the job of getting the states to fall into some fiscal disciplinary line. The elections have transferred power more than ever before to the states; Vajpayee will now have to deal with newer forces in the form of the Janata Dal (United) in Karnataka, probably the Congress-NCP in Maharashtra, and Om Prakash Chautala in Haryana. Most of the states are broke; every one will clamour for Central assistance and cry foul when it is not given. What a way for Vajpayee to begin his third innings. •

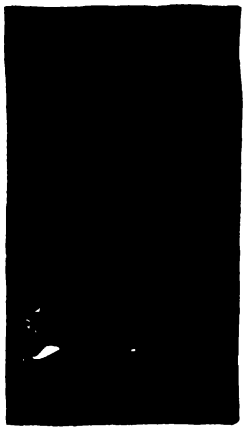
Diesel downside

Populism is the worst enemy of rational pricing for petroleum products

At first sight it might appear a bold and dashing move on the part of a caretaker government whose representatives have just finished fighting an election for a comeback. Hours after the Election Commission's model code of conduct was thrown out by the Supreme Court, the BJP caretaker government announced a 40 per cent hike in diesel prices. It was also a little foolhardy, because consumer might just have decided that the caretaker government had become opportunistic and therefore felt shortchanged especially those who had voted for the candidates from the ruling alliance. Mercifully the move passed muster. Not any more, now that the government is in place.

It might be argued that there was no alternative to increasing diesel prices by 40 per cent even before the election results were announced, considering the increasing domestic consumption of the fuel. Contrary to past trends (consumption of diesel grew by 4.3 per cent in 1998-99 and 3.7 per cent in 1997-98), this year it increased by 9 per cent. A major reason was, of course, the surge in industrial production this year compared with the previous two years, when recessionary conditions had gripped industry — the major consumer of diesel. A 60 per cent jump in crude oil prices since the last price adjustment in April 1999 also weighed in favour of the increase.

However, the manner in which it has been done was inopportune. Once the government announced a policy of linking domestic diesel prices to international ones, it should have been put on autopilot. In fact, immediately after the announcement in 1997, several such adjustments (and some of them downward) were announced. However, the BJP's coalition government facing elections could not muster the courage to follow the practice in the last six months.



The resulting 40 per cent hike is going to be difficult for industry or consumers. to digest. Already the Congress and Chautala's Lok Dal in Haryana, a political ally, have expressed opposition to the hike. While the Congress's demonstrated opposition appears to be opposition politics, the INLD's cannot be wished away. The discontent among various alliance partners with Vajpayee's exercise of ministry-making is only going to accentuate the problem.

Keeping politics aside, the delay is obviously retrograde and hopefully will not happen in the future. Just as the announcement of interest rates periodically has been left to the wisdom of Reserve Bank, we hope petroleum product prices too are left to the Oil Coordination Committee every month, no matter what the political situation is.

In fact, the government should go a step further and take serious steps to implement the Nirmal Jain Committee's recommendations regarding administered prices of petroleum products. Cooking gas prices are waiting to be hiked and the urban or rural middle class can definitely absorb a Rs50 hike in monthly fuel prices once a quarter, so that before the end of 2000 the cooking gas subsidy is ended. The kerosene prices too can be delinked from cross-subsidisation and, instead, a direct consumption subsidy be provided for in the budget, targeted at the poor.

The result will be a rational regime for the growth of the oil sector and not one where the refiners keep waiting for thousands of crores in receivables from the government. If the government is serious about creating a level playing field between Indian oil companies and the foreign ones, it has to let them sell their products like any other oil company in the world. Similarly, concrete steps should be taken to ensure that the entire administered pricing mechanism is dismantled by 2002 as scheduled and the 12 per cent cost-plus formula is removed, as it provides no incentive to efficient refiners.

To implement all these purely economic decisions the government has to take a few lessons from Chandrababu Naidu, who educated his electorate against the Congress's populist 'free power' slogan by asking them in his rallies, "Do you want two hours of free power or 24 hours of quality power?" and won the elections with a thumping majority. The whole second phase of reforms cannot be implemented by recourse to rule by decree, as we have seen increasingly in the recent past. Instead, the government should take extraordinary efforts to educate the public about economics as it is a necessary condition for economic growth and a shield against charlatan demagogues. Voters in Andhra Pradesh have shown that it works. •

An unclear future

Gen. Musharraf's coup, rather than ending the turmoil in Pakistan, may actually be the beginning of more instability

It scarcely bodes well for India to have a virtual martial law clamped on Pakistan for the first time after that country acquired its nuclear capability in May last year. More so when the military leadership there has manifested a visceral hostility towards New Delhi — in February, when the chief architect of the current bloodless coup, Gen. Parvez Musharraf, and his other service peers boycotted the reception accorded to Indian Prime Minister Atal Behari Vajpayee in Lahore, and again during the June/July cross-border strife in Kargil.

Indeed, it was on the vexed impasse over Kargil that Musharraf, Pakistan's maiden Mohajir army chief and chairman of the joint chiefs of staff committee (JCSC), first came into conflict with Prime Minister Nawaz Sharif. They could never reconcile their differences thereafter, culminating in Sharif's dismissal of Musharraf when the latter was on an official visit to Sri Lanka. The same day upon his return to Pakistan, Musharraf turned the tables on Sharif, had him and his key aides taken into custody, and strode to power with military backing. Within days he put an end to all speculation whether he would induct a puppet civilian regime by declaring instead a state of emergency, that is tantamount to a virtual imposition of martial law, appointing himself chief executive, suspending the constitution of the Islamic Republic, banning the Supreme Court from challenging his authority, and putting the whole of Pakistan under the control of the armed forces.

Ironically, Musharraf himself had been handpicked by the prime minister to succeed Gen. Jehangir Karamat, who had unceremoniously been dismissed by Sharif in October last year. Karamat was made to pay for his public condemnation of the Sharif regime, while Musharraf was rewarded for his loyalty. That Sharif miscalculated became increasingly clear when Musharraf swiftly consolidated his control, not unlike Gen. Mohammed Zia-ul-Haq, who had similarly belied the trust reposed in him by Zulfiqar Ali Bhutto. Musharraf's aversion for India came through even in his address to the nation delivered on state-run Pakistan Television (PTV) soon after assuming power. In a veiled warning to India without naming it, he declared that no country should take advantage of the situation prevailing within Pakistan. It was just as well that, despite his preoccupation with government-formation, Vajpayee was quick to ensure that the Indian forces were put on high alert.

Pakistan's latest descent into political turbulence ironically coincided with the swearing-in of the re-elected Vajpayee ministry, whose numerical superiority in the 13th Lok Sabha and in comparison augurs a political and economic stability for India. It is generally felt that military rule in Pakistan has not aggravated its relations with India as the army there focused itself on consolidating power and governing the country quite unlike the civilian governments, which have sought to divert attention from their misgovernance back home by conjuring up threats from across the border. But one must recognise the fact that Musharraf has traditionally been close to the fundamentalist Taliban – supported in neighbouring Afghanistan by the dreaded international terrorist Osama bin Laden – as well to the extremist fringe in Pakistan. Being a Mohajir rather than a Punjabi, as most of his predecessors have been, he needs to ensure that his acceptability within the Pakistani armed forces is sustained and will thus seek to nurture his militant constituencies even more fervently in order to bolster his influence.

While Musharraf enjoys the backing of the Islamists and the militants, he would do well not to get carried away by the street exultation that greeted his ascent to power. The jubilation was less for the military takeover than for the ouster of Sharif, whose popularity has waned on account of his misgovernance, his pussyfooting on Kargil by acquiescing to US pressure, his mismanagement of the economy, and the violent sectarian strife in Sindh that has united the disparate opposition against him.

Despite the state of emergency, Musharraf has allowed President Mohammed Rafiq Tarar to retain his post. Pakistan's political future as yet seems hazy. With army rule back and Sharif's discredited predecessor Benazir Bhutto – now ensconced in Dubai to avoid grievous corruption charges back home – exerting herself in wresting some advantage for an early return to power, the real losers will unquestionably be the ordinary people. In his brief address on PTV Musharraf said: "You are all well aware of the kind of turmoil and uncertainty that our country has gone through in recent times." Little does he realise that the future for Pakistan may scarcely be different under the circumstances. ♦

BPL acquires London CTV unit

Consumer electronics major BPL is busy pumping up volumes in the international marketplace. On 1 November a sales and purchase office is being opened in London as a precursor to acquiring a CTV plant just outside the megalopolis. The plant, with a capacity of 300,000 sets per annum, is being purchased for $3 million. This includes the working capital required for expansion. BPL's director (international operations) L.H. Bhatia has been instrumental in masterminding the acquisition. The company is all set to shift some vital plastic moulding machinery from its Bommasandra automation division plant to the London facility.

With the working capital expansion, Bhatia reckons that he can up the ante with capacity shooting up to 600,000 units per annum by the year 2000. This is expected to add Rs500 crore to the group's turnover. While the ownership of the actual plant is being kept under wraps, it is very likely that this acquisition is of London-based manufacturer Binatone. This will enable BPL to attack the western and eastern European markets, and also hit the north African market with the old brand name. BPL's strategy is determined by the novel concept of 'time to market' to ensure that the product gets to the consumer in double-quick time.

Taj property hunt

With the Taj Mahal hotel set to be renovated, the top echelons of Indian Hotels will be shifting out of the old Taj to their new premises. The Taj management was negotiating with the Oxford University Press for its building near the Taj, but that has now fallen through. Instead Dhanraj Mahal, also behind the Taj in south Mumbai, has been zeroed in on. Further, the Taj group is keen to acquire a small hotel in the same area (could it be the Diplomat?) for its other personnel.

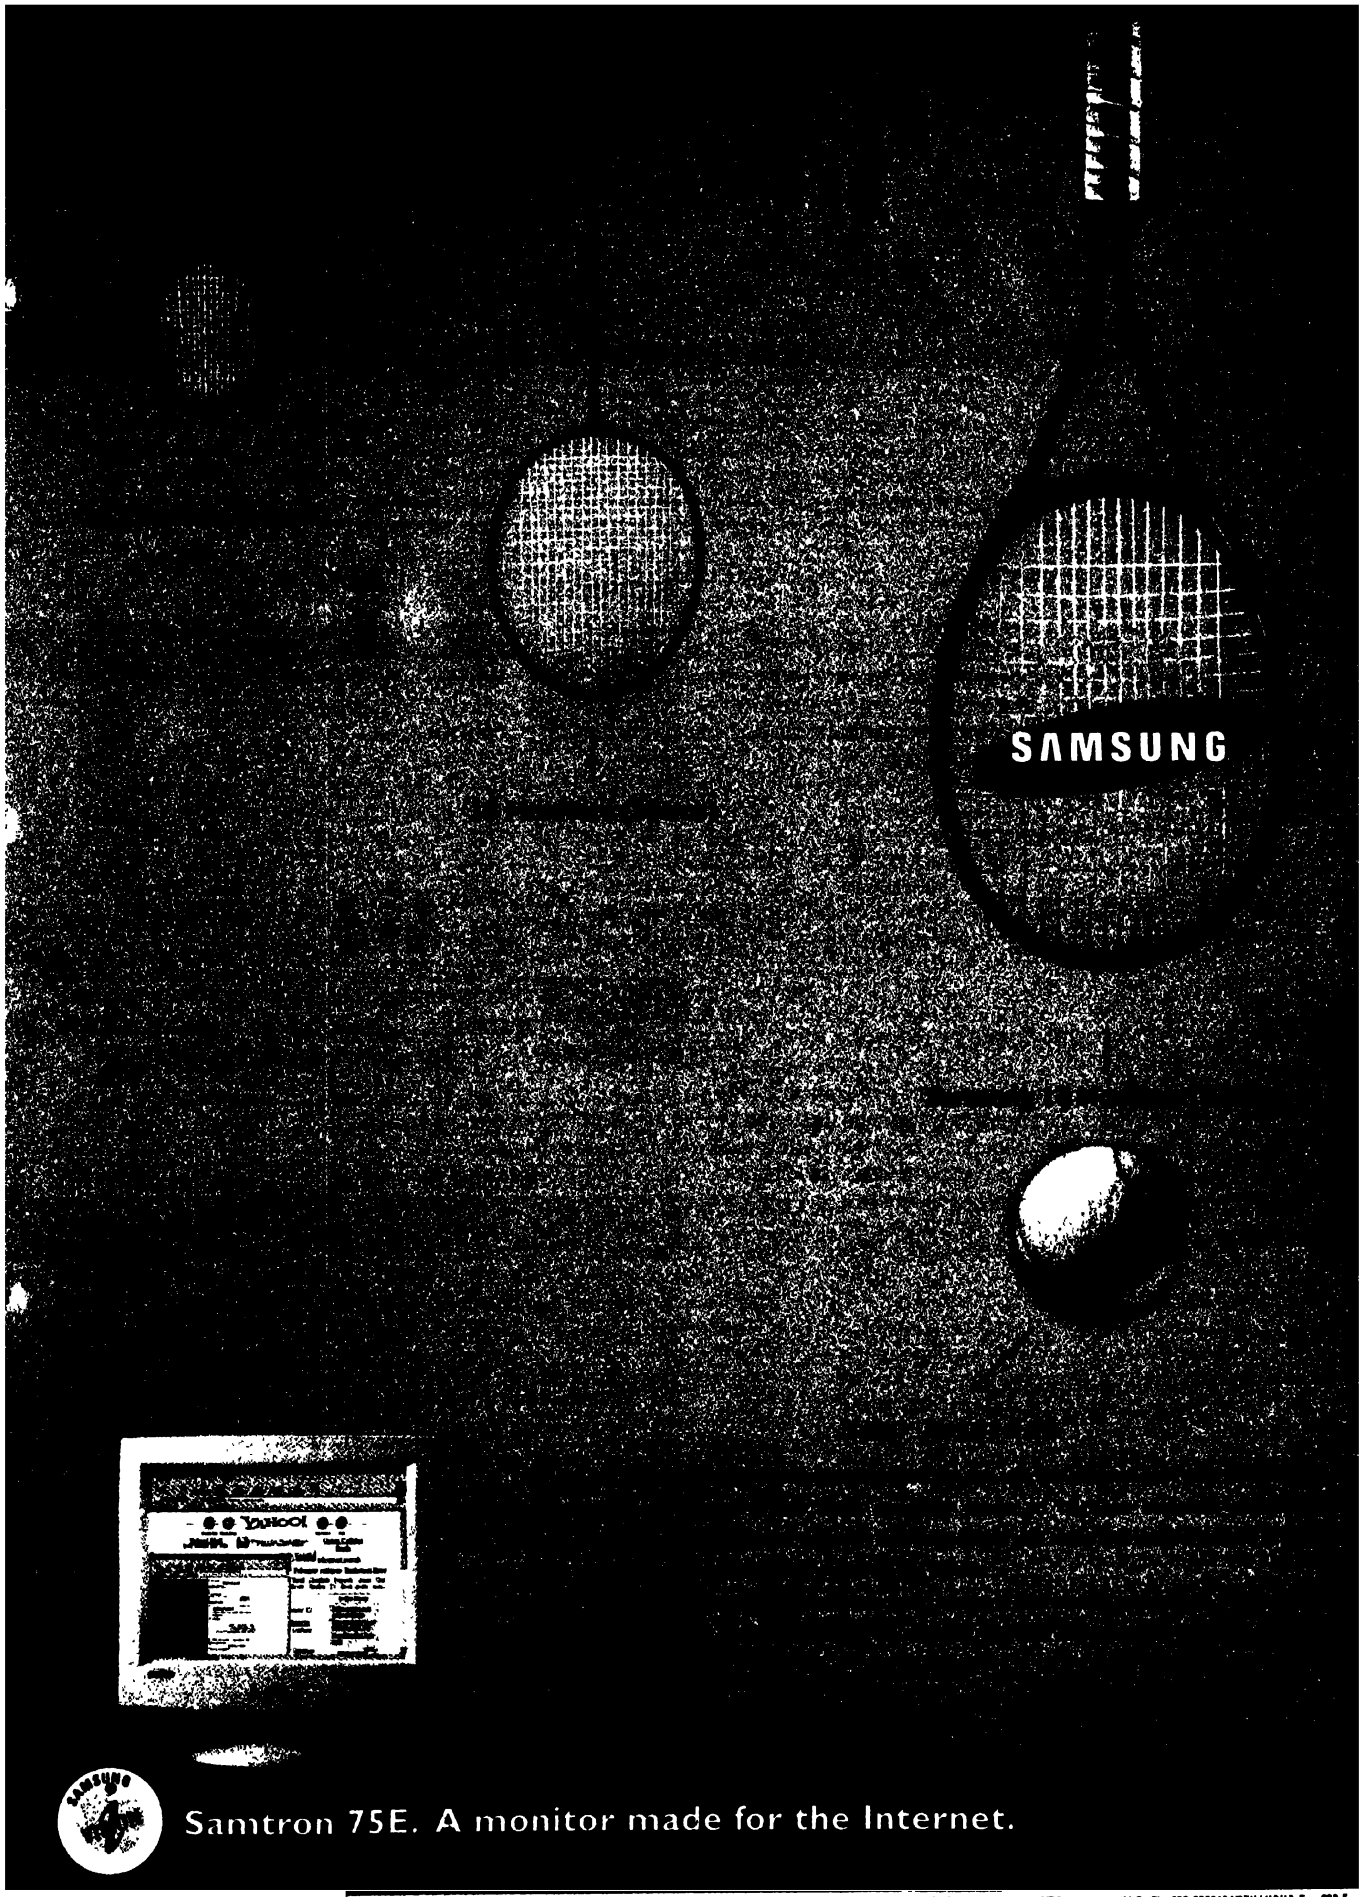
With the Taj group going slow on building new five-star properties unless there are substantial profits involved, fine-tuning of the demand-supply projections for north Mumbai are underway. Intense competition in that area is forcing the Taj to work on the blueprint for a radically different product in the Sahar area. Meanwhile, the buzz is that the Wellington Mews hotel project (in south Mumbai) is finally taking shape.

HDFC real estate MF

Housing Development Finance Corporation (HDFC) has apparently once again asked the Securities & Exchange Board of India (Sebi) to allow it to float a real estate mutual fund which will enable investment in real estate. With a new government in place and Jagmohan as the urban development minister, a slew of measures are on the anvil. The grapevine has it that Sebi is not averse to the idea this time round, subject to the government amending regulations. HDFC, buoyed by a 40 per cent increase in housing loan applications from individuals in the first five months of this fiscal, has also cut by 1 per cent its interest rate for the Rs5-10 lakh slab.

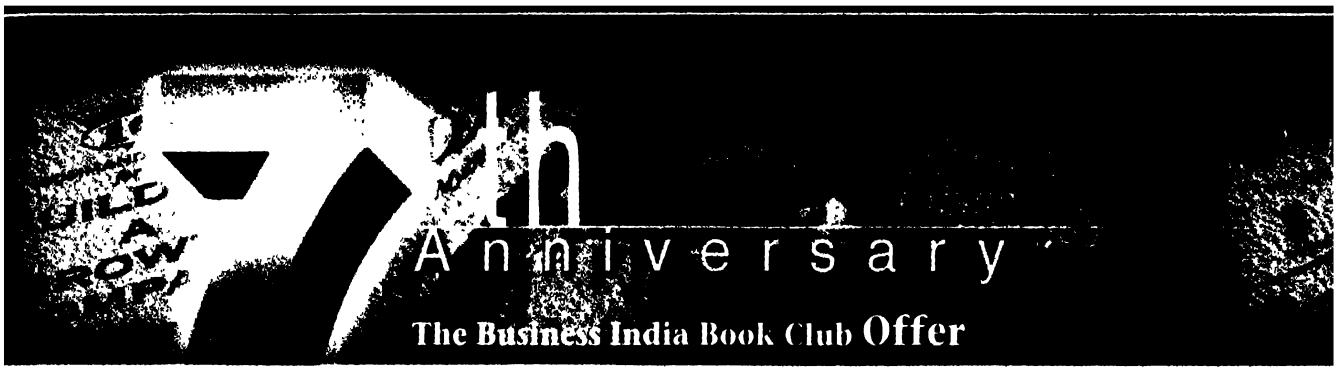
Meanwhile, Hudco has put forth a proposal to the Union government for a regulatory authority for urban infrastructure called the Utilities Commission, which will handle a wide array of tasks related to urban infrastructure projects.

Spielberg to come to India



The Indo-American Chamber of Commerce is keen to stage a major interface between Hollywood and Bollywood in Mumbai later this year. There is talk that Hollywood will be represented by Dreamworks guru Steven Spielberg, while Bollywood will have all its titans in full regalia, including ace filmmaker Mani Ratnam. With the film industry being accorded industry status and industry associations like CII and FICCI keen on interacting with the entertainment industry, film finance is something that is still proving to be problematic. A dialogue between the two hotshots of the film industry - Spielberg and Ratnam - is expected to iron out some of the glitches.

Downturn in publishing



Gentleman magazine of the Sterling Group (part of Manoj Sonthalia's The New Indian Express Group) is facing tumult. Editor Sambit Bal has put in his papers as the magazine's printing is being shifted either to Bangalore or Chennai as part of a cost-cutting exercise. The New Indian Express Group's magazine division publisher Rajib Sarkar, also publisher of *Gentleman* magazine, is the new editor. Apparently, printing *Gentleman* at Tata-Donnelley in Mumbai has proved too expensive. Meanwhile, the news out of Job Charnock's Calcutta is that the Ananda Bazar Patrika group has finally decided to suspend publication of the beleaguered *Sunday* magazine. This, however, was denied by ABP sources in Mumbai.

Ambanis may take DSQ

A few weeks ago the Ambanis made known their decision to buy some software companies. Using their financial power a number of software companies could come their way. However, the Ambanis are known only to pick up bargains and stay away from high-priced deals. Apparently, one company they are looking at is DSQ software. Earlier a Singapore-based NRI wanted to take it over. At that time the share prices jumped. After that deal fell through the share fell significantly. Now the Ambanis, knowing that the promoter has pledged a large number of shares in the bazaar, are said to be aproaching he lenders with an offer to take the DSQ shares off their hands — naturally at a price lower than the market but higher than that at which the lenders have lent. The lenders get off the hook and the Ambanis acquire cheap — the only loser is Dalmia, the original promoter, who in any case has made a large amount in the past out of the whole deal. •

Cellphone conundrum...blowing cold...snakes alive!

Cellphones are taboo in the air — particularly while aeroplanes are taking off and landing. They have also acquired pariah status in hospitals and restaurants. Now they are becoming unacceptable in another area — petrol pumps.

The latest to sound a warning is BP Amoco.

Company officials are concerned that electronic impulses from cellular phones and other electronic devices could trigger explosions if mixed with gas fumes. The company had earlier cautioned against using cellular phones, compact disc players and pagers at its service stations in the UK and Australia. It is now doing the same thing at its service stations in the US.

BP Amoco in not the first off the block. Motorola has warned against using its instruments in fuelling areas. Chevron has begun mailing out information to caution against the use of all portable electronic devices near gas pumps. This was done earlier by Exxon. Meanwhile, Cicero, near Chicago, has passed a law banning the use of cellphones near gas pumps.

Much of the reason for the ban is because of rumours spread on the Internet that use of cellphones can be dangerous. There have been reports that two drivers — one in Indonesia and another in Adelaide, Australia — were severely burnt after explosions caused by the use of cellphones. These reports have not been verified, but companies in the business have been issuing warnings as a measure of abundant caution. If things keep on this way, the cellphone bids fair to acquire the status of today's other popular bugbear — smoking.

Nasa's Mars Climate Orbiter has gone up in smoke, one of a series of recent US space programme disasters. This time there have been no prolonged post-mortems that end up absolving almost everybody. The reason for the failure, it turns out, was a simple calculation error.

The Jet Propulsion Laboratory in California said its preliminary findings showed that Lockheed Martin Astronautics in Colorado submitted acceleration data in English units of pounds of force instead of the metric unit called newtons. At the propulsion laboratory, the numbers were entered into a computer that assumed metric measurements. Lockheed Martin Astronautics acknowledged the mistake.

The Mars Climate Orbiter was on a mission to study the Red Planet's weather and look for signs of water, information key to understanding whether life ever existed or can exist there. It carried cameras along with equipment for measuring temperature, dust, water vapour and clouds.

All eyes are now focused on the Mars Polar Lander — the second element of a two-part mission costing $328 million in all. The Lander is due to touch down on 3 December in the planet's south polar region.

The calculation snafu has brought into sharp focus two issues. First is the US persistence on continuing with archaic measurement units such as miles and gallons. If this had not been the case, the mix-up would not have happened in the first place. The second is the poor performance of US students in mathematics.

Results from the Third International Mathematics and Science Study show a continuing decline among US high school seniors in maths and science. American students ranked 19th out of 21 countries in general maths skills, with only Cyprus and South Africa showing poorer results. Among academically-advanced students, the US ranked 15th in maths among the 16 nations that participated in the advanced tests, with only Austria ranking lower.

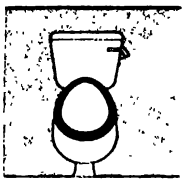
The study found that US students did fairly well in both maths and science at the fourth-grade level, but, by the eighth grade, they ranked in the middle in science and below average in maths. US schools are apparently failing to build on those skills as students move into middle school.

A recent editorial in the *Washington Times* said that "US high school seniors are among the least prepared students on the planet in the fields of science and mathematics". It's from seeds such as this that orbiters go belly up at Nasa.

Blowing your nose when you have a cold would appear to be an automatic response to troublesome symptoms. But, if researchers are to be believed, that's just the thing you should not do. According to a collaborative study done at the University of Aarhus in Denmark and the University of Virginia in the US, blowing your nose can propel mucus into the sinuses potentially increasing the severity of a cold and risk of bacterial infection.

There is a potential risk for each nose blow to introduce nasal secretions into the sinuses. During colds, nasal secretions contain virus and bacteria.

While the findings have implications for the treatment of the common cold, this nose blow by blow account has little by way of a short-term solution. After all, a running nose is hardly a viable option.



MSNBC reports that "an August *London Observer* story alerted Britons that this summer's New York

City fashion fad of live snakes as women's accessories would soon hit England. Londoners just back from Manhattan reported they had seen "several" or "quite a few" snakes on the street, from dance-club exhibitionists to the upscale patrons of trendy bars like Max Fish, with serpents usually carried in handbags and chosen for their colour, e.g., albinos or green garters or bright-banded corn snakes." •

BUSINESS INDIA INDEX

Ratio of foodgrains wasted annually in India to total foodgrain production in Australia during any given year: 1:1
Ratio of fruits and vegetables wasted annually in India to that consumed in the UK during any given year: 1:1
Number of Indians, in million, who could be fed for a year by the amount of foodgrains that India wasted in 1998-99: 117

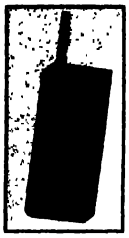
Percentage of rural households in Haryana and Punjab that own a television set: 40 & 39
Percentage of rural households in Haryana and Punjab that have a toilet: 8 & 20

Percentage of school-going students in Delhi who have dental cavities: 33
Percentage of school-going boys in Delhi who have dirty nails: 56
Percentage of school-going girls in Delhi who have dirty nails: 44

Chances that militants in Punjab took to militancy either for the sake of fun or for indulging in large-scale looting rather than for political commitment to the cause: 1 in 2
Chances that the victims of militancy in Punjab belonged to the community from which the militants came: 78 in 100

Increase, in per cent, in the number of IPS officers in Punjab in the last 14 years: 130

Percentage of rural households in Bihar and Uttar Pradesh that have a separate kitchen in their homes which, according to NCAER, 'symbolises autonomy to female members within the Indian structural context': 16 & 18
Percentage of rural households in Himachal Pradesh and Kerala that have a separate kitchen in their homes: 81 & 89



Number of unmarried women out of every 100 Keralite women of marriageable age: 51
Number of unmarried women out of every 100 Indian women of marriageable age: 45

Percentage share of the population of 37 democratic countries (of the 121 countries worldwide) in the total world population in 1980: 35
Percentage share of the population of 117 democratic countries (of the 193 countries worldwide) in the total world population in 1998: 54

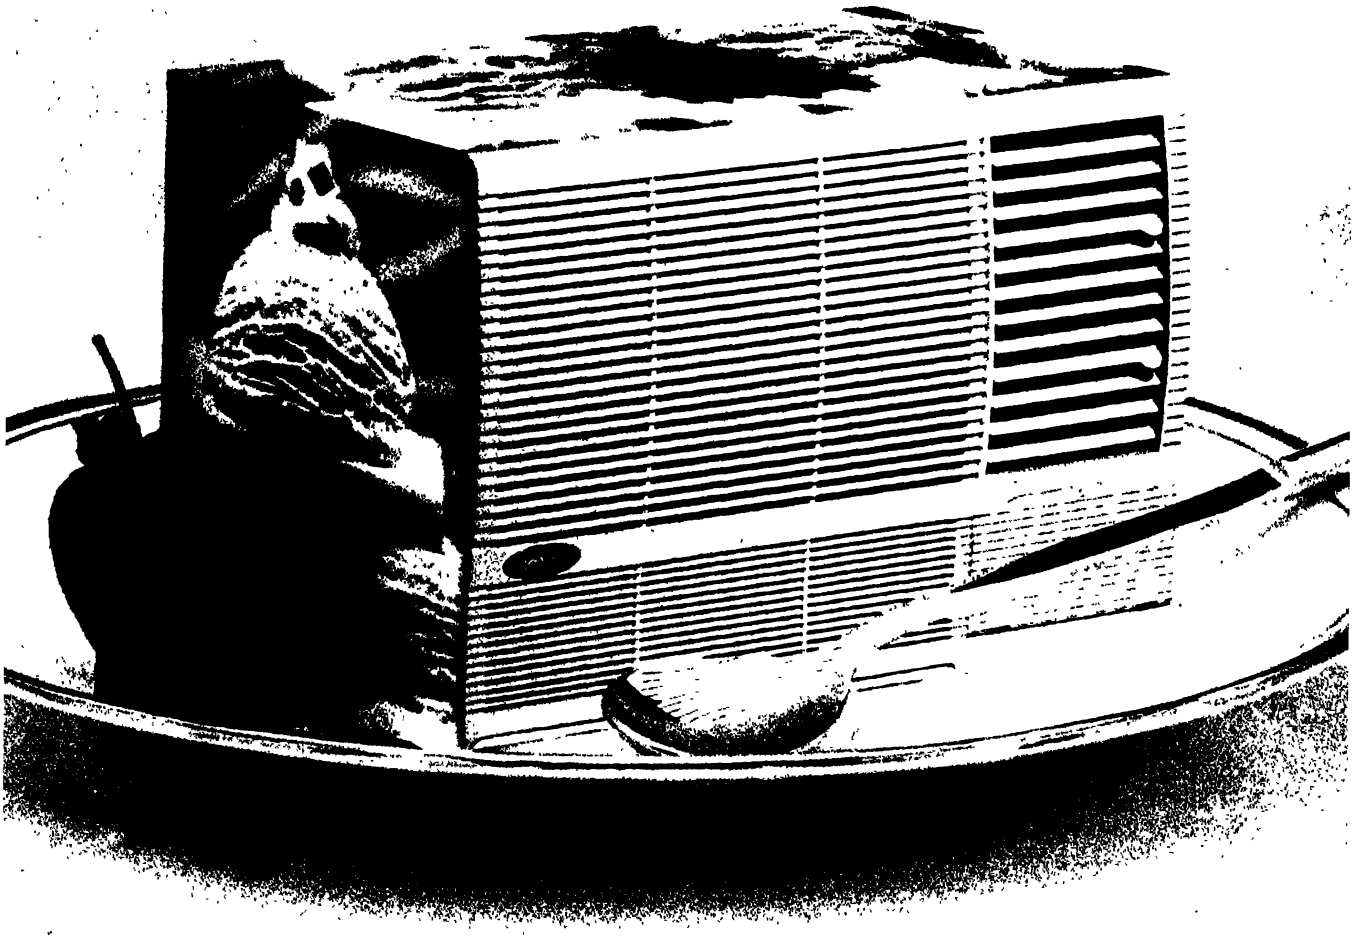
Average number of hours that a British woman spends ironing her family's wardrobe annually: 117
Average number of hours that a British man spends ironing his family's wardrobe annually: 68

Percentage of Canadians who expressed a great deal of confidence in political parties in 1979: 30
Percentage of Canadians who expressed a great deal of confidence in political parties in 1999: 11

Estimated number of mobile phones that will be lost by Londoners on their city's public transport system in 1999: 13,000
Estimated number of umbrellas that will be lost by Londoners on the city's public transport system in 1999: 11,000

Number of words in which members of Britain's House of Lords have to explain why they should be allowed to keep their jobs: 75
Number of Lords, out of a total 759, who will lose their jobs and titles this year due to massive cost-cutting by the British government: 667

Amount, in dollars, offered as reward by the US government for capturing Afghanistan-based terrorist leader Osama bin Laden: 50,00,000
Amount, in dollars, reportedly offered as reward by an Afghan scholar for the head of US president Bill Clinton: 113



Average cost, in dollars, of a breast augmentation surgery in the US: 3,077
Average cost, in dollars, of a breast reduction surgery in the US: 5,471
Chances that a breast surgery in the US among girls aged 18 and younger is for reduction and not for augmentation: 68 in 100

Recommended for fastest cooling.

Nothing cools you faster than the Godrej SmartCool Air Conditioner.

Godrej SmartCool Air Conditioner has one strong advantage over the rest – the unique Rapid Heat Exchanger. It sucks in a larger amount of air, filters it and blows out icy cool, purified air – in seconds! This means that the compressor works for shorter periods of time. And therefore, a huge saving on power. Now, that should speed up your decision to buy the best.

Godrej SMARTCOOL Air Conditioners

FASTEST COOLING. SAVES ON POWER.

Storage on Net

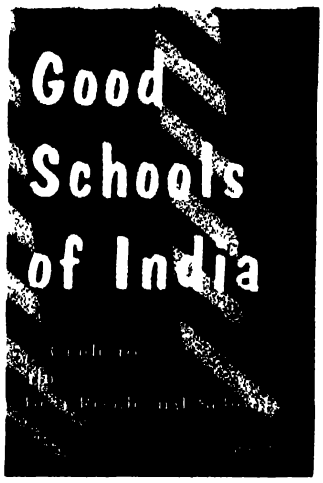
Imagine going back 10 years in IT history to the time when PCs only had a CPU and no hard disk. You had to load simple WordStar or dBase programmes from a floppy and store files also on floppy. Then came the hard disks and entire PC profile changed. Today, **www.DiskonNet.com** provides a hard disk on the Internet where a user can place his/her files, photos, MP3s and address book, among others. This new concept is a free service that gives visitors a personal Web-based 20 MB hard disk along with an e-mail account with mail forwarding facility, and the ability to share specified files, photos, and calendar entries. The promoters explain that the site is dedicated to creating a community of subscribers who want an easy, efficient, effective and secure way of storing and accessing their personal data over the Internet. The company offers partner and alliance programmes. The partner programme is aimed at a wide range of companies who can use the product to complement their business strategy, whereas the alliance programme is targeted at ISPs who can team up with the facility and enjoy increased site traffic and added value.

DiskOnNet.com

IT Net

One of the most successful IT sites on the Internet for the past couple of years has been ZDnet promoted by international publishers of computer magazines Ziff Davis. The information contained in this site is primarily American and it was only a matter of time before someone would occupy the Indian IT cyberspace with a similar concept. During India Internet World held in September 1999, promoters Pradeep Kar and Microland Limited unveiled **www.itspace.com**, India's first information technology portal. The Website aims to create a virtual on-line community of technology creators, developers, vendors and users by creating, building and facilitating content, community and commerce across the technology marketplace. The site features articles by IT professionals and analysts along with on-line ticker service on IT stocks, industry news, and coverage of IT-related events. For professionals the site offers the latest information on Web applications, IT services, enterprise management, manufacturing, and the changing canvass of IT policy. For others the site contains analysis of infotech stocks, job opportunities, and book reviews. A must for IT pros and enthusiasts.

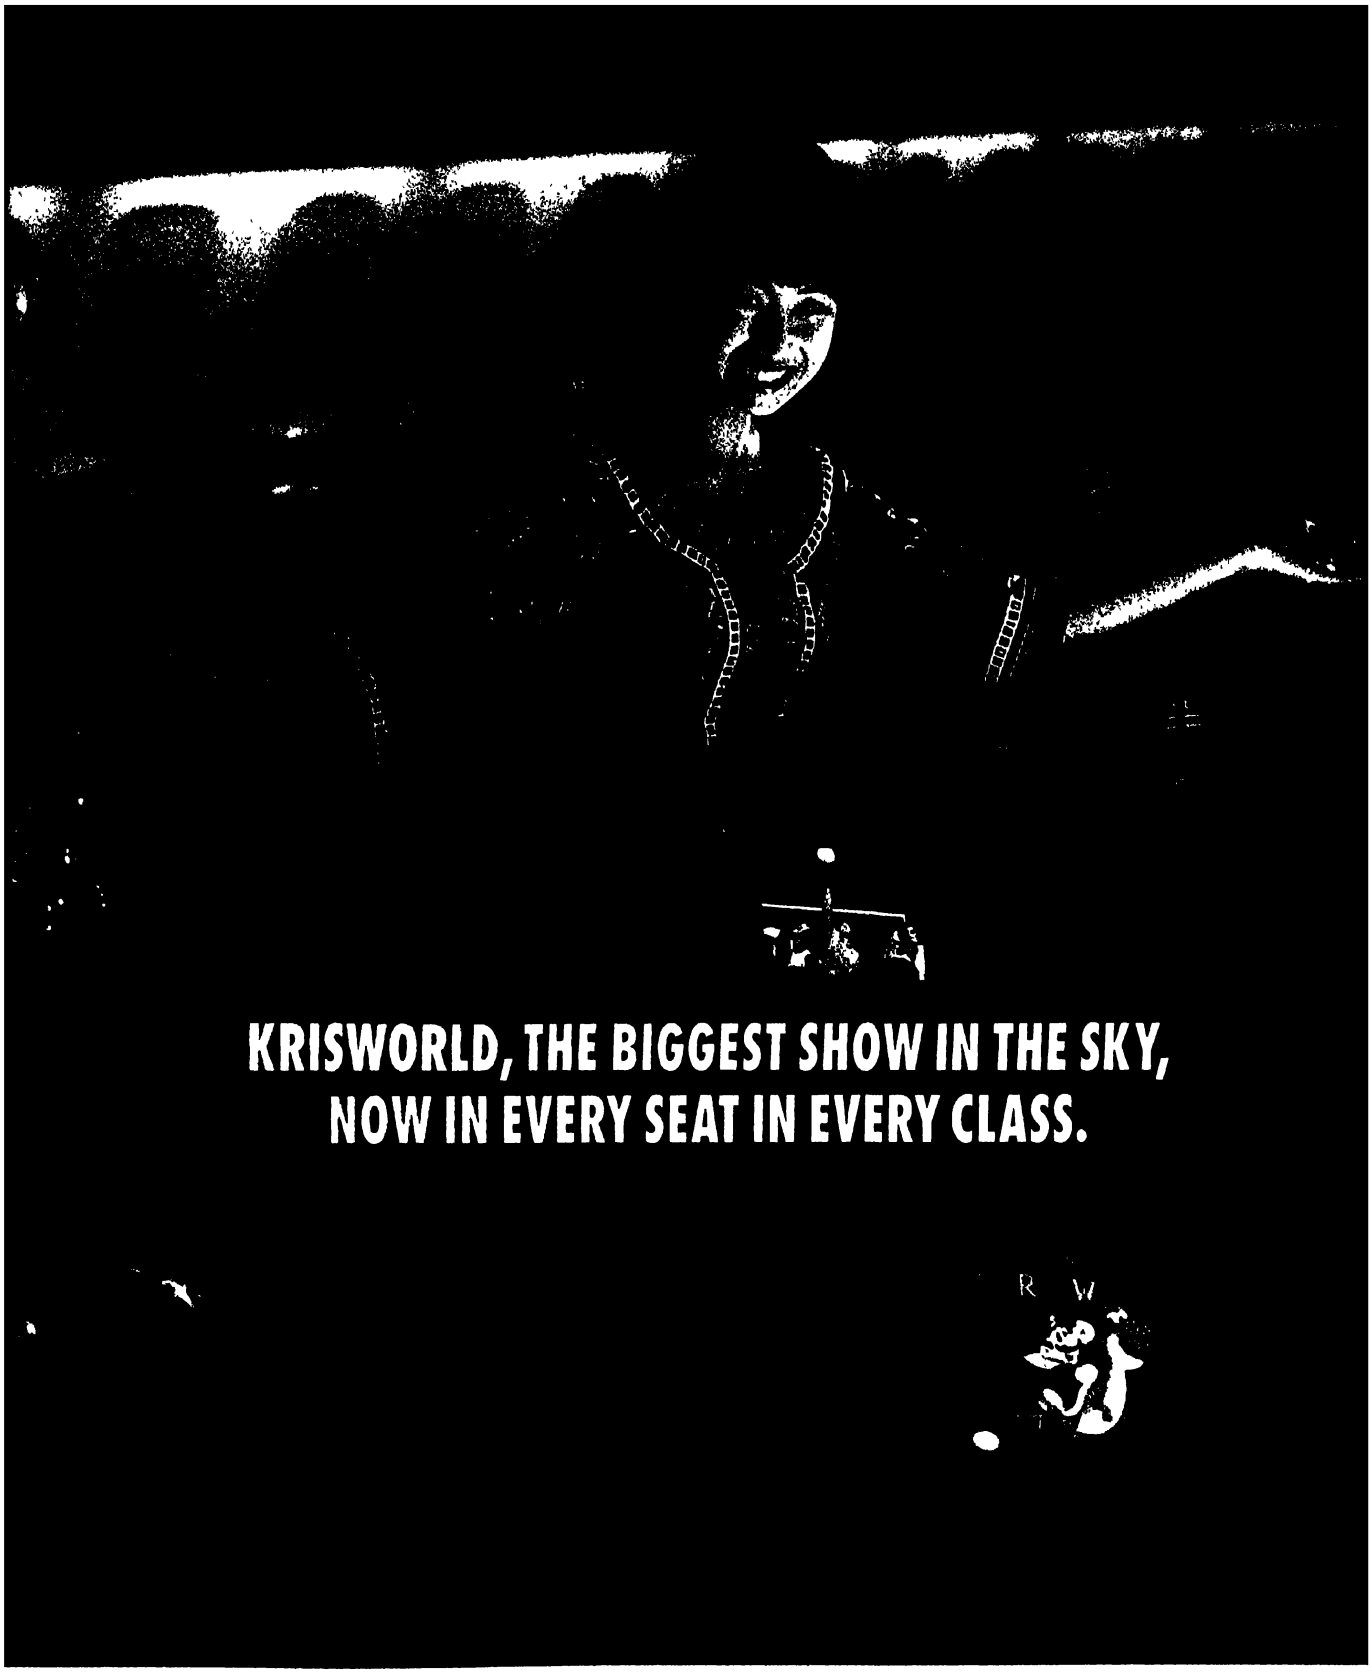
Bank on Net



The Housing Development Finance Corporation Limited, among the first institutions in the private sector to receive 'in principle' approval from RBI to set up a bank, is also one of the first to offer banking facilities on the Net on www.hdfcbank.com. Laun-ched during September 1999, the site offers consumer banking, consumer loans, demat accounts, stockbroker accounts, business accounts, custodial services, corporate banking, cash management, correspondent banking, and treasury and capital markets. HDFC Bank's Web foray is driven by its mission to be a "world class Indian bank...a bank that would meet various financial needs of its customers in a convenient and cost-effective manner at international standards of service". The bank, which has a strategic business collaboration with Chase Manhattan, currently boasts a network of over 60 branches and 50 ATMs across the country additionally supported by phone-banking centres. A good effort for an Indian bank!

WebWatch

Net numbers are skyrocketing



The number of Indians glued to the Internet is set to swell by 3.5 million in next 15 months if recent estimates prepared by Hyderabad-headquartered MBL Research and Consultancy Group are to be believed. MBL is a part of NFO Worldwide, the third-largest market research firm in the world. Its report on Internet usage in India released last week estimates the population of netizens in the country to increase from 1 million to 4.5 million by December 2000. Almost 85 per cent of India's Internet user base is currently in eight cities with Mumbai and Delhi leading the pack, though Pune has recorded the highest Internet penetration rate in the country. As regards gender and age-wise classification, 42 per cent of India's Internet users are between the ages of 15 and 24, 31 per cent between 25 and 34, and 27 per cent are 35 and above. Males constitute 72 per cent of all users. Another interesting finding is that e-mail accounts for the largest category of usage followed by entertainment, education, file transfer, and product queries. One out of seven users looks for local language content on the Net, whereas one in 10 claims to have made an on-line purchase so far.

Information on good schools

Dehra Dun-based The English Book Depot recently published a book *Good Schools of India* and launched a website **www.goodschools.net** containing the same information as in the book but with additional search facilities not possible in the dead-trees edition. The site provides detailed descriptions of over 100 of the best residential schools including famous and academically successful and speciality institutions like sainik schools, military schools, sports schools, etc. Authored by Sandeep Dutt, alumnus of the Doon School and a law graduate, the site provides details on curriculum, provision for sports, art, drama, and hobbies, and general information on fees and admission. There's also a primer on the characteristics of a good school and a checklist to help you choose the right one for your child. A useful effort.

Ogilvy

Much room for growth

Agro Dutch Foods Limited

Five months ago (17 May 1999), Business India said how Agro Dutch Foods' share price, at Rs22, was a mushrooming one. Today, the scrip changes hands at around Rs130

It's not just the share price of Agro Dutch Foods Ltd (ADFL) that warrants a look, but the company's performance is noteworthy as well. During the first quarter ended June 1999, while export sales increased by 117 per cent to Rs15.12 crore, net profit shot up by over 11 times from a mere Rs31 lakh to Rs3.48 crore. This translates into an annualised earnings per share (EPS) of Rs10.11. Trading at Rs 130, the price to earnings ratio works out to 12 times. "Going by these figures, the net profit for the first half is estimated to be in excess of Rs7 crore (last full year: Rs8.59 crore)," says a financial analyst from a domestic mutual fund.

But what has really made this counter so attractive? "It's more than the results," says the company's MD, Malvinder Singh, who displays an acumen to negotiate good bargains. Towards the end of September 1999, Singh has managed yet another deal. Lipton of the US has signed a three-year agreement with the $100-million Kanan group for the import of 6,000 tonnes of mushrooms a year. "The mushrooms will be supplied by the Chandigarh-based ADFL," says NRI Mehul Shah, chief promoter of the Kanan group. The group is also the exclusive distributor of the entire Amul range of dairy products in the US.

"To cater to the growing overseas market, during the current year, ADFL has expanded its capacity from 9,736 tpa to 12,000 tpa. With the new marketing tie-up with the Kanan group, we plan to further hike this to 26,000 tpa by September 2000," adds Singh.

Interestingly, the Kanan group's commitment to ADFL is not restricted to a mere marketing tie-up. "We plan to make a strategic acquisition of equity too. This will be done through a preferential allotment of shares at a price above the current market price," reveals Shah. But, he remains tight-lipped on the details of his planned acquisition. However, according to an investment analyst, Shah hopes to step into the company with a stake of close to 6 per cent and the price that is being considered is over Rs 200 per share.

Singh and Shah seal the deal

LANCELOT JOSEPH

Gold moves in mysterious ways

With the Bank of England's 25-tonne gold auction on 21 September witnessing more bidders than the gold on sale, gold prices flared up from a low of $255.4 per troy ounce. The upsurge continued with gold in the London Bullion market scaling two-year highs of $321 per troy ounce in a short span of 10 days. On 12 October, the prevailing price was $323 per troy ounce down from a feverish high of $332 per troy ounce since 21 September. So, what triggered this unbelievable upward movement? Analysts argue that major players in the market were bearish on the gold price before the auction opened and hence went short, but with an increased number of bids

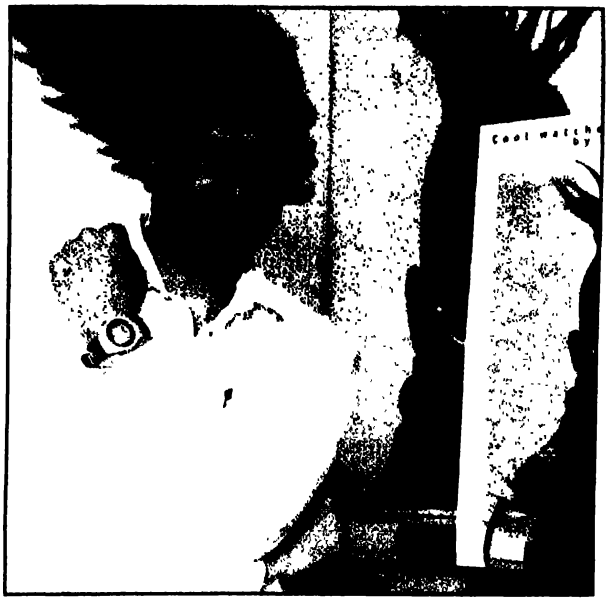
Price volatility has deterred demand

they were caught unawares. Mirroring the price spiral, domestic gold prices have firmed up rapidly.

Fifteen European Central banks stoked the fires by announcing that they would curtail sales from their official reserves. It is pertinent to note that close to 20 years ago, gold prices were hovering in the $800 per troy ounce vicinity. Once again the infallibility of gold as an investment vehicle has been thrown into stark relief with the latest price rise. Particularly in India where gold remains one of the most sound investment choices. With domestic prices ruling at three-year highs, the ramp-up, while encouraging, once again begs the question — is it sustainable in the long run? In a short span of a month, gold prices have shot up domestically by almost Rs1,000 per 10 gms.

Rolf Schneebeli, regional chief executive, Middle East and the Indian subcontinent for World Gold Council, has rightly stated, "The current gold price is a true indicator of the demand-supply situation. Consumers have seen that their confidence in gold is not misplaced. For too long, speculation had driven the market to unrealistically low levels." The World Gold Council maintains that third quarter official gold imports year on year over 1998 will definitely be better this year, primarily due to increased bank imports in the month of August. In 1998, the third quarter was the poorest, recording a mere 124.2 tonnes. However, the vagaries of this year's monsoon are still to be officially determined.

More importantly, while the demand is there, there is a definitive pause in gold jewellery offtake as the price volatility is dissuading consumers. Everyone is now waiting for stability to set in prior to Diwali which might once again kickstart a ramp-up in offtake and price.



• SANDEEP BAMZAI

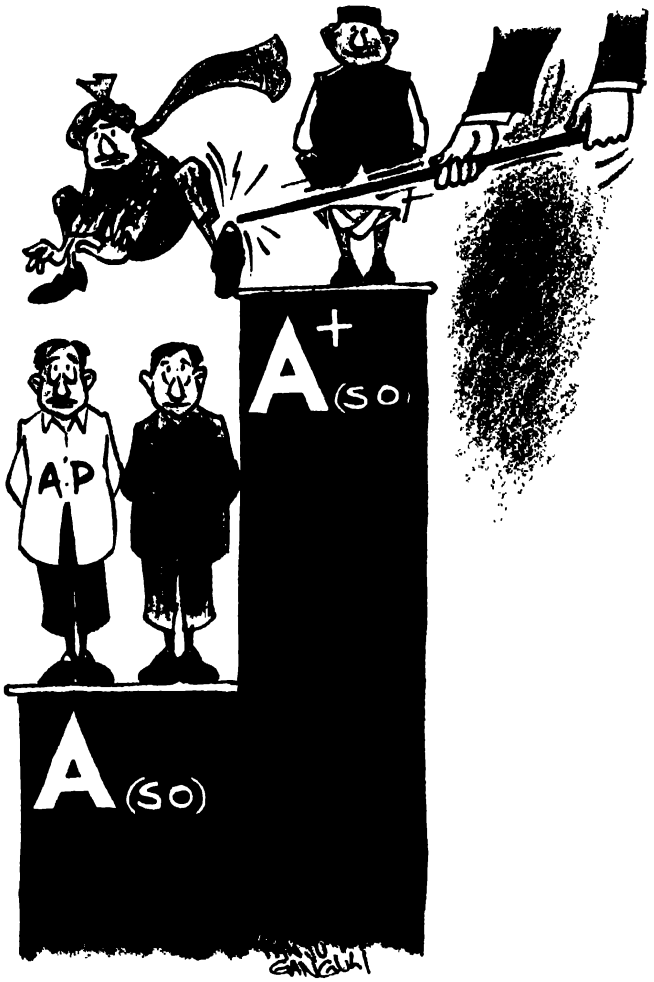
Business India, in its issue dated 19 September, had said that while the second tranche of the Bank of England's gold auction was likely to impact global gold prices, the domestic market would remain largely unaffected. But domestic prices have risen

Timing it right

In July this year, Titan Industries launched Dash!, a new range of watches for kids in the 6-14 age group. A look at the array of 28 watches in rainbow colours and funky styles had left one wondering if such a product line could belong to the same people who had designed the likes of Insignia, Regalia, psi2000 and Raga.

Following the success of Dash!, Titan has ventured into the growing digital watches market. With digital watches becoming tremendously popular the world over, the demand for quality digital wrist watches is increasing. The size of the digital watch market in the organised sector is estimated at around 200,000 watches and is expected to grow. And, naturally, Titan had to be the one to take the plunge into this growing segment. The company launched Digital Fastrack, an all-new range of digital watches designed exclusively for the young, sporty and trendy. "The decision to enter the digital watch market was inspired by the resurgence of digital watches internationally and the need to revitalise a dormant segment of the Indian watch market," says Jacob Kurien, vice-president (marketing), Titan Industries Ltd. With its digital range, Titan aims to extend its reach to the fashion-conscious youth market in the country.

Kurien wants to revitalise a dormant market segment with Titan's digital watches



The new collection includes a wide range of styles, from the simple classic to the latest space-age-looking digitals and futuristic ana-digi models. The collection of 22 designs over four series — digivogue, digiventure, digitech and digigraph — is targeted at the 15-24 age group. Priced between Rs600 and Rs1,500, the products are well within the reach of the target segment. The digital range will be retailed nationally through the World of Titan showrooms, Time Zones and select outlets in eight cities — New Delhi, Mumbai, Calcutta, Pune, Chennai, Bangalore, Hyderabad and Ahmedabad.

• BHAKTI CHUGANEE

In our 12 July issue, we had reported that Titan Industries was branching out from its elegant range of watches and sporting a different look for children. Now, it has gone a step further and launched trendy digital watches

Industrial production rises 6.3 per cent

Some good news on the economy front. Basic and capital goods and consumer durables have pushed up the index of industrial production (IIP) for August this year by 6.3 per cent compared to 4.4 per cent registered last August. As per quick estimates released by the Central Statistical Organisation, the IIP for April-August has posted a growth of 6 per cent compared to 4.2 per cent in the corresponding period last year. Production in the electricity and manufacturing sectors has grown 10.9 and 6.1 per cent, respectively, while mining output is 1.9 per cent higher this August compared to August 1998. The manufacturing sector has grown 6.7 per cent during April-August compared to 4.2 per cent in 1998-99. However, the mining sector has shown a negative growth of 0.3 per cent in the April-August period, while electricity output for the same period has fallen from last year's 8.7 to 6.1 per cent.

Maharashtra loses top slot

But elsewhere, the sheen seems to be wearing off. Last fortnight, credit rating agency Crisil downgraded bonds programmes worth Rs2,564 crore floated by four special purpose vehicles (SPVs) of the Maharashtra government from A+(so) to A(so). The downgrade covers bonds issued by the Maharashtra Krishna Valley Development Corporation, Tapi Irrigation Development Corporation, Konkan Irrigation Development Corporation, and Vidarbha Irrigation Development Corporation. The new rating places Maharashtra's instruments one place lower than those of Gujarat. The two states earlier shared the top spot. In fact, just a year ago, Maharashtra was the only state in the high-investment grade category before Crisil downgraded it from AA-(so) to A+(so) in August 1998.

The state is now placed with Karnataka and Andhra Pradesh, while Gujarat enjoys the highest A+(so) rating for the Gujarat Electricity Board. The revised rating indicates adequate safety on structured obligations. The Maharashtra government has guaranteed borrowings worth about Rs13,000 crore by state utilities and SPVs. The downgrade brings into focus the state's fiscal condition, which is not too reassuring. According to Crisil, recovery in the long term depends on the government's willingness to implement revenue augmentation and fiscal reform measures. The strain on the state's finances is manifested in the Rs588-crore budgetary deficit as per 1999-2000 estimates, even after a net withdrawal of Rs2,300 crore from the cash balance investment account. The state has also not provided for a plan outlay of Rs586 crore. Crisil also expects a sharp rise in the state government's contingent liabilities to impact its finances in the future.

Sebi expands demat list

Paperless may become the catchword in the next millennium. The Securities and Exchange Board of India (Sebi) plans to include 96 more scrips to the list of compulsory dematerialised trading for all investors and 140 scrips for institutional investors. Sebi will go about the expansion in two phases — 29 November this year and 17 January 2000. By January, 200 scrips will be in compulsory demat mode for all investors and 500 for institutional investors. In the first phase 56 scrips will be made demat for retail investors. Of these, 23 will be from the A group of the BSE and 33 from the B1 group. In the second phase the list will be expanded by another 40 scrips for retail investors. This will include the remaining 33 scrips in the A group and seven from the B1 group, thus bringing the entire A group under compulsory demat trading.

3-year record for IT cos with IPO plans

It was a fortnight of hectic activity for Sebi, which announced several new norms in its market-reform mode. The watchdog has made it mandatory for infotech companies planning initial public offerings (IPOs) to have a three-year track record in IT-related businesses. The move comes in the wake of a large number of applications for IPOs by software companies. During April-September 1999, Sebi received applications from 21 software companies planning to raise Rs509.87 crore. This compares with just two applications to raise Rs25.65 crore during the same period last year. The decision could stem the flood of new infotech aspirants planning IPOs. The move was prompted by the recent trend of several finance companies changing their names to add words like 'infotech' and 'software' to raise money from the public. Companies unable to meet the new criterion can access the market through the alternate route of appraisal and financing up to 10 per cent by a bank or financial institution.

New norms for MF investments

The Sebi board has prescribed new limits for mutual funds' investments in group companies, equity, debt, and

unlisted companies. A mutual fund will not be allowed to invest more than 25 per cent of the net asset value (NAV) of any single scheme in the listed securities of group companies. At present, mutual funds are allowed to invest 25 per cent of the NAVs of all their schemes put together. Sebi has also made it mandatory for transactions with associates to be disclosed along with the half-yearly and yearly results. The regulatory authority has further decided to restrict investments in unlisted shares to a maximum 10 per cent of the NAV of closed-ended schemes and 5 per cent in the case of open-ended schemes. This is to ensure that funds are not blocked in illiquid investments.

GKW asked to lift lockout

The Bombay High Court has directed Guest Keen Williams Ltd (GKW) to lift the lockout at its Bhandup plant in Mumbai in effect since 18 January 1998 and given the company four weeks to resume operations. The company has also been asked to pay the workers their wages from 18 March 1998 in two equal instalments. The court has set aside an order by the industrial court which held that the lockout was legal. The company had contended that it was forced to declare a lockout as its workers were obstructing the removal of material and machinery from the Bhandup factory. The workers, however, alleged that the lockout was really an attempt to close down the factory since material was being continuously moved to GKW's Bangalore and Pune units. Delivering the judgement on two petitions filed by the Bhartiya Kamgar Karmachari Mahasangh and 19 clerical staff members of the company, the court said, "There is great substance in the contention of the petitioners that the management is trying to close the company under the garb of lockout."

Syndicate staff get long leave

Even as workers at the GKW plant prepare to get back to work, staff members at SyndicateBank are all set for a long vacation. The board of the Manipal-based bank has cleared a proposal to enable employees to take a three-year sabbatical from regular service. Under the scheme, employees will have the option to either quit their employment and realise their terminal benefits or resume service at the end of their leave. The leave period will be treated as leave with loss of pay. The bank has also approached ICICI, HDFC, and other term lending institutions and private sector banks for deployment of its surplus staff on deputation. Any employee of the bank will be allowed to go on leave with a lien on his job for a period of three years. Employees of the bank who are selected by the institutions or private sector banks will be entitled to a deputation allowance of 15 per cent over and above their present salary, which will be borne by the new employers. The bank has opted for such an approach to trim staff as a VRS would involve payment of a huge sum at one go, whereas this method staggers the cost of settling the employees' dues.

More Meridien hotels in India

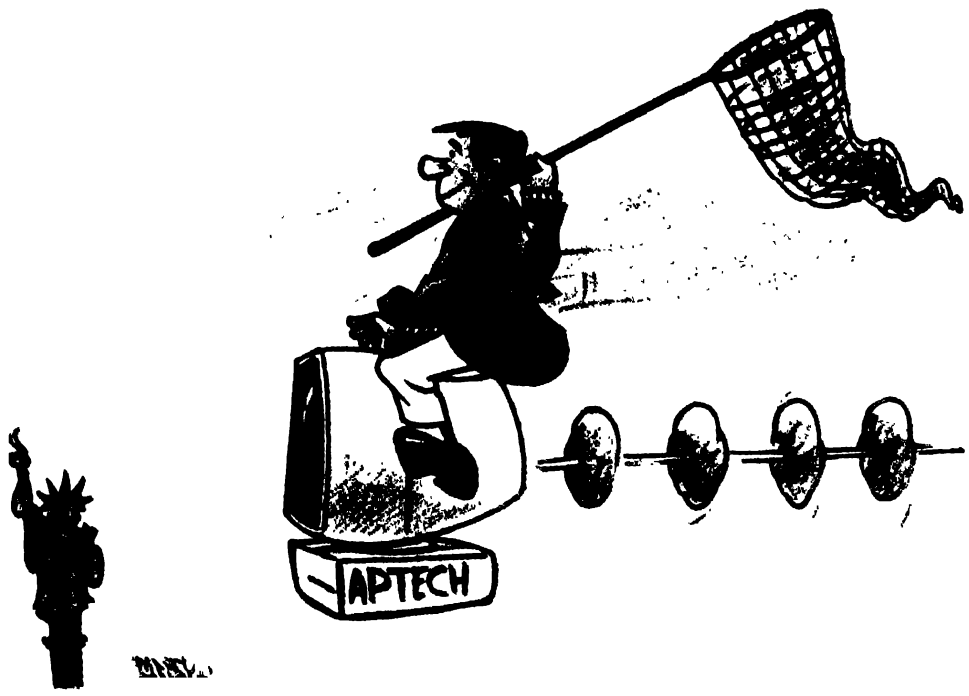
At a time when global occupancy rates are slipping, there are still some who will go ahead and build more rooms. Take hotel chain Meridien International, for example. The international chain has embarked on an ambitious plan to set up another 17 hotels across the country. These 17 hotels, expected to come up in the next five years, will be in addition to the three existing Meridien hotels in the country — in Pune, Bangalore, and Delhi. According to Meridien, work has already begun on the Mumbai project, which is expected to be completed by the middle of next year. Meanwhile, the group has started renovation at its Delhi hotel, said to be one of the best in the Meridien chain, in preparation for the millennium celebrations.

Silverline mulls ADR issue

These days, if it's happening, it's in IT. Software services company Silverline Industries Ltd has drawn up plans to float a $75-million issue of American Depository

Receipts (ADRs). The company's board of directors has also proposed acquisition of the US-based Silverline Technologies for $46.25 million. The acquisition will be funded through a preferential allotment of 4.5 million shares at Rs445 each to Silverline Holdings Corp of the US, which holds over 51 per cent in Silverline Industries. In the second quarter ended 30 September 1999, Silverline Industries posted operating profit of Rs18.18 crore, while operating revenues were at Rs46.43 crore.

Aptech plans US shopping spree



A big byte in the US. That's what the Rs227-crore Aptech Ltd is now looking at. The company is reported to be in talks to acquire three software companies in the US. Aptech, which has earmarked $25 million for the acquisitions, plans to clinch the deals in the next seven to eight months. The company has asked investment banker Warburg Dillon Read to help it in finalising the deals. The acquisition will be funded through a combination of internal accruals and borrowings. In March, the computer training and software company raised Rs117.25 crore via a private placement to institutional investors. The company, which has training centres in 20 countries now, plans to increase the number to 27 countries by the end of this year.

RPG plans big Bollywood foray

Call it a case of being star-struck. The RPG group is in talks with leading Bollywood producers for joint production of big-budget movies. Having remained content with producing small-budget art and regional films so far, the group has finally decided to aim for a bigger slice of the Bollywood pie. RPG is looking at a model whereby it will finance joint banner productions. Gramco Music Publishing, a subsidiary of the RPG-controlled Gramophone Company of India Ltd, will spearhead RPG's foray into big films. Formed in 1996, the subsidiary has so far produced six films. It recently produced the award-winning Shabana Azmi-starrer *Godmother*.

Bharat Shah signs JV with UK firm

And there are still others flocking to Bollywood. Diamond exporter and film financier Bharat Shah and the UK-based LMB Holdings, promoted by steel magnate L.N. Mittal have signed an agreement to float a joint venture Bollywood production house to be called Mega Film & TV Productions. The joint venture expects to finance and release 15-20 big films every year and has planned an outlay of Rs150 crore for the first year. All forthcoming films of Bharat Shah will now be produced under the new Mauritius-registered Mega Film banner. The joint venture has also worked out the details of distribution. While Shah's VIP Enterprises will get the rights of all theatrical releases in India, the rights for all overseas distribution will be vested in Eros International. Eros International is promoted by L.N. Mittal of Ispat International and Arjan and Kishore Lulla.

Gujarat Ambuja Cement net rises

It's a bonus for the festive season. Gujarat Ambuja Cements Ltd (GACL) has posted a 195 per cent rise in net profit for the first quarter of the current financial year. GACL's first-quarter net profit has soared to Rs50.1 crore from Rs17 crore in the corresponding period last year. The cement major has declared a 1:1 bonus by way of capitalisation of reserves. GACL's turnover has grown 16 per cent to Rs281 crore from Rs241.6 crore in the last corresponding period. But sales volumes have only gone up by 3 per cent. According to the GACL, the increase in net profit is on account of the cost-cutting measures undertaken by the company. GACL's total costs have come down from Rs1,501 per tonne to Rs1,262 a tonne. Major cost reductions have come from reduced power and fuel consumption, lower interest costs, raw material costs and consumables.

Jai Hind Bank profit up

The Jai Hind Bank has reported higher net profit for the 1998-99 financial year. At Rs1.06 crore, the bank's net profit is higher than the Rs1.01 crore posted last year. Deposits have gone up from Rs22 crore last year to Rs27 crore, while advances have risen marginally to Rs19.89 crore. The board of directors has recommended a higher dividend of Rs4.50 per share. The bank, which completes 50 years of operations this year, has reported a net worth of Rs7.04 crore as on 31 March 1999. ◆

Do you often wish that your ERP implementation was revertible?

"We were extremely impressed with the time and effort put in by the Ramco implementation team. Some of the most demanding deadlines were met with aplomb. Ramco sees its job to the finish."

David Lowe
Chief Executive Officer
Revertex (Malaysia) Sdn Bhd
Yule Catto Companies - Far East

Most Yule Catto companies across the world had standardized on one common ERP vendor When it was the turn of Revertex, Malaysia, a major specialty chemical company whose diversified interests flow into a myriad of industries, to select the right FRP, they decided to be daringly different They chose Ramco Ramco helped Revertex move away from legacy systems into an online, highly integrated and accurate management information system

Ramco's credentials were very good Ramco's track record for Process solutions were even better Several processes at Revertex are extremely complex Ramco admirably handles some of these complex processes like yield, recycling, recipe handling etc , which are unique to Revertex

Today, Revertex manages its operations on a real time basis, thus providing for greater speed of response and accurate decision making Earlier, the P&L statements and Balance Sheet would be ready only by the 15th of the month Nowadays, they are available by the 3rd working day of every month and bound to improve further This enables them to meet their business goals faster

Some of the other significant benefits that Revertex enjoys today are online availability of critical information, reduction in inventory, maintenance and manpower costs What's more, tangible financial benefits are being seen in the areas of quality costs, customer response time, and personalized service

You too can enjoy the benefits of using Ramco e.Applications. And not worry about reverting to earlier systems!

Get ERP to work for you!
Ramco e.Applications. Made in India For the whole world

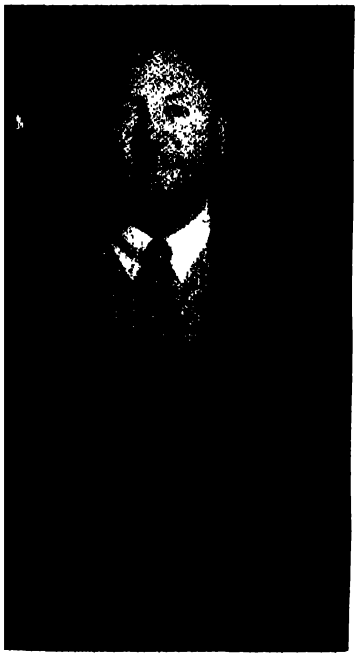
Department of Electronics secretary Ravindra Gupta recently inaugurated Aptech's new software facility at Seepz, Mumbai. He was there on the invitation of Aptech's CMD Atul Nishar. The Seepz unit, which is the third such facility set up by Aptech solely aimed at software production, will focus on offshore development. The first was set up in the STP, Mumbai, last year, and the second focusing on e-commerce, in Bangalore earlier this year. "Aptech is positioned to make a mark in the software industry in the new millennium," said Nishar. Aptech is currently engaged in an exercise to identify acquisitions in the US market, with a view to extending and consolidating its reach. •

Tata Consultancy Services has launched the world's first object-oriented component-based software development platform, MasterCraft. The package of tools allows medium and large software developers to capture and classify knowledge as objects, allowing for the creation of very trim software applications, which will extensively reuse the individual components, thus saving tremendously on complexity and reducing the possibility of software failure. Releasing the package, TCS chief executive S. Ramadorai proudly acknowledged the role of Tata Research Design and Development Centre, Pune, which conceptualised the integration of TCS's software tools into an integrated package aboout two years ago. MasterCraft will compete in a marketplace dominated by market leader Rose, from Rational Corporation of the US. •

Promoting Bahrain as an investment destination has been Robin Marriott's main job since 1997, when he took over as the chief of the Bahrain Promotion & Marketing Board (BPMB). Attracting investments from India has been a thrust activity for BPMB. Marriott has been making regular trips to India and BPMB has even set up an office in Mumbai (its first outside Bahrain), which has achieved significant successes. "We recently got Tata Consulting Engineers to set up operations in Bahrain; the Oberoi group is setting up a $70-million hotel; and Videocon International is investing $200 million in a factory for TVS, washing machines, and refrigerators in Bahrain," says Marriott. Besides this, Marriott reveals that there are currently 27 projects by Indian companies involving a total investment of $500 million which have been approved by the Bahrain government and are awaiting clearance from various ministries in the Government of India. Marriott was in Pune last fortnight to conduct workshops and seminars for Indian businessmen to highlight the many advantages of investing in Bahrain. •

How would you like to create your own Website, without the help of any specialists? That's what Umesh Tibrewal, director, vSplash.com Ltd is going to help you do. Tibrewal has a new technology to offer – a package that enables you to create your own Website, minus the $70 registration fee. "vSplash is an IT enabled. It can be used by everyone from college students to business executives to create their own Web presence," says Tibrewal. vSplash is a design software which helps you select, through a number of combinations, your personal Website. Tibrewal has divided the product into three price clusters to suit various profiles such as business, fashion and lifestyle. "The idea is to let you build your own brand on the Web," says Tibrewal. For the sceptical, there is a 10-day free trial offer. •

At a time when mutual funds are once again the flavour of the month, Ashutosh Bishnoi, president and CEO of JM Capital Management Ltd, which has a total of Rs805 crore under management, came calling to Calcutta recently to hardsell a new JM Mutual Fund product — an open-ended dedicated gilt fund called the JM G-SEC Fund. Says Bishnoi: "We plan to mop up Rs400–500 crore in the scheme by the year 2000." The fund comes close on the heels



of a similar fund launched by the Unit Trust of India (UTI), and is targeting provident funds, which constitute a large market for gilts. Bishnoi says of the total target mop-up, about Rs100 crore, is expected to come in from the PF sector alone. The fund, which has three plans as part of the package, has no entry or exit load on all three plans. It will primarily trade in treasury bills and dated government securities and the minimum investment allowed is Rs5,000. •

Awesome! says Nitin Ahuja of India's potential to help his Dallas, US-based information technology company achieve its stated aim 'from visions to reality'. It is an adjective much favoured by Ahuja, president of $30-million Ahuja Technologies Inc (ATI), which provides data integration, data warehousing, and Internet solutions to global giants in the telephone, airline, insurance, consulting,

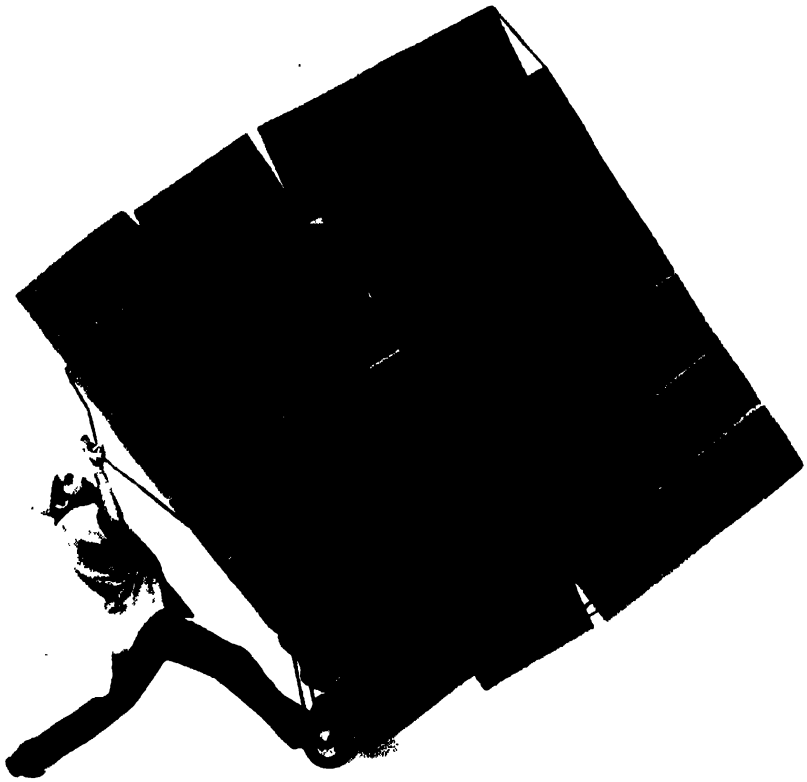
and other businesses like IBM, KPMG, and Southwestern Bell. Back in hometown Pune last fortnight, he finalised a tie-up with Ruksun Software Technologies to provide "the front-end software solution to our back-end services". The business alliance will enhance ATI's value-addition for its worldwide clients, and shore up revenues by $20 million in the coming year alone. "Ruksun is primarily a product development company," he explains. "Having their product to sell will give us an edge in our consulting service." ATI is the Y2K auditing agent for Merrill Lynch, has built a tax data warehouse for KPMG client J.C. Penney, and is currently creating a data mart and -mining solution for a leading financial services company with operations in Hong Kong, Tokyo, Singapore, London and the US •

Infinity-Sungard financial technology, a specialist in treasury management software, may not be a slow mover on the global platform, but it certainly is a late entrant into

India. The $1-billion software company forayed into India earlier this year, when it set up its office in Bangalore with just three employees. But it beat 16 global software companies to win the TimesBank mandate for providing real-time on-line risk management for the bank's treasury department. Andrew Ford, managing director for the Asia-Pacific region (excluding Japan and South Korea). "Infinity is the largest provider of trading and risk management solutions in the financial markets. Globally we have installed our software to over 500 top international banks like Citibank, Deutsche Bank, Bank of Tokyo, and the like. We've outlined a strong India initiative and the TimesBank deal just happened. In India we are hoping to acquire another 3–4 clients in the banking sector by the end of the current financial year and our earnings from India operations by March 2000 should be around $2–3 million," he says. •

Ronald J. Floto, group chief executive of Dairy Farm International, a $6.6-billion retailing conglomerate, was in Calcutta recently to sign a deal with RPG scion and Spencer & Company chairman Sanjeev Goenka for a 49:51 joint venture to expand India's largest retail store chain. Spencer, under the brand Foodworld, already operates 29 stores in south India and has recently expanded into Pune as the hub for western India. Goenka says there will be 50 Foodworld stores this year with average sales of Rs1,200 per square foot per month on a typical 4,000-sq.ft. format. Floto's company, which is part of the Jardine Matheson group of Hong Kong, is a major force in Southeast Asia. Foodworld is not bad news for the corner *kirana* shop, not yet at least. "In 30 years we have only taken 40 per cent of the grocery market in a country with strong entrepreneurship like Taiwan," says Floto. •

Cambridge Technology Partners (CTP), a $750-million American outfit, is a management consultancy that offers systems integration services that increase information flow, thereby improving productivity and value-creation. Among its success stories is Southern Company, the largest producer of electricity in America. CTP helped Southern Company develop new interactive products and services for residential and business customers. It has also assisted RS Components, Europe's leading distributor of electronic, electrical, and mechanical components, and Canon Computer Systems. CTP set up shop in India last year. It is presently headed by Subbu Iyer, who is responsible for business development and customer relationships in Asia-Pacific and the Middle East. "We are progressing well in India and our clients include Bharti Internet, ICICI, Godrej & Boyce, Sundaram Clayton, and Spice Telecom," he says. •



Indian Hotels and Health Resorts (IHHR) is a project set up to develop health resorts, spas, and city-centre luxury boutique hotels in India and the rest of South Asia. It is promoted by Gautam Khanna, who till recently was executive director of Oberoi Hotels and managing director of Mercury Travels. Its first property, in Narendra Nagar near Rishikesh, called 'Ananda - in the Himalayas' will be operational from mid-December this year. "The cost of the project is Rs44 crore. Fifty per cent is in the form of equity. The balance in the form of debt has been funded by Tourism Finance Corporation of India and banks," says vice-president Ingo R. Schweder. The project has 75 rooms. In the pipeline are two others — in Goa and Kerala. Both are expected to go onstream in 2001. Ananda - in the Himalayas expects to rake in Rs12-14 crore in its first full year of operation. •

Zarir J Cama, newly appointed chief executive officer of The Hongkong and Shangai Banking Corporation (HSBC), was pleased to announce the launch of their globally accepted credit card in India. "The card business is an important entry level product and allows us to expand our customer base. We have made huge investments in this business," was Cama's

comment on HSBC being the latest to jump onto the global credit cards bandwagon. The card is to be accepted at 100,000 merchant establishments in India and at over 16 million outlets around the world. HSBC's global card's USP lies in the fact that it is the first credit card to offer its customers access to their personal bank accounts through ATM transactions. Card-holders will also be able to access cash at over 5.30 lakh Visa/Plus and HSBC ATM machines in over 100 countries worldwide. Other features include a lost baggage insurance under which card-holders are entitled to a cover of $1,200 for gold card-holders and $600 for classic card-holders. •

Steel springs back

Exports of high-value steel are coming to the rescue of the Indian steel industry as global prices firm up

"Out of the death valley, rode the steel men..."

No, not a ballad by Walter Scott but a signature tune, appropriate for the revival in fortunes of Indian steel companies. Death Valley is the name given by steel sector analysts to the steep dip in global prices. For example, hot-rolled coil (HRC) prices in Europe plummeted from $350 per tonne FOB in August 1997 to $185 in December 1998 and stayed there till the first half of 1999. However, much to the relief of the global steel industry, it is now climbing steadily. Today many companies are booking HRC at $300 and higher qualities at about $330 for year-end deliveries.

So what has led to this climb? Industry experts submit several reasons. One, of course, is the slow recovery in Asia and a healthy growth in Nafta economies. The other is anti-dumping measures against CIS and Japan. Today more than 40 countries have virtually banned imports from CIS, where some producers are now trying to export slabs instead of HRC. Similarly, Japanese producers are still facing a lot of problems in the US market. This has led to descent price levels in the US and European markets. However SAIL, which exported plates to US under distress conditions, is facing dumping charges as well.

"Our strategy is to realise high value as well as to make sure that we do not attract anti-dumping charges. It simply means moving up the value chain," says Jagdish Mehra, managing director of Essar Steel. "We have invested in technology that allows us to produce wide coils of even 1.6 mm thickness and better surface conditions due to 'hot skin pass' and oil finish." With the prices rising, Essar is finding exports very attractive and is putting its capacity utilisation in high gear. Exports, which used to hover around 35,000–40,000 tonnes per month, have been ramped up to over 90,000 tonnes in September. Today, in fact, Essar is looking at a 50-50 mix of domestic and international sales.

SAIL, which had a disadvantage when it came to exports because of its land-locked facilities, has also increased shipments from 5,000 to 16,000 tonnes per month, and Tisco has reached 40,000 tonnes from about 18,000 tonnes earlier. Clearly, exports have become the priority for Indian steelmakers. Companies that invested in cold-rolling and galvanising are also concentrating on these high-end products. For example the Jindal group, which hopes to produce about 1m tonnes of HRC this year, uses more than 550,000 tonnes of this for cold-rolling and galvanising — 400,000 tonnes destined for the domestic market and 150,000–175,000 tonnes for exports. "We are able to realise $450–500 in exports of hot-dip galvanised sheets depending on the thickness," says N.K. Jain, joint managing director of Jindal Iron and Steel Co. Ispat Industries, however, seems to be still concentrating on more run-of-the-mill HRC grades for exports; observers cite problems with stabilising the thin-slab caster as the reason for Ispat's not going in for exports of grades less than 2 mm thick.

Internationally steel capacity has shrunk, either owing to non-viability of some units during the downcycle or to mergers. For example, following the Thyssen–Krupp and Hoogovens–British Steel mergers, capacities in Europe considered redundant were closed down.

The party obviously isn't going to last forever. In fact, most observers expect the prices to go up for two years and then again not reach the dizzying heights of $475 a tonne as in May 1995 but a more sedate $350–400. There are two reasons for the lag between the demand and production — one, it's not easy to quickly ramp up capacity, especially if a blast furnace or some major facility has been shut off for some time. Two, the exporters from the Far East still face anti-dumping duties and have to convince the world otherwise. Luckily India has a fairly large domestic market and its industry is not that dependent on exports, so if the downswing has been used to cut costs and become more efficient, then Indian steel will not be as sensitive to global downcycles as the Far East.

Making no sense(x)?

Where is the Sensex heading? Such a question will evoke an instant response from fund managers, merchant bankers, dealers, brokers, investors, analysts, etc. So popular is the Bombay Stock Exchange's (BSE) 30-scrip based index. What has escaped everyone's notice is that none of the mutual funds (with the exception of UTI) has an index fund.

In an index fund, money is put in all the stocks comprising the index in approximately the same proportion that they represent in the index. As a result the portfolio moves in tandem with the index. Obviously, the fund manager has no discretion, hence index funds, unlike other schemes, are called passive funds. An inherent risk in index funds is tracking errors. Put simply, returns generated by the fund might be less than that generated by the index.

Says Ajai Kaul, CEO of Alliance Capital: "As of now, there is no need for a passive fund (read index fund) because the Indian equity market is a stock-picker's delight." "Passive funds will not find favour because Indian investors like beating the index," observe some fund managers. Replies B.G. Daga, executive director of UTI, "Retail investors would like to have index stocks. Since prices of Sensex scrips are prohibitive, they would prefer an index fund." Adds Arvind Gupta, head of marketing at IDBI Mutal Fund: "It is not possible for fund managers to beat the index every time. How many funds can repeat the success they achieved recently in the current year? This explains the need for an index fund." Observes Divya Krishnan, fund manager at SBI Mutual Fund: "Studies overseas shows 80 per cent of mutual funds underperform the index in the long term." The latter's view perhaps underscores the need for an index fund. Then what is holding back mutual funds from offering this product?

Explains Gupta, "Mutual funds are introducing various products in the market gradually. For instance, money market mutual funds came in 1997." Adds Krishnan, "Three years back sector funds were not that popular. The situation now is different. It is just a matter of time before funds start offering index based schemes." K.V. Hegde, managing director of Canbank Investment Management Services, gives another angle. "Absence of hedging instruments and rolling settlement in the Bombay Stock Exchange, acts as a deterrent. The former helps in risk management and the latter imparts more liquidity."

UMESH GOSWAMI

Why does the much-celebrated BSE sensex not inspire index funds?

But is it not possible to launch a Sensex-based fund within the existing framework? Listen to some fund managers. "In order to replicate the index (returns from the fund should more or less be equal to that of the index) fund managers pour money in index funds in the last half hour of the trading session. Chances are that the required volumes of Sensex scrips might not be available, which would result in the fund underperforming." Daga of UTI feels otherwise. "All the Sensex scrips today are available in the demat form. Therefore volumes are not a problem." "UTI has a good network but all funds don't," counter fund managers. Another problem area they point out is with regard to transfer of funds. For instance, if an investor in Hyderabad puts money in the morning there is no guarantee it would be invested the same day. This lag is bound to affect the performance.

In conclusion, let's take a look at the performance of Master Index Fund (MIF) — UTI's open ended Sensex-based fund. MIF was launched in June 1998 with an initial corpus of Rs175 crore. According to UTI officials, MIF's first net asset value (NAV) was announced on 5 October 1998. The same stood at Rs9.04 and the Sensex was 2,878. A year later the Sensex has risen a little over 63 per cent to 4,709 and MIF's NAV too has increased at the same pace to Rs14.82. "Tracking errors inherent in index funds, is negligible in MIF. As a result, the appreciation of NAV is the same as that of the Sensex," say UTI officials. A success story? It would seem so but why has it not inspired similar index-based funds? It is clear that there are no takers for the country's stockmarket barometer — Sensex.

H.K. FIRODIA AWARDS

Recognition for researchers

Come October every year and a number of top-notch scientists are flown down to Pune and presented the H.K. Firodia Awards for Excellence in Science and Technology. The Firodia Awards are the highest cash awards in the country for scientists, currently with a total of Rs5 lakh given to three awardees — Rs2 lakh each to the top two scientists and Rs1 lakh to the third.

Arun Firodia set up the H.K. Firodia Foundation in 1996 soon after his father H.K. Firodia's demise on 1 October 1995 and instituted the Firodia awards, which he felt was the best way his father would like to be remembered. The late Firodia, founder of the Rs1,000-crore Kinetic group of companies, was a great proponent of science and technology. Every year since 1996 the awards have been given to leading

The winners (centre) at the awards function

Indian scientists with world-class achievements to their names.

Some of the recipients of the Firodia Awards during the last three years include A.P.J. Abdul Kalam, C.N.R. Rao, Anil Kakodkar, and R. Chidambaram (of Pokhran-II fame). This year's recipients were K. Kasturirangan (chairman, ISRO), M.M. Sharma (former director of the University Department of Chemical Technology, Mumbai), and Paul Ratnasamy (director, National Chemical Laboratory).

The awards were presented at a glittering function in Pune by M.S. Swaminathan, the country's leading agricultural scientist and the father of the Green Revolution in India. Swaminathan was recently acclaimed by *Time* magazine as one of the most influential Asians of this century and one of the only three from India, the other two being Mahatma Gandhi and Rabindranath Tagore. The recipients of the Firodia Awards are selected by an expert panel which also includes distinguished scientists like R.A. Mashelkar and Vasant Gowariker, who too were present for the awards ceremony. So it was a veritable galaxy of star scientists who gathered at Pune for this annual event.

Prof. M.M. Sharma, has the distinction of being the first Indian chemical engineer in this century to become the Fellow of the Royal Society, London, a rare international honour. He has also taught eminent scientists like R.A. Mashelkar, Mukesh Ambani, and Anji Reddy, who studied under him at UDCT. Today Sharma is not only consultant to all the leading Indian petrochem refineries but his expertise is also sought by global giants like Shell, Mobil, Amoco, and DuPont.

Accepting his award, he lambasted the Maharashtra state government for its total apathy towards research institutions. "The most recent example is when General Electric of the US wanted to set up a huge research centre in Pune with 1,000 scientists, making it the largest research set-up in India. When top GE officials came to visit Pune for a survey there was no government official to even receive them at the airport and they were left to fend for themselves. They then went to Bangalore and Hyderabad, where the respective state governments literally rolled out the red carpet for them and eventually Bangalore was selected. Thus Pune lost out on a great opportunity because of the sheer apathy of the state government," he complained.

K. Kasturirangan, father of Indian the IRS and Insat series of satellites, exhorted Indian private companies to come forward and participate in India's space programme. "Already 500 big and small companies are partners of ISRO in the space programme but there is a huge scope for more companies to join us in our efforts to exploit the international commercial space market, which is worth $98 billion annually," he said.

Paul Ratnasamy is known as 'Mr Catalyst' in the scientific world because he has invented several important catalysts which are now used by leading chemical companies all over the world. He turned India from a net importer of catalysts to a net exporter of these hi-tech chemicals, which are required in every chemical factory to produce fertilisers, petrochemicals, pharmaceuticals, and what have you. "Private Indian companies must invest more in R&D if they are to survive global competition," he said. "While pharmaceutical companies the world over invest 12–15 per cent of their turnover in R&D, in India the average investment is abysmally low at 2–3 per cent of sales. This must change and Indian industrialists must realise that technology is proprietary and unless they have technology they can lose management control of their companies to multinationals."

What the award winners say is indeed an eye-opener, but whether the powers that be wake up to reality is the big question!

♦ ROOP KARNANI

DARJEELING BRAND

A bitter battle

After 30 years of uninspired marketing, tea producers in Darjeeling are finally waking up to the value of the Darjeeling brand. The Darjeeling Planters Association (DPA), fed up with the surge of spurious Darjeeling tea in world markets, recently worked out a scheme along with the Tea Board, to ensure that nothing but the genuine item would, in future, be marketed as Darjeeling tea. This would not only ensure that the Darjeeling name would always remain synonymous with quality teas but also weed out unscrupulous tea packagers.

A premium orthodox item, Darjeeling tea is known the world over for its unique flavour and light liquor-like effect. These qualities are due to the environs in which the tea is grown. One of the most expensive teas in the world, the Darjeeling label has been indiscriminately appropriated by unscrupulous marketeers around the globe.

The Darjeeling production is around 10 million kg a year. However, tea sold

fraudulently under the Darjeeling name amounts to about 50 million kg, say tea packeteers. This figure is not surprising considering that tea from countries like Sri Lanka or Kenya has for decades been sold as Darjeeling tea. The Tea Board had in the mid-1980s tried to stop misuse of the Darjeeling name by introducing a special logo. However, the lack of suitable controls rendered this move ineffective.

Now, WTO and globalisation has led to a fresh attempt at reining in this malpractice. The DPA strategy involves a scheme of certification which is thought to be the most judicious by Darjeeling producers. Says Ashok Lohia, chairman of the Association and a Darjeeling producer: "The scheme is a result of the government's decision to protect the Darjeeling tea industry. We need to define Darjeeling tea afresh so that it satisfies requirements for protection under the TRIPS agreement."

"Redefining Darjeeling tea in this case means basically plugging the earlier loopholes which had helped the spurious marketeers," says Sanjay Bansal of Ambootia Tea. This is the first time any Indian product has sought protection under WTO regulations which provides for goods, including agricultural and food products, which have an identity or exclusivity based on its geographical location or identity.

While MNCs aggressively protect their brand into which they have sunk millions of dollars, producers or manufacturers of products renowned by the place where they are made or grown, are also fighting lawsuits in every country. Havana cigars, Scotch whisky, Champagne, Burgundy or Chartreuse are products instantly identifiable with their locational origins. Closer home, we have Pashmina or Cashmere, Kolhapuri chappals or Alphonso mangoes (besides, of course, Darjeeling tea) which are much in demand worldwide.

Unlike their global counterparts, Indian producers have never bothered to fight for their rights of exclusivity. Manufacturers of Scotch whisky have around a hundred cases (three of which have been filed in India) pending in several countries worldwide, while Champagne producers are engaged in a similar activity. Both Champagne and Scotch whisky are premium products which derive their exclusivity from their place of origin.

DPA has filed for registration of the Darjeeling mark with the trademark authorities both in India and the UK. While legal experts say that registration for such products based on geographical indication alone may be difficult or take time, protection of the names of products which owe their existence to the place of their origin should not be a problem, provided they are considered premium products. Take the Basmati case. The term Basmati refers to rice grown in the foothills of the Himalayas.

GOUTAM CHATTERJI

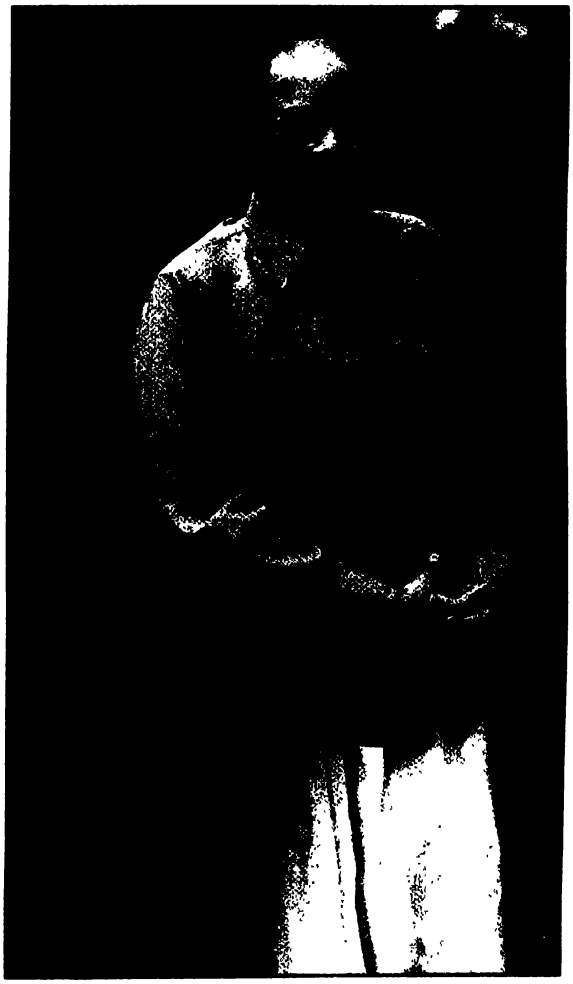
Bansal (L) Lohia have an aggressive strategy

However, the US rice company which brought out the brand Texmati, contended that Basmati was a generic term referring to a particular type of rice which could be duplicated elsewhere. Champagne, Scotch whisky and now Darjeeling manufacturers emphatically maintain that the product which owes its name and existence to a certain region cannot be duplicated elsewhere. Indeed, the international community has been trying for long to develop a legal framework for protection of geographical indication or appellation as a type of intellectual property right.

Manufacturers of such products which owe their equity to the name of the place, are all for such protection without which they feel that the brand value of the name gets diluted or finally erodes. Feels Lohia, "If the DPA can actually, through its certification scheme, check the proliferation of spurious Darjeeling tea in the market, it would result in major gains for the Darjeeling tea industry. This would enable the industry to begin making profits changing its currently loss making position." At present, few of the Darjeeling producers make money barring a handful. Once the Darjeeling name is protected producers would be tempted to invest in their gardens as it would fetch improved prices.

"DPA is pressing for the certification scheme, as without regulatory powers it would be impossible to maintain a control on the quality or quantity of tea that goes out of the district," according to Bansal. The scheme should be in place in the next three-four months, now that the election is over. Lohia says this will be a final document of reference for those in the trade. The certification to be issued by the DPA would not just indicate the source of the product (to prevent any counterfeiting), but a watchdog body under the Tea Board would check the quality and quantity of produce in the gardens. Additionally, the certification would help in tracing packers, blenders or dealers and the quantity of their offtake as every importer or dealer of Darjeeling tea particularly within the European Union has to be mandatorily registered with the Tea Board.

How far the tea producers would succeed in creating an effective infrastructure for all the aspects of policing remains to be seen. With computerisation, it should not really be a problem, says Lohia. But for the Darjeeling tea industry where costs are heavily subsidised and prices more often than not unremunerative, the need to protect its niche market is imperative. With the controls in place, Lohia estimates a three-four fold increase in turnover. At current turnover levels of Rs200 crore annually this could mean gains of about Rs400 crore in the longer run, particularly if there is a shortfall in the crop. It is to be hoped that the certification scheme works, to ensure at least that the consumer at the end of the spectrum gets a taste of the real Darjeeling tea.



◆ MADHUMITA BOSE

Craving for more FDI

The government is clearly looking for enhanced foreign investment flows to bolster the economy

Every government of this decade has shown a great deal of enthusiasm in welcoming foreign direct investment (FDI). The newly-formed Cabinet of the BJP-led coalition is no exception. From day one, the prime minister and his team have been promising a slew of measures that would blow in gusts of FDI.

Leading the 'hail FDI' brigade is Murasoli Maran, who has been given charge of the heavyweight ministry for commerce and industry. On his very first day in office, the minister announced that he was all for dismantling the Foreign Investment Promotion Board (FIPB) which, he indicated, was clearly incapable of fulfilling the responsibility entrusted to it. Maran expressed anguish that the FIPB had actually overseen a decline in FDI coming into the country, from the peak of $3.4 billion in 1997-98 to $2.3 billion in 1998-99. According to senior FIPB officials, the key inhibiting factors have been the international investment sanctions imposed on India after the Pokhran nuclear tests in 1998, as well the decline in FDI inflows from Southeast Asia following the economic crises there around the same time. However, the new political dispensation in New Delhi is clearly set for a surgical strike against the FIPB itself.

Maran's views indicate a fresh look at FDI

Maran's views indicate that a drastic transformation of the FDI regulatory apparatus is imminent. He has called for a "drive for the removal of all stumbling blocks that obstruct smooth inflow of foreign investment". Central to his vision is the opening up of all sectors to 100 per cent FDI projects, barring a few which could be put on the negative list. Currently, the government has an elaborate scheme of several lists with differential limits for various sectors. The commerce and industry minister has promised other initiatives for simplifying industrial laws and regulations and making them more conducive to FDI. His plans include synchronisation of the industrial laws of the Union and state governments, streamlining of multiple clearing authorities, and establishment of the long-promised single-point interface between foreign investors and government machinery.

Indian policymakers have made a habit of such promises regarding foreign investment for some time now. Maran's views about FDI, as well as the FIPB, are also well known; he had voiced most of them during his earlier stint as industry minister in the United Front coalition government just two years ago. This time, his inclinations are backed by some very recent initiatives of the erstwhile caretaker government.

The newly-formed Foreign Investment Implementation Authority (FIIA) met for the first time on 29 September. Prime Minister Vajpayee's previous government had given the FIIA the task of cutting through the sloth that had hogtied the FIPB. The FIIA has begun its work aggressively. It has come up with the idea of setting up troubleshooting fast-track committees (FTCs) in each ministry whose decision-making authority impinges upon incoming foreign investment. These FTCs will be responsible for sorting out any problems, and accountable for any delay or obstruction in the way of approved FDI projects, says a senior official associated with the FIIA. The FTCs will comprise representatives of Central government departments and agencies, along with their counterparts in the states. Very often, FDI projects suffer due to Central and federal procedures working at cross-purposes, and smoothening the road on this ground is the specific goal of the FIIA.

To impart an initial velocity to this initiative, a calendar for regular reviews and consultative meetings has already been decided for FTCs of various infrastructure sectors. The schedule has been communicated to general representative organisations of industry as well as sector-specific bodies in order to elicit a full picture of impediments to FDI in the country. According to FIIA officials, the consultative meetings will enable them to identify simplification of FDI-related procedures at the Centre and the states, and establish a timetable for implementing projects in each infrastructure sector.

The government is also toying with

more novel ideas concerning FDI. The most remarkable of these relates to investments by the so-called widely-held funds, which are proposed to be made totally independent of the existing sectoral caps for FDI. Through this proposition, the government hopes to tap overseas mutual funds, American Depository Receipts and Global Depository Receipts. Indian firms do have access to these forms of investment currently, but through severely circumscribed channels of government regulation and permission, and within a 30 per cent ceiling for portfolio investments. Now, the industry ministry has circulated a paper recommending that domestic companies be allowed to garner such investment through directly negotiated deals. The Union finance ministry has reportedly endorsed the proposal.

Encouragingly for the government, its push for enhanced FDI flows is backed by leading representative organisations of trade and industry. The CII leads the pack, even though it is also greatly concerned about 100 per cent subsidiaries of MNCs (a concern shared by Maran, as well). Yet, just as the new government came to power, CII unveiled a seven-point agenda to enhance FDI inflows. One of the recommendations is that the list of items reserved for the small-scale sector be cut down drastically in order to open up many of these reserved avenues for FDI participation. The CII has advocated that this radical measure be taken up in an extremely careful and calibrated manner, even while asserting that this would go a long way in boosting foreign investor interest in India. Alongside, the CII has suggested that many of the PSUs referred to the Disinvestment Commission be lined up for an ambitious programme of strategic sales to foreign private investors. The CII agenda has also recommended comprehensive rationalisation and simplification of these laws so as to encourage "flexibility, productivity and customer orientation".

Such views are currently in favour in many corridors of the Central government. All its predecessors have looked upon FDI as a valuable resource. But the present BJP-led coalition is

services

more inclined to it than all others. Its own investment capabilities are hamstrung by a non-starter disinvestment programme, a stagnant rate of public savings, and increasingly glaring revenue shortfalls for the current financial year. The interest groups represented in its coalition also prevent the BJP-led government from significant additional resource mobilisation such as fresh levies on Central taxes, or reducing subsidies. FDI seems to be a very important panacea for industrial revival.

This thinking is also in line with current international economic wisdom which has come to see FDI as the most vibrant source of international capital resources available to developing countries in particular. In 1998, global FDI flows increased dramatically by 39 per cent to reach $644 billion. Most of these, nearly $460 billion, were trans-country investments within the developed countries themselves. Yet, nearly $184 billion, some 26 per cent of the total figure, went to developing countries. India's share, at $2.3 billion, was a very thin slice of the cake, and the government has appetite for far more.

Even in the initial days, the new government has received several assurances that a conducive policy programme could get more FDI on its plate. Among them is a US embassy survey on American companies in India. The survey, covering 1,184 American MNCs operating in India, anticipates that these companies will double their investment in India by 2003. Embassy officials are confident that a proactive reform of FDI regulation would boost this further. The timing of the survey is significant, with president Clinton's visit to India scheduled for the early part of next year. Sources reveal that the presidential delegation will include an unprecedented number of businessmen and the number of MoUs signed in India by US-based MNCs around that time will be held as an indicator of the new warmth of Indo-US ties. A drastic reform of FDI regulation is finding a real political justification as well within Prime Minister Vajpayee's new Cabinet.

Uncondonable lapses

Internationalising the Kashmir issue has meant that it has irrevocably slipped out of India's hands

The military coup in Pakistan and Washington's soft reaction present more potentially insurmountable troubles than opportunities for Vajpayee's new government in its handling of Kashmir, Pakistan and the United States. When it comes to Pakistan and the US, our normally clever officials and intellectuals labour like tired rats on a treadmill in a cage. They just cannot break out of the box of perceptions they created several decades ago. They think that the Kargil victory has brought them closer to Washington and are trying to promote India vigorously as America's partner in the fight against terrorism.

At the UN and in the US, Jaswant Singh and other Indian officials are currently arguing that the real problem in Kashmir is Pakistan-sponsored terrorism. They insist that the UN and US should not interfere in the Kashmir issue because that terrorism is an internal matter for India. They demand that the UN and US put extreme pressure on Pakistan's generals to stop sponsoring the terrorists.

These Indian arguments are disingenuous, treat the Americans like simpletons and stick India's head into sand to avoid looking at reality. The reality is that the people fighting inside Kashmir against India are not terrorists. They are Pakistani irregulars who are part and parcel of Pakistan's armed forces. The truth of this is borne out by the fact that the Pakistani army chose to launch a coup rather than stomach the insult to it caused by the Kargil withdrawal.

Pakistani irregulars occupied one-third of Kashmir in 1948 because Delhi pretended they were tribesmen without a central command. Then, instead of dealing with the matter, India went to the UN, a move so disastrous that we are still paying its blood price. Now, we are repeating that mistake. India is again insisting that Pakistan is not at war with India, it is merely supporting terrorists. Delhi wants the UN to put pressure on Islamabad to stop that support and has asked the US to treat it as a partner in the fight against world terrorism. The effect of these requests is to internationalise the Kashmir issue irrevocably. Of course, the US will take India as a partner in its fight against international terrorism, but, as usual, Washington will be in charge, not Delhi.

Unfortunately, at the UN general assembly this year, India has again internationalised the Kashmir issue and tied its own hands by insisting that what is happening in Kashmir is terrorism, not a continuous low-intensity war with Pakistan. It has also loudly admitted to the entire world that it cannot handle that terrorism by itself. At the same time, it is crystal clear to everybody that a cross-border war with Pakistan cannot be allowed because of the spectre of nuclear conflagration. Therefore, interference by the US and the UN is now unavoidable.

In effect, establishing peace in Kashmir has moved out of Delhi's hands almost completely. With a military dictatorship in Islamabad, Delhi has become even more powerless to create peace in Kashmir through its own efforts. A military solution is not possible, while meaningful negotiations with Pakistan's generals to obtain withdrawal of Pakistani irregulars in Kashmir are out of the question for the foreseeable future. Simply maintaining status quo and preventing an escalation of the terrorism inside Kashmir will require enormous international pressure on Pakistan's generals, who will naturally try to tie down as much of the Indian army inside Kashmir as they can.

In any case, judging from the tough attitude of the UN and the US regarding the independence of East Timor, it is very unlikely that Pakistan will ever be put under sufficient pressure without the promise of a fair referendum in Kashmir for independence. Non-governmental lobbies, which are very influential now, will also insist on ascertaining the wishes of the people of Kashmir.

Restoration of a civilian regime in Islamabad will not help because it will be too frightened of the generals to change the policy towards Kashmir. To make matters worse, India has nothing to give to the US in exchange for controlling the generals other than becoming the vassal of American goals and methods in geopolitics and the fight against world terrorism. For Washington those terrorists are Islamic fundamentalists and the great fear of Christian America is that Islam will destabilise all of Central Asia. If Vajpayee becomes truly involved in America's fight as part of his policy to halt Pakistan's interference in Kashmir, how will he prevent Hindu radicals from tarring India's own Muslims with the same brush as the Islamic fundamentals? Opening that Pandora's Box will be catastrophic for India. •

FOR SOLUTIONS

IN I.T. & TELECOM,

THAT ARE

CRITICAL FOR

SUCCESS DEPEND

ONLY ON

Cutting-edge technology, inimitable quality and cost-effectiveness are doctrines that define success in the I.T. and Telecom world today. In this scenario a name that offers technological excellence and trust is Crompton Greaves -- Digital. One of the key Strategic Business Units of India's premier corporate enterprise, Crompton Greaves Ltd., the company is rapidly making its mark in the arena of Telecommunications and Information Technology. Setting new benchmarks, the company is driven by a visionary management, specialised workforce, strategic alliances with global leaders and a mission to live upto expectations and trust

INFORMATICS

Customised, Turnkey Solutions through System Integration -- Adding value to the customer's business objective as the benchmark, Informatics Division offers System Integration Solutions in the areas of Intranet and Internet Technologies deploying computing, switching, routing help desk, billing and application software capabilities. Informatics today provides unique solution to ISP's (Government & private) Telecom, Government, Defence and Corporate customers with strategic alliance from Global Leaders

TELECOM BUSINESS SOLUTIONS

The today and tomorrow of Business Communication -- Keeping in focus the need for voice, data and video communication solutions, this Division in collaboration with ECI Telecom Ltd., *a global name in telecommunications,* offers world-class Coral range of ISBX exchanges, with configuration flexibility of 8 ports to 6000 ports. So, whether its Corporates, ISPs, Defence Services, Government, Hospitals, Hotels, Banks, Educational Institutions, Manufacturing Plants, Public Utilities etc., these exchanges are ideally suited for ISDN, Transparent Networking, Call Centre Applications, IVR etc.

TERMINALS

State-of-the-art office automation products - Committed to discerning global standards in quality and technology, the Terminals Division offers superb and exciting range of office automation products to streamline communication and increase productivity Product range includes, basic and multifunctional telephones (for retail & institutional segments) at an affordable price, ultra modern Fax Machines with Plain & Thermal paper options and Desktop, PCMCIA modems for speedy, uninterrupted access

PUBLIC SWITCHING, TRANSMISSION & ACCESS PRODUCTS

Futuristic public switching, transmission and access systems -- Looking beyond the present, this Division in total conformance to international quality standards offers central office and rural electronic exchanges of capacities ranging from 128 ports to more than 40,000 ports The range of transmission systems includes Fibre Optics Transmission Systems (FOTS) of 30/120/480/1920 channel capacity, Ultra High Frequency radio systems and optical based SDH systems. Network based access product include WLL, HDSL, DLC etc

This division caters to the needs of the Government, Defence Services, Railways & Private Telecos

The PMO gets a new portfolio

With the unenviable job of playing peacemaker to a jumbo cabinet, Vajpayee's office promises to be the place where all the action will be

The forecourt of the Rashtrapati Bhawan is normally used for holding functions to welcome visiting heads of state. But in 1990, Chandrashekhar decided to celebrate his ascent to power by organising the swearing-in ceremony of his council of ministers there. Fresh from his triumph in deposing V.P. Singh, the ageing 'Young Turk' of Indian politics was under the illusion that what he had achieved had the approval of the nation. Chandrashekhar's acolytes claimed that the event, signifying his formal ascension to the Prime Minister's Office (PMO), would attract thousands of admirers and he just did not have the heart to turn them away. A lesser place in the Rashtrapati Bhawan just would not do.

Almost a decade later, Atal Behari Vajpayee also decreed that his swearing-in ceremony be held in the forecourt of the presidential habitat. But his reasons for this were not as grandiose as those put out by his predecessor. Pure logistics dictated the choice of this venue over the numerous ornate-and-mahagony halls in the Rashtrapati Bhawan usually used for the purpose. For instance, a record number of 70 ministers were to be administered the oath of office and secrecy. And as many as 24 parties were joining hands to put the new government in place. Representatives of the participating political parties, family members of ministerial aspirants, and the sundry VIPs would themselves constitute more than a handful.

The open air swearing-in ceremony of Vajpayee's council of ministers lasted almost two hours. It proved to be a test of the prime minister's physical endurance, if not of his patience. Soon after the last minister had taken his oath and the photo-ops had been dispensed with, the cavalcade of vehicles carrying Vajpayee made a dash for the PMO in South Block. The cavalcade whizzed past Gate No. 6, where Brajesh Mishra and N.K. Singh, the two senior-most bureaucrats in the PMO, were waiting with bouquets to welcome Vajpayee on the first day of his third term in office. For the assembled cameramen, it was a missed photo-op. Sensing that something might be amiss, Mishra and Singh almost ran after the cavalcade which stopped a short distance away. The prime minister ambled into the building accompanied by his private secretary, Shakti Sinha, and SPG personnel. In the cool comfort of his office, he allowed himself the luxury of a soft drink. And then it was back to business.

It is the PMO which Vajpayee will turn to in the coming days as he attempts to steer the country, and charts out a purposeful economic agenda for the National Democratic Alliance (NDA) government. As the

BJP's K.N. Govindacharya points out: "The electorate's verdict is directed towards speedy development and fulfilment of the basic needs of the people. There can be no two opinions on this." Vajpayee himself has set three goals for his government on the economic front. First, the need for hard decisions to tackle the fiscal problems Second, carry out programmes to meet the basic needs of the people. Third, usher in the second generation of reforms. With such a wide and diverse array of parties cobbling together a government, the PMO's role in co-ordinating the various sectors of activity cannot be underestimated.

Vajpayee will have a lot of talking to do in the days to come

A retired bureaucrat, who functioned as a point-man of the reforms process in the Narasimha Rao administration, observes: "The PMO could again well become the new powerhouse of economic decision-making in the coming days, with the fulcrum shifting across New Delhi's Raisina Hill from the North Block to the South Block." BJP ideologues, sitting at the party's Ashoka Road headquarters, agree but point out this would not necessarily be a reflection of the merits of those who man the finance ministry. It would be a necessity born of the exigencies of coalition politics.

Take the case of Murasoli Maran, the DMK's heavyweight representative in the Union council of ministers. Maran was a candidate for the finance minister's job, in keeping with Tamil Nadu's tradition of producing the maximum number of finance ministers. For reasons of policy, Vajpayee was keen to ensure continuity insofar as the Big Four (L.K. Advani, Jaswant Singh, George Fernandes and Yashwant Sinha) were concerned. So, Vajpayee invited M. Karunanidhi for dinner and explained to him that while he appreciated and understood the critical nature of the DMK's presence in the NDA as well as the intrinsic worth and seniority of Maran for the finance minister's job, there was little he could do to disturb Sinha from his post. Sinha had acquitted himself well in the past 18 months, establishing himself as a man who had come to grips with his job in international financial circles. The PM offered the commerce and industry portfolios to Maran, with the underlying assurance that henceforth the PMO would be the co-ordinator of all economic decision-making. In other words, Maran would be an equal, not an adjunct to the finance minister. The argument worked with Karunanidhi emerging from the meeting to remark: "We want finances for our state and not finance (portfolio)."

Similarly, there was the problem of adjusting key economic ministers like Sharad Yadav (civil aviation), Ram Vilas Paswan (communications) and Mamata Bannerji (railways) *vis-a-vis* Yashwant Sinha. Yadav and Paswan are known to be highly individualistic. But they had played a key role in shoring up the BJP's prospects in Bihar and decimating Laloo Yadav. They just could not be ignored. Besides, assembly elections in Bihar are due early next year and the "usefulness" of the Janata Dal (United) in the BJP's game plan of capturing this crucial northern state just could not be underestimated. This was the main reason why the prime minister had reluctantly agreed to drop senior Karnataka leader Ramakrishna Hegde from his council of ministers to accommodate the jumbo Bihar component.

But left to themselves, Paswan and Yadav have the potential of running berserk and, given their stature in the NDA, there is no way Sinha can keep a check on their actions. Hence the need for a "super

finance minister", a.k.a. the PMO.

And then there is Mamata Bannerji. The BJP leadership sees her as a long-distance runner and feels it has everything to gain by backing her in spite of her relative inexperience. The BJP sees the fiery leader as a potential replacement for Jyoti Basu as the chief minister of West Bengal. Elections to this withering Marxist bastion are due in 2001 and, given the declining vote percentage of the Left in the state, the BJP feels that the time is ripe to press its advantage. The railways is one sector where large-scale patronage can be extended and a political constituency created in no time. But for that, Bannerji's strategy to take on the Left would have to be drawn up and the rough edges of her politics smoothened. As a BJP ideologue explains: "This can be done best under the watchful eye of the PMO."

BJP rewarded Jaitley's pre-poll services

The smoothness which marked Vajpayee's cabinet formation exercise showed that Vajpayee had come a long way from 1998, when he was buffeted by pressures from within the Sangh Parivar as well as his allies to drop and include certain persons. One can still recall the embarrassment which followed the prime minister's decision to first include Jaswant Singh in his cabinet as the finance minister and then change the decision. Bowing to pressure from a section of the Sangh Parivar which did not want a defeated MP to be made minister, Vajpayee went into a sulk and announced that he would keep the finance portfolio for himself. But the same evening, he asked Yashwant Sinha to swear in as finance minister.

This time the prime minister, assisted by Brajesh Mishra, laid down broad principles for the formation of his cabinet and delegated authority to senior colleagues to carry out the exercise smoothly. To begin with, a ratio was fixed for every party – one cabinet berth for every five Lok Sabha seats won. He entrusted the task of preparing a list of the ministerial candidates from the BJP to L.K. Advani and Kushabhau Thakre. The decision to make the media-savvy Arun Jaitley the new information and broadcasting minister was an inspired outcome of this consultative process. Jaswant Singh and George Fernandes were asked to shortlist the names of MPs from among the allies. Besides, it was also decided to maintain continuity in the four major portfolios of home, defence, finance and external affairs. The job of carving new ministries out of the existing ones was done by Mishra and N.K. Singh.

The result: there were no major snafus in cabinet formation. Ramakrishna Hegde did protest at not being informed about his exclusion, but the Karnataka politician is too suave to make a song and dance about it. In any case, the recommendation to drop him came from his own party – the JD (U). Shiv Sena's Manohar Joshi did protest at being given the truncated heavy industry portfolio and even threatened that he and his party colleagues would not assume charge of their portfolios unless "justice" was done to them. But Suresh Prabhu, the new chemicals and fertilisers minister, met Vajpayee the next day and assured him, on behalf of Shiv Sena chief Bal Thackeray, that his party was very much a part of the new government.

Sources close to the Vajpayee establishment admit that problems of "personality mismatch and conflicting egos" among those holding charge of core ministries could periodically erupt as the NDA gets down to the business of governance. Hence the need for a PMO which would also act as a peace-broker. Sources maintain that a mechanism for monitoring the economy already exists in the PMO. After Pokhran II, Vajpayee had insisted that it was essential to monitor the economic fallout of the nuclear explosions because of the sanctions imposed by the West. Brainstorming sessions were held on a

Autumn of the party

The story may be apocryphal, but it is indicative of the prevailing mood in a section of the Congress party. One of the longest-serving dinosaurs of Indian politics, Sitaram Kesri, was finally giving it back to his detractors. Addressing a motley group of followers at his Purana Qila Road residence last fortnight, Kesri gave vent to his anger and joy simultaneously: "When the Congress won 141 seats under my leadership, they yanked off my *dhoti* and literally kicked me out of the party president's post. But now the party has touched the rock bottom; there is not even a whimper. I have finally been vindicated."

The Congress barely touched the figure of 125, as many as four Congress working committee (CWC) members bit the dust, the party's alliance with Laloo Yadav in Bihar and Jayalalitha in Tamil Nadu came a cropper and the dismal results from Orissa clearly indicated that the party would lose its control over the state in next year's assembly election. The only consolation was the conquest of the prosperous state of Karnataka and a share in the power structure in Maharashtra owing to the split verdict in the assembly albeit after joining hands with some Gandhi's strongest critic. Even in UP, the much-hyped revival of the Congress stopped in its tracks with the Samajawadi Party and the BSP coming out tops.

Barely had the final result been announced than eager-beaver Congressman began jockeying for key slots in the organisation. Kamal Nath, for instance, called for a "generational shift" in the leadership, quite conveniently forgetting that it was the leaders of his generation such as Girdhar Gomang in Orissa, Ashok Gehlot in Rajasthan and the seemingly invincible Digvjay Singh in Madhya Pradesh who had let the party down.

Despite the talk of the Congress going into an "introspection mode", it is almost certain that the party is going to embark on an offensive course when the 13th Lok Sabha meets. Sonia Gandhi's remark "I am ready to fight back" reveals that the party will need more than introspection to get back to its position as the country's pre-eminent political force.

One of the biggest losses the Congress suffered was the humbling of Manmohan Singh in the South Delhi seat by over 30,000 votes. What was once being touted as an inspired decision and the party's trump card in Delhi turned out to be a miscalculation. As former BJP spokesman and the new information and broadcasting minister Arun Jaitley says: "Didn't the Congress know that South Delhi is a BJP stronghold and we have won this seat during the last three elections with a margin of over 1.5 lakh votes? Despite all the goodwill that Singh has, how could he have possibly bridged this margin?"

With important figures like Manmohan Singh fading, Sonia has the tough job of rejuvenating the party

Singh is likely to stick to his stated decision of quitting as the leader of the Opposition in the Rajya Sabha. This would reduce him to an ordinary member. In a party which is often equated to a basket of crabs, it is highly unlikely that others would like to see Singh being accorded the kind of pre-eminence he had been getting of late. This would be a pity as the former finance minister, with his rich experience, could have contributed substantially to the economic debates in the Lok Sabha. With his defeat, the Congress, as the frontline Opposition in the new House, has also been deprived of a gladiator who can lead the charge on the economic front. ♦

The man to watch

His eyes say it all. Alert and piercing, they constantly dart about. It is as if N. Chandrababu Naidu is always on the lookout for a prey. Or a political opportunity. But the man's diligence and the elaborate consultative process he takes recourse to act as a foil to his demeanour of a hunter.

Ever since he became the chief minister of Andhra Pradesh by deposing his ailing father-in-law, N.T. Rama Rao, Naidu has been trying hard to live down the image of an untrustworthy back-stabber. He behaved impeccably during the reign of the two United Front governments, led by H.D. Deve Gowda and I.K. Gujral. But when the Gujral government fell and fresh elections threw up a near majority for the BJP-led coalition in 1998, he had no qualms about supporting the Vajpayee dispensation. He insisted on staying out of the government lest his support base among the Muslim minorities of the state was affected. But he ensured that his man, C. Balyogi, became the Speaker of the Lok Sabha.

Naidu played hard-to-get with the BJP on the eve of this year's elections to the Lok Sabha and the Andhra Pradesh assembly. Only the realisation that a BJP-TDP tie-up was imperative for a Congress defeat could make him finally agree to join hands with the saffron party. After storming back to power in the assembly and bagging an unprecedented 29 seats in the Lok Sabha (*see page 130*), he decided once again to stay out of the government even though some felt that C. Rangarajan, former RBI governor and present Andhra Pradesh governor, would be his candidate for the finance minister's job. It is likely that the BJP would offer the Lok Sabha Speaker's post to his party again even though P.A. Sangma also appears to be a strong candidate for the job.

Despite staying out of the government, Naidu will have a big role in its decisions

Political observers ascribe two reasons for his decision to keep the TDP out of the power structure at the Centre. One, elections to the municipalities and panchayats are shortly due in Andhra Pradesh and he would not like to be committed to any political formation for the time being. Two, Naidu would also like to keep his options open. An extreme case scenario being worked out by ever-hopefuls in the anti-BJP camp is that the Andhra Pradesh leader could use his connections in the Third Front to trigger off realignments within the NDA, particularly the DMK and the Janata Dal(U), and desta bilise the Vajpayee dispensation if the need arises.

But right now, destabilisation is the last thing on Naidu's mind. He needs Central finances desperately for his state and could do with a little goodwill from the North Block. He is willing to share with the Centre his experience of the political management of reforms in Andhra Pradesh. Naidu also wants free entry into the optical fibre business, till now a monopoly of the department of telecommunications. •

weekly basis to achieve this end. "The mechanism will now be fleshed out for a proactive sectoral monitoring of the economy and for taking fresh initiatives," sources added.

When the prime minister and the finance minister talk of ushering in the second generation of reforms, it is not that they are unaware of the pitfalls that lie ahead. Even a cursory look at the wish list – insurance and banking reforms, strategic sale of PSUs, easing labour laws and curbing government profligacy – shows that the government will have to grapple with pressures from within to achieve anything meaningful. The hike in diesel prices has already invited flak from Mamata Bannerji's Trinamul Congress and Om Prakash Chautala's Indian National Lok Dal. Another hike, being contemplated in November, could further complicate matters.

Elements within the JD (who are yet to live down their socialist moorings) and the Trinamul Congress (who cannot entirely give up their competitive populism against the Left Front) are bound to oppose the huge staff cuts proposed in the banking reforms. Similarly, there is bound to be some opposition to the strategic sale of the government's stake in PSUs as was evident in Bannerji's description eight months ago of the proposed sale of the government stake in Balco as a "scam".

The finance ministry's move to curb fiscal profligacy could also run into trouble. While nobody would mind if the government sticks to the plan to slash Central expenditure, the move to prune subsidies could work up a storm. Even Govindacharya acknowledges this: "Where basic needs such as food or agricultural

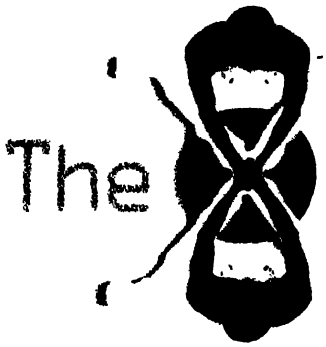
Mamata Banerji is the helipad for BJP in West Bengal

subsidies are concerned, one should not be deluded into thinking that even the developed countries have done away with subsidies. The talk of abolition of subsidies in the Indian milieu is an anti-people proposition."

In its new *avtaar*, the PMO will have to confront and resolve all these contradictions as best as it can. Vajpayee and his senior cabinet colleagues are acutely aware that they bucked the anti-incumbency trend partly because the last government was seen by the people as a government which, albeit inexperienced, at least tried to deliver. It is a different matter that they were helped by an effete opposition which was largely perceived as being power-hungry.

Indeed, the important lesson of Vote '99 is that good governance – or even a sincere effort at it – pays, while misgovernance will be punished. Sample the voting trends in Punjab, Karnataka, Orissa and Bihar. The Akali Dal lost out in Punjab because it failed to capitalise on the immense goodwill the party had earned when it came into power. This happened despite Prakash Singh Badal's promise of free electricity to his constituency of Jat farmers. While Karnataka and Orissa were classic examples of misgovernance, Bihar saw the voters rise in protest against Laloo Prasad Yadav for allowing his state to practically waste away. Even in a state like UP, where the Vajpayee wave would normally have subsumed the caste and community calculations of rival political forces, the BJP was clearly told by the voter to pull up its socks and put the Kalyan Singh administration on alert.

There is a distinct possibility that the new government in general and Vajpayee in particular will be insulated against sniper attacks from within, at least for a longer period than earlier because this time around the BJP and its allies had this time sought a vote in Vajpayee's name. Conscious of the goodwill which Vajpayee generates and aware of the odium which Jayalalitha attracted by pulling down the last government, the allies may be expected to behave more responsibly this time.



Apart from goodwill, the biggest factor which would lend stability to the BJP is the magic of numbers. Unlike the last time, when a tempestuous Jayalalitha with her 17 MPs could bring down the government, it will be difficult for any single component of the NDA to take recourse to similar blackmail. The Janata Dal (U), with 20 MPs, is the most volatile part of the NDA. The outfit consists largely of former socialists who have shown a tendency to split and reunite with a view to grabbing power.

This was evident in the way Ramakrishna Hegde was sacrificed. But even if the 20 MPs of the JD(U) were to start flexing their muscles, the NDA (which has crossed the 300-seat mark) would have a cushion of around 10 MPs to stay afloat. Indeed, the JD(U) would have to work very hard and join hands with other disgruntled components of the NDA to do a Jayalalitha on Vajpayee this time. But the lure of Bihar, in the event of the BJP and the JD(U) sharing power in the state, would automatically preclude such a possibility.

One man whose moods the BJP would have to constantly gauge is the Telugu Desam Party's N. Chandrababu Naidu. With 29 MPs and a renewed mandate in the state assembly, he has emerged as a larger-than-life figure on the national scene. The arithmetic of the present Lok Sabha is such that even if he were to withdraw support, the government would not fall. But that does not mean that the BJP can afford to bypass him on important issues even though he has chosen not to be a part of the new government. After all, the people voted for the NDA at the national level with the same expectations which got Naidu his renewed lease in Hyderabad.

• RAKESH JOSHI

There is a shortcut to the top. It's called the consumer.

The X Factor

The complete brand Xperience explained

How will your brand reach out to the single most important person in its life? From concept to consumer contact, how will your brand adapt to the future?

Welcome to The X Factor – the complete brand Xperience explained

A 3-day international brand convention - right here in India - that offers corporate and business heads a melting pot of global brand experiences.

A galaxy of international brand gurus
Here are some of the sessions to be presented by academicians, businessmen and consultants from across eight countries.

Let **Prof. David Aaker** take you on a live interactive video conferencing journey on 'The Complete Brand Experience'.

The future is out there with **Allen Rosenshine of BBDO,** who will give you his insights on how brand experience needs to be crafted.

After crafting, comes fitting. **Anthony Freeling of McKinsey** will help you fit your brand into the new paradigms in consumer marketing.

What's IT going to do to your brand? **Greg Consiglio of AOL** has a few mind boggling answers for you.

Jan H Hofmeyr of the University of Cape Town, S. Africa will show you how to convert consumers committed to their current choices.

And **Ipung Kurnia of Hero Supermarket** will share with you his Indonesian experience of taking seduction to the streets.

Can you afford to forego an opportunity that will give you a preview of what the future holds? **Sign up for Brand Summit today.**

CII BRAND SUMMIT™

November 11-13, 1999
Taj Coromandel, Chennai, India

Share the brand Xperiences of:

HTA.7335A.1999

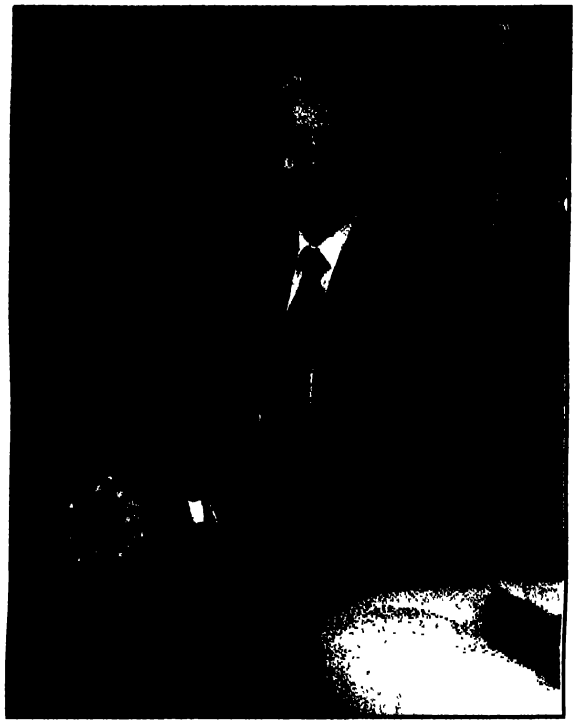
Is winter over?

Bombay Stock Exchange (BSE) president Anand Rathi, some governing board members, stockbrokers and stock exchange employees are perched on the terrace of Jeejeebhoy Towers that houses the BSE. In high spirits, they release 5,000 balloons in the air. The simile is inescapable. For, after seven long years of a bear grip the BSE sensitive index (Sensex) has crossed the 5,000 mark. Such dizzy heights were previously reached only during the now infamous-Harshad Mehta era.

But, wait a moment. Aren't those storm clouds looming on the horizon threatening to wash out the party? Shall the revelers have to run for cover? Are the celebrations premature? For the press has been flooded with worrying reports. The Securities & Exchange Board of India (Sebi) was concerned by the surge in outstanding positions. The finance minister went public on the balance of payment crisis. Could these reports do anything but act as a damper? The Sensex in one trading session (15 October) lost close to 200 points. However, Rathi, for one, is not going to allow his party mood to be spoilt. "There is a strong bull undercurrent in the market. This could be a temporary blip," he counters. Also, "there is no truth to the reports on the outstanding position".

To get a clear view of the actual scenario one would have to go back six months in time. Since that date, the stockmarket has been on the upswing. It was, in fact, anxiously awaiting a new trigger from the political front, to shoot up even higher. This was provided on 8 October 1999 when the final poll results trickled in. The National Democratic Alliance (NDA) had secured a clear majority. The Centre at last having a majority government after many years of cussed coalitions was like a shot in the arm for the stockmarket. The Sensex rose to the rarefied height of 5,091.24. With the Vajpayee team taking charge, however, the market went in for a breather and the Sensex began moving in a narrow range of 100 points.

It is very clear that the current rally is based on sound fundamentals. "Over the last four years, the Indian economy has picked up and its growth has advanced from negative to neutral, and, now, to slightly positive. The market being sentiment-driven has reflected this trend," says Nikhil Khattau, CEO, Sun F&C Asset Management. This positive trend is evident from June 1999, he says. "The first positive news was of a higher-than-expected industrial growth. Then came the rising figures of cement dispatches, commercial vehicle sales, finished steel production and tax revenues. The economy was now well on its way to recovery. Inflation, too, had fallen further. These were the first signs of GDP growth," points out Khattau.



"Positive indications of a turnaround in other key sectors such as consumer durables and petrochemicals are also evident," adds D.K. Bhatia of Mega Ace Consultancy. Adds Niamatullah, managing director, SBI Mutual Fund: "Besides the economic recovery process commencing, the anticipation of political stability kickstarted the stock rally." Concurs

Basudeb Sen, executive director, UTI: "Economic indicators have been pointing towards low inflation rate and acceleration in industrial growth. Corporate earnings are slated to grow more in fiscal 2000 than in the previous year. The gradual firming up of international prices of various commodities also improved the outlook of many companies."

The bullish sentiments on India are clear from this one fact. In May 1999, while the Kargil conflagration was clouding the horizon, foreign institutional investors (FIIs) were making aggressive purchases. "The FIIs' reading on the India story was positive," says Nimish Shah of Fortune Financial Services. "At the macro level, the semblance of stability in many parts of the globe, the recovery of Southeast Asian economies and early signs of revival in the Indian economy, led to the upside," reasons P. Chandrasekar, director, Erudite Capital Creations.
